(1:41:51) altered carbon was the TV show where they talk about like sleeves and like you just kind of insert your soul and that's how you get around the issue of distance between planets and that starts to get weird with time as well because essentially that means like when you go back to it wherever you were before like you know it's going to be hundreds or thousands of years later um Kimberly oh wait yeah I'm sorry I just wanted to add uh you were talking about the Roy D Herbert um moment and that time dilation thing is just

(1:42:26) fascinating but if the fly for example has a you know a short life and it sees things in slow motion um if we have a very complex being with uh levels of thought that would have to be in the complexity too um they might have uh anyway I'm G to back off u i I don't know enough about it but it's um interesting to think about yeah is that thing about flies seen in slow motion true cuz if so that would corroborate the whole idea of their time being faster cuz that's the same exact concept of if some like an Interstellar when

(1:43:01) someone's near the black hole and their time is slowed down and they're looking out at the space station which time is faster they're going to see the space station moving at super speed and if you are the person in the space station whose time is moving faster than the person who's near the black hole and you're looking at that person it's going to look like they are moving in super slow mo so I think that that is a very interesting thing to look into with respect to the fly and whether or not

(1:43:26) its time is moving faster uh Kimberly I saw you jump up do you have any comments yeah what what if they're interdimensional so what if there's a six Dimension being that's cloning threedimensional things to go explore the third dimension yeah it's a good thought would that would that explain the time dilation thing too well from that perspective I think it depends on what these extra Dimensions mean for me once you get past four dimensions it starts to not make a lot of sense just because I think of

(1:44:00) like up down and straightforward is the first three dimensions and then uh from or sorry up left and forward is the first three dimensions I think of time as the fourth dimension and then beyond that if there's a Fifth Dimension I would think of it as like what's the underlying Matrix and so if there is a being that is existing on the outside like if they we were imagine a snow globe and we're staring down at it and that snow globe is our universe that we're comprised of then absolutely I think that you start to have the

(1:44:30) capability where a being could just show up wherever it wants to right where if I'm it's the similar concept of me being on the computer and the computer is our universe and I can just kind of insert myself as an avatar anywhere I want anywhere in the program Etc um I think that could account for that type of thing but uh really hard for us to know because we're stuck inside of it right and we can't perceive that underlying Matrix we can only perceive the reality over the to but but so they're saying

(1:44:58) that they had to have been made on this planet in that right did I get that right I think that what they're saying yeah is that you know and again this opens it up to your theory that you just brought up but the idea that they're using uh the chemicals and biological uh processes that are available here and they said that their biosphere was like a combination of two different things so probably a combination of what we have here that's available but that it comes from somewhere else I think they

(1:45:26) mentioned the idea of pans spermia um so that you know some part of it doesn't seem to match what we find here locally um well pans spermia I thought was like just stuff coming from space falling on us yeah yep pretty much but you know if you think about the underlying mechanism or what that or what that means is that there the idea is that we we can tell that whatever we're seeing from there comes from somewhere else that's not completely attributable to you know Evolution here yeah exactly right and then even the

(1:46:00) person mentions in this ebo post that someone asked well is it just two locations like Earth and you know Mars or is it could be more and they said well could be more because they don't we don't know right we don't have a biome of another planet or anywhere like that so be unsure yeah since we don't know what the sixth Dimension is it still could be that it doesn't have to be like an alien from a billion light years away right yeah it could be from anywhere right and I think it just depends on what you what

(1:46:32) your perception is of uh extra dimensions in general right but once you go beyond the dimensions that we can see and the dimension of time then you're really kind of dealing with uh just essentially like teleportation so to so to speak in terms of being able to be somewhere anywhere else so you could in the Universe uh instantaneously um true so yeah not sure good thoughts on that um any any other uh response or closing thoughts on that okay if not then I think I'm going to close it out here uh I just want to

(1:47:09) thank everybody for jumping in and reviewing the ebo scientist physiology of the alien with us uh if you guys want you can share the space afterwards we was also live streaming at

the same time oh looks like we might have one more uh Nathaniel he might have one more comment before we close out I'll let him jump up and then I think we'll close this out in general uh go ahead Nathaniel hey sorry I just wanted to add um uh I that we might have other moderators on but just real big thanks for everything and I might encourage to

(1:47:40) not let this disappear again maybe this is worth revisiting again and uh now that everybody's downloaded the information and you know I've read it twice now um it's worth thinking about a little bit more and it seems that it might be corroborated um since it was deleted in a day I don't know how much air this has gotten and so I think it could be valuable to get some other people um on the case that have more uh knowledge in the science and they might be able to um you know figure some things out

(1:48:10) here but uh anyway thanks much um yeah and so that's like the next step here right so what I'm trying to do in terms of the MH 370x movement is get other people Empower other people to be investigators into stuff like this like I don't have the medical or uh academic background to know if a lot of the stuff checks out from reading the comments you can tell a lot of people are pretty impressed by it but someone who does have that kind of background who is interested and curious could investigate this type of stuff and determine does

(1:48:40) this check out right there's a lot of verifiable information in here that can be looked into and that's the kind of what I want to impose upon this community is that also what's going to happen too is that as more and more stuff comes out we might find uh congruencies between the stuff that we're reading here right and if we do then that's going to lend more credit and evidence towards this this potential post being real even as as stuff like today what was mentioned I think by Jeremy Corbell where he mentioned this

(1:49:09) idea that that um be you know humans whatever might be containers right it's kind of goes to that philosophy that we read in there although I'd say that philosophy side is probably the one that's the least verifiable right compared to the scientific aspects of it so just to close it out I would say that you know keep this one in the back of your mind if you find stuff that comes up you know um pull this out of your hat and take a look at it take a read of it and see hey does this match up with the

(1:49:35) science that that ebo scientist post person posted out there um you know back in 2023 and who knows um maybe in the future we'll figure it out like this is I guess open source intelligence This Is Us looking at stuff that's out there digging into it and determining the authenticity and matching it up to other evidence that we have out there in the UFO world so thanks everybody for jumping on today thanks for jumping on the space uh appreciate all the time and for those interested we will be getting back into some MH370 stuff over the

(1:50:04) weekend uh so thank you guys and have a great evening bye everybody okay uh thanks everybody on the live stream as well everyone who joined in here today and went over the ebo scientist stuff uh let me switch this over real quick okay so that was fun are there any last uh thoughts from the chat about that sorry I got didn't give you guys a lot of attention uh I

try to do my best but I just thought that was an important one to get out there because a lot of people told me they didn't know about it and I think that you know a lot of it

(1:50:47) obviously goes even over my head but some of the stuff that we see out there seems to be consistent with some of the documentaries and some of the other knowledge that's been passed out there I also think about this idea of what um Tucker Carlson was talking about about the spirituality of the phenomenon and whether or not like you know this is this dark concept of the the phenomenon that's out there and whether or not you know we maybe we are ourselves uh hybrids or we are uh species has had our biology and evolution tampered with so

(1:51:24) pretty interesting stuff um yeah seems very credible I don't know if it's true or not I just want to make sure that information's out there so I'm going to take it easy tonight after this uh I'm going to look into some more MH370 stuff I'm going to be watching uh some more of those videos that people have been linking to me uh tomorrow we're going to go into tiboy Abino and we're going to prepare for the interview with him I still haven't determined if it's going to be a live

(1:51:50) stream or not but if not I will try to upload it uh later on Saturday on the same day so thanks everybody I hope everyone has a good night you can

MH370x - "A Letter to Ashton" 1/10/24 - YouTube

<https://www.youtube.com/watch?v=wV0VF7V8QH8>

Transcript:

(00:04) yo yo yo what's up everybody starting right into it okay okay what up everyone I'm uh this is Ashen Forbes MH370 x uh so obviously you guys were jumping in early you know that this is uh for this letter that showed up on YouTube uh right away just want to say that I don't know what's going on with this letter um I don't know if it's real or if this is some scop or you know uh if it's a hoax or something like that I have no idea uh I have listened to the letter about 10 times probably and it's

(00:44) pretty damn weird the more I listened to it the more I think I want to talk about it because I don't know what's going on if this is some elaborate ruse or who's doing psychotic stuff uh like coming up with these letters the details on it are so specific that I don't think it can be AI created although I've wondered if it um they like stick to the narrative that I have thrown out there but um it's not exactly the same like there's a lot of pretty significant differences and then they talk about like this Joe Rogan

(01:14) guy like Randall uh Carlton right Carlson and I had never heard of him before today too

so it's pretty creepy I don't know what's going on with this guy so I think we're just going to kind of talk about the letter anyone who wants to jump up and be a speaker um I think that what we're going to do here is I'm going to read through the letter uh to everybody it's kind of long so just keep that in mind and then uh we'll just do questions I want to hear what people's opinions are if they think it's

(01:42) like the fakest thing ever or if they think that there's something to this um curious to what you guys think in general but either way it's an adventure for all of us uh I don't know how this is going to play out but I'm definitely here for the journey and if it is elaborate ruse I want to say right off the bat that I appreciate the effort that's gone into this because boy this is this is pretty dark in some aspects so uh get ready just a second guys I'm going to pull it up and I'm going to see if I

(02:07) can pull the transcript up because I'm probably just going to read it I think is the better way to do this this is a submission sent to us the eth of Jan okay hang on folks of January of 2024 it's I also need I'm looking for uh a co-host to jump on somebody I know and trust uh if anyone is out there listening okay so let me see what I got here oh crap that was what I wanted there's some way to do transcript does anyone know real quick in the chat I'm also streaming simultaneously here um or want to jump up and tell me how I

(02:51) can pull the transcript up out of YouTube thought this would be easy oh follow along show transcript okay there we go okay I've got it cool here we go okay oh was that red panda nice thank you I need red panda up here real quick sorry hold on a sec guys where is he oh there he is invite co-host okay thanks red panda for jumping on as co-host you'll just take him second then he'll be hopping up here good evening Ashton there you are what's up buddy so right off the bat before I jump into this what are your

(03:40) thoughts on this letter have you read this or listened to this yet honestly I haven't had a chance to I saw that it was referencing Randall Carlson and it talks about Diego Garcia a lot and it sounded like the guy seemed uh scared if it's real but yeah I'm excited to hear what's going down yeah it's uh man it's pretty damn weird I'll just give you guys the the for warning it's pretty weird you want to pull Tupac Cabra up here as well if you can make him co-host or do I have to do that uh I'll do I

(04:08) think you have to do that yeah okay thanks Tupa for jumping on as well um if Tupa jumps up right away I want to hear his opinions and if he's heard this at all yet if not I'm definitely curious to hear what you guys think about this because it's pretty weird I listen this thing a bunch of times and the more I listen to it the more I'm like okay I don't know if this is real or fake but either way I'm just going to go have some drinks cuz either somebody's being really parasocial and

(04:32) going real deep into the case and kind of presenting like very Niche Alternatives and don't worry we're going to discuss all this um or this is somebody who's really I guess just honest I I don't know I have no idea but I've learned that I got to be more skeptical so we're going to

look at this with a very skeptical eye okay so for the people who are wondering I'm going to put the uh Link in the chat you guys can listen yourself if you just don't want to listen to me speak it um and put them in the pill or

(05:02) whatever this is here here we go put that there okay what is up gentlemen oh there you are what's up tupu how's it going man hello going good what's up red uh yeah a letter to Ash and Forbes I listened to part of that clip yeah it's it's weird man and it's 10 minutes long so this is going to be a minute but guys it's going to be worth it because this is like I don't know real deep uh role play or like just some kind of you know super creepy stuff going on in terms of you know this might be a real conspiracy

(05:39) because I think that you guys are going to hear some stuff that you agree with maybe some stuff you don't agree with stuff that's related to the case that we've been talking about like some very specific stuff um I'm pretty sure none of the other MH370 investigators ever got any letters like this so I'm going to be pretty sure on that one okay so what we're going to do here is I'm going to just read off the transcript as it goes here uh do my best so uh don't don't hate on me otherwise

(06:10) you guys can check it out yourself you can see it in the pill and you can also also see it in the chat okay this is a submission sent to us on the 8th of January 2024 it's a letter to an Ashton Forbes telling the story of what happened to Malaysian Airlines flight 370 that disappeared in 2014 and as always trust uh as always uh don't always trust what you read on the news your own capability to see what the world really is here we go where I work or have worked military based in the Maldives and I know exactly what

(06:41) happened to Malaysian Airlines uh MH370 this is also an open letter to Ashen Forbes you are not wrong in what you do let me see if I can just scroll down there we go okay you are not wrong in what you do is much bigger than what you can even imagine don't stop what you're doing I won't tell anything about myself more than what I currently or or in the past I spent time in a military base in the Maldives and I have done this type of work since I joined the military when I was young and that was many decades

(07:07) ago still in the game but the years are starting to get get to me as I write this because I don't I want the world to know that most of the world the trouble on the Earth are created by politicians uh for reasons of politicians the United States or at least a covert Elite uh administration of Elites uh of the United States that has at will control complete control and this H guys I'm struggling the problem with this transcript is it's hold on let me see if I can pop it out it's like missing words so this is

(07:39) really tough uh okay anyway for political reasons the United States or at least a covert admin uh administrative Elite of the United States will have complete control and this has been true since the 1960s MH370 arrived at our Base by our hand at 1856 UTC after we picked it up midair outside the great island of nicobar yeah I'm just going to play this this is it's too hard to read guys hold on a second I'm going to switch it over here at least a covert administrative Elite

of the US has at will complete

(08:16) control and this has been true since the '60s Flight MH370 arrived at our Base by our hand at 1856 UTC after we picked it up midair outside the island of great nicobar just one of many many things we do we can pick up anything anywhere and deliver it in an instant like a magic FedEx some facts about why it happened MH370 had defectors on board they were running to **China** with American Technology they are Chinese by Blood and had gotten themselves into a situation with the Chinese regime who got them to choose to defect the whole play

(09:02) everything and I mean everything about it was a political play to show the Chinese who's their daddy that's us some facts about how it happened all passengers are dead all but the handful of defectors the plane did not crash the plane was on fire we know because we started it the plane was picked up by us on fire midair right in front of the Chinese the Chinese regime knows exactly what happened and that was the whole point of the operation okay this is what I want to share with you as I said I have been

(09:43) doing this for a long time I know the technology and have been a part of hundreds of operations so let's start with the tech the foundation is not superconductivity superconductivity is a product of the technology we have had this since the 1960s and from that first day we have used it to make sure that no one else can have it the big breakthrough to apply the tech as we do today came in the beginning of the 2000s with quantum computers and by this the Paradigm for AI technology what we had to do programmatically before we now can

(10:22) do with something akin to machine intuition this lets us operate in fast-moving environments where event-based logic in linear programming was very limited as I said what you have found is not the technology itself it's just one of many derivatives of the technology I encourage you to keep on with what you are doing but you should also be aware that there is a deeper layer that you could focus on instead of the Miami aliens that I see you have been posting about I will give you some pointers for this at the end of this

(10:56) letter the products or application you are now working on is correctly based on super conductivity the number of orbs you've been speculating about is correct the fourth orb decides where the object ends up the tech okay is that coming through okay yeah it was coming through good okay so maybe I'll just cut off there because this is like 10 minutes long so I just want to start with like the first part here which is already kind of creepy and just want to hear some of your guys opinions on it so like this is an AI

(11:29) voice right but the AI voice is like I know doesn't it seem kind of weird like really Advanced the way that the AI voice is saying all the words and the other thing I want to ask you guys as well is um just from noticing it so they're bringing up the whole uh Chinese real the Chinese Defector scenario right from the MH 370x case we've pretty much brought up this idea if you guys have listened to like my podcast that it was uh like a rescue event right but they're talking about like this Espionage scenario in here so

(11:59) so right off the bat like red panda or tupo like what are your guys thoughts and if anyone wants to jump up and we can have some other people who want to give their opinions um just feel free to request and we'll get you guys up there um I want to hear so far based on what we've already had out here um about this Chinese Defector scenario that was out there as well as having this technology and that superconductivity is a byproduct of the technology and that the bu that it can also lead to this technology that we've had you know since

(12:25) the 60s which is like Breakaway uh Tech you know Breakaway civilization and the quantum computers started in the early 2000s which pretty much allowed us to create weapons and and technology that um you know before was limited by man but now with Quantum Computing we can kind of bypass that somehow is how I interpreted it what's up guys what do you guys think I think the um The Defector story is interesting you know if if the videos are real right if we're looking at what they what they depict then the government was looking at that

(12:58) plane for a reason the idea that they started the fire makes a lot of sense the um the because they were they were already watching it the idea that it was a display of technology for another government like the Chinese were watching it uh it's really intriguing right but it it kind of validates a lot of the weirdness that's kind of going on about about the case and the Mystery surrounding it still so I think I think it's a really compelling and as far as the AI voice goes uh it's gotten really

(13:26) far man and it advances really quickly so they're sounding more and more real more and more inflections are put in yeah and you'd be surprised you'd be surprised yeah I want people who are listening to think listen to some of the inflections it's really weird some of these inflections like you don't probably catch it the first time but you're like isn't an AI supposed to just be like neutral and monotone but there's like a part especially where like almost like it gets angry but I know we're

(13:48) definitely listening to an AI voice so you know either way I'm I'm looking at this on multiple levels and it's creeping me out what about you red panda any thoughts I've always gotten hung up on on how um it seemed like the US and China were in kind of a stand off about this case and um I don't know I think I want to hear more about it yeah Logan what do you think buddy yeah man about that um the AI voice like um no I'm I'm not that impressed by it at all actually I was I was gonna ask if you if you made that or

(14:22) you're given that but no definitely can get better than that just from like your everyday household user could make a better one so it's okay yeah okay Logan does know about AI voices yeah so this no I did not make this guys just for the record I wish I had been this creative to come up with something like this this is not a not an inside joke or anything like that it's just uh creepy so you know the scenarios are either this is some kind of person trying to send us a real message um or this is some kind of

(14:50) really uh elaborate parasocial um hoax or prank I guess you could call it um you know maybe it's similar to the win Roar situ situation but the thing is here so far it's like this letter isn't

somebody trying to get me to buy some files with a password on it right like this letter is like a letter of encouragement right so the person that would have sent this they doing it if it is a hoax they're doing it out of their good of their heart I think and not necessarily to you know attack me doesn't feel that way when I

(15:22) listen to this at all right like they're talking about here's you've been figuring it out here's the secret of what really happened you're close anyone else have any quick thoughts before we play some more because it gets darker into this Chinese uh scenario it's like deep throat yeah I've got a I've got something really quickly go for it yeah Ashton I just had a couple questions like have you been in in contact with Randall Carlson since the mention of like The Gray Man uh my second my second point was about the

(15:53) image from the letter it looks like somebody in a military uniform like sitting on a beach in a base like do you think that that's like an actual image from Diego Garcia or like an AI generated image like the voice yeah definitely a uh AI generated image I would say I didn't even really pay too much attention to it so that could lead to the idea that it's definitely a hoax um it could just be like and I also don't understand like is there three parties involved here like in the beginning there's this paragraph

(16:19) about that I read out but it doesn't do justice because with different voice that this was like submission that was received but this is like a 3-day old account like the whole thing is weird right it's like a joke within a joke very and I know I I never heard of Randall Carlson right is that right yeah I've never heard of him before today so yeah people right fig out Outcast yeah people right away are figuring out he's the guy so I'm like is this some kind of inside joke to like give me to look at this certain kind of

(16:46) science because if not like I'm not understanding what the joke is in this scenario here like it's pretty weird it's just so similar like the technology he talks about and then talking about Diego mixed with what you have discovered and then the letter pointing out all these different things it just it like it all tracks and feels right I don't I don't see it as like a hoax I think it could be legitimate yeah it's pretty weird and uh yeah that's what that's what kind of freaked me out

(17:10) when you started talking about them testing in the Maldives that's when I went wait what like this he's talking about the technology we're talking about that clip that I posted afterwards I mean this is exactly what they're talking about they're talking about this kind of technology technology how you could change this and it can blow up the whole planet so um let's play a couple more minutes of it here so when we left off in this we were like 4 minutes in it's like 10 minutes long and he had

(17:36) said that oh you're correct about the fourth orb and the the Espionage scenario is supposedly the scenario they claim happens to this plane and that we knew that it was going to happen the entire time and we let it happen so here we go technology is based on structures simple and beautiful structures that lets us use the unlimited power that is everywhere and step outside what I would like to describe as perceived reality the structure that is used for what you

are looking at is a meta structure that creates a low complexity

(18:09) and relative low energy phase transition the beauty of this technology lies in its elegance and simplicity the structures are inherently stable and self-regulating and the earlier challenges to conduct operations were 100% based on the limits of man with the same technology just a slightly altered mono structure gives us an infinite power generator that without maintenance can run forever combine structures to a meta product again and you have the propulsion for a trans medium object moving faster than light it's the

(18:46) definition of magic there are endless applications and the **truth** is that it would change the world in an instant but that won't happen I bet yourself or at least most of your audience have heard a version of the story that the aliens are here and they want to bless us with new clean and revolutionary technology but we are a too young and Rowdy civilization and would not be able to be responsible enough with the gifts from them that's probably made up but that is at the same time completely true it's just not

(19:21) aliens saying this it's us again the technology is infinite in its power and if two rivaling parties had access to it this world wouldn't last a day the same technology with a combination of mono structures makes a terrifying weapon that turns any matter into dust and that dust turns into air it does not matter if the object is a small bird or aircraft carrier it cannot be stopped it does not miss and when the object has been hit the phasing cannot be stopped okay so back to mh3 okay so um we're talking about some

(20:07) technology that's like the same kind of technology that we've been talking about with MH370 here like the thing that I bring up on every single podcast is this idea that you can use this technology to create a weapon that can destroy potentially the entire planet right and the other thing too especially to babra I want to get your opinion on this because um you know I know where your enthusiasm lies in general is that they say that okay well this isn't aliens you know this is potentially our technology that's out

(20:34) there um do you think this could be our technology or are you more on the side of thinking that this is uh non-human intelligence out there um curious if what you think in terms of uh where we potentially Advance by ourselves or if we think we had help I think that's a good question I would say it's us um that the Gap the deficit between um like the 1940 and now in terms of the natural progression we should have had versus what we've been presented with as far as scientific uh advancements go is really it's large

(21:08) right it's cavernous it's the Grand Canyon there's a too big of a gap between what we should know and what we do know what we should have and what we do have I think that uh you know the secrecy right about our advancement since World War II era would imply that the the effect so the technology is is Extreme and can do extreme things and has extreme consequences even more so than the atomic weapon program which is why they they what they carried over the same secrecy into it so here we are 2023 right 2014 when this incident

(21:45) happened and the question is you know could we manipulate matter time gravity Space by that yeah you had Ben Rich talking about this right in the 90s or something like yes right I think so now is is that to say that in the 40s we didn't get tipped off or even earlier right what what caused the um the Boom the technological boom what caused and what influenced you know these advancements could that be alien could it be an alien influence I mean look at Jack Parsons right he did these rituals to try to derive these answers right

(22:15) that's that's that's a human reaching up and out as opposed to an alien reaching down and saying here's a weapon here's a tool right um so maybe everything's on the table but when I look at this case I think that this could easily be man-made um if if you take the route that there's been a diversion um another another branching off if you will of science after World War II and this is what Weinstein talks about as well and put off in Jesse Michaels so and what about the part two where it

(22:46) says that like there's narrative out there I almost equate it to the Alien Invasion narrative that's out there but this idea that we can't let the technology out into the open because um like the aliens will wipe us out or or whatever and instead it's like no we will just wipe ourselves out if any two rivaling factions were to get this you know we're afraid that we'll just destroy ourselves any thoughts on all that it's kind of the extreme of like the nuclear weapons analogy kind of

(23:11) right very very much I mean I tend to think that in in instead of a physical you know uh doomsday that this could bring could bring a cultural jump Chris please do please do I don't know if you can raise your hand or not you might be on a uh but glad to have you here feel free to jump in and then we'll get to uh I don't know how to say your name it's a French name tesu tast now anyway uh Chris go ahead hey yeah I know um this is uh really fun this is this video this 10-minute video I just think that

(23:47) there's some red flags that are going off for me one about the no maintenance thing with this device that produces unlimited energy his uh quote about turning the this thing to D any object to dust dust then to dust to air I just feel like this clear everything he's saying was taken from you Ashton I feel like he listened to everything you've said I've listened to so much of what you said and I feel like I could have there's nothing new that he said that is truly like groundbreaking new or a new

(24:14) piece of a puzzle to and also the whole thing about quantum computers in the early 2000s I've read a lot about the problems of creating quantum computers there is noise issues there are problems that quantum computers still aren't as good as uh traditional superu computers like for even regular tasks that you wouldn't think like wait can a quantum computer do that it's like actually it can't yet as fast as a regular one because it's just not there yet so it's like early 2000s they already had this

(24:40) Tech I I just a lot of red flags are going off for me appreci yeah um hey can you guys hear me yes we can hear you go for it this is Taco Loco tacco got you CEO in the uh in the on on

YouTube um I've been with the uh mfmp for a while I got there on my own and started following because I'd figured this stuff out on my own I built something very similar to what this guy Malcolm what's his name that uh they mentioned in in that in that video a lightning weapon or something people been pcking yeah yeah

(25:17) Thunder yeah it's no big we built I built that when I was a kid before I went into the nuclear power program anyway I understand I mean the whole time you guys have been talking about this Tech Bob s it too it can crack the world in half I mean there's no freaking question about it and it is a lot to get but the thing is it's ancient and you know we can we can go you have to watch a lot of the videos to see it but I mean I got no doubt about this I got no doubt about what this guy is saying and also

(25:46) it didn't even really need to have ai to do some of this you can do this analog I won't worry with this with describing how to do it but I mean certainly AI would help and when when he was talking about the AI being intuitive I get it so okay so yeah sorry I'm going to stop you just there because I want to get I want to keep the keep this thing going uh M Jin what are your thoughts and I'm going to go back to the the um recording here M hey Ashton what's up um I'm gonna have to agree with Chris um I would say the

(26:15) the best thing about the video is the storytelling it's extremely good I was very entertained with it um it was like better than a movie um but yeah I I do think that um it's not exposing anything new um at least not anything new in terms of things that you could uh speculate yourself um I think a lot of the things that it presented you have talked about or at least speculated um but yeah it was pretty cool yeah awesome thanks yeah I appreciate it and guys just as a quick ground rules let's just

(26:48) try to keep the comments short I want to keep the things on topic here so we can get through the entire thing here and then uh we'll have more open discussion near the end as well rugburn what are your thoughts yeah just just a big fan I also was very entertained by it the one thing I wanted to bring up is is my take on when he says you know it's not aliens it's us I heard that as it's it's maybe us either from another realm or Dimension or future saying hey you're not ready for this like we're

(27:16) interacting with ourselves in some way yeah no good good thoughts man um I think all those are really good thoughts in generals like you know could this be made up I think AI has achieved that point but even if it's all made out AI it's pretty damn weird to me um like midin said I think that there's uh some aspects to it where just from a storytelling perspective it's uh you know pretty pretty elaborate you know it seems like somebody put a lot of effort into this no matter how you look at it

(27:41) you know even if you like fed all the AI all my pieces like I don't think you could come up with this right you need some pretty strong prompts I also think I agree when you guys say pretty much everything it's saying is stuff that we've already discussed so far for the most part at least um the I mean the big shift is this idea on the Espionage scenario where I would have said

before it was like 1% and now I'm looking at and this person saying well that's that's exactly what happened this was

(28:05) all a big plan and that we can pretty much just do anything now from the scientific perspective um you know Skeptics in terms of is this possible the thing about it the the way I'd play Devil's Advocate is if there is free energy unlimited energy then everything we said there is by default possible including teleportation which is what we're kind of advocating here for we pretty much need unlimited energy to come to be real it's not a situation where get to pick and choose which things you want to be real it's like

(28:30) once you've unlocked the power of quantum mechanics on the macro scale level like they say there it's pretty much magic so any other last comments before we listen to the rest of this here I think oh dear let's get you up here you can put rberg down thank you okay thanks R appreciate you man we'll get some other people up too when we uh go through the next part uh M you want to say anything before we get uh I don't know if darar wanted to say anything either yeah um I have to go um I do have to go and thank you for this

(28:59) um I just want to say that pay attention to things that are sent to you in terms of Storytelling storytelling um goes a long way and this one is definitely one of those where storytelling and you know it's like the the intention of where like um you know like the whole intention behind um the story of oh this this is this was all planned um we we we planned this and it's very like um intentional intentionally charged um you know so uh yeah uh bye-bye yeah appreciate you man yeah no it is like I don't people are like oh well this is

(29:38) another s up okay well what's the what's the point so far right the point is what to keep encourage us to keep going like usually if you're **debunker** you want people to make it go away you don't really want to like you know revive it which is like what this story does and I do want to repeat that I have nothing to do with this story other than receiving it which is why I'm pretty creeped out that's why I was drinking earlier tonight cuz I was thinking hm no matter which way this goes this is either

(30:01) creepiest thing ever most parasocial thing ever or this is real whatever or somewhere in between um either way yeah the resolution booze right okay here we go we're going to listen to the rest we knew about the defectors as soon as they made their decision well before that but then they weren't defectors anyway we knew when how and why back in December and as we do we made it into politics we let them go we took them back and sent the Chinese a clear message of who is in control and we did this with a

(30:35) brilliantly produced show that is fit for a Hollywood production any good movie has fire desperation regret and drama and every movie villain should see their plan fall apart and in really good movies just when the villain has accepted that the plan has failed the heroes of the movie steps in and makes it it worse this is what happened as soon as we knew what plane was the last leg of their Journey we planned and delivered so the plane was loaded up with lithium ion batteries built by us for this occasion lithium

(31:14) ion batteries cannot be put out has a predictable burn rate and we made sure that the volume was just right for a long burn that would allow for a fulllength show the Chinese were following the plane since it was on the tarmac and got to see their most close to success operation go up in flames and just as all hope was lost we made it worse right in front of their eyes 2 hours and 13 minutes in they saw the plane get phased out of there by the same technology they were trying to get access to and 5 days later the Chinese

(31:50) officially made a gesture of submissiveness by publishing a frame from the satellite of the phase moment via the state ad Administration for science the publishing was talked about in American newspapers as a possible debris field but when you know what you are looking at it's clear what the frame shows the aftermath during the 5 days after the show the Chinese found out about the batteries that we both made and placed them on the plane they accepted that we have been playing with them the whole time and at the same time could accept

(32:26) that the people they had convinced to deflect did what they wanted it was us that stopped them the deflectors had a good corrective experience when it comes to staying loyal and were back on the job as usual but with a new understanding both of their importance and the consequences of their actions what was nothing more than another Friday at the office for the administrative Elite 200 people had the most confusing death experience you could imagine 1,500 people lived lived a tragedy losing family members in a

(33:00) mystery and 10 thousands spent months searching and millions speculating for years then in 2014 military footage of the event got published on YouTube not our problem the person responsible for the leak was identified and taken care of not by us not our problem then came you hi Ashton impressive this is what I want to leave you with there was a guest on The Joe Rogan podcast that was talking about sacred geometry and some new technology his friends had discovered on some Island somewhere he did record another episode

(33:40) but it never been published doesn't the wording sacred geometry remind you of something if you choose to spend time on this which I think you should instead of maul aliens keep in mind that your case is one product of the technology what happens on on the other Island you will understand this if you pursue it is another more rudimentary product what if those in combination could lead you on the right path to the actual technology the gray bearded man is the key and he probably has no idea that he is finally

(34:16) I want to say this how do you defeat someone who can turn skyscrapers to dust completely erase whole neighborhoods in an afternoon and steal a burning bat Tri 7 midair someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after almost a full life in their service I think I know the answer you talk about them and you don't stop talking this is a submission sent to us the 8th of January of 2024 it's a letter to an Ashton Forbes so that was the

(34:56) weirdest uh thing that's ever happened to me in my life um what are you guys immediate thoughts actually you know what let me jump through some things right there okay

I'm going to do a quick summary and then you guys Jump On In so first of all the fire scenario they elaborate on the scenario that we've put forth and they add an angle to it where they basically say no we put the batteries on there which I've never speculated they say that they increase the length of the battery Burns so that

(35:20) the plane would last a lot of the narratives out there said that the plane wouldn't last but we've speculated that the batteries are being like put out actively and that those we found out that the H on fire Extinction gas can last for 3 hours um they mentioned the Chinese hack pretty much in the whole angle of the Chinese situation with the pictures saying that they knew about it and that they were taking that picture and that was Espionage like we speculated so that is something that's very specific to somebody who would had

(35:46) to have been following this case right and then they kind of allude to the same idea of like the Chinese knowing about it here um and this is some kind of big Power Play right where we're just showing them how much power we have and that's all big Hollywood production that they knew about in December which is something I've never mentioned I didn't even research that though that we know about this Espionage scenario since December that's something completely new and original um then as well uh the time

(36:14) so they mentioned that it happened and and the time that they picked up the plane they say that the plane disappeared 2 hours and 13 minutes after it took off well it took off less depends on what you go by so if you go by the time it pulled back from the gate that was 1630 UTC that would be the common time that most people would know time it actually took off from the runway was 1642 UTC so if you use 1630 UTC and you add 2 hours and 13 minutes which is what they said it took when they intercepted it then that's 1843 UTC why is that weird

(36:47) because the time that I've presented out there is 1840 UTC but if this situation is true then this time 1843 UTC is the time that the Chinese Mayday call was received 2:43 a.m. which when you convert that from Malaysian time or even Thailand time I believe um that becomes uh 1843 UTC which is within 3 minutes of the time that we've said these videos are happening so that's a really weird uh coincidence that they mention on that front and then they talk about this Joe Rogan situation says that look for this

(37:22) guy in The Gray beard that on Joe Rogan um people right away uh mentioned that this guy Randall Carlson had like his second appearance was cancelled under mysterious circumstances um and that was apparently talked about I think on the concrete podcast and they said to look for this guy I'd never heard of him before today uh and then we found that clip um kind of corroborating that this idea that there's a base in the malds which now becomes a very weird kind of thing like how are they and why are they connecting

(37:49) it to that guy out there um and then they also mentioned that they they think that the people on board are dead which is not something that I've really promoted I've kind of said that I think they could survive um but the thing that's weird that people have mentioned is like well how would they know how would they be able to keep just the engineers alive and I'm sure

they're talking about the freescale engineers so when they're talking about these defectors and deflectors by the way means defectors

(38:12) like I think this is a an error in the way that the AI was run um but it's something to look into is like what exact AI program do they use for this and was it reading off a piece of P of paper or like how was it getting words wrong cuz when I read the transcript sometimes it says the defectors and sometimes it says deflectors even in the transcript so I don't really understand it um but there was eight of them were Chinese and 12 of them were Malaysian if you believe the reporting and we've always speculated that this is way too

(38:39) many people right like why would they all be on the same plane they also speculate that we intercepted them from their original location so if we can look in and figure out where these guys connecting through KL which is pretty likely cuz K's a huge airport especially down there in um southeast Asia uh it' be interesting to see where they all came from like did they all come from the same place or do they like connect there and then they flew from there to Beijing therefore that's like the perfect location to intercept them

(39:04) on an Espionage scenario um so there's parts of this that like are completely original um which is interesting uh but very little you're right most of it is stuff that I've I've speculated on there already and then at the end this is like your creepiest uh political statement ever out there which is like how do you defeat somebody who can turn skyscrapers to dust in a race hold neighborhoods in an afternoon and steal a Boeing 777 midair you know someone who needed has complete control of the media and crafts

(39:33) the perception of events it's like okay you know this is I I think you guys can think of a lot of scenarios like this where this stuff's happened so what are your guys thoughts um on the scenario here let's uh start with oh I didn't see who was up first we'll start with Hey Ocean hey how's it going hey Ashton I'm loving your space here um um I just wanted to chime in and say I'm actually kind of loving how this letter is anonymous I think that's something that can really like bring everybody together

(40:00) we're going to just like for me anyways I'm going to take it for what it is it's an anonymous letter online I'm going to just compare it to the rest of the stuff I know right uh but I kind of like that because I feel like there's less of a bias if it's an anonymous letter but uh that's all I had to say I'd like to figure out who it is but um this is wild yeah the sacred geometry stuff too I'm curious if people have uh stuff about that like I it's said you know what do

(40:25) you think about when you think about sacred geometry there's two things I guess first is toids which is like what everybody's been talking about toids are so hot right now dut shapes um and that I feel like from an electrical engineering perspective like a troid mean like kind of just feels like the right kind of shape if you want to be able to focus energy on a single spot and um do some those things that seem like they're impossible uh let's go to Sarah real quick and then we'll go to darar yeah I just uh wanted to say that

(40:52) um it's pretty shocking you know this uh if this is real if it's a hoax it's a a good one um but my thought process is when we go to the passengers on the plane um there's that gentleman who you know took the picture stuck his phone up his butt posted it on forchan and that wasn't mentioned in the story however I think that that happened right after the plane went missing so my thought process goes to you know what if the passengers all did survive and then they unfortunately maybe eliminated the other

(41:28) ones or re or or maybe they all did survive and they actually gave them jobs there like you know the previous pictures have shown I don't know this is just like the rabbit hole is just deeper yeah the thing about the passengers is really bizarre cuz I'm trying to determine if they really mean that like they didn't survive the event or if they're trying to imply that they just didn't make it off the island or maybe there's you know this is also just maybe disinformation with inside disinformation where it's a situation

(41:56) where where um you know in a couple different aspects it could be like oh if this was real maybe it's a situation where they're trying to get me to think about it from a different perspective that's not real or that certain elements if it is real maybe are just kind of uh modified for the protection of the person who's posting it um or it's just maybe they messed up and they it's just a hoax and some aspects of it just don't line up um there's a lot of different ways I I just doesn't this is just

(42:19) bizarre like really bizarre like this is the weirdest thing that's ever happened to me probably in my life but I'm glad I'm here with all of you guys to talk about it because we're glad we're here with you Ashton this is a wild and you've been like literally like sharing this experience and this journey with us and we are here for it like this has been really great um there are a lot of other researchers and apparent insiders who really hoard this information they've never hosted spaces or live

(42:45) streamed their ups and their downs and so I really want to say I appreciate that man but uh I had a space scheduled with the Q andon Shaman uh for six so I'm going to have to go do that if your space is still going when I'm done you know I'm going to be right back in here and if your space ends a little early come on into mine we'd love to have you in also I'm co-hosting that so I got to go too but hell yeah bro whatever hello we'll do have a good one everyone love you Ash peace guys hey ocean do you

(43:10) want to become a uh co-host yeah I got you thank you very much okay let's go to Keen you have any questions or uh do you have thoughts on General what do you think what do you think that yeah first of all I thought it was 100% on point I believed every word he said it was a it was it was just exactly the story that I had in my mind that is what went on so I believed it and I also believed it because the the people that I know in the military um when I used to say man I'm worried about this or I'm worried about that they

(43:45) would say and these are people that have the top clearances they would say don't worry we have stuff that you can't even imagine and they said that every you know every time I would

say I'm worried over the past 10 years theyd say you know that we have stuff that you I'm sorry that was my mistake I'm trying to accept uh requests here go ahead ke unmute yourself sorry okay well basically I said that uh I have you know yeah we heard the part about your friends that they've been saying that um they've been saying not

(44:18) to worry about you know Afghanistan not to worry about this or that because we have technology that you came and wrap your mind around so so when he was talking about it I'm like you know that fits in with the what my beliefs are um the other I had some points of the deflectors and deflectors and deflectors I think that uh that he was saying what he was saying in there uh was on purpose the deflectors if you look up the word deflector or deflecting it's disruptors so I think he was using those words on

(44:48) purpose um purposefully the other thing that I found pretty interesting is that when he said this technology you know can you imagine just uh disappearing or you know burning in one in one moment I kept seeing the Hawaii fires I I was like you know is he is he alluding to that technology being used in Hawaii that was another interesting point and um the other thing I found interesting I kind of felt like the graybeard dude that Randall Carlson to me the letter went so much with uh what he said on the Joe Rogan what because I watched The Joe

(45:24) Rogan clip I thought you know is that that graveyard guy is that who wrote the letter so I don't know but those those were my thoughts yeah I think those are all really interesting thoughts um especially the the part about like is what they're saying really specific is it accurate like I I don't know I think it feels like the deflector Defector thing is some kind of AI issue but I don't know how the AI inputs and stuff that work if you just if it was a transcript that it was reading off of or

(45:54) what I'd be very curious to see that that side of it but the side that you mentioned in terms of the weapons like they say actually like the disappearing a skyscraper turning it to dust and then turning it to oxygen um I can definitely see some uh parallels there to 911 and I think that there are people that this makes me wonder I don't know if this makes me think it's more fake or more real but I I think that you could argue that from destroying the city or neighborhood that that could be an illusion as well to um the Maui fires so

(46:22) uh I don't know I it's pretty bizarre to add that stuff but it was like if it wasn't like very direct right it was kind of just like an indirect mention um so and that that made it even more real for me because if you think about how they talk to each other they always give you like per maybe 70% you know when they're when they're telling you things you have you listen to it like 7030 70 of it is good stuff and then they'll use 10% of it outrageous that it it's to deflect it's to deflect the the truth

(46:54) but but what they're telling you is true um and the other thing that it led to was uh The Gray beard thing he was talking about sacred geometry and um I think he kind of like wanted you to set your Telemetry over to hey the there is this technology out there and this is how you can get to it but I have a feeling that this won't be his only letter to you I think if you take

advantage of this and promote it correctly that there'll be other people and this be the only letter I think there'll be other letters I sure hope so

(47:31) I think I hope so just from an entertainment standpoint go ahead to a ocean no I was just going to say I agree I love that um I think uh Dar was next is that how I say that darar yeah darar is that how we say your name by the way here I am yeah it's Dar hey Ashton how you doing hey how's it going hey everybody good good good yeah I thought I'd just leave you guys with uh kind of my my two cents um when you first posted it uh earlier today day and I kind of heard through the it was really interesting very very well put together

(48:01) and um and uh and I'm kind of I'll Reserve judgment till I guess we kind of we'll probably obviously see at least one or two more follow-up letters so I'll probably Reserve judgment until then but two things stood out to me like it was it was really interesting listen obviously very dramatic um and very well put together uh so the two things that stood out to me were they kind of they they definitely agreed with you on everything but there like the two kind of things a little bit critical on were

(48:27) the most telling in terms of whether you know we might want to believe this or not uh one thing I noticed was like um they were mentioning a lot about the so I tuned into your live stream yesterday and I think there was a moment somewhere in the live stream we were discussing like toroids and and you know interesting shapes and and all of this from from you know the heart science that we usually talk about on the live streams and uh you were mentioning that um as as you sometimes do right like you know just to keep esoteric topics a

(48:57) little bit further removed uh from like the general science discussion you said uh you know we don't like let like let's just not discuss in terms like with with terms like sacred geometry or sometimes you'll say stuff about remote viewing just to you know kind of you know separate out like the science you know from the from the more difficult Concepts to grasp and so I think maybe somebody might have heard that they might have got offended or something as sometimes happens right when when when we kind of talk about those things

(49:26) so they might have got a little bit offended or maybe at least that's the sense I was getting plus with all the stuff that we've been discussing about the Miami alien thing it's kind of a big it's kind of a little bit funny a little bit serious so maybe just in response to that somebody was a little bit instigated and they kind of put this put together little bit of a story put put it into a had it had AI maybe build out a letter and then kind of had AI do a voice over something like that because

(49:52) it does um line up a lot with the stuff we've been discussing so it could be something that simple like I said going to reserve judgment until we obviously see see maybe more of a response um but yeah just thought I'd leave my two cents there I thought there was a little bit of an interesting kind of um connection there when you mentioned that maybe some people got offended and maybe that's what led to something like this it does I think it'd be good to do like a uh known information vers new information like

(50:19) two lists side by side to see like what is different and what is the same maybe that's an interesting thought um depends and see we'll see how serious this gets I mean we got people out here saying it's going to be several more letters for sure imagine if you're a hoaxer and they're like guys I need at least two more letters from you now I mean I don't know one letter already was pretty damn weird for me guys I don't know if I want two more um but yeah I agree uh darar definitely with this idea

(50:45) that this is some kind of personal thing right it feels very personal like someone either there's two angles to it I think the one that you mentioned it seems most likely someone was watching especially yesterday when I mentioned I wasn't too harsh on it but I said just like you said you did a good characterization which I said let's just not call it sacred geometry right um but if you really think about it I think you know when you're talking about like toids and like some of these shapes like

(51:08) the distinguish between the esoteric terminology and the scientific terminology becomes pretty blurred there um but that that definitely seems like there's some kind of personal aspect but you could also take it like okay if it's real then they could also be offended because like you know I'm we're we're the case like you guys have followed along that's why I want to talk to people who have like uh been following along the whole time right and be like okay is this somebody who's like been in

(51:29) the whole time and they just got really offended because of this one angle and like this is their pet story or is this something that's like more Sinister it doesn't really like feel Sinister to me when I uh listen to this like it just feels like I were trying to give you a a push in the right direction I don't know yeah yeah it could be either absolutely okay let's jump over to uh I think we'll go to Sarah first and then we'll go to Ron and then we'll go to a also I can't get Glenn up here I keep

(51:55) trying to accept and it just it's not working so you might need to reset buddy but yeah go s can you hear me yeah I hear you hey Ash thank you I'm sorry I don't mean to butt in I had my hand raised I didn't know how to do this um the whole um saving the that's the thing that's been bothering me the whole time your your narrative about you know they're saving the the people I did not see that as as being a valid argument and just couple yesterday or this morning I don't remember which I

(52:29) commented saying dude it was they were defecting maybe they had something with them and that if if they had this technology going to China I absolutely can see them wiping out a plane and everybody on it just to do it and honestly I think that the if they survived the passengers were offed and if the guy's right that the uh Engineers were saved it was just the passengers were offed they don't care about that they cared about the technology that's that's the that's the Crux yeah the scary part about that is like that's

(53:06) exactly the opposite of what I've been saying right they're presenting this scenario that's opposite I've been having this optimistic approach and they're going no they were definitely

killed so if there's an angle where this person was upset at something I said they that could be it they could say oh no but that just doesn't seem like enough motivation to go through all this effort to come story pretty weird technology is really what it is right then it is absolutely worth everything

(53:33) you know they will kill for this and it that's when like I said when I I commented earlier and it came to mind either last night or this morning and it just blew my mind it was like crap that's the reason so yeah that's the scary part especially because like I'm like okay well it's it's possible I just wasn't thinking it but it's possible right and I think AA cold water I was saying I we'll get to you in a second but the point you made there in terms of collateral damage I I thought about that

(54:00) because uh Florence D Changi when we showed her uh like kind of thing that she was doing speech thing I think it was like conference um I think it was the nephew of the pilot was told that his uncle was collateral damage and I went wait oh that's when I saw I heard that on this I was like that's weird that's like one thing we've only mentioned like one time ever well and it's a super it is a super dark view of the powers that be but I honestly I hate to say I think it's an accurate view of

(54:31) the powers that be yeah it may be uh Sarah what are your thoughts yeah I had two one is you know you could sit down and and and just like do a quick list pros and cons for if this is a hoax and if this isn't and maybe just at Le maybe someone's pointing you in the direction of the science and that science I looked into it today seemed pretty cool I have no idea what it means I not educated enough to understand it but um but it's pretty interesting and you know maybe maybe take that from this you know like you

(55:10) know and if it's a hoax and they want you to send you in the wrong direction then fine you spent like a couple of hour like the last hoax it's like you know you you did it you got through it and you moved on and then my other thought is um the general you were having a live talk a couple nights ago and you're were talking about a general [Music] who yes so sorry am I being too long no keep keep going sorry about that you're fine keep going oh oh yeah sure so the general you had brought him up and

(55:46) didn't he live or wasn't he in that area um in the mald could that be him could it be this Malcolm guy and not the Gray beard guy if it is not a hoax anyway those are my thoughts yeah I mean so I think that you're dead on in terms of like okay how do we proceed here I mean I don't know about making lists and everybody wanting to break it all out like I can listen to it and kind of think about it in my mind if people want to make a list feel free I'm not going to be against it we're already at the extremely par social

(56:14) stage here no matter how we play this out um but also at the same time uh the like you know if this is a real situation then they are pointing us towards the science so either way we look at it it's the answer is going to present itself with time um no matter how we look at it if they are going to I didn't even think about them sending more letters uh if this is a hoax and

they send more letters like this wow you guys are they're really making my day exciting I am done well we got hands up Ashton but I want to say this is a hopes

(56:42) um depending on how much how far gets out like um there could be repercussions like I just want to note that it's not okay to be pulling jokes on people like you know um it is it is you know you you handle it very well but like this if it is a joke then this like isn't it's not a very good one in my opinion like we're talking about families that could be getting news about their their families you know and then like I don't know I just don't like to joke about things that have death so I just I just wanted

(57:09) to point that out that I hope it's real I'm praying that it is and if it isn't then I'm going to be pretty upset at whoever is doing this just saying yeah no I agree with you um and yeah I want to say that it's not okay to hoax about this kind of stuff guys like this is if this is some sick hoax then man you guys please you have real real real issues you need to work through man um you know this isn't as bad as trying to **scam** people for money but uh you know that's like a straight up felony this is just a

(57:36) situation where you're just terrible human being so if you are faking this for whatever reason please let us know right away um you know even do so anonymously or whatever cuz it's pretty damn creepy man really creepy uh Ron G let's go you've had your hand up for a while sorry can you hear me now yeah yeah what's up man all right great um yeah sorry I just wanted to uh I felt pretty much the same way as deir actually just uh leaving a little bit out for you know potential possibilities it being true but at the

(58:11) end of it the more I think about it I mean if this is a truly like a you know a super tenured or longtime military official you know from my experience those people don't speak in the type of way that he was you know transcribing this this letter here it's it sounds really uh you know generally from my experience military people speak much more matter ofly definitively um without you know really precisely um they choose their words their thoughts with with you know with accuracy and and I don't I don't feel like that this

(58:47) letter like there are just too many in congruences in my opinion like he's military but he speaks in this really sort of subjective like writing a movie script fashion talks about movie scripts like it's you know they're very objective people he's speaking in a subjective fashion and then you know beyond that it was also like okay you went from you went from Quantum **Computing** um and how it's not you know whatever else and then and then you make the leap to Randall Carlson with sacred geometry and you know the you know

(59:24) there's was it the from what I know about sacred geometry the big piece of like sacred geometry out there that you know shows up in ancient artifacts and and structures around the world is the flower of life and I think what's his name um can't remember the guy's name but he was Jesse smollet's co-star on that one show he was like the main character um but he speaks about this there's a like a SE secret math that apparently he's and like he gets into this like subject of math and potential

(59:59) science that's so like like yeah it's interesting but like if it had any fundamental like like base in true science today's science like we'd be down that road and like we're not it's just it seems like a I don't know there's just too many in congruencies in my opinion I just I wanted to believe it it's that's a fair take Fair take for sure yeah all opinions are valid you know yeah so and I think that you know um you know it can be it can be either way now the thing I would say is you I

(1:00:32) think we need to keep our minds open from the technological standpoint I mean we're sitting here we're talking about teleporting a plane so it's pretty hard to throw out stuff as being not there scientifically right now like I think that the answer is we need to look at science a different way if we look back at all our hard truths podcasts that we've done I think the one thing that you'll keep seeing from the same from all the engineers and scientists out there is that we're using the same

(1:00:55) science but we're just looking at it differently now same science but a different perspective um let's go over to a cold water I know there's a lot of hands up trying to get some more yeah I'll make this real quick I just had a couple points I just wanted to say like to Roni first of all like keep your mind open like Tesla built a machine that could like tear buildings down with sound I think that sacred geometry is a really important factor in all this like if you watch those like um sound vibrating plates where they put s sand

(1:01:22) on them and then run sound through them you know the sand form sacred geometry so maybe this is some kind of thing where like they can amplify this sound and open portals with it at with enough energy or something like that um the second point I wanted to make is uh I don't think it's a hoax at all I think that if anything the errors in it and all that kind of stuff you know the um deflectors and all that that different stuff I think it could have been put in there to deliberately kind of throw people off the scent of it being

(1:01:50) legitimate like oh it's just a stupid AI video type of thing I think the the key to it and he even calls The Gray Man the key you know he says like oh he's the key to all this and he may not even know it I think that like the the whole point of the entire letter was to connect you with Randall Carlson because this guy's been researching this for God knows how long and is one of the most knowledgeable people I've ever listened to and I think if you have if you can you should connect with him I think

(1:02:16) that's the entire point of all of it yeah and other than that I just just wanted to say that um like China just did a land grab in the mald so you know it also kind of goes into that like why are they moving into the area what are they interested in obviously everybody's kind of buying land everywhere but it's just just a really interesting thing that's going on and I don't think it's a hoax man I think that uh I think you should watch some Randall Carlson stuff and then you guys should do a podcast

(1:02:40) together and with that I'll say uh have a good night and thank you so much for what you're doing and letting me talk to you tonight so thanks man yeah know I want to just say too

like I didn't know who Rand Carlson was before tonight and then I'm sitting there watching I'm going okay that's Joe Rogan the number one podcast ever and that's Graham Hancock and I've been watching his ancient apocalypse show and starting to kind of dig into this whole idea of like how far back toes civilization go right

(1:03:03) and then in between them is the guy that they're this guy this random letter person is telling me to look at I've never heard of before so it's like a lot of this stuff is just man weirdly specific so um Juan man thanks for coming up here today man and uh just as a quick introduction of Juan Juan is running for congress in Texas 32nd so if you are in Texas take a look at Juan and his uh positions out there cuz I know he's a guy was advocating for disclosure Juan go ahead buddy welcome hey Ashton thanks a lot I

(1:03:29) appreciate the intro uh I was listening in here and I watched that most of the haven't finished watching it but I gotta tell you man this smells like a CIA operation where I would assume would be part of this control disclosure process I don't think it's a hoax I think it's someone who has targeted the community again understand who the influential people on here are right who can get their voices heard and have fed you some possibly some real information with maybe a Sprinkle of falsehoods uh

(1:04:03) to assist and Aid in in the disclosure process because we all know that disclosure is is rolling it's it's it's going right now so just my two censor my thoughts oh man that's some great thoughts and nobody had brought that up yet but yeah that was a aspect that I was thinking too which is this idea of like what if I'm just being used and some and I'm just like a pawn and whatever some kind of game behind the scenes is being played right now because people are listening they know I have

(1:04:28) engagement and they know I'll put information out there like I don't know that's a weird dark Aly as well so truth is guys yeah go for it you want to let me follow I do know someone else in the community who was uh contacted to actually be part of the control disclosure process but uh this is this is a different situation here yeah and I mean and from that perspective too if that's the case then it can be even just a straight up disinfo op too so these are the parts where it's like man and that's why I to try to figure that

(1:04:57) outside of it out that's why I think if people are interested we should try to figure out what kind of AI program was used for this I mean it seems pretty Advanced it does have inflection capability and stuff like that um and like how do we think they recorded it like did they use like a voice changer and have the AI steal the voice or did they like write it down in in a text document and have the AI read it right like I think that kind of stuff can help us determine you know what level of technological advancement do they use is

(1:05:22) something right off the shelf or is it something that they had to you know uh have military assets to be able to create it's pretty some of the stuff's pretty Advanced so um take uh Taco Loco do you want to say something else yeah I'll be quick I posted some videos in there with respect to the AI you were just talking about there's a Rogan clip where this guy's talking

about how AI can actually inflect um can sense emotion so there it is right there and that's from a couple years ago number

(1:05:51) two Bob and us just did a live stream about the Flower of Life describing the surface of the uh of the ball lightning or the orb that was on Sunday so the sacred geometry matters I don't really have an opinion as far as the whether this is a lar or not but I'll tell you what this the signs fits and the final thing is one product of this low energy nuclear reaction stuff is microscopic crenelated iron Spears which they found all over the uh the towers and um that's what they tried to misidentify as micro

(1:06:25) thermite or whatever and it's not it's actually a product and you know you can I've been I've been doing this for years you can you can see the videos I posted the video where he describes it in there if you want to sit through it it's two and a half hours but it spells it out you know and you're into the hard science so there it is so those parts fit you know it could still be a uh you know they could be disining at at a lower level because there's layers of wies and lies but I'm here to tell you

(1:06:52) is probably the most experienced guys on here with low energy nuclear fusion but that all checks wow thanks man yeah thanks takoo that's the part twoo that's also creepy is that I'm being told by all the people who are experimental scientists and engineers and people who are DOD contractors and people that are working directly with the Navy and they're saying that the science checks out as hard as it is for us to believe so I know there is that aspect people go no we're not this Advance this can't

(1:07:19) possibly be real but people are going you know this checks out like this is just we haven't looked at this way this is how we advance from what we think is limits of our science scientific capabilities to the next level right do you have followup Taco I was in the Navy yeah I was in the Navy down there and those big weird ships with the domes on them we used to see them and I always had a weird feeling when I saw them and I wondered what it was and later on I kind of those definitely would be what you would steer these orbs with they

(1:07:48) probably have something else now but you know I can talk to you all day about egis and baser and all that too um yeah you know firstand we were gonna talk about agis actually but not tonight I don't think yeah but thank you for your service by the way y y I know but there's a lot more to it but there it's it can get deep but I'm not going to take up your time but okay the science checks out I appreciate it man definitely appreciate that I I think the science is going to check out as well and that's what makes us extra creepy uh

(1:08:17) Melo man welcome up here uh did you want to uh have any comments or anything on what's going on have you been caught uh yes sorry I was trying to uh join the co-hosting before but I was driving uh up the mountain but now I'm back in my uh office here so I can um close to the the Wi-Fi so yeah fascinating I was able to hear the whole thing though on my way home quite a story yeah the the the as you pointed out the the storytelling aspect or someone else did was on point and and quite fascinating and um and all

(1:08:47) the yeah all the relevant things that pertain to your particular you know research collaboratively and the theories you guys came up with um was cool and like you know hey should great to see um yeah I like the idea of um of really analyzing the um the similarities and the differences you know the little nuances that were in there um you and it's interesting that more and more the um potential connection to 911 you know it's not enough that we you know have the most famous missing aircraft in all of history and then the tragic you know

(1:09:17) consequences of course but also You Know Thee the that other big event that were familiar with and um you know in one of our uh the research rooms um our friend money Penney was sharing some of that stuff about the um the theories in terms of I know this is a little bit beyond your your main focus on this topic but um did you catch any of those those um theories about the potential connection between the that Boeing autopilot technology um supposedly that was uh part of the 911 um tragedy as well as um this whole topic that we're

(1:09:53) endlessly um yeah consumed by yeah so um the autopilot thing is interesting because they do mention that everybody was killed so if they are saying that they can't survive this event other than maybe some certain select people somehow maybe they're in the right spot I don't know um then that question you know that kind of B question was the the plane autopilot it to its final destination so I do wonder if there is an autopilot connection to all this and I never ruled autopilot out I mean if you can teleport

(1:10:21) a plane I think I'm pretty sure remote control autopilot in commercial aircraft is uh certainly within the Realms of possibility um couple of the quick things I want to mention related to what Tako loo was saying is that um there's a few different uh if it is fake I think there's a few different motives for it which is like you know being offended by one of the scenarios either may be the sacred geometry or you could tell they mentioned the mall aliens twice right uh the mul aliens being mentioned twice is

(1:10:47) really interesting because it makes me wonder was this somebody who's upset that I was looking into the mall aliens like did they want me to be focused on other stuff or would do they have some personal take here because that seemed like a a really weird thing to uh kind of condescend over although they are right you know if this is a real message then I apologize I have not had my eye on the prize I just wanted to be a little bit distracted um the lightning power thing that was by uh Randall Carlson's um uh buddy uh I have to look

(1:11:18) into but he apparently works with Bob Greener so that's a really weird specific connection as well we're like three degrees of Kevin Bacon uh you know and these are the guys in between us and Bob and then this idea that there's a change of matter it's kind of describing the same thing that Bob Greener talked about where it was this idea that these low Power Nuclear reactions that maybe not even just teleportation we might be able to like completely de atomize the plane like Annihilation event like I was

(1:11:46) initially thinking that that might be but subsequently ruled that out and I think that it was even on Tim Po podcast Dave Ross was also saying that no we have like antimatter weapons

he said that several times and he had never said that to me in person that was pretty bizarre also I just want to uh post his response I actually messaged him about this because I thought this was super weird and you know he told me that at first he read it and he thought Oh I thought you made that and after he realized that I didn't make that he's

(1:12:13) like holy crap that's bizarre um and that's pretty much my uh impression as well is that no I did not make this uh it doesn't even make sense when you make this like it's got stuff that's not even like my theories out there um included into it but it is pretty similar um okay uh next thing let's go to uh Hermes real quick and then we'll go back up to Hey Ocean and then we'll get to darar again oh hey can you guys hear me yeah what's up buddy hey what's going on ash uh Melo Hey Ocean uh yeah

(1:12:47) so you guys have been mentioning the sacred sacred geometry stuff for a while and I've just kind of been sitting sting back waiting till uh someone spoke up about it but in real electronic Theory and uh just radar transmission any type of transmission reception there's a theory involved involving wave guides so wave gues don't use any wires right it's the shape of the ACT it's a physical shape of like a rectangular tube that transmits so electricity doesn't travel through objects it travels on the

(1:13:25) surface that's how we transmit information that's how we transmit power data so it's not just sacred geometry it's part of the math it's all there yeah it's just it's something that hasn't been uh added to this yet as far as I can see and yeah so that's that's about all I want to add to that that's another Avenue that people can look into to see how to tie that all together and then you get into a weird physics like the abandoned torsion physics of Albert Einstein which uh that one's like that

(1:14:00) one's really interesting if you guys want to hop into that weird stuff and yeah I enjoy it's getting closer and closer into the woo stuff especially with Randall Carlson because I didn't know you didn't know about him no I had no idea man and uh yeah I think that the thing that we keep hearing and people I think that people who are skeptical of this it's like why wouldn't I ever heard of this it's because it turns out it's a lot easier to hide in general and you hear people on these spaces that go yeah

(1:14:24) none of the science is real right and it's just that the reality you know the reality is it doesn't it doesn't move information doesn't **truth** doesn't move at the speed of the mainstream media right it moves a lot quicker and that's why social media originally was formed so you could find the answer on social media before you write about it on the news right and I I wonder if that's not the scenario here especially when I have smart people coming to me and telling me you know stuff's real this isn't just

(1:14:48) like random people off the street I mean it kind of is but uh these are people that actually do work in these kind of things that are military uh that have work military backgrounds people that are in engineering people that are directly working with the government on it so I I think it's pretty interesting um good comments her do you have any followup before we go to

Hey Ocean oh yeah uh so I just wanted to throw this out there I I did make a video on uh this specific thing uh a statement made by cator Pas a while back which was piso

(1:15:14) electricity induced room temperature super conductivity yes that that is a that's something that people should look into because that holds all of this together and yeah if you I made like I think I sent you a video about it but don't uh I just skip over the first bit because I didn't realize I made like a really long intro I just threw it together today so uh but yeah thanks a lot I'm just gonna hop back into the YouTube chat and get back with the orb fam thanks can you post can you post that in the chat so

(1:15:44) people have access to the resources and we can help Ashton nro oh yeah for sure yeah I want to post your other video as well that you made it was really good man so thank you very much for helping out and being here here and with everything um yeah uh what I wanted to say too about the the technology was that they imply something that's a little bit different that I haven't really thrown out there but I've been wondering which is does the does the super conductivity lead to the technology or does the technology lead

(1:16:11) to the super conductivity which leads to technology and by that I mean is it the fact that we figure out how to induce super conductivity that allows for the macroscopic phase conjugation event or is superc conductivity is something that is required in order to you know H have the material science elements kind of update to the level that we need them to get to in order to phase this I know it's kind of a weird way to phrase it but um they mention this in the in their letter and I've always been talking

(1:16:41) about oh the orbs like the superc conductivity is the key right but it's a little bit deeper than that the coherent matter wave beam that locki Martin has presumably leads to the superc conductivity which then is what does allow for the magic to kind of happen and that's what they say in there which isn't something I've really reported on so that was really bizarre um just a lot of elements of this are somebody who's like followed along like maybe if like Hermes come out and he said that was me

(1:17:02) then I would believe it but like it has to be someone who's following the case pretty closely in my opinion Hey Ocean what do you think yeah I just wanted to add too I threw the video up in the nest again if you guys want to share the this letter I think I was sitting here thinking who would be the best person like you know it's like important you know uh to like get this out to and then it's just like no I feel like everybody should see it like whether it's true or not if everyone's talking about it like you

(1:17:28) said before Ashton then hopefully it will be addressed by a member of government right like hopefully something happens even if it uh isn't necessarily uh entirely true um there's something else I was going to say too and then I I forgot but um do we have any hands up yeah well so I just follow up as well is that you know this Jeremy Corbell uh Jellyfish thing is been getting a lot of attention right but I I Wonder has he ever had something weird pair of social like this happened to him like I've

(1:17:55) never heard about any weird kind of things like this like this is pretty damn bizarre right even if if someone was famous they got a message like this I'm pretty sure the FBI would be going like trying to stalk them and figure or like figure out if they're a stalker or something right this is pretty nut so is yes Ashton they're probably coming but uh oh I also put up in the nest uh real quick Canadian UAV is the only remotely piloted aircraft system company to be given approve approval by uh Transport Canada for Beyond visual line

(1:18:24) of sight and detect and avoid radar so I'm sharing this because if you look at the screenshot that I shared at the very bottom it says the scarce Pilots I thought that was interesting that they put that on their products website but yeah I just want to share that too awesome yeah I keep going back to the um like you guys pointed out earlier um just the yeah the how well put together it was trying to you know figure out the motivations of it right and um you know I think it's a it's a decent chance to

(1:18:51) get and one of these information control um type things uh as described you know for maybe the purpose of disclosure maybe for other geopolitical purposes maybe both right and um yeah and and you know I'm looking at Randall Carlson I've enjoyed him quite a bit on uh on on Rogan you know like many other guests who um explore these uh not yet mainstream aspects of science um and yeah you know we should reach out to him or he should reach out to you because I think you guys would have some interesting things to talk about maybe

(1:19:21) in one of your podcasts or such maybe you guys can both get together on Joe Rogan sometime soon that'd be pretty uh pretty swell as far as I'm concerned um but yeah very very interesting the sacred geometry I'm reading you know about that right now more and I've enjoyed listening to Randall Carlson discuss that to me you know not being a scientist it does feel uh innately true you know that this this division we've had between the old knowledge and the sort of you know and and sort of the

(1:19:44) increased um sort of cultural uh limitations of how we do scientific institutions and um trying to you know bring those two things together with would you know at least based on this uh narrative um of the letter could be reconciled and I I also really just um commenting on the the exciting um uh narrative aspects of this again which might also be true um the idea of the you know the science behind the science behind the science is kind of outward expanding matad doll of you know what you need to get to this uh level of

(1:20:16) magic that can um turn uh skyscrapers and cities into dust and then air you know into oxygen so it's all very super villain stuff but it also could be true yeah I think that the Randall Carlson thing I want to know more about that I mean I think that that's a thread we pull no matter what on this like okay somebody really wants us to learn about this guy in general and I think that it was the the lightning patent if somebody in the chat can find me that guy's name because he's the one that works with Bob

(1:20:42) Greener supposedly someone said which is starting to get pretty damn bizarre man it's Malcolm bendall hey Ashton how are you can you hear me yeah hey uh hey George is that you

ason can you hear George welcome George hey what's going on buddy ashon hey Aston can you hear me yeah I can hear yeah can you guys not hear me or what's the deal no I couldn't hear you respond can you hear me now though George so George we're just I can hear George I can hear George yeah I can hear him fine go ahead oh no no I'm happy to elaborate

(1:21:18) it's funny I was just looking at Twitter and kind of forgot that you did um um Live Events whatever they call them on Twitter or ex and so I'm happy to join because it's a little a little frustrating but I was just absolutely Gob Gob smacked over dinner here in Morehead City to see that video right and I was interested as hell and I watched the whole thing and it was uh captioned so I couldn't hear it I didn't even know if anyone was talking and I got to the end and damn if it didn't turn to Randall Carlson and

(1:21:53) Malcolm bendall basically and the the Whirlwind of intrigue that I've been involved in for exactly a year yeah the Malcolm band part like that part is pretty nuts man like um so he's the one that's the name apparently he's worked in low energy nuclear reactions with Bob Greener I think there might be a connection there which is pretty bizarre yes yes and no you're close there in in the sense that your your friend I know you and Bob did a recording and that was very interesting and I I recommend that to people and uh

(1:22:28) Bob Came Upon Malcolm about 3 months ago and made fast friends and now we've actually traveled me and Bob and Malcolm and others and what Zurich and um aabad India within the last three months publicly demonstrating it and then I also went to the first public demonstration in Albuquerque New Mexico which was in August so since August there have been three public demonstrations the second to Bob was extremely wired into and then Bob discovered you right yeah so there are a number of you know odd things going on um I'm

(1:23:09) happy to answer any questions what do you think it is you think that you think it's a real video what you or you think this is some kind of weird hoax oh your video oh no it's not my video it's we completely unfair yeah what what a terrible to frame it um from my personal perspective no I've followed you since the very beginning mhm I mean I'm totally intrigued but I'm I'm an anomalist and as a really Prof not a professional well I guess I am a professional now because I hold a a

(1:23:38) for-profit business so right but but I I you know I hate to get pinned down I do think the video I think they're worthy of attention on the national news I think that they're absolutely fundamentally important and we need to get to the damn bottom of it and I think you've done a wonderful job with it and it's not a it's a very difficult job you got swept into heretical science or heretical evidence in a just in a whirlwind and I've had the Good Fortune to have it creep up on me over really 30 years only

(1:24:13) 57 but I've been kind of involved in this my particular thing and it's just fun to watch you handle it so well getting swept up in into it because it's a Hall of Mirrors in the last year I've been involved with the the Malcolm bendall element of cold fusion I've been involved with it further another 10 years as an observer just kind of lucky to be able to have some front row

seats to see you know a group that's working on it very hard so I was quite a Believer and then Malcolm bendall

(1:24:45) through my friend Randall Carlson who has nothing to do with cold fusion in my you know actual library and and Rolodex who I've known for 10 years Randall pops up with a cold fusion guy and I'm like well Rand will actually know something about that we've never talked about it but be careful be careful and then I met the guy and I won't even tell the long story short because we'll do it another time yeah or I answer questions on it but yeah then it's been this Wild International tour where I'm still not

(1:25:20) entirely you know God how to even put it it's too good to be true so I keep my I keep my eyes open but it there's there's a lot going on so I'll shut up for a minute oh thanks man because I think the reality too is I'm kind of experiencing maybe something similar to you so if this St if this science is real we happen upon the one Avenue maybe there's more than one Avenue but a Avenue in order to unlock it and you know you're sitting in the front row seat to these people who are are doing

(1:25:47) it but the public doesn't know about it yet you know maybe this is what that looks like right like that's and that's what I'm sitting here wondering too the whole time where I'm like thinking okay big part of me singing This is hoax but the other part of me is going like what if this is real though man like this is just really crazy right yeah and I love speculation and I think that people don't have anything to lose and you recognize that probably initially maybe your friends make fun of your or your

(1:26:09) friend some neighbor some portion of your neighbors make fun of you but you you know what do you got to lose beyond that you know if you don't have anything to lose now there are plenty of people that are actually more important to communicate about this stuff they all got something to lose so and I'm sure this call is full of people who have nothing to lose and that's a beautiful thing these days but let me give some pointers okay let me be practical about how to get to Malcolm for you ask people

(1:26:34) in chat want me to ask if there's a way to connect to since you may have a con that's right because it's it there's plenty out there and it'll be confusing you know and a little bit bewildering uh steps into the subject but the the first stops are probably for your audience who's deep in they want to go to uh Bob grener who we've mentioned who has been on your been interviewed by you at the Martin fman Memorial project on YouTube and Bob is an open-Source investigator and experimentalist with low energy

(1:27:12) nuclear reactions who again Came Upon Malcolm just recently but has documented every part possibly can of the last three months and that's been a lot so so that's first stop so that's physical experimentation with this technology then the second stop is a fellow named Jordan Colin and Jordan has a YouTube channel called alchemical science and he is a young man Australian seems kind of newly married no kids yet living in a farm taught himself to farm and he's a mathematical genius the bottom line is he's a math genius and

(1:27:50) he's sitting out there in Australia making video videos the mathematics behind what Malcolm is presenting to the world and I know he's entirely independent so you've got then uh Martin fman Memorial project then alchemical science and then I would recommend my friend Johanna James Who's involved with the cosmic Summit which is this event that I'm putting on in June again and Johanna James's uh funny old world and she communicates what's going on she's tied in live to what is doing and she

(1:28:24) communicates it in a pop culture kind of manner I mean it's fun to watch it's not detailed so you've got a mathematical perspective an experimental physicist perspective and then just a hell yeah let's be fun and funny about it perspective so I just wanted to get them out there I appreciate it man yeah so stay up here can uh you know answer some other questions we may have uh real quick before we go to Keem start we've got some people donating in the chat uh thank you very much appreciate that uh

(1:28:51) someone mentions where's uh Ralph Blumenthal and Leslie Keane of the New York Times these videos blow away the 2017 Tic Tac videos I'd say also just the story in general here is just getting weirder and weirder right like how many times has there been a UFO video where people are like H that science checks out we need to you know start leaking information about the science and have like low energy nuclear reaction scientists coming and talking to us it's it's pretty damn weird man anyway Keem what do you think about

(1:29:14) what's going on so first of all the video that was sent to you or whatever I love the video I listened to it three times it's got the story it's so good but it's got to be fake it's 100% fake and here's why the you can tell the people that made this video aren't working on some secret technology these are internet people that made this video 100% they got the voice changer they got the graphics this is an internet type person this is a **redditor** that made this video 100% same thing with like the lock um you know the

(1:29:56) password and all that this is a clear troll the thing is the trolls so vague in so many different ways it actually might be true you know what I mean they're relatively vag about it you know like no there is a couple details there is a couple details with the with the whole um you know Chinese scientists trying to steal information and da d d da like you know it's that's something that someone fabricated for sure um yeah the being actually real and not a hoax not a troll are are very very slim you'd

(1:30:34) have to have somebody that's doing their nin to-5 working on this SEC secret technology and then in their spare time they're doing some sort of like video production to have those skills to do that and if you have that type of person wouldn't they just reach out like wouldn't they just Reach Out under an anonymous account like what of the video the whole point of the video is so it's like a spectacle right so that's that's how you know it's a hoax yeah no I think that that's I mean

(1:31:05) that's obviously the biggest percent chance of what this is right some kind of elaborate hoax the thing that's weird about is like Okay so this person has been like this is like stalker level

hoax creepy like you're following every aspect of the case and you're building this 10 minute long elaborate story but I think the big thing you said is you have to have the knowledge of how to like produce the AI and all that stuff too right it's like what's the profile of the person that would have made this

(1:31:28) you know and all right I one thing I would think I would disagree is I don't think this is somebody who's like the engineer who's making these orbs I think it's just somebody who if it's real then my profile them as somebody who's in the military who's you know a high enough clearance level and tenured enough that they know about these types of events but you know they can never speak about them and then that makes more sense like those people can never come to you directly cuz I mean they're literally

(1:31:52) giving you a story about how they like offed 200 casual people no problem right it's like no you're going to get destroyed if you come out like that go ahead yeah if it's if it's a guy working on this technology you got to assume that that guy is 40 or older right you know this isn't some young buck working on this technology there's no way right so now you got to think of like some 40-year-olds like knowing how to do the voice over AI [REDACTED] read the script like come on bro like it's just it doesn't it

(1:32:26) doesn't seem like that's the type of person um that that would have the knowledge would that would also know how to produce this video I'm sorry do you think that uh what was I going to say um that it was a voiceover how do you think it was made that that a that AI thing do you think they did like a voice changer and they spoke into like someone mentioned Dragon you use Dragon software go ahead you type out an entire script into some type of application and then for you the thing I can't understand is how

(1:32:59) does it know to do the inflections if you do that right I feel yeah as we talked about before um actually my from my experience it's incredibly easy to use there's tons of free and very cheap programs that anyone whether they're 40 or younger although I do agree with Keem's hey ke nice to see by the way uh the profile you know it's more likely that a younger person would do it but it's anyone can figure it out anyone can access it um so I don't think there's a barrier of Entry there um to me just uh

(1:33:23) the Cadence and the kind of style uh of It kind of reminded me of um speaking you know of Anonymous in the content they've been making their supportive of you so maybe it's some kind of fan or someone Loosely affiliated with that um who wants to support you in some sort of creepy um parasocial kind of way thing I'm with you Ashton I think that the some of the inflections didn't reflect Ai and caught my eye caught my ear yeah I think you guys I mean I totally agree with you go ahead keep going Keem

(1:33:49) another point that I want to bring up is that they uh referenced Joe uh Joe Rogan show right and Randall Carlson it's like okay so you're working on this technology and you're sitting there watching you know Joe Rogan you're watching Ashton on Twitter on YouTube you're watching all this internet stuff I mean come on bro this is an internet person this is such an

internet person now I've got a little insight to The Joe Rogan episode because I sat out in the green room right out there with the

(1:34:17) security guys below the analou head you want to hear about that yeah well yeah keep the bridge version but yeah we do of course I'm sorry say again I was just saying just give us the a bridge version but yes we want to hear about it sir of course no I don't if you're gonna Bridge me I don't give us give us okay give us whatever give us your story y'all got something better to talk about than what actually happened on The Joe Rogan episode I'm out Ashton oh I'm into it I I'm I'm I'm a fan of you and Joe Rogan I

(1:34:48) want to hear it uh but it's you know it's sash space and he wants to hear it too no no go for it go for it for it I didn't mean to be rude go for it I thought it was a place to talk I was just going to give you the scoop on that thing no that that okay sorry to turn you off okay we're gonna go to the next person then thanks a lot appreciate it uh weird I think you've had your hand up for a while yeah Aston uh I one I had no idea that you didn't know about Randall Carlson and the tyin with Bob what Bob Green's talking about

(1:35:22) and the fact that uh George from cosmic tux just came up here he was he was there uh at the Rogan episode something like it's wild how deep we are in all this and to learn that you didn't know about Randle Carlson and that whole side of what Bob greener's been talking about and these guys have all been coming together on the same information from different directions it's wild I it's where it ties into like the Egypt stuff and everything else it's it sort of TI to like almost too much stuff where s getting me kind of

(1:35:55) weirded out the P electric stuff is what Salvador Pi has been mentioning like the old Egypt stuff which I'm more and more believing go ahead yeah no that that's just it it feels like we're at a timeline where it's coming out regardless of it's through whatever disclosure it comes from the info is coming out the there there's too many holes in the Dyke there's no plug in it I I'd love to get George from cosmic tux back up here to to give us perspective on because and it kind of goes back into where I started

(1:36:33) following uh prad uh what's his last name prad yeah yeah same thing of of like of of uh creating meta materials using science to create meta materials and really what the the I think one of the keys is is with uh the the semiconductors is wave guides that's the thing that keeps coming up and that's it it's just it's it's wild it's all coming together from every different direction and it's G to come out one way or the other I think but I think the video to keem's point as well these are

(1:37:10) internet people all this info I like the fact you didn't know about Randall okay these people know about Randall and they could have just programmed an AI to make this thing to spit out a video like this I completely agree with ke St it's just internet people I knew everything that they said yeah internet people man if so but it's pretty weird um but it would not surpris me at this point I I definitely that's my number one uh right now my number two is some kind of weird CIA thing uh which is pretty far out

(1:37:37) there uh and then number three is yeah maybe this is some kind of uh real person who's you know being truthful about it it's it's pretty damn bizarre the way it lines up with the science and yeah I had no idea who uh Randall was uh or uh uh yeah like this other person as well Malcolm bendal I mean I didn't know either of them George I did not mean to offend you in that way uh hopefully he was not offended keemstar did I push that too far there with that was I you were just excited you're

(1:38:05) excited and I think he's a little bit less excited than you I don't I don't know hopefully he comes back I know you didn't mean any harm Ashton I know you didn't so and there's an interesting tying back to like the malds and as well as the azors and that goes back to Rand a long Rand Carlson kind of thing he talked about is Atlantis that's where he believes Atlantis was in the azors and there's just I mean and the weird thing that just happened with that Eric Weinstein was just out there I

(1:38:37) think he spent a month out in the azors probably like two month two three months ago I there's there there is some weird [ ] happening man I don't know what it is but keep it up bro this has been cool yeah it is cool apparently I chased away I'm most knowledgeable guess I didn't mean that I just don't know what's going on like this is why I literally don't know who a lot of the people are in this you know it's been an adventure for me so uh yeah once again I apologize for anyone there I've got a lot of people in

(1:39:02) the chat too uh you know mentioning some that uh um I think Randall or or Malcolm one of the two is like one of Joe Rogan's next or like most popular guests that he has on and I think Carlson is Rand Carlson he didn't he didn't put out the uh the Malcolm guys episode that was a year ago it was supposed to be out it was like almost exactly one year ago from today from right now they they did the episode with the Malcolm guy and then never released it and that's where uh you hear uh rold Carlson talk about

(1:39:37) it on the concrete podcast why it didn't come out yeah yeah that's why I think we'll get to this one way or another so I'm not really too concerned about uh you know how long this takes it feels like if this is not a LARP and this is somehow real then we're s what's happening seems to be that this technology is trying to get pushed out to the public and we're being used as a microphone kind of for it which if so I'm all for it man um not that Monica you have any comments sorry to make you

(1:40:03) wait okay no worries hi um I just wanted to jump on and and relate to keemstar like I kind of agree well I agree with pretty much everything that he said and it's not to totally discredit whoever put this out there because maybe they do have you know some good little um tidbits or you know Easter eggs in there uh for whatever reason but it definitely seems like someone that has been following you very closely for whatever their motives are who knows um but I did go ahead and try to put a prompt into very basic um being AI earlier to

(1:40:38) recreate uh you know a similar um piece monologue or story and it worked out pretty well I think I could dial it in with details a bit better um if there were specific things I wanted it to

include I think that I could get my head around it I think somebody that's better with AI could do it much more effectively than I could and I'm not that great with it I just like to chat with it and play do it since you know a little bit about it do you think they would have programmed in some of the inflection stuff in there into the AI

(1:41:07) into the monologue when it comes to the voice part I think that they B basically copy pasted it into a text to voice and even the most basic text to voice I mean just something you can get that's like from five years ago that's an app on your phone you can use punctuation to really alter um its Cadence uh you know if you put a question mark in an odd place in a sentence for example it'll bring that inflection up and then drop it back down you can put a period and then a couple of spaces so that it actually takes a

(1:41:38) breath so you can actually manipulate that with even old stuff that we have the new stuff that we have is like really intuitive and better and I haven't played around with um any of that stuff yet but I have you know watched other videos where people are playing with it and seeing kind of what it's capable of and it's really capable espe especially in the hands of like kids nowadays like they know how to do all of this stuff they've grown up with it so I mean I don't think that this would be hard to create with AI but that

(1:42:09) doesn't necessarily mean that it's just a hoax and it doesn't necessarily mean that it's not it's just in my opinion it wouldn't be hard to to create with AI even the whole monologue and story and keep in mind too what you can do with AI is create an initial prompt and then do a story scenario where you trade off paragraphs so for example the AI would create one paragraph then I would create the next one and it would take what I just wrote and create the next one so I could easily put in um information more

(1:42:38) specific to your thoughts and theories on this whole scenario and get it to play along with me to do this whole monologue so it's actually possible to do it in a really detailed way but that's not to steal um steal away the uh potential for this to have some credible information in it yeah you know it's just I think at this point it's turned to sort of like a a game of Clue like you know who done it and why yeah definitely and I think they're presenting some scenarios that are pretty interesting I I want to

(1:43:08) understand how they made it in general and if this is somebody who's hoaxing man they're giving us a lot of content here now you could say it's a distraction but like they mentioned you know it's like what are we distracting from Miami aliens and Jellyfish creatures like I'm not too worried about it they'd have to be all up in your whole all of your content to go where they went to I think that's weird as hell too so you could tell they were frustrated right they were frustrated they're like

(1:43:32) bro I don't want to hear about these aliens get back on the plane this is the thing that I tune into every day I watch Ashton on this stream I want to [REDACTED] with him you know obviously he's wrong da d d da we gotta guys let's get together let's put a script together let's throw something in chatti GTP let's put in a bunch of key things that are important that'll spin up a

script okay let's edit the script a little voice over thing I'm telling you this is 100% kids but what we need what we need

(1:44:03) is we need a camera crew following you around Ashton you got to make a documentary all right we should talk about that privately I don't know if I go through your agent or other people but um yeah it's been considered we'll just say I think do you have an agent no I don't have an agent but uh okay well I'll represent you bro I'll get you with the the best people in the entertainment business I was talking about today sitting at my parents place and I'm sitting in front of the fire my dad's

(1:44:31) like can you make the fire go while he's like making some dinner and I'm going dad this I got this influencer who's got like two and a half million followers and he keeps telling me I got to have like a crew follow me around cuz I'm like like my parents are finally kind of able to talk to me about this a little bit I'm like you guys got to listen to this voice this message man this is like stalker level like psychopath level stuff going on and like uh yeah I don't know anyway go ahead Keem do you have

(1:44:55) any other final thoughts or mow if it if all this is being documented right and every step of this is being documented and a camera crew is with you and you actually solve this [REDACTED] you actually get to the bottom of it you actually figure this thing out Case Closed international news that documentary following the whole entire is going to be worth millions yeah it's not even about the money but it just be about how amazing of a you know I mean you guys have been along for the ride here right like this is imagine being in my shoes like a lot

(1:45:30) some people out there are probably going like this is this is fake right like he made this maybe but no I didn't make this this is just the craziest crap happening whether or not these are like people that hate me so much that they're trolling me the redditors or if this is really the way it's just it's it's wild so uh deir did you have some thoughts oh yeah I was just going to say um I was actually just working late uh doing some AI stuff I thought maybe I'd play something for you guys you know

(1:45:56) just to show you like just how crazy it's gotten with AI voice generation like I just put something together quickly you want to hear this yes please okay sure let me play this out hopefully you can hear it the AI stuff is just really wild to me too guys just wrot they just plug the SC into 11 Labs using toate the voice hear that yeah yeah I mean that's really good yeah I think that the AI stuff is is just wild in general and the voice stuff as well I mean I know that's an AI that we're listening to I know 100% the

(1:46:34) question there is like I'm trying to think about like the mindset of the person who wrote the script and you know what they were thinking in general and all the different synchronicities I guess I'm using that word so much now uh related to the case is really weird they also mentioned two islands which I couldn't tell if if they were talking about C nicobar and so here's I'm going to give you a quick timeline of what they said so they said that they intercepted or they took the plane 2 hours and 13 minutes after it took off

(1:47:01) or left now I think that they're using the 1630 UTC time there to make it time up then with 1843 UTC cuz they then say that the plane landed at 1856 UTC that's a very specific number nobody's ever used and so it's like where are they Landing does that mean they're teleporting right next to Diego Garcia like about the story they're telling it's some parts of it seem incoherent but it could just be that the story that I've been telling is is potentially partially wrong um so no matter how I

(1:47:29) look at this it's it's just really really bizarre man and this is in a person where like with the **scam** it was like what was the story behind it it was like oh uh I'm a dude with his wife and I want my car fixed up and I happen to have this stuff air gapped like that's nothing compared to the complexity of the story that this thing wrote so uh pretty wild Harry King what what do you think man so I want to tackle this from a different point of view um I don't know if this has been discussed yet but why

(1:47:57) that flight why am Malayan Air flight yeah so I think that everybody even if you look at the other conspiracy theories that have been out there um they've all basically said it has to do with these 20 free scale semiconductors and Engineers the other common one that you'll hear out there is this idea that there's a patent that five people control and with four of them disappearing it reverts I think to the carile group um now there could be an aspect to that but I don't think this is about making people disappear there's

(1:48:26) like a lot easier ways that you can do that um we have speculated early on that there's a few different things it could be an Espionage which I I rated pretty lowly but this idea of like where it the plane goes dark is in this like weak Zone and there's a couple passengers that are supposedly Iranian um Nationals that were like seeking Refugee or seeking Refuge but they're going to **China** from kumur to get to Amsterdam so um the satellites uh the Satellite computer actually only connects to the India satellite even

(1:48:56) though it flies towards the Japan satellite so there may be some play of Espionage here and the idea that the batteries were put on the plane as well intentionally also kind of lines up the batteries weren't scanned twice so if we think that okay maybe that wasn't incompetence but that was maliciousness they could the story that was presented there where that they intentionally load these batteries they knew they were setting them to to burn and they knew how long they burn kind of makes some sense now we had already

(1:49:23) always pretty much proposed every single time that I think that this plane's being saved that the teleportation event which is an endothermic event could be absorbing the energy from the batteries uh and the idea is that these people are tied to the technology that is something that I've always pushed out there um the other scenario is real quick that there's like maybe a VIP that's super important on the plane maybe it is one of those people and then the last scenario which I think is like the

(1:49:44) lowest likelihood is well what if this was a weapons test assuming again this is all assuming the videos are real so what do you think about that right so several of those can be

definitely questioned and um questioned I'm going to put it in this way in today's day and age when a plane disappears and you get that type of mobilization you don't pick a plane as a Target you would pick something more inconspicuous if you're doing a test try something out this side and the other to eliminate people get rid of them make

(1:50:18) them disappear you don't pick a plane for passengers because you know those make National and Global headlines as you clearly have seen and also for the fact that you know different governments are involved different airspaces so on and so forth so the notion as to why that plane um just as a reference I don't know if you guys know um um there are usually about 2500 and I've been trying to research how many trans Oceanic not transatlantic Oceanic flights there are per day and it's unfortunately um it only

(1:50:58) gives you transatlantic I haven't seen transpacific But there are so many different flights per day that crosses oceans um when you're referencing that it's maybe these two Iranians who wanted to defect well yeah okay let's if you Analyze That how does that go well you make a whole plane you take a whole plane down for that yeah so it's not just just to clarify real quick that the Iranians were uh ones that were running on Stolen passports they're not the ones that were defecting we have 20 free

(1:51:32) scale Engineers who are on board the plane which is 20 is way too many and in this piece they also mentioned that this Espionage plan was known about since December beforehand that's something I've never broached at all that's was completely original and they also mentioned they they knew this was going to happen they let it play out like a movie and that the eight of the these people were Chinese they mentioned that the Chinese ones were the ones that were going to defect supposedly um they also

(1:51:57) said that they inter like they knew think about this way as well is if they were American they would probably come from different places in the United States and then they were flying to KL to fly to Beijing that's their connecting location right and so they pick them all up and they know that this one plane is the one that they you know this is the one they're going to make disappear now to your point yes this seems like a huge amount of work but the reality of this thing is this is definitely a conspiracy when we look at

(1:52:22) it the fire scenario just take away the orbs and teleportation stuff from what we've investigated the fire scenario makes the most sense out of everything that's out there these batteries are extremely dangerous they weren't scanned they're in the forward cargo bay right next to the main equipment center make senses why PL knocked the plane out the flight path is going back to panang the closest airport they assumed early on it was a maintenance emergency we've just forgotten all this information we've

(1:52:46) forgotten that a 777 can't crash into the ocean without leaving a debris field so what this means though is then there's a huge conspiracy because they for fabricated these IMAP pings in that scenario and all you have to do in order for this scenario to make sense is take away the imet pings that completely takes away every single expert out there their theory of

what happened to this plane just completely falls apart including Richard Godfrey with his whisper data that's all based on the iMat pings uh even Jeff wise he says he

(1:53:14) just thinks the plane went North instead of going south he thinks it went to **Russia** right the ersat pings are what keeps this narrative alive out there so the fire scenario in my opinion is the most common one now it's just a question of okay you know would they really go and deploy this kind of Technology would you really take out 200 people the person mentions I didn't even know the numbers like they say, 1500 family members and like 10,000 people searching those were numbers too I didn't even

(1:53:39) know about so a lot of really weird uh details any last thoughts Harry on that yeah well here's the thing on a Firebase scenario right so if you examine that you mean to tell me the entire plane vaporized in air without any Trace I'm sorry I find that a bit hard to believe myself no and I don't think it did necessarily vaporize but it could that's what they're saying as well is that this technology used slightly differently and this goes back to the idea of the sacred geometry and what I like about the

(1:54:10) sacred geometry is the idea of Simplicity and that if you think about like if you were just to say okay I'm going to have a line start you know turning around or making going in any direction like what would you say is like the most uh I guess like organized structure it's going to be different shapes that happen um and this is like if you're thinking of the basic framework of the Matrix underneath this reality that we live in you would think it might be right angles where you're making squares you know I

(1:54:36) think that would be the most common uh conception but you could have other more complicated shapes and I think that I think about that more and more with the stuff like the toroids because when you're trying to break reality then what do you want to do you want to try to uh like if you're playing a video game where you're you're trying to do is you're trying to push the limits you're trying to figure out what's the op thing and strategy that I can do that will you know make me have something

(1:54:56) significantly better than the next person that's what I think about when in terms of like what we need to be able to do to break through the reality and have like teleportation happen or Annihilation and once you unlock any of them I think you unlock all of them so I don't know that they're saying that they annihilated the plane here but um it definitely is a possibility go ahead sorry well it well well let's look at the flight path right flight path says that all what who picked it up right so

(1:55:23) you've definitely got Malaysia picking it up you've got Malaysian military picking it up you've got um it Crossing back over the Malaysia uh uh Malaysian uh Peninsula and then making that right turn at panang those are all verified radar well what we're being told as verified radar contacts right at that point it's simply Vanishing Annihilation trans uh teleportation incineration however you term it right um doesn't hold because when the flight path is plotted and they've seen it and they've tracked

(1:56:04) it again this is what we're being told right it all of a sudden makes that you know it could have either gone on the Northern Arc of the seventh Arc or the southern Arc right and that's where I agree with you um the only quote unquote um facts that we have is that emmer satellite showing you on the southern Arc it could have easily G on the Northern Arc and produce that exact same scenario yeah I agree with you that that the lack of a debris field even when a plane hits the water um is um startling um but I'm more of the belief

(1:56:42) that I think the plane did um have some kind of issue after it crossed over uh panangin made that weird right turn um and then went out to see I think um it could have resulted in some kind of um let's just put it this way um malicious um uh um decompression that could have happened right and the pilot ended up you know doing this um I find it hard to believe well it's not hard to believe but it's a harder stretch to believe that it was some type of teleport oh yeah of course but but but the thing

(1:57:23) that gets me the most and this is where even on a debris field right and this is where my knowledge is because I TR I I fly a lot that's why um there is an issue with one aspect um a plane carrying a ton of um kosene a jet fuel if it runs out and then plummets to the uh ocean and that's like hitting like a hard rock yep um my issue is like there was no sign of an um kind of any oil or jet fuel and this is what I don't know and this is why I came on board to ask you sure if we take it at face value that yes it was um pilot um

(1:58:14) the captain that did this and he um maliciously you know depressurized the plane the passengers in the rear um passed out then affixiated um that took care of his problems of any kind of retaliation um he already had locked out the co-pilot from the cockpit he was all by himself turned off all the transponders he knew exactly how to do that plane runs out of fuel promised to the ocean there is no jet fuel left for to disperse as it hits the ocean because it just ran out of fuel and it's went straight down the debris field is what's getting

(1:58:58) me hung up on there is no debris field and that's what's causing me to question which Arc they were looking on there is no debris field it's worse than that the thing yeah sorry uh so yeah no I I think I agree with you there so now the thing too is that a lot of people don't mention this is that the this narrative out there this P suicide has a plane running out of fuel and like you mentioned if this plane's running on fuel they're not making a controlled Landing like this thing's going to stall

(1:59:24) they're going to just crash down right and then it's going to explode into thousands of pieces there's going to be debris everywhere and the other thing too is there's no acoustic detections we would expect the acoustic detection in pretty much any scenario unless it is like somehow this perfect you know feather drop onto the ocean we know about the sosus system Diego Garcia hydrophones as well as Western Australia hydrophones the number of radar systems that had to have picked this thing up

(1:59:47) it's actually just getting ludicrous at this point I I used to think it was just like Indonesia and Australia which both have huge radar systems I could not have possibly missed this plane

but it's also Thailand India and those car nicobar and Port Blair it's also Diego Garcia supposedly should be able to track this from its takeoff there's also the Coco islands has a Sig int base right there in the South Indian Ocean no way it can possibly miss it and then you also have behind Gap Air Force Base or base in

(2:00:14) Australia which is also this secret like you know space based radar based system so it's like there's no way the US didn't see it at all just no chance at all um and that's the thing about it Northern Arc right yeah to the northern Arc that it went on the other end towards **Russia** and the problem with that is there's also tons of radar systems and then you also have to figure out okay well why would **Russia** keep this quiet right why are people why are we keeping it quiet if we know it went to

(2:00:39) **Russia** so my opinion is that the US government knows definitely what happened in this plane um let's go to Thomas you've had your hand up for a while Thomas Edward Mulford Jun Jenkins go ahead sir hey how you doing hey uh can y'all hear me yeah yeah we can hear you man how's it going hey how you doing hey I just want to say hi to the guy if he's going to troll again or he's actually giv information if he's listening right now uh I do want to throw some advice to the guy if he is uh releasing that

(2:01:06) information there is a way for any of you to leak that information if you really have the documents uh through blockchain and a lot of people don't realize with the blockchain technology it's not just some currency that can exchange block blockchain is a technology where you can now have uh **truth** instead of trust that's where we're kind of leaving into this new field and with AI it's very easy to create um manipulation especially this year with the the elections going on I mean Ashton I can literally take three

(2:01:35) of your videos go on an llm and I can replicate your voice perfectly and even pitch and tone exactly how I want it so so now we're trying to get into this territory of digital identity I know it scares a lot of people but you you can do it with this technology called zero knowledge proof so let's say if you're on the ethereum blockchain you're like hey I want to get some information without revealing identity they can go on that blockchain send you sensitive data without revealing their identity

(2:02:03) and it could be protected So in theory you could go on the blockchain get this person to give you the information if they have the balls to do it if you're listening can totally set that up and they can give you that information you can verify it right then and there and it would not reveal their identity so I'm just throwing that out there if you're listening right now there is a way for you to release the information without getting your ass in trouble yeah and just do it in a way where somehow I

(2:02:29) can figure out this ethereum thing that's pretty tough for me but I think I totally agree with what you're saying in terms of if this is real and somebody's out there trying to get information out there yeah do it in a safe way and I think that there are people out there that know what happened on this plane I mean I'm certain of it right so we just need one of them to

do the right thing and speak up right and if they speak up and tell tell us what happened to this plane all this stuff goes away whatever

(2:02:52) this whole thing that's going on right now goes away you know I I wish people would just speak up whatever the answer is right like I think we deserve to know the **truth** so if you're out there if you're the person that made this video if you're somebody else who happens to know please just speak up tell us the **truth** give us the **truth** for the families Etc we can take it even if it's this dark story of them all getting wiped out I think that and I don't mean that in in a that was kind of a crass way I mean

(2:03:16) them all dying is horrific and that's why we want the answers anyway hey you had your hand up I did I put it down uh that blew my mind blockchain disclosure I'm telling you me yeah blockchain disclosure baby this that is amazing um yeah hello hey uh we're gonna let Hey Ocean was speaking I think you might be not be able to hear yeah hey D un muted you um I don't if you can hear me but we're gonna maybe have to recycle you because it's not okay you hear me okay uh what was saying thank you Ashton

(2:03:48) for all your heart hard work you have some of the craziest trolls that I've ever seen uh they're starting their own disinformation campaign uh most of them are useful idiots and shills I think maybe from different intelligence agencies I don't have evidence of that but if everyone wants to take a step back and look at a uh a book from the early 1800s from Francis Barrett and he discussed these these demon Sig uh sigal they're basically symbols and if you take apart a Microsoft computer a lot of

(2:04:25) these microchips have the same images as these old um occult books that you can read in these areas so I find that uh I find that pretty crazy because I looked at uh your video over and over again of those three orbs going into there and it all goes back to sacred geometry and if these Elites have that info which we know they do um they could obviously pull something like this if you believe in Stargates and uh telepathic transportation and whatnot but I think this technology has been around for at least the last 60 years and we're just

(2:05:10) unaware of it so when we all saw that it was a really big shock I mean even in my belief Zone but this technology has been around a long time so I wouldn't put it past them for using it and that's all I got to say thank you very much Ashton for letting me speak and you have some great subscribers you have a great community and uh peace out and blessings thanks a lot deep ancient I appreciate it man um yeah this is weird for me man just to be honest with everybody and I I've probably said this before but

(2:05:39) people who don't know um and then we'll get here to Taco Loco is that you know I was never big into uh conspiracies or even this deep into the science or this into um stuff like you know sacred geometry really is what we're talking about sacred geometry is like what is the simplest form our universe can take shapes right and then building those shapes into patterns um and uh repetition as well so I think that uh a lot of this has just been hard for me to take in and if this is a giant scop and if there are people trolling on it and

(2:06:10) are trying to lead me down this weird path well I thank you regardless cuz it's been quite a journey for me uh anyway however this plays out um taco loco what's going on man yeah listen I not the flex but I used to sail those Waters when I was in the Navy I was a weapons officer on the ship after I was a reactor operator before so I I gommeed on to this MH370 thing because it bugged me when it happened all we did when we were out there was track airliners for practice and when you were on an when you were on a an exercise like Cobra

(2:06:42) gold or that whatever that weird one was named but I mean we did that yeah all you do all you do there is zero freaking chance we didn't have a track on that zero yeah not just the little small boy surface ships the egis which can track a basketball at 250 miles plus the awax if something weird was happening they back in the old days they would have set a fighter cap now they would have sent drones like we saw I saw synthetic aperture radar being worked on on my ship by the guys at spay war in San Diego the the the spooky guys in the 90s

(2:07:18) and it looked just like that and that's why I knew when I saw those videos that it was legit plus the lat long and all that I mean it's all that's legit there's zero down in my mind I've also happened to have picked up pieces of a jet that got shot down uh in in a training exercise in the ocean and I'm here to tell you and that was just an A6 there's fuel everywhere you can see it from the sky there's pieces everywhere you the the plane did not crash in the sea especially not with that going on

(2:07:47) yeah the thing I keep going keep going I had a top secret clearance and you know mostly mundane stuff and I'm not I'm not trying to flex but one thing that you know about that if you if you're in it is everything is siloed and need to know so some guys may be even like this guy you know this guy may be legit and telling the story that he thinks is true it may not be a lar and and then and one thing to think about is like what is he saying he says stop looking at the stupid jellyfish and whatever happened

(2:08:14) to that mall I mean that's clearly probably some kind of distraction and look at this remember what's at stake here you know I know about this energy I I I came to the the mfmfp because I was following cold fusion back in Nuke school when I was a kid I I mean I know this Tech is real and I I've spent years you know following Bob and doing my own research I've transmuted metal I've made those little microscopic uh crenelated iron it's real so you know everyone wanted to say well what ises you know Weinstein say about

(2:08:48) it well either he's wrong or he's lying or he doesn't know because this stuff is true period so we're all scientists here don't you know don't say oh because I don't have a white cat I'm not a scientist we're looking at the observation and trying to make something fit to it and and all this science com came up and it's legit you know Mal Malcolm and and his Tech I did something like that when I was a kid that's just pretty mundane saving fuel stuff using low energy nuclear fusion in the teral

(2:09:16) moment blah blah blah I won't B you with the tech but it's and it is Earth shattering right so remember that so there's going to be all kinds of stuff coming out like this to distract us

you know for yeah it'd be great yeah you should be recorded because it is big but the big thing is we don't like you say we don't need energy you know we don't need to pay for fuel anymore we can we can literally transmute Metals we can do all that stuff and they have been doing it you know you talk about Bob Lazar and

(2:09:42) everyone go osbs because he says you know Element 115 is you know californium or whatever some transuranic doesn't matter that what what it behaves like is a meta material doped with evos and if you go through what an EVO is it's just a mini bit of ball lightning which is comprised of sacred geometry whls in the toroids like you know like you see on on those dragon balls all over Asia and you know Bob's got you got to do the work to see that but I'm here to you know I'll save you guys you can trust me or not but

(2:10:14) I'll save you the time it's legit and you've already talked to guys that agree and we're all coming from different directions and we all got here and it's written on all the ancient monuments for a reason yeah and then you know when they talk about the ancient cataclysms and all that stuff being destroyed what what do you think did it what do you think carved the pyramids yeah so I appreciate you keep keep your eye on the ball on this is that freaking big yeah so I I first thing you mentioned is like

(2:10:42) the clearance there's a lot of people have clearances I've had a topsy of clearance mine is mundane but you know what I'm flexing about it anyway no I don't really talk about that much cuz I I don't think it's that huge because of my my knowledge is mundane but if you think about somebody who does have that knowledge I I think you brought some really great points about it how this could be real and the story behind it being real would be that somebody has compartmentalized information and what

(2:11:04) that means is they're just telling the story of what they think it might not even be 100% accurate right they're just telling the story from the perspective of their what they saw like don't think that like they're an engineer what if they're just somebody who is in the know with a top secret clearance that is a person that manages the on flights at Diego Garcia right of course they know that they lied to us how nuclear power works I mean they lied to us about that you know because we didn't need to know

(2:11:27) I'd ask my instructor but wait sir if this happens they'd go shut up son and just push the I believe button and you know and answer this way yeah and you so yeah so I was going to say too real quick on what you mentioned is this idea of infinite energy uh there's a term called overunity device which is peret is essentially a perpetual motion machine which is you know a free energy device to a degree um so that might be something that we look into as well related to this now that we but that's

(2:11:54) like that that that that word poison that term is poisoned like conspiracy theory I mean if you talk about what Bob and Saul talks about if you set up the right situation you end up setting up basically a portal where one form of energy transmits to you know switches to the other it gets into the phase conjugation and the gayer wave and all that stuff um yeah and it's

and when you understand it that way without the prejudice of there's no such thing as Perpetual motion well why we see it what's making the Earth go around the

(2:12:24) sun it's not inertia that's what all these great scientists teach you even Weinstein will be talking about oh yeah it's just inertia and it's all gravity it's not I mean that gets into the electric I mean it's all connected and it all has to work together so you know the Earth is a homopolar motor and it speeds up when there's a solar flare as one would blah blah blah okay yeah appreciate you man Taco Loco that's uh some good information I think that you mentioned Weinstein as well Eric uh

(2:12:51) Weinstein I believe you're talking about and I think that we talk about the physicists that are out there there's a lot of physicist to and I don't mean to disrespect him at all I'm actually not really talking about him in this case but um I think it was super nice guy sounds like a nice guy yeah Gary Nolan was ripping on Neil deGrasse Tyson saying like when it was the last time he was in a lab right and I think we also have to remember that a lot of these academics and people out there the reason why we

(2:13:12) don't look for people who have letters next to their name is we know that just because you have letters next to your name doesn't mean that you're somebody who in the know that you're in the trenches doing the tests right you're just somebody a lot of times there are people that are reading other papers they're coming to their own interpretation they're just giving their opinion right they're um sometimes they are like science influencers and not science experimenters the basis of electrical

(2:13:34) engineering Maxwell's equations was pounded down to make it easier and to take all this stuff out of it and you know and and Bob Rossy will tell you that anybody will tell you yeah so it's it's uh pretty interesting there one thing I want to go back to just real quick uh that was back to the more of the what happened with the plane scenario that Harry was talking about one thing that happened recently too was this door fell off of this 737 Max and none of those passengers passed out or anything like that as well

(2:14:02) in fact those air oxygen masks apparently worked I I have no faith in the oxygen masks and after this investigation we learned they only last for like 30 minutes which makes me wonder they tell those passengers that now what I was told by somebody I a commenter I don't know if it's true or not that this happened when the plane was at like 14 15,000 ft so quite a bit different than being at cruising altitude but still really scary now keep in mind like when you're at cruising altitude and you land normally The

(2:14:26) Landing process takes between like 20 and 30 minutes which is already a really short window of time so you have to get to the ground like right away um just something to keep in mind in general uh because I think that if the pilots were to depressurize the plane manually like they're not blowing off a door right they're doing they're using something to like open the vents or something like that right it's going to be a slow process it's not going to be a process where everybody gets WIP wiped out

(2:14:48) instantly like we see that happen with this door situation um which is a much worse situation um Herm or yeah let's go to Hermes real quick and then we'll go to Hey Ocean oh hey uh yeah I just wanted to touch on some some of the stuff that taco logo was saying I was I was dying laughing the uh the rage I can feel it because I have the exact same I I uh I'll give a bit more of my background um I'm a fully qualified Naval Weapon technician and a sonar technician for the Canadian Armed Forces and and I like

(2:15:19) I I train people on all this stuff like I well I was flown over to on a helicopter to fix some equipment on USS pikney during like a West Ploy couple times uh stuff like that and it just there is so there's so much information that's available online and just out there that as soon as people know what to look for they can figure out the analogs to relate them to other systems like a lot of electrical engineering works like fluid dynamics so as soon as you get to uh high power and uh high frequency with

(2:15:55) wave guides and whatnot you run into issues like conglomerate eruptions in your wave guides which is uh just it's the same type of uh uh Cavita of issue that you run into with propellers so there's a lot of the stuff that relates in the macro world that you can see and just like with the uh you've heard of phase shifting with the different electrical signals now what happens when an electron phase shifts there's a wind there's an ion wind that's what happens it's slight but every electron produces a mild ion wind

(2:16:31) and that's where you get that type of thrust from it's a same and it's all cyclical it'll keep going back on in on itself like that anapole design that uh Bob Greer was talking about and it's you have to realize that we are constantly being bombarded by waves that are way outside of our Spectrum we only see a very tiny visible spectrum of light all the way down to Pro to zero Hertz which is going into the red shift and whatnot and that's where you get into the L frequency stuff and that's where you get

(2:17:02) into transmission uh carrier frequencies that can travel through the Earth or through into your brain which they already have patents on for these new screens these LCD screens I passed them up before and anyways I'm just going to uh pass the buck on this one yeah so I mean what you're getting at is that um the science and what we see out there there's a lot more than what we can visually see especially in the the Spectrum and everything is really a matter of vibration I think that I I didn't give Ken wheeler enough of a

(2:17:32) chance early on because I was having my own CNM BR and go on but I think that his theory that we need to stop thinking in particles and start thinking about waves uh makes a lot more sense to me and because when you think about it like that you don't think of light as a photon but you think of it as a the interaction of SpaceTime where SpaceTime is reverberating kind of like you would think of it as sound don't don't think of a wave think of an oscillation there's a slight difference because an

(2:17:55) illation is a three-dimensional movement and that's one of the things that they don't teach people in a in 3D space you have uh people only think of forward back up down left and

right but there's actually pitch rolling yaah as well and that's the same thing for any object traveling it's it's through wave propagation so there's a bunch of principles that people are going to have to look into to figure this stuff out but I'm just going to drop off here and get back into the YouTube chat yeah

(2:18:21) thanks a lot appreciate you man um just real quick I want to get some other people here as well but yeah so this idea of you have wave propagation uh why that's important is think of the uh glass scenario I think Dave Rossy brought this up why it was so important is that if you flash your light through the glass you're going to see a Bend right and that tells us that there is another medium there right now you have to think of the air as well and the space around us is yet another medium so is there really a speed of light or is

(2:18:47) it the speed of light is just propagating through what we would consider it's empty space but it's not really empty space there's like in they say ether but I call it Matrix whatever underline framework um so those are definitely some advanced concepts we want to be thinking about if we think the science is real because we have to stop thinking inside this box that we were taught previously uh Hey Ocean I saw you had your hand up I want to get some hands here yeah for sure we haven't heard from

(2:19:11) uh anema yet so oh Ena yeah enema and then we'll go to Harry K hey can youall hear me yeah what's up yeah hey it's uh yeah anema that that's a friendlier way of saying it I adopted that handle uh in 2015 uh I'm sorry 2006 when I uh I got my decades WR when I almost went to work for the FBI for the carnivore project I didn't it fell through but just in retrospect um you know you're fighting the good fight Ashton it is a hard uh area to practice honesty and openness and transparency uh excluding your own bias

(2:19:51) at any given moment as you intake more information that's true science and we're practicing here as a crowd a lot of crowd Source science I just learned things in the past 10 minutes and and it just reverberates right it just it all seems to make sense so I I know it's a good vibe here so kudos to you and the team thanks man I think the challenge two more points real quick uh the challenge today is uh many speakers have mentioned is authenticity right validity of custody my own domain right now is

(2:20:19) cyber security so one of the things I actually fired up is a website recently I tried to fire it off for interest it readit and I got shut down by the RF UFO moderators for trying to commercialize and right on the front page I'm like this is nonprofit like I'm not trying to so it's an AI driven uh you know you submit a picture and oh that's an octopus but it's really this but it's really this morphology and you know so a lot of things can happen we can crowdsource hey were there any other

(2:20:46) people in the area you know so it's it's kind of like taking Avy lob's star scanner idea with a \$6,000 setup and making the average Joe or Jane have that in their pocket with an app we'll see where it goes but the URL is uh UAP x. sorry small self promotion but it's for the community and I and I truly am a believer so here's my take and here's the the the the uh the

rather darker aspect of what I see recently with the YouTube comment uh I think it came in today uh where you had uh I'm trying to

(2:21:19) trace my day uh but basically there's a submission to you uh from somebody on YouTube that is uh uh asserting some facts about their involvement and validating the US's uh utilization purportedly of advanced technology uh harvesting from we're going to conceive here and I believe in in the concept of nhi nhi right so let's just break it down I believe in the concept of a deep state so rapidly here and I'll try to cut it off and I won't go too long with it but it could be disinfo right it

(2:21:58) could be and and here's my tldr maybe it's nhi gone wild right where they've just violated the gria treaty they've just uh absconded with 200 plus human souls and we may never know the reason for it right now who wants to cover that up well obviously if we're thinking in this kind of uh Foo and woo uh area which I practice at all right I I love the hard science I love the meta topics right so the bigger topic is it could be just something that was out of our control and we don't want anyone to

(2:22:30) really know that that kind of fits in line with some of the thematics of the bigger communities drives for awareness that this may not all be bright and shiny in the way that we need to or we have thought about it so our Consciousness expanding how we think about things things might need to change but for right now and right here have you considered this could be a disinfo op and that's my takeaway yeah thank you no I have I've considered every possibility uh because again this is a letter that uh just for some background

(2:23:00) how I became aware of it earlier today right after lunchtime I saw myself get pinged I get to pinged to a lot of stuff I haven't been really following my notifications super strongly but pretty closely and so I look at it and I I've looked at a lot you guys sent me some other videos today like this one woman talking about some pretty Advanced uh interesting technology um and I saw this one and first thing I read is a letter to Ash and Forbes and usually if there's something in the media or whatever I try

(2:23:25) to look at it and see is it talking about me there's been a few cases where they've been talking about the case but not really uh super in detail so I looked at this and right away I got creeped out I mean it was right away I could tell it was super specific very personal and I think no matter how you look at it the the narrative around the mindset of the person who sent is they were upset at something they really upset because um you know this is just again if I don't know if somebody crafted this

(2:23:51) narrative or what have you I think it could be disinfo to either push me off some other scenario push me off the non-human intelligence scenario or maybe just pushing towards this Espionage scenario that I haven't really been promoting really honestly with you guys I have no idea what's going on here with this um but they the things the reason why they seem like they can be angry is either because I was talking about the mall aliens they mentioned that right someone's like hey Focus back on the stuff that matters like if you're

(2:24:16) somebody who knows about this information as you saw that you've heard the anger in some people's voices who know the science is real right those kind of people you know that's like oh okay you know we want you to be focusing on this like you're our mouthpiece to get this out there there's not really anybody else doing it or it could be a scenario where uh you know they were just more personally upset uh about the different aspects that were in there as well um you know related to making fun

(2:24:41) of sacred geometry you know if you want to think of from that perspective uh or maybe they just thought that like some of the scenario that I put forward close but not really so it it's pretty weird no matter how you look at it if it is a hoax is extremely parasocial this is like people that definitely been following the case pretty closely you're not a random person off the street coming up with this hoax it would have to be our our redditor friends um certainly a possibility yeah um oh hey quick clarification on that part

(2:25:08) because um Hey Thomas a pleasure to meet you Thomas mentioned that the letter uh featured not just the Maul aliens like you described but also maybe the squid alien with is it just the Mal aliens I want to clarify for um this analysis I didn't hear anything about the squid aliens I've listened to it like a dozen times cuz that's how weird it is um but definitely mention the mul aliens multiple times okay so maybe the squid aliens are real just the M aliens according to this potential hoax or maybe Insider you know just just

(2:25:35) clocking all the angles here no big deal yeah and it could be partial truth and partial fake there's everything in between on this one guys it's it's a weird one uh my opinion kind of analysis of just kind of breaking it down we're going to do a couple more questions and I think we're going to close it down cuz I'm pretty wiped out by this it's been pretty bizarre afternoon is that uh uh yeah I just the truth is I don't know what's going on with this but I think that it will reveal itself over

(2:25:59) time right so even with the scam that happened with the raar files like we got to the answer within like two days right I think that something like this is going to there's going to be some Breakaway either they're going to do another letter it'll be more information we'll be able to tell if it's a scam or not um uh you know so I think that we don't have to worry too much about decoding anything here uh just go along for the ride and not get too committed one way or another is kind of my opinion

(2:26:24) on it let's go back to Harry real quick and then we'll go to Nathaniel yeah hi Ashton uh so um when I did the research on this uh regarding the oxygen um on board these commercial airliners so the main cabin from my understanding from what I remember reading can provide anywhere from 10 to 20 minutes worth of oxygen right now in the Pilot's oxygen masks um in the cockpit and they have Reserve tanks um in the front cabin area I believe I I recall reading they could last up to two hours so basically

(2:27:05) they're a mask attached to um a green oxygen tank they put on their face and they could breathe oxygen for up to two hours from my understanding um so or what I call

remember reading of it so if the pilot did decide to do this I'm not saying that he did but if he did and they you could have simply just opened up the vents um at 33 to 35,000 ft it's quite cold and the lack of oxygen would have read to hypoxia right off the bat and within 20 minutes let's say I'm giving him the most amount of lot of

(2:27:41) time within 20 minutes most of those passengers would have um been uh passed or um would have died because of hypoxia lack of oxygen um on the aircraft however remember how I said that the co-pilot could have been possibly outside of the plane I mean outside of the cockpit well if the co-pilot was outside of the cockpit that coil could have had the oxygen tank that they store in the front main cabin area for emergency use and that you know another scenario that hey if that you know as he's trying to get into the cockpit remember once

(2:28:23) you're outside of the cockpit you got to get let back in by the pilot and or co-pilot that presses that button to release that door so as much as you know we have all these different theories again I just fall back to the exact same issue where's the wreckage when that plane hits that water at that speed as it plummets even if it ran out of fuel um you would have seen um wreckage um especially flotation devices life vest something or other um I am of the belief that it may have landed somewhere and then um certain

(2:28:58) parts of the plane were uh dismantled and thrown into the ocean so it it would wash up on shores and that would equate back to oh yeah it hit the ocean it's in the depths and they would stop an investigation because it's costing millions and well it did cost millions and millions of dollars to you know C- scan the um the um Indian Ocean trying to find this aircraft yeah 1505 million I think at least maybe up to 250 million they they uh estimated um yeah the thing I have against uh this oxygen scenario

(2:29:33) there's just no evidence there's just no actual evidence all speculation and sure you know you can speculate something when we have no idea right what happened to the plane um but I just I really don't like the idea that somehow he was able to lock the pilot the co-pilot out even though we saw it happen with a German Wings guy um in 2015 but the difference there is he crashed the plane in 9 minutes he didn't go around on a joy ride he you know this idea that we're going to knock everybody else out

(2:29:58) I just it seems too movie like to me um they one of the couple of things are that you know yes knock themselves out the oxygen masks uh you have the cabin oxygen and then you also have the oxygen that's in the crew area so you've got to get all the crew out there's like 12 crew members right and then also you've got to knock everybody out before they retaliate so first thing they're going to do is they're going to come out the door they're going to go through the panels they're going to try to go

(2:30:23) through the equipment Bay you know I just I don't know it just seems too Fantastical we haven't really seen this kind of snare ever play out um and the times too I think you're right about the oxygen in general I think I've heard yeah I mean depends on how gracious you are about the passenger oxygen but yeah 20 minutes 30 minutes something like that and then for

the crew I heard it's 2 hours the thing you have to keep in mind there is it depends on the oxygen level they're running it at so I think

(2:30:45) the 2 hours maybe if you're at 100% oxygen um there's quite a bit difference whether or not you had 100% oxygen or not and that's going to you're going to want that depending on what your altitude is um but in general I appreciate your insights on that uh you know I think that's what the the narrative that's out there is that that's you know what happened because you know we just don't know otherwise and like the thing the debris field you just I always I always go back to it

(2:31:08) because it's the number one thing where the heck is this debris field or this plane uh Nathaniel let's go to you buddy and then I think we're go to Sarah and we're going to close up here in the next 10 minutes or so oh hey thanks um I thought that I might uh defer to Sarah um just just because I don't think I have the most important viewpoints um I did have a couple of things I could mention in less than a minute um oh yeah go for it but uh I I will I will give it over um I will give it over to her

(2:31:33) because there's a good chance that I'll learn something from this and I'll be back around I really appreciate the time and um I could say a lot of positive things but just know that I thank them um uh I came onto the space one time before and I got something wrong I wanted to make a correction on which is uh the Emerald Tablets of thought authenticity I thought was um uh I conflated it between the Emerald Tablet and th which are historical but uh there's not early history of uh The Emerald Tablets of th by Doral that I

(2:32:04) thought they were so it could be a hoax there or it could be a legitimate leg Legacy information gotten from other means but it's just not verifiable um I did have a couple of other things I'd like to say and again I can do it less than a minute I'd like to oh okay um well uh I had just a couple of veins of comments or leads and then just one question um so on uh the letter that you got or the um uh AI voice that that came through um you know whether it's right or not everything doesn't hinge on it so I

(2:32:38) don't think it's the most important but I do think that the lead of Randall Carlson on sacred geometry was amazing and I think it leads you into a positive space which uh might be connected with a couple of other things I recommended um looking into simatics before which just give uh form of sound in objects but the shape of the form and the structure seems to have a lot of overlaps when we're talking about these geometric uh shapes um and other forms um also uh I'd be interested in uh the science of

(2:33:13) Consciousness involved with all of this so I think that Dean Raiden has reproducible experiments with um affecting a random number generator with Consciousness alone either that is or is not true I believe it is true that that's been reproduced um and it's either true or not but I believe it is that Dr amoto put uh intentions into Ice Crystal structures so I think we do have a basis for moving on to a science of Consciousness that would be interesting to explore um uh the other thing I wondered about is uh I I sent you a

(2:33:46) video was like a 4our Steven Greer thing um and I realized that uh we all have different amounts of time and capability of looking into things so my question is would it be helpful to uh give quotes and timestamps to break things down tldr some interesting topics or maybe you've got enough on your plate um well if you have those definitely uh pull them up and either hit me up in the replies with them on the various videos uh I'm always looking for little clips and stuff that explain it it's funny because I've been

(2:34:16) thinking that I I want to go back through my own interviews with people because as I've been getting more knowledgeable to science and everything behind it things are starting to make more and more sense in general and I think that's really what we need you know just keep in mind that if everything if this is all true then we're in the middle of a propaganda War 100% this is an information war that we're in the middle of whether or not we're being used we're at the Forefront of it however you want to look at it if

(2:34:39) this is real then there's people that want this out and people that don't want this out and what that means is we have to be intelligent about how we put the information out you I've been I think I've been transparent about this is that's why I'm doing these streams live streams so people can see that I'm not in the middle of this whole thing going on because if I was me on the outside I'd probably be like wait this guy's making this all up nope this is just this crazy uh it just really is and so

(2:34:59) we need to make sure that the message goes out there with visuals that people understand we are in the Tik Tok era I'm not going to be on Tik Tok making those Tik Tok videos but I am trying to increase the production value and make sure that the stuff that I put out there is better I've started to edit videos now so that's where you guys are getting these clips from I'm like pulling them down there so you guys can help me with that and tell me like the time stamps of stuff that I should look at and pull

(2:35:21) that helps me a lot in terms of getting stuff out there I think you've seen how compelling some of these clips are like just even the one today was like holy crap like I saw that and I'm like okay I'm downloading this I'm cutting this cuz what is going on he's talking about the Maldives man there's only one military base in the Maldives guys Diego Garcia so at least the US ones so anyway it's it's pretty wild of what's going on here um hey oan do you have a quick comment and then we're going to go to

(2:35:42) UFO Sarah yeah I just wanted to say uh thank you to all of the new faces that I've met tonight there's quite a few new people and I've added all of you I appreciate your Insight and experience and stories I've learned a lot um so yeah just thanks that was all go ahead Sarah y yeah thank you I wanted to thank everyone as well I've learned so much um and uh made a lot of notes which I'm sure some other people have too but I I wanted to also say that um I'm thankful and grateful for the time that you're

(2:36:16) giving me to to say something um and the time that you're giving to do the research on this project um and your team and then I you know I just as a researcher myself this is it's

inspiring and also I it's I just I respect it I respect you a lot and um maybe if you wanted to spend five more minutes thinking about where this video came from you can look at it from the perspective of who benefits from it you know but I think like um and then you could probably Branch off to like s up you know all of those things um but I

(2:36:53) think five minutes is all that that really you know should take because that person isn't going to reveal themselves but what you can take from it and I think even from just being on the space tonight and hearing everything about the GE the geometry and uh you know the artifacts and and all of that it's just it points to someone if anything all of that is AI gibberish there's a clear you know there's a a path to take from here and and and that's exciting and um and that you're not alone yeah thank you

(2:37:27) thank you yeah no I appreciate it I think that man the funny part is was you guys look at me in terms of being this leader of this uh project I think in terms of MH370 X which I guess technically I am I mean I came up with that that idea but I'm just a passenger along for the ride like the rest of you guys that's how I look at it myself um you know this is in some elaborate rules I've been playing on you guys and I think that you know that especially the people that have been watching and that's part of the reason why I've been

(2:37:52) as transparent as possible so that people can realize that that's not what's going on here this is just a wild uh kind of experience and ride that we're on and it's leading us to technology that I think a lot of us didn't know existed so the fun part I think sah is that we're learning the science behind it we're not just looking at crazy videos we're like actually figuring out oh this is how the science really works and um if this ends up being real then we really are on the front lines of disclosure here where we

(2:38:16) are getting this information out there uh for everybody else the stuff that's really important and this stuff will lead to um you know the disclosure that everybody else was is looking for as well that there crafts out there potentially that we don't understand propulsion that we don't understand and potentially even non-human intelligence that we don't understand and that's why tomorrow we are going to talk about the ebo scientist post unless there's some major breaking update there's another

(2:38:41) letter or something like that um but otherwise we're going to go into the ebo scientist post that I promis tomorrow tomorrow um because I think that there's other stuff that's out there that I think is being hidden that's like just just buried underneath the surface that people should be looking at and ebo scientist was something that came out uh this last summer where they were deleted in real time and like the reason why you do that is like what Sarah mentioned like what is there to benefit well when

(2:39:04) you silence somebody that's potentially a leaker out there that's something I want to be taking a look at and I want to take another hard look at with you guys tomorrow I'm not going to be making any definitive statements on it um I know it isn't quite the same as m370x like the whole aliens aspect isn't really a huge aspect here but there is a non-human aspect to

this guys so um I'm just going to keep doing stuff that I find is interesting um Weir did you have any last comments before we close out

(2:39:27) tonight yeah man just real quick thanks for your work appreciate you um in the vein of realizing we don't know what you don't know kind of like with Randle Carlson are you familiar with uh the term uh limited hangout and then specifically Whitney web Whitney web no um is what's the connection to Whitney web ah she's deep in deep in the uh an amazing researcher she reminds me of you I kind of uh was hoping you two would connect and she could kind of give you some contacts to get deeper into finding

(2:40:04) some of the stuff maybe specifically with uh uh the SE land guy just anything specifically with deep research in the government but then she also runs a thing called unlimited hang out and I think some of the things you're running across with these counter narratives and just information that's out there is a limited hangout including the videos for that matter they could be 100% true with elements of fakery put in there much like the exothermic event and the clouds and any of that stuff kind of like I

(2:40:38) said right when this when that **debunk** was happening is they if if they wanted to if they if they really did did this if this was done by a government they have the ability to do all of the to the fakery and like the it was a limited hangout and is salted with bad info to make it pre-bed so that they could **debunk** it later so just keep it up man you're doing great look into other people and uh it's funny what you that you didn't know about Randall it's cool man there's a lot of cool stuff happening in his world he's our he's our

(2:41:16) innocent uh genius here leading the team um I just want to I know we're wrapping it up you too long so I know you're tired I just want to say you know extend my gratitude to this community and uh you know it's it's been so endlessly inspiring to me um how you know maybe you didn't start the fire you know but you you've harnessed it and and um you've she shepherded it in a really honorable way based on my um investigating the investigation so you know I've been looking into you and what

(2:41:39) you've been doing and and I and it's been cool did transparency um I really love the people who are committed to this and how it has turned into an Ever um positive thing based on my ethics in terms of collaboratively trying to reach the **truth** with more and more people and more more with more more expertise you know we don't we don't call people experts with the you know but uh you know with with with interests and different perspective and strengths and um you know and regardless of what the

(2:42:02) answer turns out to be the there is real um I I've learned so much so much I went over my head because I'm not a scientist but I'm trying to learn um and this is this is to me the best of what the internet has to offer u in its true potential so I think you are all just really um beautiful inspiring good people uh who want to understand the nature of reality as I do and it's cool how this this uh process just keeps evolving um and I just want to thank you guys so much yeah thanks Melo man I appreciate you and I appreciate you guys

(2:42:29) who have been on this journey I know Melo is one of the people who's been with us from the very beginning some of the earliest spaces we ever did about this and it's pretty wild to think about how far we've come so um you know I think that's a good note where we can kind of close it down so just some last comments uh are you once again I oh go ahead Thomas did you have something else you want to say real quick all right I swear to God just real quick uh I put down in the comments uh I actually got

(2:42:52) that [REDACTED] post for it got deleted and I turn it into an AI video so if you want to listen to it AI transcript I did it already so you can just watch that video awesome damn boy thank sweet appreciate that man yeah and I've got the other transcript up as well um some people did snap it up before it's gone that's why tomorrow we're going to go over the whole thing and we'll kind of explain why I think it has some credibility to it and if there are any scientists in the chat tomorrow that are like

(2:43:15) biologist or genealogists or you know anything related to the relevant Sciences microbiologists um I'd be very interested to hear from them as well um and that's going to be a little bit of a different thing right because we do a here we're talking about advanced technology and then we're going to be talking about the yin and the Yang tomorrow of it which is like the non-human intelligence aspect are there really beings visiting us if so is this potentially what their physiology is or are they flying jellyfish not sure it's

(2:43:40) going to be kind of interesting though um and then just to close out again guys I want to thank everybody MH 370x everybody who's been following along this really is just a crowdsourced investigation um and I've just kind of been the voice so uh yeah uh you know thank you guys for being along here on this journey uh we're going to close this space out here for tonight and then we will be back tomorrow with another space about ebo scientist post and if anything else comes up I will let you guys know right away if you are jonesing

(2:44:09) for more content take a look at the stream from last night around a where I go the a stuff too because I don't know I think we should not prejudice the AO yes they didn't give us the answer we wanted in terms of disclosure and what's out there but unless that guy was in on this elaborate thing and whatever is going on then I'm pretty sure that was a real call with a I mean I've got the guys like uh name and uh Rank and everything like that we can look them up if we have to but they can be a resource

(2:44:38) for us because they do have the capability to look into some of this stuff like we can find the stuff that's public but we need somebody on the inside to find find the stuff that's private to verify parts and aspects of the videos or come back to us and tell us no guys this is a giant scop or maybe it like has been suggested maybe this is a partial scop or maybe it's a total hoax maybe the videos are I don't know guys at this point I think we're all along for the ride so thanks a lot for

(2:45:02) joining me on this journey I appreciate all of you guys and hope you guys have a great night peace have a good night Ashton okay and everybody who is watching the dream thank you

guys very much tonight for hanging out with this and going through all this I mean this was a wild thing that happened today man um reality is uh yeah thanks keemstar for jumping on asking some questions I know he's somebody that always keeps me grounded related to everything because the reality is you get to a part with some of this science and you start to

(2:45:38) learn you start to not even realize what's real or not real anymore related to some of this stuff you're like if we can teleport a plane then really everything's possible and then you think about like well what could we do from an intelligence and disinformation standpoint like you think about like what the story was told there was like oh we knew about these guys were defecting in December and we set up a thre Monon elaborate plan to like ENT trp them and capture or like stop them in the last possible moment just to you

(2:46:06) know Flex to **China** man that's a weird story man if we can do that then I don't have a lot of chance of making it to uh you know life expectancy guys so once again just to close it out yes I'm very happy person I would never do anything to harm myself uh I'm going to be very careful not to get by any cars crossing the street and I'm just going to keep bringing you guys the story and in the me in the meantime we are going to cover some other stuff that's just fun and interesting um so if that upsets anyone

(2:46:35) out there I apologize we are going to get to the bottom of this disclosure catastrophic disclosure we are going to get to bottom of the science uh we'll do whatever it takes guys so have a great night peace everybody it's been fun talking to you I hope you enjoyed if you have any questions post them in the uh YouTube comments or in my replies on this space I'll try to take a look at them tonight or tomorrow morning when I wake up if there's any questions you think I didn't answer or whatever let me

(2:46:58) know uh I want to make sure I'm as transparent as possible peace everybody have a good night

MH370x - Debrief on Miami Aliens, Tim Pool, then Investigate Earth's Chat and I talk 1/7/24 - YouTube

<https://www.youtube.com/watch?v=PlontnRggSk>

Transcript:

(01:42) malan 370 contact 120 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] he I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(02:47) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds hey what's up everybody how's it going hey everybody oh boy lots of messages already in the chat uh yeah we're gonna so hope everybody had a good few days with no stream I know you guys probably are Jones in for a little four orbs stream here um sorry I'm not in my Sunday finest here right now uh just cuz I'm jet lagged as heck right now but what's up everybody uh I'm not going to do all individual shout outs today but

(03:40) everybody who's here and watching thank you guys for jumping back um give me one second I'm just going to post I'm going to post this on Twitter uh real quick um okay okay this should be good that work yeah it worked okay sweet man yeah having Dave was a pretty sweet win is Miami okay H yeah I don't know if Miami made it uh yeah I don't think we're going to do a debrief I'll talk about all the stuff that's gone down over the last few days since we haven't been uh you know online doing

(04:28) stuff uh so I just wanted to oh man get back into the swing of things here damn Ash's back from the world tour yeah I did fly man I flew twice scary stuff man on the flight back uh on the back here now as well it was there was a lot of turbulence and I was just going okay this is my time this is where I go I'm glad I didn't see that picture of the uh oh is there already 1600 subscri subscribers wow yeah I'm glad I didn't see that picture of the Boeing plane um with the w with the door busted out

(05:06) before I got on that plane I would have been freaked out man that that is scary dude did you guys see that I'm going to pull that up real quick oh my God that is just scary as heck that's like the last thing I want to see uh before I get on an airplane I didn't even I don't know how I didn't know about that uh so where was it look at this you guys see this this was the craziest thing ever look at this door is the whole door is gone can you imagine being in that row or anywhere near this door when it just

(05:44) pops out and the whole plane de pressurizes so this is interesting though with the MH370 case right like if this happened and people weren't getting knocked unconscious immediately then like you're not going to die right away right that's idea that they just like knocked everybody unconscious in a few minutes there's no chance no chance at all nobody passed out or anything from this like they would have had to decrease elevation like immediately unless this happened like while the plane was taking off but presumably it

(06:16) was at cruising altitude at 35,000 ft supposedly people will suffer from hypoxia within like a minute or two so unless everybody unless all those oxygen masks worked then the plane's not going to depressurize that fast and that's a whole door game getting knocked out that's a whole door getting knocked out there so this was actually really interesting with respect to the case right cuz we've got look at that you can see the stars you can see the stars out there you see you guys see that see the

(06:52) stars man that is scary apparently they said nobody was sitting here in this spot here as well or at least if they were goodbye so uh pretty wild um yeah that uh man that's scary yeah what a view though okay yeah it is pretty ironic that I'm afraid of flying isn't it I'm like actually afraid of flying um and then so I got to meet Shane Cashman he was on the Tim pool podcast let's start with uh let's do a recap of the Miami alien situation so let me switch over here I want to give you guys just the

(07:34) the straight down and dirty uh where's my thing here okay full screen full screen face let's get my hair right let's get my hair right okay so Miami alien situation guys sorry people are making some comments I just want to see about the door maybe can regrade the door okay so what's the deal with the man oh hey alien girl hey how's it going and hey everybody who's in the chat uh Hey Hey Ocean see you as well oh so I did Foya um hey ocean so hey ocean sent me a DM saying that uh she talked to was it Richard dy I think

(08:16) right or Dodie however you say his name and that we should Foya like some call signs the problem is like I don't know if those call signs are legit or not so instead I just foed all Air Communications uh for every airplane that was in the area around like the South Indian Ocean from like a th000 miles uh over the dates of March 7th through March 9th for both the Air Force and the Navy so hopefully we'll get a response back on that um if you need uh for my two cents I I made the most abbreviated version of

(08:51) the story that's actually possible and it's actually currently pinned to my profile here this is as abbreviated as I can possibly get just can't get more abbreviated than this so if this is too much for somebody to read then I'm afraid that this case is just too confusing for them it's about two pages at most here it's what one how many paragraphs let's just count it up real quick you can even skip the quotes ahead of time right 1 2 3 4 5 6 7 8 9 10 11 12 13 13 paragraphs if 13 paragraphs is too much

(09:27) to read then you're just they're not somebody who's interested learning about MH370 that's the reality but that's as short as I can possibly make it um so if you want that um they can read this I'll probably do some type of uh like explainer video for this I just I wasn't in town so I I didn't have time to do that okay yeah so the Miami stuff why did I report on the Miami stuff I'm going to give you guys the breakdown of everything that went on with it cuz you know it's probably fake I mean I think

(09:57) there was always a really good chance that was fake and General but um first of all uh I was let's see it was Friday morning and Friday morning I woke up and I got a text message from

one of my buddies who's not into any of this stuff at all not into you know uh aliens or UFOs or anything like that Al although he's like you know he's open-minded he's just not into it and he sent me this thing there was this story about this Miami situation right and it was from earlier that that morning like middle of

(10:28) the night and I had remembered seeing those cop cars and that whole situation that was going on uh a couple days earlier and I was like I already like I was looking at that I was going man that's weird like why are there so many cop cars there right and so he sends me this story about these the shadow beans or whatever the hell they were right and so I'm like huh that's interesting so I start digging around and I'm sitting there in the morning I'm taking a shower and I get out I'm looking at my phone

(10:53) and I find that one uh witness I didn't post the video of the witness but he's basically given that whole story about about the fat chicks running and the old people running and I was laughing I'm sitting there in the in the bathroom on the toilet just laughing reading I'm going okay I got to post this and then I'm looking around and I see that like uh you know uh Matt Walsh and people were posting it and stuff like that so I'm like oh okay we're going to post this right like why not you know why not

(11:20) why not post it uh it's a fun story no matter how it played out and so I posted that I did not expect that the Miami store would get that huge like that I got over 10 million views on that post that's the most views I've ever gotten on any post almost by double the next closest one is the my letter to Congress which after kim.

(11:45) com retweeted us ended up getting like 6.5 million um so just to give you some perspective of how much crazy engagement that got I could never of course I could never have expected that never expected that uh and I'm sitting there and I post it and like an hour goes by and we had just like Dave and I had just gotten picked up uh by uh Brian who is uh I think I posted his picture he's the one who took his selfportrait or whatever cool guy and I'm looking I look at the post I'm like wait this got over 100,000

(12:16) views I'm like wait what and that's when I realized there was some yeah that's when I realized there was something going on with like this was a viral sensation right at that point um I'll pull the post up so you guys can see I couldn't I couldn't I still can't believe it I mean people were loving that story um so here I'll show you guys let me switch so this was Brian he was the one who drove us around and stuff he was awesome really chill guy right away like I could tell he was into

(12:44) the story and we were talking about MH370 and some of the advanced technology with him and you know he wasn't laughing or joking at all about it um so Friday yeah look at this here it is so this was Friday morning I make this post right like look 7:00 a.m. 7:30 in the morning I made this post so this was like 15 minutes before they picked me up and I'm sitting there and I was like you know in the bathroom getting ready and I'm like okay I got to make a post about this this is some viral thing right and uh and I had already watched

(13:15) the witness thing I wouldn't have posted on unless I saw that that guy's witness video um and it gets 10 million views I'm just like I mean obviously didn't get 10 million right away but like by halfway through the day it was over a million like several million and I'm like whoo and that's when I was like okay I got to be careful here cuz like you know I you know people are going to sure try to discredit me with it whatever I don't care man I'm just I'm just out here being myself and enjoying stuff so later

(13:41) that day and I was actually kind of worried about how much engagement it was getting because you know of course it could be fake and what have you um somebody then sent me one of the like a still picture of one of these beans which I was skeptical of to begin with and I didn't know where it came from uh but I posted on Twitter anyway ended up deleting it because I was I was like 99% sure the picture was fake and then when I saw the the alien creature walking around it was obviously CGI that people were sharing I was like oh I'm I'm

(14:11) deleting that cuz I knew that was CGI for sure CU it also didn't even match what the witness was saying like not even the same kind of thing and so then I saw later that day you see here so this was what time did I post this this was like wall right after we left I think I was might still been at Tim pool's place when I posted this then I find the guy's recant video and this is the same guy his recant video and I'm like okay so it's got to be fake like I'm going to post this out here right

(14:38) away I thought about deleting the post but I just figured what the hell why I'm going to leave it up right um and I thought about putting this in the reply and maybe I should have put this in the reply probably would have been a smarter move honestly I don't really I'm just not that familiar with social media and what have you so I made a separate post about the recant uh saying that this guy recanted and I thought that was it right like okay um you know I even made this joke cuz Tim P was making the joke about Mitch Hedberg I

(15:08) don't even know I don't know if he knew it was a Mitch Hedberg joke but uh the joke goes um maybe Bigfoot is blurry that's extra scary to me and I love Mitch heer he's probably my favorite comedian Ever Rest in Peace Mitch so I made this other joke in here and you can tell I was having fun with it at this point like I wasn't taking it too seriously or anything like that yeah and I don't know how it works if you delete views like that I mean I'll be honest I'm not trying to clout Chase or you

(15:35) know uh you know do this for money or anything like that but yeah 10 million views sure I'll probably get like I don't know 50 bucks or something from that I'm not going to turn it down not going to turn it down plus it was a viral story it was fun man um and so yeah like I didn't I don't even know what the comment there's 2.

(15:54) 8 th000 comments on here I did not read all these comments I didn't even look at it I my phone was blowing up beyond belief couldn't do anything about it so I made a separate post about it whatever figured it was over and then was this yesterday when was the one with the woman was this yesterday what what day is it today guys I've like I've been gone for three days I

don't even know what day it is anymore um yeah so yesterday then I see the post right where uh oh yeah cuz it's up at the top now

(16:32) was why cuz I made the thread so yesterday I see the post then by this woman right and I'm sitting there I'm like H should I post about this like uh yeah Li Lya how I don't know how you say your name man and so I just make this joke right and you guys can see it's like right at the top because and this is I'm at this point I'm just having fun with it at this point right and so I make this joke I'm choosing to believe her because she's extremely hot beautiful people never lie I don't know

(17:04) if you guys know probably a lot of people probably won't get this reference but there was this um study that the news did like I want to say five or 10 years ago probably closer to 10 years ago where they would have people walk along on the street and then they would drop like all their stuff and then they would see if people would help them and they would have like ug person do it and then they would have a beautiful person do it and when the ugly person does it nobody would help them and like they would drop their

(17:35) stuff on the ground and every nobody would help them pick up all their stuff and then when the beautiful people did it and they did it with a man and a woman in both scenarios and and like for the in like the ugly people was like nerdy people right it was like glasses like ugly person whatever uh nobody helps them but the beautiful people like then everybody goes and like all rushing to help them so that's what I I think about that a lot especially when like I think about helping people I always think like huh I

(18:04) shouldn't help somebody or not help somebody just because of like how attractive they are so I was making this joke here about it and then I'm sitting there thinking I'm like you know what like H maybe there is something to this right and then what happened was I started seeing all those other um Witnesses all those other Witnesses and all these videos start coming out and I posted all of them so you look at the replies I start looking at it and I'm like what is going on like I had already seen this one because I did a podcast

(18:33) the night before with alien addict guys and I was telling them how it's you know the one video is just people standing side by side it's not like a super tall Bean or anything like that and this guy's video is pretty interesting you know he's talking about he's some graffiti artist or something and I still that still wasn't enough and I see these other ones and this is the one that really creeped me out this guy like I don't know man some of these still are I I mean I just don't know like these I assume these

(19:03) people must be lying right you get \$6,000 for a million views I guarantee you you don't get \$6,000 for a million views man Jay you're not living in reality dude just to let you know Jay um I think the most I got like a few hundred for having like tens of millions of views man from from uh Twitter you you guys vastly over estimate how much you get paid you don't get that much money man not at all yeah not even close dude not even close maybe less than 10 times less than that man you get like maybe 60

(19:39) bucks for a million views maybe even less honestly it's it's a very low amount this is not uh this is not some lucrative thing on Twitter here that I'm doing just a heads up guys uh so anyway I see all these other videos and I'm like okay and I had already seen this cop one as well where this guy's like talking to his dad and I this one definitely seemed fake right but after you see these other ones you're like okay what's going on here so this is where I was like I I don't know

(20:07) what to do with all this so I just decided and oh and we had that space with the one guy right so we had this space with this mo guy and I had I deleted it cuz he didn't save the recording yeah they really think that I'm like really just making bank off this Social Media stuff huh they really do not just spoiler guys I'm not if I was I'd probably just quit my job or whatever but no I think it's funny because people like especially kids and stuff who have no idea like they think social media is this

(20:36) glamorous thing where people are making tons of money most of these people on social media like especially I'm I have like 75,000 followers right and that's got to be like pretty upper echelon and you could never live off of the money I make off this never it's like the amount of money I've been getting is like \$300 a month for the last two months and I uh I don't really like to like talk or brag or anything like this but like I gave a bunch of people that are part of the investigation that have been helping out

(21:05) um just like \$50 gift cards for uh Christmas and the New Year's just because I appreciated all the hard work they've been putting in you some of my admins some people that investigated a lot so um I'm definitely not making like any money off of this at all I've been giving pretty much all of it back for the most part and I'm not saying that like I'm going to continue to do that I'm just saying that you know it's this is not some kind of life-changing thing um so I posted this stuff you know I

(21:32) just thought okay well whatever but that mo guy something irked me about it so I deleted the space because he didn't save it and it was weird that he didn't save it yeah minus the 3,000 plus the reality too is you have to pay taxes on this money so I'm actually like probably in the hole honestly I'm probably in the hole still I just it's not about the money in general either way I just just so that people understand the reality is like I'm not I've probably made negative money off the situation if we're just

(21:59) being honest um with ourselves here so um so he deleted the or he didn't save the space so I make this notes and I don't know if this this actually wasn't all the notes I missed the funniest one he mentioned Pokemon and he's like oh it looked like a Lugia I was ready to just call [REDACTED] right then the moment he mentioned like the Lugia Pokemon that was like okay [REDACTED] hold on Lulu is having like diarrhea I might have to take her out I don't want her to poop in the house um Lulu you okay girl uh

(22:39) so that's not going to sound good on the stream huh um so he mentioned the Lugia stuff and I'm like oh man I'm like this is that's a weird thing to say like oh this reminds me of Pokemon

uh and like so then I'm sitting there thinking like this guy's definitely full of crap but he actually he had me going where I was joking about it I was sitting there joking about it uh thinking like okay this guy's definitely full of crap right and I I pulled keemstar in I messaged keemstar I'm like keemstar get in here I need you

(23:12) to grill this guy like there's no way this guy's telling the **truth** right uh and this was this the mo guy so keemstar jumps into the space I wish we had the recording in the space man and he's kind of grilling them you know doing his keemstar thing and by the way I I love keemstar I I just love this guy I don't know why I just he and I see like I see the the world the same way he doesn't take it too seriously he doesn't really care that much about what people think of him you know for some reason I just I

(23:40) like people like that um hold on hold on come on girl okay you're good J I'm scared she's going to poop in the house um so he grills him but we can't get anything deep on it right and I'm asking them all kinds of questions too like we're trying to figure out uh uh you know why is there no other recordings or trying to find any holes in his story and then finally like I come up with a good question which I ask him okay what day did it happen right and he says January 3rd January 3rd I'm like wait a minute

(24:16) The Thing Happened on January 1st and I remember uh that I saw screenshots in Twitter of people talking about the alien narrative on January 1st and I remember being surprised because I thought it was a new narrative that only came up like on the third so that's why I was really surprised about like oh wow um you know that it's uh you know this this narrative that must have been out there so had people had plenty of time to invent stories related to it and so if we check out this moy's background

(24:55) too yeah this dude's definitely full of crap definitely full of crap now sorry Mo I don't believe you anymore man so when he got the wrong date and here was the thing there was a lot of people there was like 800 people on this space by the way there was like 800 people there was a lot of people on that space um and I listened to like pretty much most of it and this was the one on January 5th right where he made the post and I remember seeing this on January 5th and I was like this is full of crap but then when I saw the space run on

(25:29) January 6th I jumped in it cuz I was like okay I'm going to grill this guy at that point I thought it was all fake and um and so when he said the wrong day to me that was a huge uh huge red flag wrong day man he had the wrong day so and when he's posting the story on the 5th I was at the mall yesterday well the thing happened on the 1st it wasn't on January 4th it wasn't even on January 3rd so he didn't even know the right day because he hadn't even been following the story well enough so he had invented this fake

(26:03) story around it right like almost guaranteed and probably you know because he wanted to make a little bit of money off of it I would imagine right but he was you know in the space like he was ready he was a good liar you know he was pretty good but you know if you if you saw the beans or whatever on January 1st you're not making posts like this you know on January 4th

you know you're not making posts like this you're you know you're probably talking about the beans or whatever that had happened right so

(26:34) um anyway uh let's see let's wrap this up um so then today finally finally someone breaks out the last post this one finally we got what we needed here this guy I don't know who he is I apologize if he wants recognition he probably should have put his name in his Tik Tok um he went through and had the scanner he actually has the scanner so the scanners and I already knew the whole story about like the power being out and the flights being stopped didn't really add up that's why you saw me never post

(27:11) about it cuz that always seemed like a little bit of disinformation um but it's still a fun story either way right um but then when I heard the scanner the scanner pretty much tells the true story right so I'm not going to play the whole scanner but the scanner pretty much says that it was not in the mall but in the parking lot outside they were having one of those car get together things where like all the people get together in the car and they you know sit there and talk about you know they I don't know their cars or

(27:42) race or whatever and then it turned out into be a fight so this started to make more sense because it does look like this mall is one of these outdoor malls that they have not necessarily indoor mall um and that's why I'm like oh I get why it's the confusion right there's probably not really cameras out there like outside in the mall or what have you and if it was just some heat of the- moment thing then it would make sense in terms of why they didn't you know record they they're not

(28:08) sitting there recording it or whatever and you can tell from the scanners that like there's no they're not talking about alien beans or anything like that in the [Music] scanners um nothing nothing crazy like that in general so um definitely not a situation where you know there was at least from the scanner there was nothing that would indicate that that story was true at all um so that was pretty much for me that's the death blow for it now of course right I'm not telling everybody else what to think you know if you want to

(28:40) think that there were Shadow aliens and attacking them mall that's totally fine um you know I don't care I I don't care at all I think I've been pretty clear about what my opinions are in terms of you know aliens and stuff like that um and we probably will do a follow-up post about ebo scientists but I'm not going to do it tonight a because I'm tired and B because I wanted to just do the recap but later this week I'm definitely going to do a rundown of the ebo scientist post because I think that just deserves a

(29:06) little bit more attention than it got when before it was deleted and a lot of people don't know about it I going to probably have to take my dog out here cuz I can tell she's in distress um but I'll do the Tim pool thing first and then I'll take a five minute break and take her out so Lulu lul yeah okay I got to take her out actually probably right after we do this um yeah she's having a hard time I think they fed her the wrong food or something uh so the anyway so this to me pretty much **debunks** it in my mind uh regards to this

(29:39) Miami aliens thing in general now I still think that people probably oh yeah and also tupacabra so I was in a uh uh one of these messages updates you see on the left side of stream here is uh probably from tupacabra and um and uh keemstar and uh red panda I think is in there as well and he tupacabra actually called all the uh the mall stores or whatever and they pretty much uh told him that there was it was like some kids fighting there nobody was saying anything about you know aliens or anything like that so uh I don't think

(30:14) that that was really a big issue so that pretty much um gets rid of that Punjabi did not do the ebo post guys he definitely didn't but if you want to believe that you're welcome to believe that Punjabi Batman did the ebo post we will do a breakdown of of uh why that's not the case oh Eric Weinstein's doing a physics thing that's interesting we might have to jump into that in a minute okay guys I have to take the dog out she's obvious she's definitely in distress right now so I'm going to come back in like five

(30:42) minutes uh so hang tight and then we will uh do a rundown of the uh Tim pool situation and maybe we'll jump in this Eric Weinstein um physics uh thing here as well uh you know what I'm going to go ahead and join it so you guys can listen in oh royy herberts in there too bizarre that so many of us have had no experience of us seem to have some sort of an experience okay guys I will be right back you guys listen to this make sure that you guys can hear this UFO you can okay I'll be back guys actual alien

(31:16) spaceships inside that program whether it's a SC the whole thing is confusing it would just help if the experienced Community when it approached the physics Community said I know this puts you in a terrible spot because without doing that nobody in in the physics Community wants to listen because who wants to tell somebody that they're crazy or that they're trying to turn a buck I don't because that's not what I believe but I don't know what to believe I'm not clever enough to be able to explain why

(31:48) everybody other than me seems to have seen a UF very strange thing I I completely understand where you're coming from but I think what I was trying to express was the the frustration I mean there's so many of us and and I mean this is this group that you've joined is usually one of the groups that is on the outside of it um you know we're fortunate today that lots of people have joined in but there's usually a group of about 10 of us um and and we're quite a small group um but the frustrating thing is that

(32:22) there are a lot of us that have got sort of responsible jobs and hold respons positions and um I mean I've I'm educated up to master's degree but not in anything um alongside G M's all medical based it has nothing to do with that I've met so many people who are so sober and so normal who report completely insane experiences many of them having only one such experience there's no pattern in their life other than you know some encounter on some random Thursday from 17 years ago mhm and and um and whatever that is

(33:01) I'm not pretending that that that it's all you know myar balloons and seagulls I don't know what I can't figure any story that works and the only thing that I don't want to be I don't

want to happen to me is I don't want coming into one of these rooms to become pressure to accept like I just I'm dealing right now with somebody I respect in the community who's telling me basically you know to f off um because I'm not embracing what it is that they're doing and I'm barely

(33:32) conscious of it and and so you just have to appreciate that people want to listen and don't want to be dragged into a place where they're you know forced to yeah yeah where they're forced to adjudicate stuff where I don't I don't know how to adjudicate any of this if you told me that you know you're having a a love affair with a ghost who was born in the 1300s I'm going to be a lot more skeptical than if you saw something in the sky you know and but the fact is I probably would have been a jerk about

(34:02) people who saw something in the sky if you talked to me five years ago so whoever that guy is he apologizes to your community but he's no longer here you wanted to ask me one more question um do you mind if I put it to the I have got another question I'd like to ask you but do you mind if I put it to the room because there's so many people that will be desperate to ask you questions um I feel I should hand it over to somebody else um maybe you'd like to pick if you can see the hands up no I don't want I don't want any

(34:33) choice of mine I'm just I'm just here trying to be a a decent soul and I don't know whether I'm adding value or monopolizing your air times no you're not you're adding value and it's a real privilege to have you come in the room um you know I'm thrilled um Andrew or all R are gonna have a good question I guarantee it yes let's take those two and then I have to I have to go deal with stuff around here there you go go ahead guys go ahead man thank you I appreciate it um I'm a real big fan of what we got

(35:06) going on here and I'm glad you stopped in um uh Roy as well as Eric so the question is this and if you don't want to answer it I understand Roy I think I've asked you one question before about uh let's call it the sport model that's what Bob Lazar calls it yeah Andrew Andrew Andrew um should be these are questions for Eric at this moment I'm remain in the room okay so these are because he's a busy man and he's got to go shortly so yeah um if you have a question for Eric if not I do I do kind

(35:39) of but it's for his benefit and it involves you because I've been here for the whole conversation so I'm trying to put myself in Eric's place and I think I can do that because let's assume I'm an average American I am let's assume I don't quite follow the highle physics conversation that you guys just had I'd love to I admire it but what I want to understand when I open up Douglas Adams hitchhiker's guide and he says the ships hovered there they hung there in the air

(36:07) in the same way that bricks don't let's say Roy you were sitting with Steven coar say and he asked you how is it that the UFO is able to hover now the question I really have is just could you explain that to a lay person to an entire TV audience to America to the world in a way that they could understand and I I love the physics but I want to understand why it is that it's okay

and yes this is a good thing and since you know I'm trying to respect this Eric you're a skeptic so a lot of us are experiencers we've been there

(36:38) we've done that we understand we may not have all the answers but we wanton to know how the UFOs work I want to what just happened if you've got any ideas of how they work Eric and perhaps Andrew would like to know well I I don't know how they work because I don't know if they exist if they ex I don't know if they exist look it's just one or two moves Mak things very much easier so let's try if they exist how would they work do you have any guess about that because if you ask me how I answer it

(37:14) then it creates me the reputation for me the reputational problem why are you assuming a phenomenon which one's isn't to exist like assuming that uh you have Fons with Bose Einstein they work exist so you can't do that he just say both there was such a thing that was hanging there and you know then I would have guesses I would guess that basically the thing that you think of as SpaceTime that you think of as ruled by the Einstein field equations is not what is warping SpaceTime like the construct that you

(37:52) thought was SpaceTime get in this and the equations that you thought governed it are not actually right there's a cheaper way of warping what you thought was SpaceTime that is not the Einstein field equations and then you would say Okay I I think I get it you're telling me that the entire Earth has this incredibly weak gravitational field which is kind of a mismatch because the Earth is a very large structure by our mesoscale standards and yet it barely warps space and time at all evidenced by the fact that you can climb stairs with

(38:24) just your legs so then you'd say okay Mak sense imagine that it's something small like a ship had an equal ability to warp this thing because it knew physics that the Earth was not using right so that's sort of the kind of thing that I would start to say now somebody always if you do that somebody will always say no no no but practically if I was building a ship how would I build it well you know that's getting ahead of yourselves if you were Rutherford trying to explain the neutron in in 1911 uh when you guessed that it might

(38:57) exist uh you could sort of generally guess that you could shoot neutrons at very heavy nuclei that were sort of trying to come apart as it were because you had a bunch of protons packed tightly together which all were repelling and there was something called the strong force which was keeping them back and then you can say I don't know the details of it but theoretically if you had some way of sending in a probe tapping these things so that they busted apart uh you could get something like a chain reaction and that that could be an

(39:27) arbitrarily powerful thing it wouldn't be the plans for an atomic bomb mind you but it would be the general principle by which that worked and that required about 41 years for that to turn into the hbomb so if you're asking me I would say that you would imagine that there was a successor to einsteinian SpaceTime and a successor to the Einstein field equations and that it would be cheaper to bend what you had previously called SpaceTime uh using this enhanced physics than it is for the earth to clumsily

(40:01) bend space and time using only the old Theory and that two counteracting bendings of SpaceTime could result in a fairly inert spaceship Harry have you ever seen a set of lectures on YouTube by The seti Institute called alien mathematics where they um explore how um hypothetically someone from somewhere else with a different idea sorry guys I'm just enjoying this right now and I mean different ways of working things out could see things differently to us um it's no it's it's a set of lectures by The seti Institute um it's

(40:41) called alien mathematics and it's on YouTube and I have friends at that Institute I will check it out thank you yeah it's very interesting yes Eric makes a very good point in the the Eric is within you know a respected member of the community and what this requires is a Maverick essentially um which we've seen in our history um to come to the poor as it were to change our thinking because every time that we do get a Maverick that's come forward in our history it's changed the way that we

(41:12) consider the cosmos essentially so hopefully um you know I'm the Maverick in this equation as it were and that um I don't hold any vested interest within um certain communities as were within the physics community and I don't have any they all consider me crazy okay so Eric is right on that point we haven't done the Tim pool thing yet guys I want to listen first anybody crazy at all no no no no I'm not saying that you did I'm just saying no there plenty that have called me crazy brother but I want to be

(41:45) very clear no no I just want to be I want to be clear that when you start trying to sort through this stuff because the most serious people in this community can all attest to the fact that we're dealing with a mountain mixed with facts inuendo disinformation misinformation rumor like it's a mess and and G and you know what I tend to believe is is that I tend to believe that general relativity and the standard model are as far as humans have conclusively figured out how to go geometry points the way forward

(42:24) and there may or may not be a phenomenon here because again if there's nobody here visiting us it probably means we can't leave and that would be a death Nowell so I'm certainly hopeful that something is visiting us because otherwise I think we're probably that Roy Herbert talking to terrible um there was another yes it's yeah like I I um I hope I can represent the the community with enough Justice Eric I've been a huge fan of yours for for quite a while um um I assume the portal has dropped off I

(42:59) don't know if you resumed it does he have any papers but in the pun is intended uh we there's there's a portal that we need you to enter back into UFO Twitter needs you here on X regardless of whether we agree with you um there there seem to be two problems um when it comes to the phenomenon one I would say is the negotiation of of **Truth** what what should be considered more true or less true and the the other one is a psychological I guess maybe a Nash equilibrium if if you're willing to go with that metaphor how how do you even

(43:33) engage with the asymmetric risk of somebody who has higher status um and they might be putting themselves at greater risk when to bring it like to you have to prove the **truth** and

then you need to sell it and um if you if you can only do one what is this the other one doesn't exist um and so I'm asking you Eric are you would you be willing uh to at least give us your view like on on another day one of us can host the space somebody in the UFO Twitter Community would you be willing to come on and give us your perspective on on

(44:07) this psychological let's call it a hard problem a hard psychological problem on how do we engage with people who might be more noteworthy and have a harder physics understanding um without being self-destructive to our own cause it's a really great question um I I feel for you guys because because quite honestly I'm often in the same space myself I'm tolerated pretty well as long as I'm not saying anything very declarative it's when I start to say something um that's truly disruptive

(44:40) that the doors start to close and so you have to realize that it's a kind of a delicate dance where you're looking for somebody who's open-minded enough to listen and you have to try to not endanger them it's sort of like if you're a kid and you see a beautiful butterfly and you want it to put it in a jar for a few minutes to study it uh you have to not destroy the butterfly in the process um so the way I would say it is try not to think so much about status um status do is something that is kind of a

(45:14) I think it's people don't really understand it very well um one way of going about it in my opinion is to just bring some think of it as a pot luck and every time you bring something uh to the pot luck the person who's tasting your dish appreciates you even if your status if assume you have no status in the community but you um you call somebody's attention to something that they didn't know so for example I see Jeremy uh in the room man has an incredible wealth of historical knowledge of uh what has been going on

(45:53) in the world of physics and the world of sort of weird crazy physics and how those two things interact so you know um I think I told him a lot but I think he told me a lot of things too that I didn't know and a lot of them checked out so you know it immediately increases somebody's confidence why I pinb that somebody has reliable knowledge that you didn't have pin my posts um and when that person checks out what you're saying they start to realize oh I can get I can get more interesting stuff so

(46:27) if for example I bring up the fact that um oh do apply to you because I'm I'm actually I mean this appli to you like if we want you more in our spaces what do we need to do so one thing would be the cost of looking at other people's theor talking about about what's going on is high if done in public and people tend to be very vindictive if you don't affirm them so the the pattern that most people don't see is uh you know you get a message Eric huge fan of your work um really appreciate you I think I've

(47:09) got something super interesting um let me send you the following blah blah blah blah and you don't want the obligation of a 97 page thing you might want to look at something cursorily to get an idea of it the person on the other hand has been hurt and burned so many times that they're defensive so they don't want to send you something that you will easily

dismiss and you you begin the dance of closest approach I want something from you that is relatively short gives me an idea do you know what the existing theory is do you

(47:46) have a theory Beyond it are is it going to cost me to evaluate it in public where by listening to it um I find out that I'm listening to a perpetual motion machine and now I'm 20 minutes in the space is recorded and the detractors uh bless their little hearts uh turn it into you know uh the the revelation of quackery uh video you know or whatever don't do that to people what you want to do is you want to make life easy on these people you're going to have to take some risks and also know who a good

(48:21) candidate is going to be um I will tell you that I I have brought some of the stuff that I've learned to uh an acquaintance friend of mine neima arani Hamed at The Institute for advanced study who gives much more time to faster than light and Casmir effects and the like than most theoretical physicists and his basic perspective is yeah you can't use these things the way people want to but it's much more subtle why it doesn't work than the standard explanations that we give you know he's very open-minded but you know if you're

(48:54) going to mess with Nema you really have to be on your game so it helps to sort of understand how the standard communities think what is their notation what what sorts of structures do they use can you express yourself to the extent possible within their structures that's a that's a big heavy lift I'm happy to give some books or some recommendations I will say that there was a famous paper called a Gucci gilki en Hansen that occurred around 1980 which was how most of the physics Community learned about um differential

(49:31) geometry and bundle Theory and I would highly recommend maybe going back to that and saying is are you guys in a position to have a crash course in differential topology differential geometry Le group representations all of the indispensable things to the standard model and to a lesser extent general relativity and it would be much easier to interact with that if you also so one thing you could do which would be crazy is you could get several sympathetic physics types in here and you could try to have them conduct the

(50:05) in the conversation within your space because the biggest the biggest problem is that the people who don't have phds and don't have to worry about some of these reputational issues quite so much are much Freer and it's very it's a very envious situation to be in so it's not it's not like everything goes in the direction of having a PhD having a PhD can be lousy because you can't entertain things uh as much as you'd like to so that's sort of my general recommendation that you can get people in if you really

(50:40) think about not putting them in bad spots Eric I really appreciate you answering that question I would say I'm that everybody here you say listed as speaker and several people listed as listener are absolutely worth following and I would expect that they would take your advice to heart to deliver value first and make your engagement easy and asymmetrically low in Risk um I would love to request that you follow me back so I can send you a message and if I if it turns out I did not listen to your advice well then you can you can block

(51:11) me but I just want to say thank you so much for giving us so much time and stepping into the space and talking with Rory and everyone oh Rick I really appreciate it just followed you but let me just say this I plan to unfollow you don't take it personally I just wanted evidence the problem that um plan un nobody wants to be put in a bad spot by virtue of the fact that they come and they want to expose themselves to some risk and offer some help and then there's more risk and more help demanded than most people expect so let's try it

(51:44) out to begin with and really appreciate you guys and by the way just keep in mind that what we're all trying to do here is incredibly unpleasant because of the amount of lying disinformation grifting etc etc and you know just something I get from you guys is when I hear normal reasonable people trying to figure this out it gives me hope and uh really appreciate you all thanks for having me in and I hope I haven't taken up too much time because that's always a complaint people in the audience so you much it's been a

(52:16) pleasure thank you Eric thank you very much and peace and much I brother that was amazing J CHR okay okay everyone calm down okay okay Eric is a person a human being like you are okay um so I I do have to say something in in relation to what Eric had to say about what happened a 100 years ago with the discovery of quantum mechanics and the nucleus and how and the neutron in specific how to use those neutrons to um break apart nuclei and release the mass energy that contained within them um and it's very similar to what you know guys

(53:02) like salp the the author of those US Navy patents have put forward with his his theorem of pump Quantum vacuum you can break What's called the schwinger limit yes and that if you break that swinger limit then that might be oh they brought me up now they brought me up folks uh can't hear anything this is getting awkward uh yeah no why [Music] why why did it break not like this folks not like this folks not not like this I guess I got to leave and rejoin IDE and just throw throw [REDACTED]

(54:08) against the wall until something um yeah but when something does stick and I have something uh you know I try to go to people like er that better you know the not to waste people like that's time with the information to try to get like the best of the best and uh it's just unfortunate that you know by the time you get to those people you're all covered in [REDACTED] from your your uh journey and it's it's hard for them to they take a lot of risk to try to deal with someone like that you know

(54:39) what I mean so um and yeah I understand what he said about the community I I totally agree that you don't know who to trust it's it's it's hard sometimes and you don't know who's compromised and who's you know with you or against you sometimes uh but I suppose I suppose um you know if we have the right physics model and we have the right team together and people working on this it's going it's going to continue to attract the right people it already has we've already got you know

(55:09) we had charl bu on from NASA La last uh Apec conference and we're going to have some even better people I mean I can't I can't say I can't say that even better it's just G to keep getting

better with the uh quality of the information as as we we continue to work off each other and grow off this knowledge base and and ideas and uh I think we're at a really important time in science moving uh to move all this forward so it's just uh if this all works which which I think it does and there's a lot of people in this

(55:39) room who who who know that it does because they say that they've experienced it firsthand and um you know I have no reason to doubt those people even though I can't use those stories and and that is evidence or unless there's scientific information or some kind of engineering knowledge that was passed on better avoid that really uh it's really just a distraction from from the goal here I think we've got Jeremy I think we've got to be much more careful in in the way that we put some of these people

(56:08) from these communities into these awkward positions I think Eric made that point very clear in that um you know we have a reputation that can be burned as it were um so we must be very cautious essentially I'm going to drop here in a sec from this and we'll go back and uh I've I I've taken you I had rough rough holidays and stuff so it's just a lot of I've had a lot of anger at the the the lack of progress and and recognition in a lot of these things but uh to know that you know some people are

(56:40) actually looking in paying attention is now finally is um it's kind of like all right cool yeah well GE can you guys hear that I can't even hear what he's saying who is that somebody's saying something but it's very quiet yeah just is it Jeremy were you trying to say something then or oh sorry Roy it was me um I I was just wondering if anyone could remember the name of that paper that he referenced the uh the differential paper doesn't sound like Jeremy's saying anything now no he's not um here I'm here I'm just

(57:28) listening uh what is it called the dark entropy paper I I think it's related to it yes essentially uh oh God is anybody recording this space no I don't record them unfortunately sorry they're not recording this of all the spaces the record space of your life well it's just habit unfortunately I got on the dark attacked by the dark side of Twitter and decid not to record them anymore um they didn't even Record paper the things that I was talking about that Eric sort of um said he was going to go and have listen to was the

(58:08) set of lectures by The seti Institute and it's called um oh yes alien mathematics and it's very interesting um it looks at lots of different concepts but we're going to somewhere else could possibly have um on mathematics that could be different to the concepts we have lectures on YouTube and it's well worth looking at if you Paradox yes tup you got your hand up brother the only person in the room with it so good manners deserves so on go for it brother congratulations on a great space that was really cool I just popped in

(58:43) here I couldn't believe my eyes it was uh really it was it was great treat guest treat with respect good questions I only as soon as I I just tuned in right to right at like the right time I I I I can't believe what I missed I just tuned in a little bit too late so we can recap that means we what he talked about and because I saw him in here and I was like oh I gotta hear what he's

saying and uh yeah I mean uh I'm not going to recap but I would add something you know to what Eric was saying the the cost of um

(59:26) initial Discovery uh you know one of the many projects that I'm working on um is an artificial intelligence uh framework uh it's called Nine High uh that that vets out initial theses uh compared against a whole database of Prior projects uh going back to 1990 um we have six different artificial intelligences over a billion parameters for each um of those six artificial intelligences one of those uh if you submit a project or potential thesis will identify a uh a personality type or an actual person that uh may be a subject

(1:00:15) matter expert to be able to fill in a gap that you're looking for um another one this is just basically mumbo jumbo no disrespect gaps in to Jeremy but you can teleport information we know you can because they literally teleported a picture last week helps to work for commercial VI viability um so if anybody's everybody has competing theories doesn't mean one's right or wrong uh you know having uh you know collaboration as the new form of currency and um you uh on the platform would be compensated for their

(1:00:50) contributions to the project as well so um yeah this has been something in the works uh for some time now and you know if anybody's interested the DMS are open okay um I've just had a message from Eric the paper is the Uchi gilki and Hansen paper uh spelled e g u c h i g i l key okay and Hansen okay that's the paper that Eric was referencing um sending me more stuff with links that I'm going to put into the room shortly okay yeah I can't look that up right now so if you could post those in the

(1:01:37) description just in the comment thread right below um they'll be awesome and I'll check into that this week okay right well to recap um what we were discussing we discussing basically dilation Theory okay in that the latest ligo results uh are providing analysis essentially are providing significant Sigma to a thing called Dynamic behaviorism in that it provides a geometric Unity okay in that properties to note the behavioral outcome independently of scale okay and we saw this with the neutron star collisions

(1:02:17) essentially and that those neutron stars did indeed hold that very odd phase of Quant okay so the macro and mega scales essentially can emulate that of the micro scale and the correlations to their energies spins and time essentially correlate quite well however it requires much more fur analysis of those results to determine if that is ultimately correct but fingers crossed I think we've got one right in that essentially the phase of Quant holds a much faster relative rate time okay the phase of Quant does not interact with

(1:02:53) normal last scale matter okay so we can start ticking some of those observables that we see with the phenomena we can also say that this conservational geometric symmetry should be applied a bit more than we imagined at first in that it should be applied to emergent entropic time providing a fluid symmetry as it were in another dimensional thing like a virtual as it were application of time so that we are essentially abstractions within that fluid symmetry of time and if we can do that we can use the physics of relativistic fluid dynamics

(1:03:30) to explain gravity in that the slower one's flow okay the greater the inertia and the faster one's relative rate flow the lower the inertia okay so if you hold a much faster relative rate of time than your surroundings for example you will experience zero g okay which gives us another tick on the box of those observables that we see and starts to answer some of the questions so we're looking at things more of a Time tensor as it were rather than an energy tensor of Einstein yeah we're going to drop out

(1:04:03) we're moving into the Realms of post Newtonian Einstein physics as such with this new dynamics that we're looking at okay so that's a quick recap of discing for hard TRS number five so you're staring at him roy Herbert there he is so it's notation then okay I'm going on to go a drop out of that guys okay so that was fun uh I don't know so um my thoughts from just the little that I gleaned from uh Eric Weinstein is that wasn't very impressive to me I mean everybody wants to fate the guy but um

(1:04:42) if you're out here and you're telling people that you don't think there's UFOs visiting us I mean what do you think all what's going on man I mean what is going on right we got Congressional hearings about it we got a guy testifying the Congress that we have crafts um you know that's just it's just backwards thinking at this point you know it's like the old the old crew needs to just go retire and go somewhere else cu the reality is we need younger people who are looking at the same

(1:05:10) physics with a new lens there must be a way to travel faster than the speed of light if we have uaps visiting us simple as that even if there even probably if you think of uh like let's just say that we found them and dug them up or whatever then if even we dug them up they had to have come here from somewhere right they had have come here from somewhere um let's go ahead let's do a recap uh let me see what we got going on here yeah SE is full of crap I mean that's pretty obvious they've uncovered

(1:05:43) literally nothing in what 50 years I have no I've I have never had any respect for seti even back well before I even thought uaps were visiting us I just feel like they had to have been they have to be doing something wrong um yeah uh I mean I doubt that I have an email address for directly to Joe Rogan but you know I'll take a look at it um I did want to look at some scaler stuff I don't know how long I'm going to go tonight though I'm just I'm so jet lagged uh what was going on here yeah Lulu is better now I mean

(1:06:19) she's having some stomach stuff uh but she should be fine okay so you guys want to talk a little bit about Tim pool stuff okay yeah no she's good she's fine she's chilling in the other room right now um so Tim pool was great uh so here's the rundown of the Tim Pool Stuff uh we we showed up there kind of like around I don't know 900 in the morning maybe a little bit earlier and the thing was at 10:00 a.m.

(1:06:52) so we hung out uh kind of in the I guess you could call it Green Room uh of the castle which is a house that he has for his Studio I'm not going to say too much more about it because I'm not trying to dox people or anything like that uh but he had a pretty pretty sweet hangout

spot right so I got to meet a lot of the people because when you're dealing with podcasters are this big they have like a really big like Entourage of people I mean he even he has there's two studios in the house so there's like a whole another crew that does a different

(1:07:21) podcast as well the I think it's the pop culture one or something um and so I got to meet a bunch of people they were hanging out we someone we talked about tww flight 800 somebody showed a video I think it was Brian actually the dude was driving us showed us a video of this guy where they claimed that they accidentally shot it down US military accidentally shot it down uh when they because it was like a test or something and they thought that they were shooting at the decoy and they ended up shooting at a real plane

(1:07:47) accidentally kind of cool not cool I mean horrific but uh interesting to see and uh met a few uh cool guys um Wesley as well who I met who knows um Tony Merkel who was the first guy that had me on in person for a podcast uh I love Tony Merkel I think he's just one of the nicest dudes I've ever met so it's interesting to see these small worlds right where it's like all these podcasters kind of know one another uh and I you know I that helps in terms of like getting good word for uh you know me and what have you so 10 o'clock rolls

(1:08:25) around it's like 10 minutes to 10 five minutes to 10 and like they're like okay it's time to go up and see Tim pool and you know he's set up in the studio uh playing the guitar and uh like right before I went up there I had that moment where I'm like man I can't believe I'm going to go talk to Tim P right now like that's wild you know like I just can't believe it and I kind of got past it I really don't get Star Struck like at all ever like I just just don't you know I just I look

(1:08:55) at everybody is just a normal human being but it it kind of it wasn't just like Tim P but it was more of like the moment and everything right and I had just met Dave uh in person for the first time uh as well so it was just a lot and then so I got past that pretty quickly we got up into the studio uh met Shane Cashman as well who was going to be he's the other guy that was you know the main the people talking in our it was a four-man round table and oh hey Bernie how's it going buddy uh and so then yeah we we started

(1:09:27) pretty much right away and yeah I thought it was it was awesome it was it was a fun conversation I mean the reality obviously is that you know Shane and Tim were definitely skeptical right very skeptical of the videos and the situation you you saw probably some of the clips including the one I retweeted with Shane earlier today this one where he's talking about well maybe the plane was fake the whole time right or maybe it was a hologram or something like that plane's definitely not fake there was definitely a real plane guys like there

(1:09:58) was definitely a real plane um but you know I think that what I would say with respect to like Shane's comments is um you know is it possible that like the government could have faked the videos sure right but you guys know you've followed the case long enough where it's like it doesn't make any sense for the government to fake these videos oh there's there's Jess as well I'm going to give you moderator um it doesn't make any sense for the government to have fake the videos I mean what's what's the story

(1:10:29) the government saying like they never revealed this stuff right and I could see how people on the outside are could say like oh maybe like you're part of the government right but like I know I'm not disclosing this on part of the government and if I'm if this is somehow a government setup then I'm in the middle of being used by them and how would they have known that I'm going to be the person that's going to pick this up right like nobody else picked this up if I didn't pick pick the story up these

(1:10:55) videos go back into the ether nobody talks about them right so that's why I just don't find there to be any credibility to this idea that the government made the videos right they never they never made them public they never uh marketed them or advertised them they never posted them on any social on any major media and I mean you got major media talking about aliens in Vegas but they won't even touch this story like just not even touch it and the reason why they don't touch it is cuz they know that it's going to destroy

(1:11:26) their narratives that they've put out there because even when you look through this like as much as like uh you know Shane and Tim they don't believe the videos right like and it's pretty obvious to tell they don't believe the videos right but they know I think that we got through to them on this idea that this plane didn't crash into the South Indian Ocean right the evidence is too strong against the plane crashing into the South Indian Ocean Shane was really cool man he was really cool he didn't really hang out

(1:11:58) afterwards but yeah like I messaged him afterwards and just really cool guy man really nice guy I asked him some questions about you know his background and stuff like that um yeah I mean it's fine guys like here so here's the thing too and this is a little bit uh kind of going off topic for a second is that we have to realize the situation that we're in here and I think I even said this on the podcast where like even 6 months ago I would have thought this is all crazy even if you talked to me 6 months ago I probably

(1:12:31) would have said the same thing probably would had the same attitude as Tim I probably would have said like this is nonsense there's no way right so keep that in mind what I'll say is what I realized about all this yes I believe the videos are 100% authentic because they tell the story of the plane better than any other story to date right um another 2K ad I'll skip it oh no it's too late uh but here's the reality of it is that this science is so Advanced and this stuff is so beyond what the public

(1:13:05) is aware of that even for me in the middle of it even let's just say I'll just say it I I believe that teleportation is real I believe that there's science beyond our understanding but think of what this does like to me I'm even starting to lose the line the line starting to blur between fiction in reality and that's just from somebody on the outside like imagine somebody on the inside who knows this science is real it's like man now you really just start to wonder like what's real and what's

(1:13:35) not anymore like what's possible and what isn't and this is why like when I look at Dave Rossy Dave Rossy is one of my best friends at this point and he's into a lot of esoteric

aspects of this phenomenon and it's probably because he has seen stuff that's like he's like okay I know like a lot of stuff is real and a lot of stuff is possible right and once you start to go down that rabbit hole it's hard not to fall in it's like where is the line the line just blurs to a point where

(1:14:07) you're like I don't know man maybe there are Shadow beans right like I don't know and this is from somebody who I don't even I'm not even convinced aliens are visiting us right so this is the part where it gets difficult and when you look at it that way look at it from that perspective you realize too well wow it's really easy to hide this stuff really easy to hide this stuff cuz even the people who are working on it don't even know where the line is and so I think that the people that

(1:14:36) do this kind of science that know this type of stuff is real about quantum mechanics unification theory of quantum and macro Eric Weinstein's obviously not somebody who knows about it right he wouldn't have said half the stuff unless he's you know disinformation um and what I've heard though too uh I don't want to too off topic actually is um what was I going to say is that it's it's easy to hide it because it all just seems like fantasy right even to the people who are working on it it seems

(1:15:05) like fantasy so from the people from the outside of course everybody's just going to be like oh no this this can't be possible right they're going to and they're going to say show it to me show it to me well you can't it's all classified it's all classified who's Dave Dave Rossy right here you're staring at him where is he there he is Dave Rossy right there if you guys watch this you can check it out so yeah this is the part where it's it's like okay so how do you proceed so if

(1:15:41) you're in a situation where you know the stuff is real but the whole world you know what's going to happen if you try to tell anybody like and Dave and I were even talking about this where it's like even if you're to tell people this they're not going to believe you people aren't going to believe you right same way where we're talking about teleportation people aren't just aren't going to believe you it's that's simple they need to see it firsthand right and so this is the part where I think that

(1:16:10) if you are a scientist who's been in the know on this you just don't even bother trying to tell people because you know nobody's going to believe you anyway they're just going to think you're crazy like so maybe Eric Weinstein does know but he's not going to say that publicly because he knows and you heard him talk about it in that space right there where he talks about it he says the push back you could tell he was concerned about the push back he got for saying the wrong things on social media

(1:16:37) and you can see that even with stuff that just from the you know Miami situation that I posted you've got people going Ashton don't look at this don't talk about this blah blah blah like I want to keep your credibility whatever right like man I don't care about that stuff if if you guys have been following along you know I don't care about that that stuff at all I was nobody with 30 followers 6 months ago right um so it's like wait so uh I can you call in so Chad wants to call in uh so it's like you know I don't care about

(1:17:26) what uh people think about me and that kind of stuff at all because here's the thing too it's like I'm just going to tell it like how it is right and I'm not even concerned with trying to convince everybody anymore if that's the **truth** behind this is what I was going to post later tonight or maybe tomorrow now just because I'm tired is I'm just not concerned about trying to convince a bunch of people right like you guys who are watching right now there's 300 people watching this right now like the

(1:17:52) reality of what I'm telling you is the absolute **truth** in my heart which is that there is advanced technology out there the government knows all about it they're probably at least 25 or 50 years more advanced than we are that's just the **truth** that's from what I know from people I've talked to Etc they're they're at least that much more advanced than us right and we're not going to be able to convince the world we're just not you know they're not going to put us on TV they're not going to put me on CNN

(1:18:19) right um because the government does control everything it's just it's the sad state of the reality and even if you go post on social media you've seen the gatekeeping behaviors right that are out there everybody's going to push back show me your Source show me your scientific paper how many phds do you have that led to that man that stuff doesn't matter at all that stuff does not matter the people that I'm talking to do not have phds that are working on this stuff they're just people that

(1:18:44) figured it out and then they're you know and what what happens then logically is it creates this world of the halves and the Have Nots the people that know this stuff is real are living like kings because the people that buy this type of technology and use this type of Technology have tons and tons of money and everybody else is just a poor surf that's what that's been my wide o eye opening Revelations from all of this right so I don't even care about the trolls on **Reddit** or whatever if they

(1:19:18) want to go live like surfs and be idiots and be ignorant of all this feel free feel free I don't care man doesn't bother me at all right I'm 100% convinced in my mind that this science will get verified and authenticated um uh oh Chad wants to to dial in I'm trying to figure out if there's a way I can dial him in uh if so I might set up a quick Zoom yeah from investigate Earth podcast so uh quick shout out to those guys uh Chad and Sherry were the very first podcast not not in person the first in person

(1:20:04) podcast was Tony Merkel so I I always like to give him a shout out because he took a chance flying me out having me on his show in person I think that was still to this day you know one of the best podcasts period that I've ever been on and then Chad and Sherry from the investigate Earth podcast I might be older than they are but they you know they treat me like I'm their child and I love them absolutely cuz first of all I just love talking to them uh but they've just been nothing but grateful uh or gracious I would say

(1:20:34) is the word uh in terms of having me on even after the very first interview like if you listen to that still investigate Earth part one I was visibly scared audibly scared that's how

freaked out I was by everything that was going on at the time um and yes for uh Kathy D in the chat I do believe that free energy is real it's not that simple the reality is there's energy even in the vacuum of SpaceTime even in the vacuum of space time in our space but definitely right here right here in this little space

(1:21:04) there's energy here right and if you can tap into that and figure out how to tap into it then you can create a device that will produce energy right now you know how do you do that that's the stuff that's classified that's the stuff where you're either one of the elites so you're not one of the elites um and so anyway that's what I've come to realize about this now we can jump back okay I'm going to you know what we're going to do a quick impromptu we're gonna I'm going to do a

(1:21:37) quick Zoom hold on hopefully this won't reveal anything when I pull this up doesn't look like it did okay I'm going to send a quick zoom over to uh Chad and Sherry hold on guys we're having a quick impromptu uh hard **truths** maybe here give me a second uh create new how do I do this create new Zoom how do I create the zoom um I can't figure out where the add new Zoom meeting is oh uh Jesus uh here schedule meeting oh nobody saw that right okay yeah okay cool I think that's good enough schedule meeting what time is it

(1:22:28) uh we'll back date it there okay give me one sec video audio save okay uh which one which account did I use I don't remember I think I use this one gotta make sure I use my right account oh great well that's not good hopefully people won't join that you know what I better make a different one huh hold on I'm gonna make a different Zoom uh I'm going to switch over to full screen face for a second let me cancel this God this so annoying did it just close delete okay let's try this again

(1:23:19) schedule meeting I definitely don't want to reveal that okay there we go yeah I switched it don't worry we're doing a different one start the zoom [Music] meeting okay okay here we go let me copy this invitation send this over to chat and share uh Chad sh if you guys are watching I'm sending it to you in chat yeah they do they do this as well okay oh they sent me one oh okay well I just sent him one I already sent you one okay I'll switch it back over once I get in the the stream the thing with

(1:24:21) them all you know what I'm going to join theirs I think hold on I'm just going to join theirs it's easier oh okay well now neither us neither of us are doing it okay uh we'll get that started here in a second um yeah we're doing full screen face so uh once I get the uh thing here okay let me see if I can join his I'm going to let them choose so we did the we did the Tim pool thing hung

(1:25:27) out with them and uh after it was done you know I thought it was I thought it was a really good one and then afterwards we hung out and we played poker actually down in Tim pool's basement with Tim pool and some other people as well we ate a bunch of sushi he ordered like a huge amount of sushi man it was awesome and uh hung out and chatted with people for a while and then uh bounced out and then I went back to the uh the hotel and hung

out with Dave and um some other people okay uh I'm join hold on I'm

(1:26:01) joining my thing now as well let's see if we can get this going these are big chunker headphones I don't know what they are uh let me see let's see if you can get in there we go can you hear hear me is that Chad and Sherry let's let's switch back over to the other full screen Chad and Sherry where are you uh I'm here there you are hey Chad how's it going man how's it going brother hey good H you having a good night man we are having a fantastic night we just got done with the podcast

(1:26:49) and started listening to your stuff oh did you yeah I figured it wasn't random that you were jumping in and texting me so uh what was the uh podcast tonight that you guys were doing well we were doing a little bit of spiritual stuff biblical stuff in relation to UFOs uaps and all that stuff so um yeah we actually had you know we're not very I mean I don't know we're kind of spiritual right I mean I kind of grew up in a religious household but we had someone that is very spiritual a Biblical scholar which I don't

(1:27:20) necessarily know that I believe in everything thing 100% I'm kind of you know neutral on that but we at least have these people on because we want to talk about their like you know their their very devout beliefs um then just kind of mix it with a lot of the UFO UAP stuff and a lot of stuff we're talking about today I mean even the stuff you're talking about the how we can really harness the power of the world right now we're we're literally experiencing this right now and how does that relate to

(1:27:48) the spiritual realm that's kind of what we talked about a little bit tonight man yeah that's awesome I think that that's really where I'm trying to push the conversation forward is like how do you even move forward with a lot of this you know I've been very critical of a lot of people in the uip community just because I feel like you know if I look back TimeWise from when I was younger and I'm over 40 years old now it just feels like there's not much has been accomplished like sure I would say people are more

(1:28:15) aware for sure but you know we haven't nobody's shown any UFOs this stuff goes back to Roswell right it's like you know 100 years and uh we haven't got anything out there and I talked to these people that you know I've never thought I would talk to my whole life and um you know the way they talk about everything so casually about the science of it just feels like it's they're just like nobody's really even trying that hard honestly at least the people that are in the know that could get it out there you

(1:28:43) know so I'll be honest with you Ashen I um you know with the ma370 thing right you so let's talk a little bit about MH370 and especially about the **debunkers** right so the **debunkers** I think have come out loud and clear yeah uh against you and and if you look at by the way these **debunkers** that come out against you these **debunkers** come out against anything and everything that could tell or at least um potentially prove an outside power or Force outside of our government yeah right so you could you could have two two versions of this but

(1:29:22) at the very least like um I won't even talk about names but there have been prominent people that that that's their main goal it's like how do we **debunk** this how do we how do we try to disprove that either technology or an interdimensional force can actually exist like we are seeing today and so Ashton with MH370 thing as part of your thought process is hey the United States government has this reverse engineered Tech or technology to where we have reverse engineered this we have this techn technology and then the other side

(1:29:53) of this topic which is the UFO UAP topic is like okay well if it isn't our technology then it is a spiritual realm or force that we is it's kind of a scary thing right so um what would be the reasons Ashton in your opinion let's let's go opposite of what your theory is for a second sure far as this is United States or adversary countries reverse engineered programs let's go opposite to that for a minute what would be the reason why government or um **debunkers** would want to **debunk** a spiritual realm potentially of

(1:30:35) inter dimensionality of this to your thought have you ever thought about that yeah and I think from the **debunker** standpoint it probably doesn't change much because I think that from the **debunker** standpoint this is something I think I posted about to is that a lot of people are just fighting to keep the status quo right I think they we were just listening to Eric Weinstein as well in a space you know and he the first thing he says I don't even know if UFOs are real and I'm going wow well that's I

(1:31:01) mean it's kind of hard to believe like there's definitely stuff out there that's anomalous and we had the 2018 DOD Navy videos you know that were Declassified so um you know to that part I'm like okay I think that a lot of people just can't believe anything until the authority tells them right um but for the perspective of the people that are in the no that know the stuff is real that know there's uaps and let's just say again for the sake of argument they know there are aliens out there and

(1:31:28) that they're visiting us you know that's the part where I I want to talk to people understand their perspective the people that I've talked to um even as recently as this weekend you know I thought well it must be that it's a National Defense situation where uh you know this type the technology that they're going to be using is of national security purposes we want to you know make sure we're the only ones who have it Whoever has it going to control the whole planet uh Etc but it may be even

(1:31:58) more simpler and More Human Than That from the same it may be the same thing that we see from the UFO Community where it's just like Middle School fighting that there's that same infighting that we see as well with these scientists right and they all have their own agendas you know and they're stealing each other's work like look at it kind of like this where if there is teleportation technology the public has no idea but there's people and scientists that know that it is possible so which of them is going to get the

(1:32:28) credit right it's probably whichever one the that comes out with it publicly is allowed to come with out publicly first right so I think you end up getting a lot of the same Middle School

drama that you get there now I'd like to hope that that's not as Petty as we are but that's kind of what I've been told behind the scenes so uh I don't know what are you what are your thoughts on it in general well well I I okay I'm going to ask ask you one question before I get into my thought and Theory um what do you think

(1:32:56) about C5 and uh Dr stepen theory on that especially summoning these things I like our conversations it's almost like two podcast hosts are both going at one another I love it we're jockeying for who's going to be the one asking the questions um you know so my true opinion of that before all of this was that I thought this was some kind of **scam** or something like that but I was open-minded to it I actually watched Close Encounters of the fifth kind which is his documentary about it I want to say a year or two ago about it and I was

(1:33:26) never comfortable with this idea of charging people I don't know how much he charges I heard it was thousands of dollars but now I think well maybe that's all disinformation too maybe it's not really all about that um but I did like this idea that Consciousness may be linked to uh non-human intelligence or beings or something like that and I'll just tell people right now is that I actually like kind of tried it out on my own right because I I just I I don't that the idea that like you can project

(1:33:54) your will or Consciousness on reality itself is something that I've always been interested in ever since I I was just actually talking about how I used to I played poker with um Tim Po but I used to play poker like semi-professionally about 15 years ago like when it got really big online and everything like that and I was really good at it even thought about quitting my job and there's definitely been times where I was sitting at the poker table where I wondered whether or not the collective conscious of the people at

(1:34:24) the table was impacting what cards came up and this is what I always think about when I would think about C5 is this idea of like can you project your emotions your feelings your Consciousness onto reality and even now I I certainly do not rule it out um but I you know I think that it takes more than just wanting something like there's some other element that perhaps I'm kind of missing related to it so I think that's how I would answer does that kind of give to know you're getting that no I

(1:34:54) get it yeah yeah yeah yeah yeah that's that's good um the reason I asked the question about step GRE and by the way um I see some people in the chat they're saying uh you know Dr step GRE is a grifter uh and and I've seen that by the way I've seen they say about me too though so yeah I get I get that um but let's think for a minute like let's let's just say for example that Stephen Greer is legit say that C5 he can summons these things um there's been by the way we've actually done a lot of

(1:35:24) pretty good research we've talked to probably 30 people we we actually did an episode on this um probably about a year ago we did an episode where we talked to a few people that have been to some of the C5 events and and I don't know what he charges I have no idea about any of that but what I can say is a lot of these people said it was pretty legit and I was

like okay that's pretty crazy um because when I first heard I was like yeah that sounds that sounds crazy um so some of what Steven Greer's thoughts are

(1:35:54) based on C5 and and I guess some of his deep meditation and kind of how he summons these things and some other aspects of this is that if for example Steph Greer is correct let's just take for example that Steven Greer is right to where you can somehow have a theory or a methodology to summons or have power and control over orbs or beings or things or energy um what does that do like say for example if the government knew that you had power in control over direct communication to an alternate power or force that was

(1:36:36) beyond their force that was more powerful than they are right what does that create to them that creates a threat to their power right Y and so that's one of the things Dr stepen Greer has kind of pointed out in in past uh things but we've also heard other people say this like if this is a spiritual realm or being or or things that we are seeing you have a threat to the powers that be a lot of these people we've talked in our podcast many times about the world economic Forum the New World Order their their Global governance

(1:37:08) system that they really want to try to set up and their entire Mission there is to create a global governance to where they are all powerful Almighty and they are the gods and we've seen this by the way in biblical texts in the past to where even in Genesis and exodus um back back in biblical days whether or not you believe in the Bible or not doesn't matter if we're just talking about in historical text we saw um even the Jews that were Moses said hey we're going to lead you out of Egypt because they

(1:37:37) brought the Jews in the Egypt uh in Egypt had all these Gods such as pharaoh and and some of these other ones but they were Kings but they were known as gods in Egypt and so as uh the Jews were being led out of Egypt Egypt away from those quote unquote Gods um they thought they were Gods right they thought they were the powerful and much of the people underneath the Egyptian rule uh back in those days were slaves regardless of how you want to see it if you look back in those days even the Israelis that came in or the Israelites that came into

(1:38:11) Egypt they became slaves but their people in Egypt were slaves before that and it was all because of the power structure that the Egyptian kings um put in into place mhm I think we are very much back in a way of we have power structures and Kings whether we see it or realize it or not that they believe they are the gods they are the almighty and they are all powerful and if you ever put into concept an actual uh you can say it's God you can say it's aliens you can say it's uaps you can say it's UFOs but if you ever

(1:38:47) put in into any um uh structure that there is a more powerful group of of beings over the powers that be in this world the worldly three-dimensional beings um they have a big problem with that because they cannot rule the people if you have another way out of them ruling the people does that make any sense what I'm saying no it definitely does I mean because I think that way you're talking about you know this power hierarchy as well and that's what this technology kind of uh implies is that whoever controls this technology you

(1:39:20) have this whole control and I think this is probably why you were jumping in because I was sitting here talking about that you have the halves and the have knots right and it's to a point where the line is so blurred that normal people the Surfs to have knots whatever you want to call them right are never they're never going to catch up they're never going to believe that technology is even real it's like the perfect defense is that they just they don't believe it's real so you now have your

(1:39:43) power structure is not threatened in any way shape or form and if some other beings were going to come down and they were either delivered that information to everybody or reveal themselves and you're definitely challenging that power structure right um on a side note I I think that Dr Greer definitely has information that he was privileged uh on receiving before all this happened I thought that it was a situation where he got some information probably most of it was accurate maybe some of it wasn't and

(1:40:12) then he kind of ran with it now I look back especially after I was in the space with him a couple weeks ago and I think that like 90 to 99% of what he talking about it's probably real I have a hard time with beu from the Andromeda galaxy and the ambassadors and what have you of the alien races um but you know what I'm keeping an open mind on it I think that everything else he's talking about with the science and like this I haven't watched documentary The Lost uh Century or whatever it is yet but I I already

(1:40:41) believe it like I think that we've this technology I think's been out there for decades and if we had access to it I think we'd be living in a different world even right now um and yeah I think it all probably goes back to what you're talking about is that it allows for the elites if you want to consider them that to maintain their power you know and even just between some of the conversations that we've been having even as of today like you see that same implication right I don't want to talk

(1:41:07) about it on stream but um you know some of this stuff is real it's like man you just kind of get brought in and if you're somebody who's open-minded enough to believe this technolog is real it's a whole new world for you you know and the last thing I would say is when I was looking at the MH370 stuff one weird connection that came up was the 1 MDB scandal from 2015 where the uh I'm going to butcher the prime minister's name it's the one after mahater and actually before mahater uh oh najib I think is what it

(1:41:39) is they found this bank account where he had \$700 million in this bank account even my dad knew about it cuz my dad is uh worked in Singapore and he had his own business and he had a consult uh one of his I think I'm okay to talk about this he's retired now he had a contract where it was with the bank and there it was like he did that Disaster Recovery planning and so this is one of these emergency scenarios where like we found this money what the hell do we do like how do we how do we like reveal this to people right and he was like

(1:42:12) brought into discuss it and I was digging into the case because the M M1 MDB cuz I kind of knew just from what the news was going on but like the guy that was the whistleblower

like put yourself in this perspective he's hanging out with people who have hundreds of millions of dollars that they are essentially just stealing from poor people and they're going and you know hookers and blow in the whole nine yards right going every nicest dinner possible and then he's got to determine whether or he's going to blow the

(1:42:38) whistle and when he Blows the Whistle they take everything from him he thinks he's safe in Thailand because it's next to Malaysia and it's a different country nope he gets arrested the the elites don't have they don't care about borders it's like the Batman movie borders don't stop them and they throw them in Thai prison where that's the last place in the world you guys want to go to prison is inti prison like there's one water bucket and 50 people in a 40ft square cell and you sleep on the floor in 50°

(1:43:06) Center 40° centigrade heat like 110 degrees you know just straight up hell right and imagine the dichotomy of one day you have hundreds of millions of potential dollars the next day you are literally broken a cell and living in a Cell for three years you know like man that's and that just goes to show you know how certain people live and we don't even see a lot of that in America but I lived in Singapore I went to Malaysia like Malaysia compared Singapore compared Malaysia is like United States compared to

(1:43:37) Mexico and it's just straight up corrupt when you go there we drove to panang one year I remember which is actually where we're talking about the plane flying to um and just to give you a quick Side Story on this and we can go back to the other stuff is that when we were driving up there the first thing that happened the cops pulled us over and they just shook my dad down for like whatever money he had in his wallet that was like the very first thing we were on this like eight hour drive they pull us over

(1:44:04) like there's like kind of a language barrier and they're like just pointing at his wallet and just he gives them like all the money in his wallet like I don't know \$100 or something like that and then they just let us on our way and then we get to panang and like the first hotel we stayed at I'll never forget this I've never been in a building where I was more scared in my life it was tilted I was afraid to go up in the elevator and we get to the room and it's like you get in the room and it's like

(1:44:28) slanted and you're like feel like you're going to go out the balcony and fly off the edge and I'm like I'm not staying in this building like I'm just not staying in this building we end up going somewhere else so just a little side story for you go ahead dude that's crazy I mean that that is nuts um you have pyramids pulled up here by the way oh yeah I was just showing it cuz you we're going about ancient history and what happen yeah you're right I want to talk about that for a minute you want to

(1:44:51) talk about okay let bretty pack yeah I do want to talk about this because um you know Ashton on on our podcast the other night we talked about Robert shock now there are probably a lot of people here that don't know who Robert shock is Robert shock is a um he is a professor at Boston University Robert shock is alongside Graham Hancock even though I think

Robert shock probably does a little more deep Dives in the ancient civilization Theory um as far as you know for example I told you on the on the podcast the other night when Robert

(1:45:25) shock and um and his team goes to Egypt to look at the pyramids they closed down the pyramids for his team for his people and you know we got invited by the way this past summer and they said hey do you want to come to Egypt and the pyramids with us and and we were like yeah we want to do it and then something happened at the very end we Cann not go which was so bad but um but they closed down the pyramids Robert shock is one of those people he actually has a book which I will get right here is a signed book I got to figure out what the book

(1:45:55) is actually called but U well there's one myth of a cosmos and forgotten civilizations revised and extended edition but anyway um his theory on this is even the Spinx right for example was actually not a SP it was actually a female rather than a male lion um and and he thinks it was it it was because water erosion whatever but also the thought process on how did these pyramids get built what was the what was the power structure Behind these things so you could go biblical and say that hey maybe it's nephlim these Giants that

(1:46:30) actually picked up rocks these 35 foot Giants I mean that sounds crazy but you know biblical terms you can kind of take that for example but then you could go the other example and say well these were Advanced civilizations far beyond probably even what we are today um I mean how many times do you see pyramids being built today um how many times and and if you look at our our very mediocre way of building structures today um we we we have cranes we have a lot of weird construction techniques we have a lot of

(1:47:07) this stuff but you look back at the pyramids man and not only did the pyramids were built with massive we're talking about some of these um uh I guess a lot of this was Granite uh rocks that were probably the size of uh 10 to to 20 houses in in length these things were put in place and not only are they put in place in you know specific ways but they were also aligned with certain astrological um uh what do you call astrological structures in in the sky yeah cosmology yeah and all that cosmology yeah and all

(1:47:44) this stuff what was the question is like how old are the pyramids I mean yeah and Beyond the pyramids I think the pyramids are probably older than we realized but I also think that the Earth also goes through recycling right I think we have probably been recycled three or four five six seven times we we know the Earth's probably at least multi-million or billions of years old um how many civilizations were around and how long were they around for that structure how and why did they why did they recycle what happened in the end did we did we

(1:48:21) destroy ourselves at the end of this either with our technology um or just our technology to be able to destroy ourselves and um what's your thoughts on this Ashton like have you ever thought about this especially in terms of MH370 let's just go there just the technology we have looking at the ability to potentially you you say I believe these orbs are a product of our reverse engineering so this is the first step being able to disappear an airplane so

what is the next step what if they can disappear an

(1:48:59) entire planet or civilization because they get pissed off this is human nature human nature is a very bad thing in in in a lot in more ways than one um typically if you look at Human Nature we do not have a kind heart overall um so how would you like do you think that potentially our advancements in in Civilization could have destroyed us in our past civilizations if you believe in past civilizations 100% And this is something that I've only been broaching I think it's I've been broaching this idea of ancient history

(1:49:39) being pushed back longer than I've been doing the MH370 stuff um and when I watched ancient apocalypse with Graham Hancock I mean I found a lot of that stuff very compelling cuz despite the the nature and the name of the show he's really just doing anthropology and archaeology right and he's just he's doing stuff where like I like when people actually go out and do the work do the science right he's doing it not just sitting there like talking about oh blah blah blah this is what the academics said no he's actually going

(1:50:06) there and doing it right and I look at structures like the pyramids and um I was actually on with Jimmy coretti he's somebody as well who I I appreciate because he throws ideas out there that people you know it's just it goes against the grain I just I people like that that try to challenge the status quo right and I think he's one of the first influencer uh proponents of the idea that the pyramid is not a tomb which when you look at the structure of it it seems obvious it's not a tomb like it's it's clearly the way it's designed

(1:50:36) and the in the stuff inside the pyramids there they're not designed to be a tomb it's clearly got some other purpose for it and what we see when we look at it here is what it's become after thousands of years of erosion right you know I think there was some images that I was showing where you can tell that like it wasn't just kind of rocks the way it is now they've tried to like you know uh REM uh um renovated and all kinds of stuff as well it used to be very smooth and used to have a smooth surface to it

(1:51:04) like you said about the science related to it this was a situation where just because in some ways these civilizations were you know inferior to us they didn't have computers potentially that doesn't mean they didn't understand some of the mechanics of the universe better than we do now you know I think it's a very real scenario where they understood quantum mechanics uh perhaps even stuff like we would call anti-gravity better than we understand it here today you know um I also think Ashton by the way I think

(1:51:34) that we talked about this on the podcast if science is if you go against the grain you are defeated and I feel like back in the uh pyramid days there were a lot of scientists right back in those days there were a lot of scientists that said hey we got to figure out how we do this I don't I don't know I I have no idea why they created a pyramids or for what reason but um we do know at the very least science today is minuscule if if you go against the grain you're done we saw this with Co we saw this with many doctors coming

(1:52:14) against the official narrative or response to co um they they got threatened to get their license pulled they got all of this stuff I think there's a lot of this today and I think we're seeing it on the medical scale when you look at Co but I think that's also what we're seeing with the MH370 thing I mean oh we have three orbs that are you know in circling this aircraft and and this aircraft gets disappeared um but also we have to remember that you know during Co days I don't know if people realize but DARPA

(1:52:52) which was heavily involved in Co whether people realize I mean you guys can look up the uh the Articles DARPA was involved in covid-19 pretty heavily um they were involved with uh Dr baric at University of North Carolina um as far as his uh I guess um research as far as the gain of function of uh of what was it the Corona virus into SARS kobe2 yeah we gotta be careful just because we're on YouTube but yeah know you know where the line is no I get it yeah um I get that but anyway so you can look at those things and you

(1:53:29) can see that anyone that kind of pushed back on that right um anyone that pushed back on that they were they were ridiculed they had been threatened to have their medical license uh taken and this is no different by the way than what we're talking about today we're talking about if you push back on the physics aspect of what is possible and what is not if you push back on the civilization Theory as far as how old we are as civilization all of these things are you will get push back and and I'm and and by the way I'm even talking

(1:54:04) about Robert shock which is a Boston University Professor he is one of the most cited archaeologist geologist and U and ancient civilization experts he is also one of those people that get pushed back um and he's got ridiculed in in his own University in Boston University um and I think what we're seeing here is is that we are in an I guess to your point just a second ago we got to be careful because we are on YouTube and you're right you are 100% correct um they have to control information because if they

(1:54:39) do not control information um then they lose the narrative because otherwise you want the **truth** right like is that not what Society wants like Society wants the **truth** Humanity wants the **truth** and and and and if you don't want a **truth** then you want a narrative and so what is it is it the **truth** you want or is it a narrative and an agenda and I think what we're seeing here is is that we want a narrative and an and and the agenda rather than **truth** yeah and yeah what I would say is this is not medical advice

(1:55:14) and uh somebody said in the chat that uh the covid-19 vaccine is safe and effective and works against minimizing the spread of covid-19 just want to make sure the YouTube sensors got that absolutely and I think we've seen it too with uh Scott Jensen he is a former Senator and a doctor and he came out and just for the crime of investigating uh how many people were being uh labeled as covid deaths he got attacked they tried to take his license away I think they I was looking into him and I think they they tried like six different times um

(1:55:47) to take his license away because he was simply auditing the deaths and looking at the death certificates and uh we're not going to get too much into that but it goes to show you that

anybody who threatens the narratives that are out there or the status quo just gets straight up attacked by people and I don't think those people even have to be paid or anything like that they are just doing it because they're being told by the TV and being told by their authorities that that is misinformation this is harming people Etc um now going

(1:56:14) back to some of the other stuff like DARPA you know what I'll say is that I'm like 100% sure there's even classified papers out there Declassified papers that are into a lot of esoteric stuff we know that like the CIA was investigating stuff like remote viewing psychic stuff I've been making fun of Jack sarfati but I know for a fact that he was part of the CIA and he was you know investigating a lot of that stuff so they take it seriously they take a lot of that stuff seriously and then they

(1:56:40) will go ahead and crap on it when people outside the you know that are not under their realm of sphere of control bring those types of theories forward that's the thing that's kind of scary is that they're out there doing expensive Research into all this stuff and then if anybody else says it then they'll just go and crap on them like it's not real like perfect example of MH370 stuff is like I had reached out to Jack sarfati about teleportation and to try to learn from him how it work and you know he was

(1:57:08) pretty rude and dismissive of me and I was kind of rude back I'll just be honest Jack if you're out there you know we can make amends um but then like just a week ago or two weeks ago someone's linking to me his stuff and he's talking about teleportation is real I'm like what like why are you crapping on me I'm sitting here showing videos of teleportation you can't why would you not be aligned with me on that and it's because you know it's they have to there's it kind of goes back to that

(1:57:31) infighting they're willing to have one face and and where they know the stuff's real but on the other side on the public side just go ahead and lie about it so they can maintain that control that's out there now two last things real quick are I was just looking at this picture of the pyramid this is not a tomb like looking at this like the passageways are angled like like if this is a tomb you're going to have like a straight up passage you're going to have rooms right like you would imagine you would have

(1:57:56) rooms like it would be it makes sense for someone to walk into when you look at this this has like geometric and clear purpose whether or not we understand what that purpose is it's it's something Beyond just burying people right that's not what's going on in this pyramid here and then lastly what I would say is to your point about reset Theory absolutely in the back of my mind that's what I keep going back to is this ever ever since I discovered JFK's Moon speech where he talks about uh you know taking human

(1:58:26) civilization and and crunching it down to 50 years from the 50,000 years and he just starts by saying for the first 40 of those years so the first 40,000 years we know nothing about our history except for that at the end of it you know 10,000 years ago man had learned how to hunt animals and use their skins as as clothes like that's how far back 10,000 years is basically

how far back we can look back at our history and look at how advanced and evolved we are as just human beings it's like this is there

(1:58:55) should be way more history like if I were to look at our civilization from the outside and just guess how long Human civilization's been out here I'm going to guess like over a 100,000 years or more right and yet all we know is 10,000 years so from that perspective and to your point earlier we know that like stuff erodes over time even the pyramids and I think they're probably older than what they say they are as well just really hard for me to believe that they're they're only a few thousand

(1:59:18) years old um and I agree with the Sphinx thing as well where like potentially it was like had a different face on it and it was carved out and and the water erosion around it as well doesn't really make a lot of sense consider it's in the middle of a desert so that's the thing that I think scares me if you just to wrap it up you know you take the stuff like Tucker Carlson's been saying about this idea of you know what he knows and what he's been told is dark it's scary right one of those possibilities is well what

(1:59:46) if we're in a prison planet and they're just going to reset us whenever they want want whenever we get a little too smart a little too big for our britches right cuz your point this technology of teleporting a plane you just I think anybody who thinks about it logically it's like where what else can you do with that technology what else can you do when you see three orbs that are breaking the swinger limit as Jeremy ree was just saying earlier today on the on the stream um and it can create basically infinite energy or if we can

(2:00:13) even just suck the energy from the vacuum state of SpaceTime like this is free energy you're like okay well now I can start to blow up the whole planet pretty easily I have to do is scale this up a little bit and yeah so I I think that like Dr Greer says that the reason why he doesn't think that the the non-human intelligence are malevolent is because he says they could just destroy us anytime they want so absolutely yeah okay well I will say this I I didn't want to go here but we're gonna go here

(2:00:41) we're going there no this this is this is way safer than covid-19 so okay that's that's what's funny I my YouTube channel for now I don't want to have to switch over to rumble just yet yeah we don't want to murder you on YouTube yet um by the way speaking of which before we get into that I will say that Spotify is so good at free spee um and and I want to give them credit because we've been with Spotify for five years and by the way yeah I I think that I think Joe Rogan going there and

(2:01:12) getting a contract probably helps that because they can't like censor other people and also let Joe Rogan say whatever he wants to at the same time so I I I but I will say you know Spotify is not a US company so they you know they don't have to as of now abide by the same BS that you you know the United States abides by or what they want to push on us companies but what I will say to your point here is um with the whole spiritual realm Tucker cross and all of this now we don't have to go religious but we can go a little bit

(2:01:50) in the realm of what happens when we die this this this is going to get somewhat deep but it's not going to get crazy deep we're not going to go you know nuts but what I will say is that I think that um and and that's one of the things when when Ashley when you first came on our podcast and and and you're right by the way you came on our podcast and you said hey uh what I and and I and by the way you have done a ton of research by by this time you when you came on our podcast it was not like you had not done

(2:02:21) research you have you had been heavily invested in this before so it's not like we brought you on the podcast and and you had no idea what you were talking about um there were people there were listeners of ours that that said hey can you bring action on your podcast because he is saying some stuff about MH370 that I think makes sense and some of these people by the way that that reached out to us uh we respected because they had reached out to us on other topics that they were usually right about um and and

(2:02:51) by the way some of these people which I think I reached out to Ashton before about these people some of these people are in the government um I will be honest we we have had government employees on our podcast like literal actual government employees now I can even say this because the reason I will say this because they said when they came on our podcast that you know hey I don't care if you say this even though they did not say we are we're allowed to say what What entity they were with but what I will say is that they were ahead

(2:03:24) of a major three-letter agency um they were over I'll put it this way there were over 3,000 agents um in the United States government and they've been on our podcast a couple times and so um one of these that particular person by the way Ashton I don't if you even know this but that particular person reached out to us and that that was one of the people when they said hey you need to look at this footage of MH370 and I want you to do a story on it I want you to follow this and this guy I won't say his name but if you guys

(2:04:03) listen to a podcast or whatever you can probably find who this guy is because we do on the podcast in this particular episode we say hey this guy is is is a part of the government he is um a big name in the government he has over over 3,000 agents and um and I even told him before he came on I said hey look man you don't have to even say your name by the way like don't say your name he's I don't care if I say my name I was like okay that's fine because by the way when he says his name you can literally go

(2:04:33) look him up on on Google and see who he is uh but I'll let you guys figure that out um but regardless of that the spiritual realm like do we feel like that when we die that we are that we're going to see black right that I think that's I think that is something that people are scared of I think that's people I think that's a fear of ours I think that's something that also when you look at this UFO and UAP and alien and and God and all this stuff and you wrap all this in like I think until now with the UFO topic we

(2:05:10) there's a lot of people that only had Faith to go on they only had faith it was like we have no evidence whatsoever they're interdimensional anything and by the way if you if you if

you listen to and I I want to read something real quick because this is this is important I want people to I want people to understand this and I'm not a Bible person at all but I I I literally just read this tonight on the podcast and the first thing I read I was like wow this is kind of crazy but if you if you think

(2:05:41) about what's going on today says Heaven out of this world the Helix nebula which is 690 Lightyear from Earth is it looks like the Gateway right to a brighter world but the glow is actually from gases of a Dying star the heaven of scripture many say has nothing to do with the physical Universe there is no Galactic address heaven lies in the spiritual Dimension and it even says goodbye Flesh and Blood the end isn't near it's here it's a vision of the future the physical Dimension is gone is replaced by something that sounds a bit

(2:06:15) like a super physical Dimension blending the best of both worlds physical and spiritual right so you hear that from the Bible and you're like okay then you look at like the UFO thing and what's going on today and you look at all these things that are you you're literally talking about um Tucker Carlson and and some of these whistleblowers that are coming out even even literally Declassified government documents and even classified government documents that that these people are saying hey there there is a realm of

(2:06:48) this that we know that is spiritual I actually think the government 100% believes that most of what we're seeing UFO and UAP is a spiritual realm it is a interdimensional realm and so the reason I bring this up is because Beyond or or sorry before we ever even thought about the disclosure of UFOs and uaps we only had Faith to depend on a potential afterlife now we are starting to see a little bit of evidence of of of of a potential other side right of a potential um realm outside of what we know that exists in our 3D dimensional

(2:07:31) realm now you can take that as as Jesus or God or Muslim or whatever it doesn't matter doesn't matter the religion it we're literally only talking about the physics or spiritual aspects of this and um and so when you look at this I think this is the most groundbreaking thing we can possibly take from this today and you can you can wrap yourselves in religion all around all of this we don't we none of us know but but one of the things that we do know is that we're trying our very best to figure out and can sipher what

(2:08:07) we are seeing and hearing today and even with CERN um trying to look at these other dimensions with uh the the particle colliders where you're where you're literally colliding particles at light speed or or faster in some cases um and you're trying to see what that Dimension would be and you're trying to find those other particles and so the thing I want to say to people um that we don't always get to say on our podcast because sometimes our podcasts are are are very concise and we got to we got to

(2:08:39) get it point out but what I want to say to people is that at the very least it doesn't matter if you're a God believer or Jesus believer or or if you're BLM or Hamas or Israel or whatever the point of all this is is that I think that what we are starting to uncover in 2024 and 2023 is that there is a possibility that we are not just who we think we are we are not just a

physical being and structure of ourselves I think there is far beyond energy that encapsulates all of us and I think by the way what Ashton

(2:09:18) um points out a lot with the MH370 thing the fact that if Ashton is right in terms of what the United States has been able to reverse engineer imagine what is beyond what the United States has been able to reverse engineer and um and so I I think we have to I think we have to uh harness our lives and and but also we have to understand that um potentially there is something way more and way more structured and way more bevent than than what we are as a 3D dimensional physical body yeah um have you ever seen real

(2:10:03) quick have you ever seen Andy we the egg have I shown that to you or sent you guys that if not I'm looking at it on the screen is that is that what you're showing no no no the egg so here I'll pull it up um and I'm not going to play it just yet but I'll I'll kind of spoil it uh for you here um now this short story and I I don't want to play it because it'll also get me YouTube strided or whatever but um this is a story here where it's it's uh kind of about reincarnation is the reality of it now

(2:10:31) it's better if you kind of watch it yourselves and dig into it but the idea is early on this person dies and then they are reborn as somebody else and it's about okay well what does life mean then if that's the case right and the reason why I find it so compelling is that I'm sitting here I've been talking to uh Roy de Herbert which we were just on a space with him and Eric Weinstein actually and this idea that time itself is really a construct it's the fourth dimension but it's also something where

(2:10:59) you can I think I was talking to you actually about it as well where uh it's the only reason why we perceive it the way we do is because of our biology and because of the beings that we are but if after we die there's no reason why we couldn't be reincarnated say gask Khan you know from centuries ago and living essentially every life out there is just one person perhaps we are all the exact same being but because of uh physics we are all in our own local frame rate our own uh kind of little bubble reality in

(2:11:30) any given moment and that's how it's technically possible where we all could be the same person despite the fact that we may be interacting with oursel and the thing that's beautiful about this story that I'm going to kind of spoil is that it gets to this idea of every kindness that we do to someone else is a kindness that we're doing to ourselves every time we abuse or harass someone we're we're just abusing or harassing ourselves absolutely um I agree that real quick on a couple of the points you

(2:11:54) brought up um you know when you talked about the government agent who was willing to say their name or what have you I mean one thing that I think I've come to realize is that a lot of people aren't afraid in the government from because there is a lot of bureaucracy around it but also because nobody's going to believe anyway right because what we talked about is like some of this stuff is so out there that they know that like okay even if I were to just spill the beans it would just sound like I'm a crazy person mumbo jumbo

(2:12:20) right so from that perspective and they's so good at disinformation and throwing misinformation out there where we're already in my opinion in a post-truth world where people can't even understand what's real and what's not anymore um and that might be what kind of allows some of these people to come out and speak so freely um because I've kind of wondered too like why are they able to speak so freely are they sewing disinformation and I don't think it really is a lot of time I think it's

(2:12:43) just a time where like even the government itself at this point doesn't even know how do we get this information we been lying for so long that nobody believes anything anyway right and we talked about even if aliens were to come down onto the front lawn and and say hi to Joe Biden or whatever like I think um you know Joe Rogan even talks about this is like the moment the government tells me aliens are real that's the moment I stop believing they're real right it's like damn that's a tough situation um

(2:13:08) and then there might be other aspects too before all the MH370 stuff and all the stuff I've learned about technology before then I was one of those people that thought that the reason why they would hide it is because religion would be threatened and that people that are religious wouldn't be able to reconcile it now I have the exact opposite opinion funny enough that I think the religion will adapt to it quicker than anybody else because the reality will mean that there is a construct that we live in and that

(2:13:32) if we then live in a construct it's this idea that there must be a creator for it which is very congruent with the idea of God and and a Divine entity um but I think that the same issue the government has applies regardless of if it's the religious people or non-religious people that have a problem with it is that I think they're afraid that people will just kill themselves for a lack of a better word because of what we're talking about this idea of reincarnation that people will just think oh I'm just

(2:13:57) going to take the easy way out this is an avatar situation where our soul lives on and and personally that's what I think the situation is just for everybody who's watching what have you is that think they're afraid that a lot of people that don't have great circumstances will check out and this again goes back to this idea of the elites versus the non- elites the elites don't want everybody to check out because they're taking advantage of it all right they want the non the the the pors the you know the the surf class

(2:14:22) they want them to stay surf class stay working wage slaves and what have you um and just real quick the last thing I want to say is that this is just a personal story that I've had is that I've been pretty much unable to talk to my parents about pretty much anything related to the case um because they are what I would call CNN brains that they have you know my dad's been somebody that's read the New York Times probably every single day for the last 50 years right and he hasn't in my opinion uh

(2:14:49) come to realize that it's not like it was even 20 30 years ago where like you would go to the newspaper to get the truth right it's come to a point now where it's pretty much just

propaganda that's being spread under control maybe it always was um but one thing that we have been able to connect on is he's always been a Buddhist pretty much his whole life and they believe in reincarnation and recently we sat down and I was like Hey Dad I want to talk to you about you know what do you think

(2:15:13) happens when you die and you know he told me well I'm a Buddhist blah blah I believe in reincarnation I said so do I you know um and I kind of told him and I could just tell from the look in his face that he was kind of surprised by what I was telling him that and it was funny because I told him like I think we've arrived at the same end conclusion but from different perspectives like he came out from this conclusion of like he just always felt connected to it especially when he was even younger in his 20s um and he would

(2:15:40) travel the world and stuff like that and for me it's like I came at it from looking in the science of it like I look at the science and I go The Logical conclusion is that our body is a capsule that's holding our soul and perhaps that's what this is all about good absolutely no I agree no I I agree with everything literally everything you're saying I mean we we said this on the podcast the other day we said you know our parents when you try to talk to them about what's going on today they just

(2:16:11) cannot yeah fathom it there's no way they cannot grasp what is going on I mean uh my mom I if I call her at 545 she's like hey I got uh 15 minutes before world news tonight or whatever it is comes on and and that is that is her world view whatever that World News Tonight comes on and says that is what she believes nothing outside of that by the way nothing and then by the way I saw someone that said I was trying to cross reference like what he was saying who was this guy that was on our podcast talking about I will say that it the the

(2:16:51) episode where we had the guy on that is uh the government employee is the Israel war with Palestine and Hamas World War III breakdown with rashed r a s he so you guys can go uh check out what he says there but I actually want to bring on rashed um to a deeper episode because me and Rashid talked before this episode actually me and Rashid talked uh for probably an hour and a half um now Rashid is in in in his position um he is in a he is in a high up position but he was in in my opinion I guess in weird other positions before

(2:17:33) the position he has now so he was in positions in the military like high up military almost scop type stuff uh before he got into position he is in now and so when we started talking about the uh the virus right we won't go into that but um we started talking about that and and and we were talking on a personal level he was talking about the scop aspect right of he was like man you know that whole realm that whole three years was a it was like everything I had ever learned or knew it was like I ripped out a page from our book that we

(2:18:11) were trained on and and so when he got kind of deep in that I was like Wow and although we were not talking about that with our podcast that we brought him on for I do want to bring him on um in that capacity I I don't know that he can do that right in his position necessarily but um but it is very interesting I I think I think we're living in a world today that um

people are looking desperately for answers right I mean there people are desperate for answers to try to figure out what in the hell is going on I think we're all

(2:18:53) um I think if anything as much as we are divided we are united in realizing that something is not right like there is there is a lot of things that are not right about the world right now and um and and I I think I think if I had a microphone to the entire world if I had if I had one microphone to the entire world and by the way our podcast over 5 years we are so blessed to be able to to reach as many people as we do and I'm so thankful of that I I literally wake up every single day I wake up to that is my

(2:19:32) purpose and I've never known my purpose I used to um I used to feel like my purpose which I still do marketing I still do stuff like that but I was always chasing a I was always chasing money right I was chasing money a way to survive but I'm telling telling you guys that are listening right now when you find your purpose then nothing else matters and when you find your purpose money will come if it if it's meant to come it'll come but but it'll support you your purpose will support you if you're

(2:20:04) passion I guess I guess if you're passionate enough about it um your support will come and our podcast is is our passion it is our purpose and um and I'm just saying that I think now people like you Ashton uh people like podcasts like Joe Rogan or whoever people that are really speaking the truth no matter who it is um I think those people are the most uh instrumental people in society and our future today because when they take that away CU that is my biggest fear by the way for those that want to listen like what is my biggest

(2:20:42) fear in my life every single day take my microphone away like take take my ability to speak the truth or at least speak my opinion to people to verify it for themselves that is my biggest fear and um and and I think they're desperately trying to do that right now and and and if you guys can imagine a world right now to where as bad as it is right now take what take away everything that is against their narrative take away Ashton take away me take away jro take away all these people and all you hear all you hear is the government's

(2:21:25) message think about think about how your world would be think about how depressed you might be right now even given all the propaganda that is being spit in our face on a daily basis but then take away every dissenting voice from that as well think about how depressed you would be cuz you're in North Korea I we're close to that by the way I feel like we're close to North Korea I mean I I don't I don't know how far we're how far out we are from that but I just feel like we're not as far as you

(2:21:57) think and um and that's that's a very scary thing and so so Ashton with your mh70 thing I look people can say MH370 and the videos and the and the satellite videos or or you know there's going to be people say well that's BS there's going to be people that say that you know hey I believe this but at the very least I know that Ashton 100% believes us and and by the way based on people that we've talked to and even the guy I'm just I literally just talked about the government employee that said

(2:22:29) he was one of the guys that said uh check out Ashton check out his videos you need to cover this now I don't know what that means by the way Ashton I have no idea I think I've kind of told you about this but yeah I don't I don't know what that means I don't know I don't know if he knows something that that we don't know he he would probably never say it I don't know um but take away all of that what what do you have left what do you have left if you if you have no dissenting voice in

(2:22:58) any topic period what do you have you have the stopan tyrannical North Korea or even worse **Reddit** no that's **Reddit** you have **Reddit** mod you get reddit yeah and I there's another topic that I'm afraid to talk about on the podcast but what I'll say is that I took a chance and I I made a comment on the news sub**reddit** on a particular thing related to the date of yesterday um about somebody who died on that day and not not only did I just get downvoted and it was just basically saying that we should not uh glorify

(2:23:38) death or people that are killed um not only and there was a lot of comments that were glorifying death which should be against social media rules but none of them were being you know moderated against not only did I get moderated I got permanently banned permanently banned from one single message on this particular sub**reddit** about news and I think it goes to the point that you just mentioned which is that when you remove all dissenting opinion what's left is you get not just an echo chamber but a literal brainwashing machine and it

(2:24:13) leads these people that live their lives from those particular social media platforms so not realize like what normal people think and what they believe and what have you and if you think about some of the podcasts that I've been on that were uh very hostile you know it's that's that that's what I call the **Reddit** brain where they don't even know what real people believe they think that they're going to look like Heroes for trying to chop me down or whatever right and then they find out

(2:24:40) that real people are like looking at them going what why are you such a douche like what how could you possibly be so close-minded and stuff like that right um and you're right like the what the government is doing is they're taking away people's microphones they're taking away people's views and that is what reinforces that Echo chamber and this is why even when you go to **Reddit** and you go to like the Joe **Rogan** sub**reddit** it's like 100% against him I was talking to Jimmy corsetti about this

(2:25:06) Jimmy coretti got banned from that sub**reddit** he was like one of the only guests who's actually been banned from The Joe **Rogan** uh sub**reddit** for like just trying to comments about it because everybody's just trying to rail on him and it's like man just think about the emotional and mental damage that's doing to like a whole generation of people that are out there um and that's why I think that it's so important that we do have free speech is that we do have the capability to speak publicly and openly

(2:25:34) and if we're if people don't want that then I think we have to get rid of anonymity on the internet and I think that we have to do away with stuff like section 230 protections because

if uh either everybody gets the free speech speak freely or nobody does is kind of my opinion and I'm fine with either way we want to go with it right because if we then get rid of social media and say okay we're not going to have it then people have to force to have interactions in person right and they have to try a different route of doing

(2:25:59) it I'd prefer if everybody can just speak freely um but yeah I so I 100% agree I think that that's what's been going on especially in the last few years this is what I personally don't think my political opinions have changed at all I think that I'm still the same person politically that I always was I've always believed that your uh your rights end where mine begin and that I think that's something that if everybody were live by those rules it establishes pretty clear guidelines for what is

(2:26:25) against the law and what isn't against the law in the United States of America I think that we have this Overton window where the politics is just shifted and it's shifted because of what you just mentioned is that only certain views are tolerated and there isn't anymore this idea of equal justice um the last story that I'll bring up here is related to somebody that I have come to uh find to be I mean not like necessarily A you know like my best friend but I somebody that I've come to respect which is Jake

(2:26:53) Chanley um you know he has been vilified in the media he went to prison insurrectionist he went to prison and you know I told somebody at a dinner the other night not going to say who it was or anything like that that oh I know that guy like I've been hanging out with him it turns out he's not at all what the media tried to make him out to be he's like the nicest guy I've ever met I could never imagine this guy ever hurting anybody in ever he's way nicer than I am even and they were like I wish

(2:27:19) you would stay in prison and I'm like man this is like even people that are really smart really intelligent people well read people people that have Highly Educated everybody's susceptible to the propaganda and the brainwashing and that kind of idea of if you remove people's microphones then people start to cohere towards these peer-reviewed approved beliefs and I just kind of said I didn't want to harp on it too much but I said I think if you to listen to talk to the guy you might be surprised at what he

(2:27:47) really believes he's running as an independent he's not raising money he wants term limits on people in Congress it's like I think you'd find you might have a lot in common with them at the end of the day now yes is he consider himself a shaman have a lot of spiritualistic beliefs sure but that's not anything that makes somebody a bad person you know so just some thoughts I mean I I I feel like that um Chanley is a I I feel like they made him out to be a subjective uh insurrectionist right I

(2:28:18) mean this is what they wanted to do they wanted to use this image and and what he stood for even though he didn't stand for that but that's what they want to use him for um and and listen I mean the reality of this is like j6 or we won't go too deep into this but you know there were a lot of people in in in 2020 that felt like that there was a lot of weird stuff that

happened right at the very least um and you know what happened with the Jon six and and all that stuff I I do feel like I I just watched by the way

(2:28:51) did you watch the the Alex Jones um oh my God live feed debate last night did you watch any of that with the I saw a clip with was it oh was not the one with Destiny was that a different one yeah and that one yeah it's the same one I I didn't watch it all but you know he's another person that we're really bring the line it's going to get me cancelled here today but um no he's another person too where when I went on his show um I had a lot of people even in my own Discord saying don't talk to this guy

(2:29:21) right because of the stuff around the lawsuit that he had happened right in the Sandy Hook stuff and I even myself like you know coming from where I used to be I'm like oh you know do I really want to go there with this but this isn't the kind of case where you can really be pick and choose who you go talk to right it turn out we had one of the best interviews of any of them with him right he even said that this was one of the most mindblowing interviews he he had ever had I'm going this the same

(2:29:47) yeah oh my God I'm literally just thinking about this this was the same dude yeah so he was the guy on Alex Jones Last Night Live the debate was this the same dude oh no uh so you mean Destiny or who are we talking about yeah because Alex Jones debated Destiny I think yesterday okay okay and it was about a lot of the topics that we were just talking about okay um and stuff like that and I think that's where that whole thread that I was reading or whatever came from related to that but isn't interesting that like okay so but

(2:30:18) you agreed with this guy on your topic right um I mean Alex Jones no Destiny no I have Destiny I've never talked to so little side story though Destiny and I used to play Starcraft against each other like 20 years ago and that's how he ended up getting big was he was one of the first like video game streamers um and now obviously he's morphed into a whole like personality and what have you related to it but he was known as like people hated him because he was super toxic but now I'll tell you the **truth** is

(2:30:47) I was pretty toxic back then too so we would have like you know little arguments in the chat I don't know if you would even remember a lot of this but um maybe if I told him my handle name he might he might remember uh and and I you know I'd never got into all that streaming stuff like that so that's kind of the different uh perspectives and I don't think I would agree with him on very much honestly anymore which is interesting because I used to think that I was left of where he was at from a

(2:31:12) political perspective and now if you I were to talk everybody would say I'm to the right of where he's at um so it's just interesting how that stuff changes even though you're probably middle yeah yeah I mean I definitely middle I think in middle of the road in general but I don't know a lot of people think that they are so that's aside the point though no I agree that um but yeah I I just I guess um I'm not gonna stay on here too long we had a podcast tonight I I just want to point out that um I'm

(2:31:39) very proud of you Ashton I I and we and and we've said this on the podcast before um we brought you on I think you've done an amazing job I think that we have to have people like you um come out and talk about this stuff because and not just talk about this stuff I mean we can do podcast and and by the way when you do a podcast where you're constantly talking about different subjects it's hard it's hard because you know you have to try your very best to understand and acknowledge everything

(2:32:11) surrounding what you're talking about the very best you possibly can and that's given a like two days scale of time right and and so so you should of all people should know that you know hey um how long have you been doing MH370 I mean it's been a while it's been six month months it's not even that long surprisingly and how much have you dove into like the physics the science the engineering all of the stuff of that that that is that is a lot of stuff to dive into and and so at the very least

(2:32:43) um when I see naysayers of people that literally has zero clue in any aspect of what they're even talking about they they they say oh this is this or this is that and this is this dude you haven't done any research whatsoever I maybe you've done maybe you looked up some stuff on Google right um but the amount that you have thrown yourself into uh the physics and and and everything not even just the physics but you know just the uh uh the ability of the United States government the spy satellite the drones the the aircraft

(2:33:20) how the I mean what the you know what what a what a um um I guess you can say a HUD would look like as far as a a drone um how this how this whole thing works Nobody Does that I mean and and the people that do do that can understand on a deeper level more so than other people and so you're obviously going to get at people that say well this is this is crazy this is ridiculous yeah um and and I watched your uh Tim pool interview which by the way I'm not going to say anything bad about Tim pool I I actually think he

(2:33:53) was very respectful yeah um he um I think he did I think he did a good job by being respectful but he also had his own opinions and um based on you know things that he had um I don't know talked about before whatever the case is uh but at the very least I I think you handled yourself well um when I was when I was listening to his standpoint on the videos I feel like from my perspective I feel like he was um I feel like and I and by the way I'm saying this respectfully yeah um I feel like he was uneducated to the terms and

(2:34:32) the level of what we are talking about with these videos with MH370 because if if anyone has followed you and your research and all this stuff with M 370 videos you understand there is a lot more involved than just oh I can do that in Unreal Engine in 10 minutes CU it's not the way that works yeah I just go ahead finish your thought sorry sir no sorry I mean it's just not the way it works because I've done in Unreal Engine five I I know that pretty pretty well um but it's not going to look like that

(2:35:05) it's it's not the same it's not the same thing it's not how that works um and so I I I heard his point of view I got it he wasn't he wasn't saying it by the way in like an [REDACTED] way um

but he was just saying like hey here's what I think and by the way I felt like you did a good job saying well but look here's the reasons why this is not necessarily as easy or as easy as you think um I just think that 2024 for everybody listening it's going to be a [ ] show I want everybody to be prepared

(2:35:41) because um this year is going to be crazy uh we have election years um we have in my opinion I think we have a turning point in America I think we have a point to where we're about to see whether we are a um whether we have a democracy or whether we don't you know I know the Democrats are using that word a lot right now but we're to find out whether we do actually have a democracy or not um there is some speculation by the way this is I can break this a little bit on your stuff um just based on a couple

(2:36:19) things I've heard but I think Joe Biden is about to be subsequently pulling out of the 2024 election within the next few days um I have heard that from some sources and so what does that mean well we don't know but uh well I know I was telling my brother two years ago two years ago I said I hope he's ready to vote for Gavin Newsome because that's what it's going to be there's no it wasn't a surprise that Gavin Newsome was going on a world to guys and I'm going to break that here right now just in case

(2:36:49) everybody we end up telling the truth the future here you can you know take this and you can post this and say at Chad nashon on a random stream called it wouldn't surprise me at all I said two years ago uh to my brother over a Christmas um that get ready for it you know that's what's going to end up happening because but if but if you're worried about if you're worried okay so if if you're one of those people that are worried about like hey Dem say that you're like not Democrat you're a

(2:37:15) Republican or or libertarian or whatever say that you're one of those people who is your biggest threat to run it's going to be Michelle Obama I'm just going to go and tell you that that that is that is the Trojan Horse for the Democratic party and Gavin Newsome can come run I don't think he will win against Trump probably regardless of whether you love or hate Trump I I don't think Gavin Newsome win I mean you look at California look at you look at what California I mean just look at California I'm somebody that voted for

(2:37:46) new some when I was living in California and then I voted to recall him so yeah I think that he's got a lot of baggage that comes with him I think uh and that was the reason when I was actually campaigning to I was out there collecting signatures for several months I was uh I guess you could say in between jobs at the time and I was out there collecting signatures of real people and I said the reason why we're doing this is because Gavin Newsome is going to try to run for president and I want there to be a blemish when he tries

(2:38:13) because of all the stuff that he was doing to the state at the time Anyway by the way someone said in in your chat Kennedy what do you think about Kennedy by the way yeah I I like um RFK a lot honestly you know I would vote for him for sure I think that the reality is the Democrats are never going to let him be the guy um just like they didn't let Bernie be the guy

you know back uh however many boy almost eight years ago now um because it's a selection process right and because he's outspoken and says what he wants to say

(2:38:43) and because of his stance on covid and the shots Etc like I think there's no chance to let him be the guy um and then just from a perspective of it's kind of a petty perspective but I think that his voice stuff gets in the way as well sadly I know it's disgusting to say that but true when you're looking at like presidential stuff a lot of it's It's a popularity contest man it's not you know so every little thing matters and these are some of the things why people like Trump because he just speaks off the

(2:39:09) cuff and he's a guy that people can connect to Etc uh you know with RFK he's like he kind of stutters a little bit and this this is you know as much as it sucks to say you know it it ends up being a strike against him but everything he says is in my opinion on the money yeah and and even uh Vivic I mean I think like I really like Vivic um but you know I don't think they're gonna let him be the nominee either I mean you you could probably see a trump Vivic ticket but I see a trump Carlson ticket person

(2:39:42) but real quick what I going to say is point before I forget you were talking about because this is really important one about the case is that a lot of people that I go on and I talk to on their podcast they don't do their homework at all right and that's why they get to what you just mentioned where they say oh I could have create that in you know an hour in the Unreal Engine which of course pool cannot do that right not even close and you look at the requirements and evidence this is why I ended up on that podcast talking

(2:40:06) through the requirements which I don't always talk through on every podcast it just kind of depends on if people start to push back on that I go okay are you sure cuz here's the list of stuff you'd have to know right um just to kind of push back on that but like you go through and you look at all the case and the evidence and this is why like on the podcast I mentioned like well what if these things are fake how come they tell the story of what happened to the plane better than any other story today by

(2:40:28) wide margin use more evidence than anything else and all you have to do the only thing you have to do is throw out these IMAP hings and if you throw out those IMAP hings this is by far definitely what happened to the plane right and that's that's the difference between a cover up and you know this this narrative that's out there but going back to the the politics stuff which I'm happy to talk about for a few minutes as well is like my opinion of Vivic is there's something off about him right from the beginning I felt like

(2:40:53) he's a little too produced too polished he's also kind of young I mean I love everything he's saying right and this is just me from a perception perspective right it feels like he's also kind of been selected is the reality that's what it feels like to me versus you look at somebody like Trump and I'll be honest with everybody else I'm not like a huge Trump supporter in any way shape or form um but he comes off as completely honest he says what he thinks right when I look at Vivic it's like I feel like

(2:41:22) everything he's saying is he's looking at a sheet that says here's all the things I'm supposed to say right and somebody even caught him on the conspiracy [Reddit](#) I was looking at yesterday or two days ago and uh they even caught him where back in you know right after the January 6th event he was saying how he was this is horrible blah blah blah and then yesterday he was saying something about oh you know in completely opposite V right like how it was a detriment it's like he's like kind

(2:41:49) of flowing with the wind or you know flip-flopping and and blowing With The Wind in that case so um that's my concern with him is that I want to know if he's really genuine about everything he says it it just feels like he's just saying the right things and okay you know maybe that's fine so that's just my opinion well unpopular opinion by the way someone said in your chat they said um let's see what they say they said well well there's one person that said 2024 but uh someone said Vivic if

(2:42:20) elected watch him change his tune ASAP that's what I'm concerned about y yeah and and by the way I think that's also Nikki Haley like Nikki Haley by the way I don't I don't know if anyone knows this but isn't she WF she was our governor uh where where my wife Sher and I live where where we host our podcast she was our governor um Nikki Alia was our South Carolina governor didn't love her as governor but I mean I thought we were you know she was all right but Trump came out and said hey by the way

(2:42:50) just uh wait and see how fast she turns against you like she did me and that was a great comment because you know Nikki Haley was uh you know one of one of his girls in in his administration and uh as soon as everyone went against Trump you know she turned against him um here's unpopular opinion though and I'll just say this and I'm not going to say it's a you bannner or anything else but I will say is that I don't think it matters who we're going to vote for in 2024 yeah I don't I don't I really don't

(2:43:23) think so I think we are past that I don't think it ever matters in my opinion man and here's but I I think it's beyond I think it's beyond even what you're saying I think it's beyond like I think there is a massive system set up right now to where it does not matter at all whatsoever yeah I I think that they have a potential system that is in place that we you know we don't have a there there is no I look I I say this on the podcast and this just my opinion um there not facts um but I say that there will never

(2:43:58) be a pro-american Republican president in office ever again so yeah you can take it from what it's worth yeah it doesn't surprise me and since we're just you know throwing it out there like I probably would uh vote for Trump in a heartbeat if he had fired Anthony fouchy if he had done that I think now looking back I would say I think that in my opinion to somebody just looking the outside in that probably his biggest blender was not doing that um I think that he disenfranchised himself with a lot of

(2:44:29) people that are probably now on like the RFK bandwagon just to be honest I agree um and yeah if he had done that I think I'd be all in and but reality is my personal opinion is I think

Trump's going to win no matter what I think that he beats anybody out there just because one thing I learned from the Obama era real quick um and uh you know I voted for Obama I'll say just out there I did too actually is that it's a lot about like what your momentum is right like you've got this momentum if you can

(2:44:57) really like pull people and when you see Trump's rallies like it's like wow you know he's got he pulls people um and that's something that I've always felt as a powerful aspect of politics even in in J in companies as well like I even think that that existed with like Tesla where the reason why I would tell people invest in Tesla and uh early mid uh you know 2000 2010 was like people just want it to be successful right and when you want something to be successful it ends up kind of like you said like when you

(2:45:29) were talking about you know if you say your **truth** and you follow it you will be successful it's that same kind of idea that's out there and if you come out there and you're lie or you're deceptive or whatever people don't resonate with it I think that applies to all aspects of Life yeah it's it's weird I I think that most most people you know and and it goes back to this like I think most people want aliens to come invade because of literally because of our our choices we have like most people are

(2:45:57) just saying look look how screwed up our government is like if aliens come invade like what is the worst case scenario I'm rooting for Alien Invasion honestly at this point although I think it would be a big scop but yeah I'm still rooting for it you know man I wish those Shadow aliens were real and they just invading I'd be sitting there go yes Shadow aliens take over let's end this but but do you realize the psychological aspect of that like the aliens thing do do you realize that the psychological aspect I really believe is

(2:46:27) because of how screwed our actual people are like people are looking for a savior of some kind like that they're they're literally looking for like the Miami thing which by the way we still don't know what a deal is 100% with the Miami thing we don't I mean I we had some Miami officers that listen to our our podcast and and by the way this guy I can read the message to you if you want me to but he sent us a message and said hey we have some guys that um that want to talk to you about the uh about the

(2:46:58) Miami thing yeah um and I I have not got back I've not heard back from that but regardless people are desperate like they are they like isn't it sad when people are more desperate for aliens to come invade than they are our Administration and our government oh definitely yeah and I mean I've looked into this stuff now and I'm pretty off the Miami bandwagon stuff I was coming back on to it for a minute but I'm I'm like 99.

(2:47:31) 9% sure now that people are just making up these stories now and because of the you know because they saw oh Ashton got 10 million views and keemstar got 10 million views now they just kind of want to ride the the coattails of it but um yeah I definitely think that there's this idea that you know people just want change right and this even goes again back to Obama back in 2008 is like that's what he was running on you know hope and change and this is why also I

think that um generally you find there's a flip back and forth between

(2:48:01) the parties on different election years we go the Democrat Republican Democrat Republican because everybody just wants change and then I'm old enough to realize we never get change right and this is why I'm just kind of disenfranchised with the system in general is that we always get a new person in there they never have any significant change to the part the politics to the government structure or anything else related to it um and that's why I've kind of just come to this own personal opinion that like it's

(2:48:25) really more of a selection process and nothing's really going to ever get done there so you know personally Ashton what what do you feel like is the Hope for the people what do you feel like is the Hope for the people yeah I mean the hope for the people in general to me is the technology so this is I was going to do a space and a stream about what does disclosure mean to people and I wanted just people to come in and tell me what they think disclosure means you know because I think that everybody looks at it differently you got the

(2:48:53) people that want to clap those alien cheeks you've got the people that want to go fly to another uh solar system right and they just want to get the hell out of here kind of your your point before to me I like at disclosure and to me it's the technology it's the ability to change the circumstances of billions of people on this planet um to me the things that I've been passionate about are helping people and by helping people I mean not having children go to bed hungry um not having there be homeless

(2:49:20) people with nothing on the streets I personally believe that living on the streets has a mental impact on people uh a negative one and with this technology even with just room temperature super conductivity we can just completely change the circumstances of the whole face of the planet pretty much and then that's just the beginning right I mean talking about flying cars and being able to have computers they 10 a thousand times more powerful than we have have right now being able to teleport different places you know um it's it

(2:49:50) becomes like Star Trek it it really just becomes like Star Trek at that point by the way Ash I think I think that you're GNA be one of those guys in in in in our time and for those listeners that are listening right now I'm telling you Ashton's gonna be one of these dudes whether you realize it now or not he is going to be one of these guys I don't even want to say why or why I think that but I'm just telling you he's going to be one of these guys and you to have these you got to have these people

(2:50:17) Ashton is an everyday uh whatever the hell he does I don't even know whatever Ashen does it doesn't matter Ashton is gonna be one of these guys I know Ashton on a pretty good personal level we we text and talk quite a bit and uh I'm just saying that ashen's potentially going to be one of these people that changed the course of our future and Humanity um we have to have people like this and and that's why why um if we don't have people like this that tries to pave A New Path or tries to go against a narrative if we don't

(2:50:52) ever go against the narrative and pave A New Path we're never going to know anything different anything new we're never going to we're just going to settle for what it is that the government and the the the elites say that we are allowed to know or or believe um and and it's going to be a hard battle by the way it's going to be it it's going to be a very hard battle for those people that go against the grain um but I believe in you Ashton I really do believe in you by the way and and I believe you're smart

(2:51:27) enough to to make those changes to make those advancements in in our future I think we have people and literally I would even maybe compare you to like an Elon Musk even though Elon Musk obviously he's got rockets and Tesla and all this [REDACTED] but but I think you can I think you can be that right and I and I think um but you can be that in a different way um and so when people you know even when people look at Steven Greer you know he's the gri he's this you you have to not just necessarily um discredit him as a

(2:51:58) grifter you have to look and listen to what he has to say you have to take that into your Consciousness and then you have to apply that to everything else that you know and listen to and hear um there there are some people that may not be completely right I mean no 's perfect right but there are people that you can take all of these different aspects and you can apply that to all of these different theories and things and I think that we can really Advance because in my opinion I think Ashton will agree with me on this um we cannot

(2:52:31) no longer depend on the government in the United States or any world entity to advance Us in Civilization we are at a cusp of advancing ourselves as Independents as people that that get together we we start understanding learning from each other and that's how we really Advance each other and our biggest battle is the government trying to stop that from happening and ashton I think you know what I'm talking about when I'm saying that um but I'm just saying that I think that that is that is what we have to do um and so to save

(2:53:09) Humanity how do we save Humanity we have to save Humanity with ourselves we have to we have to connect with each other and we have to figure out ways like if Government wants to uh lock off scientists from figuring out reverse engineering or this or that they want to you know compartmentalize everything we have to open up all of that um in our Independent Media in our independent um conversations in our independent science um that's how we change the world and I think that uh I think the Ashton inm Street 70 thing

(2:53:46) um I think that is a huge first step and I also think that's maybe why there's so much backlash so I wanted to point that out as I I think that I think that one day people are going to look back on this and and and everything you're trying to learn and understand Even in our personal conversations by the way um I think that's I think that's going to be huge I think 10 years from now 15 years from now um people don't necessarily understand it right now now and I think that maybe you will release

(2:54:17) some information that you have been learning in the background outside of the public realm um but I but I think that people are going to understand that like it is us that determines

our future it is not it is not the the government it is not the powers that be it is us who determines where we go from here because if we Depend and only let the government tell us where we go we go nowhere and and and I think if you look back by the way at history uh it was the people that went against the grain that actually

(2:54:50) made the biggest changes and the biggest Staples in our history and in our future now yeah and I I'm very proud of you thank you very much sir thank you Chad I I love you guys so much um and I think that you just said some really nice words um you know one thing I would say I get reminded of a lot um a lot of people have said stuff about me that I think is inaccurate but one of the things that I guess I find a little bit offensive as this idea that like I'm full of myself I would say that you know that's definitely not the case I think

(2:55:21) that a lot of times when people say stuff that people don't want to hear they have this idea that oh that person must be narcissist or whatever but um I think that kim.com told me one thing before he started kind of retweeting all my stuff and boosting uh the message a lot was you know stay humble when you you know make it or whatever and I told them I'm never going to change there's nothing that's going to change me can I'm I'm I'm old enough at this point where like you know who I am is pretty

(2:55:49) solidified and even if I were even if I were to become president of the United States even if I were to become an Elon Musk with billions of dollars it wouldn't change who I am at all I would still be trying to seek the same exact things as I am as this person you see in front of you here today and this is why I started m370x is that it's about connecting people just what you talked about and we've been talking about politics and stuff that I think is is somewhat divisive of course but the reality is

(2:56:17) the people that been following this case are of multiple political Persuasions we have people that come from workingclass backgrounds people that come from you know white collar backgrounds people that are very educated people that uh don't have lots of education but we all have the same common purpose and same common goal right is that we are looking at the science to figure out and drive our future forward and how are we doing it we're not doing it through mainstream media channels I've never been on TV

(2:56:43) never once right I'm just going on alternative media talking to real people and like you said it's you know when they take away your microphone well we create our own Avenue for it and I'll just throw a quick uh thank you to Elon Musk again even though my personal belief is that he's been getting attacked because he took away one of the government's propaganda tools which was Twitter and once he took that away he gave power back to the people and he gave power back to people like us and you know I've been using because I think

(2:57:15) that this is one of the last avenues that we really have free speech where we can hear real people we don't always have to agree with everything everybody's saying and we're going to see stuff that we don't like to hear that's out there but that's what free speech is all about it's not just all people you agree with all the time right absolutely so I agree I agree Ashton um but

listen I I think 2024 is g to be a good year for you I I believe that and and uh by the way there was someone in

(2:57:43) the chat said says she's a cougar Ashton so I'm just saying I appreciate that keemstar was joking around that I made a joke about one of the the girls that was or ladies let's say women that was mentioning the uh um mentioned the aliens in the Miami thing he's like oh we got to get you set up in a space cuz Ashton's thirsty out there and I just started laughing I love keemstar he just cracks me up man oh he's he's funny he's by the way teamstar has been around for a very long time he he used to

(2:58:18) commentate all of the YouTube stuff so Logan Paul Paul everything all the drama in YouTube he was huge in there and it's it's kind of funny because we start seeing him now in the UFO space he's trying to he's trying to transition into a YouTube uh news guy and now he transition to a UFO guy um which is kind of interesting but um but either way uh yeah so that's all I have to say Ashen I appreciate you any final thoughts on this we had a little impromptu hard truths here today uh Chad I think it was

(2:58:54) a good one I may have to edit this and post it up as an official hard truths well the the final thoughts I have uh for everybody is that um look here's the deal we're in 2024 guys and at the end of the day um we have to realize our surroundings we have to look at every every single thing we see um and and I think that we have a opportunity right now I think we have an opportunity to um really harness the information we are giving because I think that in my opinion um probably within six to eight months and I hope I'm wrong by the way

(2:59:37) by this but I'm saying within 6 to 8 months we may not no longer have the opportunity to AR harness the information we are given right now like do you ever do you ever think like when you are healthy for example and you take for granted your healthiness you take for granted your ability to walk to your car to go to the grocery store to go for a walk to go for a run to go do all these things right you take for granted that but but say that you get cancer or say that you get some disease or say that you break your leg or or or or or

(3:00:12) you even lose your leg and then all of the sudden you're in bed you cannot move you cannot you cannot function normally as a human being anymore and yet just the day before all of this happened you were able to function completely fine but you took for granted that you didn't do all these things that you could have done you didn't go for a walk you didn't you didn't uh harness these abilities that you have as a human being there a normal functioning human being with no health problems but one day it comes along that

(3:00:47) you no longer have those abilities to do that what we're seeing right now guys what we're seeing in the podcast with our podcast with with with with Ashton's platform his ability to speak his ability to get out his thoughts and his opinions and his evidence um along with our podcast along with this exact stream right now um these are things that are like our health and I understand that you guys are listening to this right now and you're like hey man we're we're harnessing this even though you don't

(3:01:20) realize you are but you you are getting a taste of Freedom this is a taste of Freedom hearing a conversation hearing discourse hearing things hearing people talk about things that are not necessarily um granted in the in the realm of the agenda against the in my opinion by the way against a globalist or or for the globalist or New World Order um you have to understand that that can be taken away very fast and I and by the way I feel like it is going to be yeah I feel like regardless of how we see this I think that our ability to

(3:01:56) do what we're doing right now is no longer going to be able to be done within six to eight months maybe a year maybe I'll give it a year yeah and I hope oh yeah land your point sorry no I'm sorry I'm I'm just saying I hope I'm wrong yeah and so I just want you guys to understand that like your fight is for information and you guys and we say this all the time on our podcast you got to fight man you you got to tell everyone you know like our biggest threat to society and humanity is information um

(3:02:30) and and if we lose that we lose everything we lose medical Freedom we lose freedom in general we lose uh everything that we ever have known as human beings as being just be able you know just to be able to discourse with other human beings we've already lost a lot of that by the way our last stance here is communication over the internet but once they control the internet then we lose control of our conversation they've already they've already basically stopped human communication because they they have transversed that

(3:03:01) to now internet communication or digital communication but the reason they have done that is because they want to be able to control that and it's it's so much easier to control digital communication then is in-person physical communication but they have to just they have to stop the physical in-person communication um so now what they want to do is control digital communication they want to control what your narrative and your and your discourse is and so guys don't take for granted what you have and what you're listening to um

(3:03:35) fight for the people you listen to fight for people like Ashen fight for people that you believe in fight for people that you believe in the message and uh and tell everyone you possibly know about the people that you believe in their message because that's the only way we're going to survive this um we we have to have I always say like how do you fight the the powers of be well you have to tell everyone else that hey this is what we got to this is what we got to listen to We we got to fight for the

(3:04:03) **truth** we got to fight for the message and if you can do that man um we have a chance but otherwise we don't yeah no and I think that you know what you're saying there is like don't take your time for granted you know that we have when we have this freedom and don't take your freedoms for granted you know either like these uh you know take it for granted and then it'll be gone before you know it and I think we've seen a lot of them disappear so I agree with everything you're saying Chad and

(3:04:28) thank you for coming on and talking to me tonight absolutely ashon well man we uh like we we always appreciate you coming on our podcast anyone that listen to us I mean

investigate Earth podcast that's our podcast you guys can go check it out and um we have have a lot of good episodes ashton by the way I think we're at what four or five now I think it's four or five yeah I think five even because we had one impromptu as well so we've been having some good conversations and I I look forward to

(3:04:53) more as well absolutely well guys have a great night um Ashton thank you for having me on and I'll talk to you soon thanks Chad take it easy buddy peace out okay chat there we go that might be hard TRS uh number six there actually uh just realized I wasn't recording in the zoom so we're going to probably have to edit the stream down to pull that out but that was awesome thanks Chad if you're in there and you're still listening um that was awesome you guys can find investigate Earth podcast uh in

(3:05:26) the pinned chat uh at the top here if you guys want to check it out highly recommend checking it out especially if you like any of those topics that we were just talking about everything from politics to anthropology and history uh science the investigation we've had several Chad and Sherry are awesome awesome really great people to talk to um that was a really fun uh stream that we had here I didn't expect that we would do that that wasn't anything we planned obviously um but I think that's

(3:05:53) probably a good spot to stop it for tonight um you know I've been uh I'm pretty tired it was a long long weekend um but I want to thank everybody MH 370x you guys have been following along you know as you guys know the only way that we are where we're at is because of all you guys who've been following and watching along um so hopefully I'm doing guys Justice and don't get dissuaded by anything and anybody says that's out there let's you know this is going to be a marathon this is not a Sprint um you

(3:06:22) know getting to the **truth** out there what I will say is this too this is what I want to close it with is that we've already accomplished a lot as part of this investigation there's so many people now that just ping me every single time something related to MH370 comes up something related to orbs that come up this is something we've already put out there that's going to resonate right people know now about m370x and they know about this investigation that's out there so don't don't feel like even though there's

(3:06:52) people that say oh it's been **debunked** or whatever that we haven't accomplished something even if this was **debunked** at this point we've already created something that's Everlasting out there you know and we've already started this whole movement around it and this is why like I don't even this stuff doesn't even phase me anymore around it whether or not people believe or not we're just continuing to get the information out there continuing to push the science forward and one day I think we will be

(3:07:15) Vindicated but even if we aren't even if it just becomes a situation where people talk about it and they go oh yeah wasn't that those videos related to that even then we'll still have accomplished something people are always going to wonder in the back of their mind did three orbs teleport that plane you know and to me that's something really important that's something

amazing that I don't think it's ever been done when it comes to community-led investigations like this we already won that's a good

(3:07:40) way to put it so thank you guys very much and yes I think we'll leave it at that for tonight but guys tomorrow you know there'll be another stream tomorrow and we're going to talk about more stuff we're going to get back into the investigation I've got like five articles already to go through tomorrow that have to do with stuff like Maas Chang remote controlling airplanes as well as a lot more conspiracy angles that are out there a lot of people speculate something happened to this plane guys and we'll dig more into it

(3:08:07) can't wait to talk to you guys again

MH370x - LK99 is Back - YouTube

Transcript:

(02:04) 370 Contact 120m [Music] 9 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(03:09) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds oh wow okay well is the mic messed up okay I think it's good now sorry was muted hey everybody welcome welcome to the stream last stream before Tim pool everybody um so this will be the last stream for a few days probably until Sunday so I brought my rubber band here I'm going to

(04:12) need this rubber band for Tim pool so that we can go ahead and show the four orbs scenario to people yeah hit that like button uh I'm not drinking tonight I'm going to relax rest a little bit um let me see I'm uh checking in for my flight so if my flight gets orb'd you guys know you guys know where to find me Diego Garcia maybe Diego Garcia maybe the pic base in uh where was that like Greenland or something like that or perhaps pine pine Gap in Australia could be any of them could be any of them folks um let me see here let me book my

(04:54) let me choose my flight my seat okay confirm my seat on my plane okay yeah should I see if Lulu wants to get up on stage here for us save a credit card no thanks no thanks looks good looks good let's check in for this bad boy one carryon free perfect it's what we need it's what we need accept and continue you know you're dealing with a high podcast when they don't uh make you fly on Spirit Airlines or um the janky one what are the other janky one uh Sun

Country all the ones that make charge you like \$50 for a

(05:43) bag you are checked in nice we are checked in folks text this bad boy ourselves okay we're checked in Flight is going to happen Tim pool is going to happen folks beep beep you just heard it I'm excited guys uh hold on let's get Lulu up on the stage Lulu come here yes you're right there what is this let's see if we can do it guys what's this treats whoa want treat we got to we got to entice her folks let's see how she's feeling today come here come here come here good girl good girl okay let's try it

(06:33) out I'm gonna just try to grab her without like building it up good girl girl good girl good girl I'm scared guys I'm scared yes good girl good girl your D pick you up come here come here good girl okay good girl good girl good girls wow oh come here good girl okay yes

(07:38) okay there she is folks the biggest doers good girl good girl yeah good girl good girl Lulu good girl she's not really a lap dog folks me see oh yes the biggest doers she's chilling she's chilling yes okay okay good girl good girl you get other treatos more treats we got to make her okay with it there you go okay we pulled it off you saw she had her whole fit there right you heard

(08:42) that had her little meltdown that's my impression she's a little chunky she she might be getting a little chunky I think she's pushing 50 lb good girl good girl good girl one more treat let's see let's try to get her uh happy so she doesn't uh freak out next time good girl okay that's a doggo she's got to go to the kennel though I feel bad she's going to be in the kennel for a few days yeah yeah that's Amanda you you nailed it um yeah she's like I don't like this but

(09:38) it's my daddy so I'll put up with it once she gets off the ground then she's fine but when you try to pick her up she hates it and you can't be like hey you like you you can't tell her you want to pick her up she knows she knows what the words mean so she starts freaking out okay so let's start we're going to do science today um now the big thing about the science here is the lk99 guys lk99 is back folks now if you've been following along you know that we never doubted it not even for one minute um

(10:14) but mainstream Academia has was doubting the heck out of it of course because they were unable to recreate it I think that the big takeaway should be that this is coming out of the East China and Korea and yet for some reason United States and in the west we're not hearing anything about it right we're not making it whatever like this should be a red flag there's no reason why we don't have the capability to produce this in the west um that tells us it's being suppressed right and the reason why it's

(10:46) being suppressed that's pretty apparent especially when we look at these videos it's like wait a minute we're looking at floating rocks right I mean look at this guys this is a rock floating suspended in midair the magnet's on the side and this thing is just floating freely this is the mezer effect we're staring at it this is a key sign that what we're looking at is room temperature super conductivity and guys we know the people who have been investigating this case know

why this is being covered

(11:25) up because of this this is what room temperature super conductivity can lead to orbs that are floating freely in space creating their own geodesics that are creating a 120 de Z Point sinusal pattern around an airplane that can create gravitational effects that are so strong you can rip through the fabric of space time to do all kinds of stuff that we would consider to be magic such as teleport an airplane next they will list lk99 as a schedule one drug exactly exactly qar on still out there but I think he got his main Channel he

(12:03) got his main thing deleted the qar and on and stuff is get too weird for me man I need people who are not speaking in code okay so what's the deal with lk99 don't worry we're going to go over it we're going to dedicate the first portion of the stream tonight to lk99 okay we're not going to have a super long stream tonight we're just going to do a little doggo action we're going to talk about LK 999 and then I'm going to do a little bit of uh preparation for Tim Po and then we're going to call it for

(12:37) tonight um while I'm in uh I'm not going to say exactly where I'm going but while I'm going to the Tim pool stuff I am going to work on while I have free time while I'm not streaming and what have you I'm going to be working on getting together the evidence list and getting together the um all the podcasts and stuff uh also take a look at the Elijah schaer Elijah Schaefer came out today um so okay so there was a new paper that came out today this is it you're staring at it right here actually yesterday January

(13:09) 2nd this is yesterday guys so we are we are on the absolute Cutting Edge of Science and Technology we are on it you if you're in part of this stream if you're watching this stream you are part of The Cutting Edge of Science and Technology um possible mezer effect near room temperature in Copper substituted letter I don't appetite let's call it tight appetite I'm not sure how you pronounce this word um but what they're talking about here is lk99 okay so lk99 is a substance that came out uh paper

(13:41) started dropping over the summer and it reached a boiling point back in August similar to the videos honestly and then it got suppressed bunch of people came out said no it's fake it's fake stop talking about it stop talking about an an everybody did now what I want to point out as well is you need to be very skeptical of anyone on social media especially even people who are claiming to be science experts and what have you um let me go to one of my replies blah blah blah um yes this guy gets it okay um this guy kind of gets it they

(14:20) originally observed super cooled materials repelling flux of an electrically charged particle like a magnet making the magnet float so what has happened in these videos here guys the answer is uh part of the magnetic fields are flowing around the superconductive properties it's superc conductive means expelling magnetic fields but part of it is impure and what that means is part of it has the magnetic fields flowing directly through it so think of some of it if you look at this rock like imagine I have a flash drive do I have

(14:54) anything else oh yeah where's my my plug okay imagine this plug right and so imagine that it's impure so some parts of it if we put a magnet on some parts are flowing right through it and other parts are flowing wrapping around it what this forces is it forces the The Rock to be stuck in place because of the magnetic field lines just literally stuck in place just like we're seeing in this video right here completely stuck in place this is the mezer effect what it's showing is the mezer effect is a

(15:24) property of superconductive materials where this superc conductivity is that it's bending around part of it this is why it's able to float freely in space this looks like magic because in my mind it pretty much is Magic in order to prove that what they're looking at here is really a magnet this is where they Co and they actually they they first of all they show you there's no strings they're not cheating here and then they take a screw now keep in mind this screw is pretty small so this means

(15:50) this little piece of Ikk99 here is very tiny but look at how the screw just sticks right to the magnet right away right this goes to show us like wow whatever ever this is here is showing these superc conductive properties okay so this is huge guys huge I can't tell you how big this is and you know what's funny is that when we look in our replies and stuff like this stuff doesn't get nearly as much attention as it should this stuff should be getting like millions of views but people don't understand the science they

(16:24) don't understand the implications you know casual people out there they need it really dumbed down for them the dicky the Dick Gregory stuff people eat that stuff up right but when it comes to the hard science and the stuff that's really going to absolutely change the world a lot of people don't get the implications looking at this this is gigantic especially if this is going to come back so where was the reply I wanted to post about let me see I may have to dig around for it what's what's what's

(17:00) this oh wow 100 likes on this already I just retweeted this cuz I I think if Dan's got some weird orbs then we going to check it out oh look I thought Mick West was oh Mick West folks Mick West he's back he's back folks you know MC Miss MC West is obsessed with us he's never going to let us go uh for

(18:33) yeah remember when he said he wasn't going to give us any attention uh this is how we're going to deal with

(19:36) trolls from now on remember Mick West is an expert folks no no I love how he unblocks me it's going to be the biggest mistake of his life I want to retweet it I might have to retweet this guys you're so arrogant straight gangster love hey hey hey MC West hey UFOs equals demons o UFOs equals demons uh what o whoa hello

(20:50) hello Coco Island intelligence station well let's add it to the list folks signals intelligence station woo that's spicy where is that oh we're definitely checking this out where is this oh wow that's right on the flight path there's a signals intelligence station in the Coco's Island ooh boy

that's spicy Okay add another one oh we might have to do something about write something about this oh boy hello hello add it to the evidence list folks add it to the evidence list well we were talking about lk99 we got

(21:43) sidetracked uh Coco's Island more and more stuff just keeps coming out guys wow wow okay so there's another base 2012 US military eyes Coco Islands future Indian spy base holy crap another spy base okay well we got more and more Spy Bases out here yeah guys we're just going to pretend like we somehow can't see an airplane guys we can't see an airplane flying in the south in thean Ocean amazing yeah do signals a signals intelligence office also didn't notice a rogue 777 flying past it for hours

(22:36) uhhuh uhhuh uh Congress I think is completely in the dark guys I think we're so far ahead of the game like we are practically Breakaway civilization level uh investigation we're Breakaway civilization level investigation right now that's why people just think we're crazy cuz we're we're just so far beyond the Paradigm of what CNN brains think that this this is why it's on cover like even I think the crazy part the thing that I never expected is even the people in the UFO community that are like

(23:10) literally talking to aliens talking about aliens visiting us and all this stuff like even they can't believe that we can teleport an object which it's like how do you think the aliens get here you think they're getting on their school buses and spending a thousand years to get from nearby star systems like no they got to have something faster as Dr Greer says speed of light is too slow folks speed of light is too slow so Congress I mean when I watched the thing of Matt Gates on Congress man that told me everything I needed to know

(23:49) they're just completely in the dark man like they're they're sitting there like the CNN brains going BR maybe there's some aliens here that we should uh talk about it's like dude okay well let's let's think about what does that mean if there's actually aliens visiting us like what are the implications guys maybe some advanced technology yeah no I think they just walked here from alpha centuri I don't know man so yeah you guys are ahead of the game for sure yeah we're Breakaway investigation

(24:26) here uh you don't necessarily have to map the position of every of momentum of every atom in the object although although that might be what's going on here I mean there's definitely purpose in this video guys first of all there's no way somebody made these videos um just it's too original man even Marvel Studios can't come up with something like this these are clearly mapping This Plane clearly right there's not randomly making a sphere around the plane they're doing it cuz they're

(24:58) mapping it but it's not because they're mapping every atom in the plane they're trying to figure out how big of a wormhole they need to create in my mind at least that's my opinion right they're trying to they're trying to figure out how big does this Singularity need to be in order to Encompass the plane to make it disappear right and that's why when we see the singularity here it it completely encompasses envelops the entire plane they're trying to figure out exactly what

they need to produce

(25:28) now this in my mind is going to require like very very powerful computers very very powerful computers in order to pull this off and everything we see I want to go back to the the super conductivity real quick uh okay we got the Spy based stuff that's pretty spicy man I'm glad that I looked at this glad that this is the same one right yeah okay this is the same one oh the grifter has arrived oh the grifts the grifters why are these people following me if they think I'm a grifter I don't get that why are they

(26:07) following me um I'm trying to find the one where's my post on the science guys thing we're going to throw a little we're going to throw a little shade on somebody wait where is that man I thought I saw America Shaman like one of our posts but maybe not ah do you even nunchuck bro there we go do you even nunchuck remember that guy that guy yesterday talking about nunchucks was that that was that was you William right that was funny man can we PM can we PM please please let me PM no I like Dustin I think he's he's a German

(26:57) I think uh I'm looking yeah oo o William he's thrown shade on you sir he's thrown shade on you uh where is it where is it huh we're going to have to go to our replies folks to find it we got to go to the replies Where is the I wish I knew how to quit you folks here you go I'll put that one in the chat for yall that's going to be our post for tonight that's our main post um you're banned why are you banned what are you doing man why are you doing to to get yourself banned homie what are you doing to get yourself

(27:57) banned why can't I why can't I pin this it's funny I can't pin my own message like YouTube's like nah you're not allowed to pin any X posts uh here it is here it is okay Andrew cot let's say let's say Andrew cot or cot I I don't know okay guys we're going to throw some shade on uh is he a physicist engineer infusion okay so I was following this dude um back when lk99 first came out and he was following it how it was getting blown up whatever this I'm going to first of all say iect

(28:44) that people are looking into lk9 and what have you but this dude is a prime example of what was wrong with social media and what's wrong with academics when they look into papers is they have blinders on what happened with he was following all these papers and stuff that were out there and then one person said oh I wasn't able to replicate it and then he immediately started perpetuating the false information the disinformation that lk99 was not a superconductor and that the whole thing was dead right these are the types of

(29:17) people who should not be leading the charge when it comes to Advanced Technology he's not somebody who's doing it himself he's somebody who's out there who's just paring whatever he hears on social media right and they're of course extremely skeptical despite the fact that we're literally looking at videos of the mezer effect literally looking at videos so this is not somebody that should be getting credit for this the people that should be getting credit are the people like myself who've been

(29:44) perpetuating that it's real for months even while everybody said it was disinformation everybody said it was **debunked** those are the people that should be getting credit the people that are out there are like oh a new paper came up and now maybe it's real again no those people don't get any credit this is not like this is what's wrong with social media this what's wrong with the scientific Community is that they care about what pedigree the people said like oh well who said that that's what I want

(30:09) to know as opposed to what is a factual basis of what we're dealing with I'm literally looking at the mezer effect on two videos this is a rock floating freely over a magnet guys right it's like oh well maybe it's fake okay well I've got a second video as well right so we need to be very careful about who we put our faith in same thing where I was responding to someone earlier who said well I've already got my hero it's David grush okay great well you shouldn't have you shouldn't be basing

(30:40) your opinions on anybody else at all right like the the fact that you're putting David grush on this pedestal is setting yourself up for failure because now what happens if David grush Gets compromised what if David grush can never tell the **truth** what if David grush comes out and says oh guys it was all fake right right now you've just set yourself up for disappointment come to your own conclusions that's why this investigation here doesn't depend on you believing anything that I say I'm putting the evidence forward I'm showing

(31:09) you the evidence I'm having you come to your own informed conclusions based on that evidence that's why our community is one of the best communities that's out there right from the MH370 standpoint from the advanced science standpoint I just put the evidence out there for you guys the papers the science Etc I give you my opinions and I'll let you guys come to your own conclusions so that's why I posted here is like next time should we just look at the video evidence instead of declaring something dead because we didn't

(31:37) replicate it correctly I hope academics and influencers learn from their mistakes if one person makes a crappy lasagna does that mean crappy Las or does that mean lasagna isn't real right do you guys get the do you guys get the analogy here just because someone didn't follow the recipe correctly when given partial information doesn't mean that the overall thing is not real that's not how logic works the fact that we have people who are literal engineers and they don't know anything about logic

(32:04) and reason it's concerning this is what's holding us back from achieving the scientific breakthroughs that we need right Einstein would look at people like Andrew here who originally quote unquote **debunked** it and he would be rolling in his grave he'd be going that's not how science works like why don't you go out there and try to figure out what is the correct recipe not just go oh well I failed that means it's fake like gez man the huous of these people it would be a different story if

(32:35) we didn't have multiple videos but here's the funny part this is why they released the videos these people in Korea and **China** released these videos because they knew that there

would be people who are like oh it's all fake let's everyone forget about it don't look into it anymore cuz then you can just literally look at it you can literally see the levitation you can literally just watch the mezer effect and it's funny because I bring this up to people and no one much like the evidence that we bring forth with

(33:00) MH370 no one can **debunk** it they don't attack the evidence they just go well somebody said it was **debunked** they do the equivalent of the corridor crew said it was **debunk** they wait for their favorite influencer SL wantanabe scientist on social media to tell them what to think and then if they say it's been dun then they ignore the literal video evidence that's right in front of their eyes where they can just watch it themselves let's watch the second video again folks all they have to do is just

(33:26) literally watch it we have two videos already apparently there's going to be a third video released there's going to be another video released you know I'm going to steal that video the moment I find it so the moment we get that third video of lk99 floating oh we're going to definitely be posting that on social media then we'll have three videos of lk99 showing the mzar effects so yeah here was another one it's like this is why people make these videos hey everybody by the way yeah yeah it's **Reddit** brain man it

(34:06) really is and the reason why **Reddit** brain is such a good term is because the whole thing about **Reddit** is that it's not about what you say it's about who said that what was your Source who's your Source how does that make me feel if that makes me feel bad then then I'm not going to believe it if it makes me feel good then I am going to believe it right that's not how any of this works that's not how science works it's not how investigations work like we've we we're literally becoming a society of

(34:36) Idiocracy of actual just getting dumber and dumber and dumber because of social media because of this idea that I have to go along with the flock I have to go along with the crew I have to agree with what everybody else says agree with what my authority tells me it's just getting to the point where it's embarrassing so the paper possible meeser effect now I I post it's not a very long paper it's only about four pages I assume these graphs here basically have to do with showing how you know the mezer effect is most likely

(35:06) going to be produced by this I'm not a scientist I can't say without absolute certainty but from looking at it and reading the context that's pretty much what I got I thought about posting the the clips of this and images of this but I realized no one on social media cares about graphs and stuff like this what they want to know is they want to see the videos they want to see the hard evidence right um and that's why I post the videos out there instead um and again like when we get the next one cuz

(35:31) apparently a video is supposed to come out that's proving this as well then we'll get out there now the important part about this is that they were only able to show these superc conductive traits up to 250 Kelvin okay 250 Kelvin is still like uh minus what is itus 21° Fahrenheit is that is it 7 271 is the Calvin I think so um and so it's still I mean it's not perfect but

this is actually pretty I mean the fact that it's close to room temperature at all is amazing so this is what salvator pi calls high temperature

(36:07) super conductivity now we're not talking about it needing to be like super hot but normally we would require liquid nitrogen in order to cool something down in order to get it to be super conductive now if we can even approach something that's even even like 21° F that is very warm for room temperature super conduct CU remember what's happening when we're getting room super conductivity is that we're forming Couer Pairs and when we form these Couer pairs this is where we're starting to get that

(36:37) collapse of the electrons down to a point where they can hold the same space where they're getting that wave function that coherence that we need and once we get that coherence guys this is when the magic happens the same way when we're talking about macroscopic phase conjugation macroscopic Quantum coherence is that we can cause an entire air airplane to have a coherence effect around it where now we can get the whole airplane to potentially get the properties of quantum and now it can move at Super luminal

(37:08) speeds what's going to happen don't know but we can start to do some magic right yes still needs a magnet to levitate but it's not all about levitation it's about what are the other implications of this so some of the other implications are that if we have this effect we can have comp computers that are thousands of times more powerful than what we have today so when you overclock your computer it heats up what if it didn't heat up when you overclocked it now you can overclock it faster and faster and

(37:40) faster and faster think about the database Farms I'm not sure if you guys know about this there's a company called switch Communications [Music] uh okay A friend of mine uh a friend of mine's family or dad is a big investor in this based out Las Vegas okay um if you look at these database arms and they're just one of them look at how big these database centers are I actually did a tour of one of these they have people with armed guards protecting these I won't say who all their clients are but they have clients that are like

(38:22) you know big like uh companies that have like if you were to let's say play video games online and you're playing on those servers online like this is the type of place where they're being hosted and a lot of what these places come down to is how do you cool these data centers how do you keep them cool because look at how many computers can you imagine how many computers and servers there are in here there's thousands maybe tens of thousands of servers in here so now if these are all perfectly cool and you

(38:52) remove the issue of keeping them cool because you have room temperature superconductive ity is possible this changes the game this completely changes the game when it comes to how you we can store databases and database Farms now they become extremely cheap and extremely powerful just this alone is a game Cher for everything that we currently know about SC about technology and how we use technology today I'm going to one second Jesus what is wrong with this my dryer is just sitting over here like I'm just going to keep going

it's been

(39:34) done for like an hour um wait is there music no there's no music right oh wait yeah where's this music coming [Music] from where's that music coming from oh I coming from this okay sorry guys I didn't realize there this thing was playing music here in the background I guess that's why I need to have the headphones on okay so that's one of the big aspects of it um one of the other big aspects as well is uh this idea that how how we can transfer power so not only can we keep our computer safe

(40:17) and our phones guys our phones the phone your phone won't heat up anymore imagine if your phone doesn't heat up how much more the battery is going to last your battery might last multiple times longer than it does now now yes you're still going to run out of battery at some point but it's not going to heat up anymore and a lot of the battery losses due to heat should we play some Minecraft that'd be funny I haven't played Minecraft in a long time um so yeah we can send power a long way

(40:55) now if we can send power so the big thing thing about sending power somewhere is that you lose there's a degradation of power due to the heat when you send it if you can create power lines that have super conductive properties like let's say instead of copper we use Ikk99 to transfer the power and it just doesn't heat up at all think about that now if we can send power over long distances with no degradation due to heat this could be a situation now where we produce power anywhere we want on the planet and send it anywhere else we want

(41:28) now think about what that means that means we can create green energy like let's say green energy is more efficient in Southern California where we have solar power we can just ship it over to the Midwest we can just send it over on power lines of the Midwest no loss of heat yeah quantum computers quantum computers compossible um I'm trying to remember what some of the other implications are but they're huge not to mentioned the idea of of course what we've been talking about teleportation like the

(42:01) moment you have uh super conductivity this is the key to unlocking magic so this is why I'm so excited about it guys this is the first step like we just if this gets proven which I already think that it's out there this is the first door that we have to get through in order for people to understand the science behind the mh37 z70 videos is real first story it's a big one it's a it's a big one a really big one so Ikk99 being proven real is gigantic I can't tell you how huge this would be

(42:38) also because remember when we talked to salvator Pas there are two ways where we can achieve room temperature super conductivity one of them is through uh we can do it without meta materials he said that we can achieve it with the right electrical currents potentially with the right maybe pidal effects I'm not sure but the other way is if we can do it with meta materials it makes the whole process a lot simpler man having a room temperature meta material without needing to do any kind of engineering to it you know now we're

(43:13) going to really start to be able to do some pretty amazing stuff and you can tell as well

based on the size let's go back to this based on the size of these rocks that this is something that requires a lot of advanced Material Science like this is Tiny this is a tiny tiny flake right and this tiny flake is showing the mezer effect but you can tell it's small because I mean we can see the size of that screw that screw is probably pretty small as well so this is a look at that screw right there for scale like the

(43:47) screw is pretty tiny here here's a giant screw right this one's giant I imagine that one we're looking at there is much smaller than this screw right here so this is a tiny flake that we're seeing seeing here so this is not something that we're going to be able to produce right away in huge amounts but once we open the door and unlock the door to the material science behind this it's going to change everything so I if I had to guess time frame wise 5 to 10 years we could start really doing some amazing stuff with

(44:14) this if we can get it to be proven true like this year so we're talking by 20 2030 2035 um really seeing like huge changes to our world and the way that you know we generate power the computers that we use everything about it of course as well part of it are hoverboards are possible as well hoverboards are possible right um the problem with it is you see you still need a magnet so if we if we took magnets and we covered the ground with magnets you could use lk99 and create a hoverboard and Float around it imagine

(44:47) if our sidewalks if all the sidewalks were made of magnets and then you have a hoverboard and you just hover over the top of it that that could be a reality that could be a really reality and how much does it cost to produce actually doesn't cost that much that's the amazing part once we get it down and figure it out the products are cheap man it's just copper and Lead copper and Lead are not that expensive now people have argued that um and yeah what if we made our roads out of this right what if we

(45:20) made our roads out of magnets and we had a magnetic effect on our roads now we can have mag trains mag cars we already have self-driving cars so we might be able to have cars that just float float freely um people have argued that you can replace the copper with gold with gold now if you have gold in there the problem with gold is it's really really really expensive some people even argue that if UFOs are visi in us this is why they're mining gold CU it's a very rare metal right and maybe the gold is needed

(45:55) to produce this type of room temperature superconductive uh elements meta materials and this would be the definition of a metam material now why is this a metam material guys let's dig into that real quick and while I'm pulling this up I want to show you the end of the paper here so the end of the paper pretty important in summary the DI magnet magneet magnetism in csla which is the the product here has been investigated both by Mt curves as well uh and uh hysteresis I don't know MH Loops which can be observed up to 250 Kelvin which

(46:32) is very high temperature given the zfc fc-fc uh B furri ification at 300 Kelvin which what they're saying is like if they do the right process they think they can get this up to 300 Kelvin guys this is huge 300 Kelvin is 29° f that's almost above freezing temperatures that's very very

high temperatures guys we think that there's still a great chance to observe room temperature superconductivity that's the key word we think there's a great chance to observe room temperature superconductivity the

(47:13) signals in our sample are still relatively weak so we have to devote efforts to further synthesizing scalable samples with more Active Components what they're saying there is we got to figure out how to synthesize the product more efficiently better yeah so metam materials composite material that be engineered to exhibit unique electromagnetic properties right so unique so it's like CH taking something that is doesn't have those effects and then combining it and making something else the amazing part

(47:48) is neither lead nor copper are magnetic copper and Lead are not ferromagnetic which is weird right but this maybe explains why they create Ikk99 which shows superc conductive properties because they just bend all magnetic fields around it pretty amazing so really interesting I think I saw super conductor let's see if there's any so you can see this was back in July and June oh actually July I think was when it was started to get huge right it's a lead based copper doped material and hey Bernie how's it going

(48:42) hey Sandy hey Amanda uh is copper di magnetic yeah Copper's die magnetic it repels magnetic fields right but this is uh taking it to the extreme so you're taking lead and you're doping it with copper so you're changing the chemical makeup or you're you know uh you're making this meta material by changing atoms around one at a time you know imagine if we had perfect Material Science and we could create sheets we could say okay one layer of lead one layer of copper one layer of lead one

(49:24) layer of copper that's the idea here now we're doing it in a a crude way we're like cavemen and we're going let's just cook it we're trying to cook it right and of course it's not going to be efficient we try to cook it because we're just hoping that when we cook it we randomly get the right properties that we need that some of it's going to be the right stuff some of it's not we really need Material Science where we can an atomic layer combine the materials together that's probably well

(49:49) beyond where we're at now maybe you know decades Beyond where we're at right now but we'll get there eventually and when we get there if stuff like Ikk99 is real imagine what other meta materials we might be able to produce right we might be able to find a superconductor that's even better than lead and copper maybe lead and gold is even better than that I'm not sure so you can see that this was July and then it got debunked like about a week later a couple weeks later in early August right Ikk99 is not a superconductor

(50:18) everybody stop looking at this look at this nature Journal thing man how SLO solved the mystery guys this is why science is dead in the west science is dead in the west it's not about the evidence it's about what people with pedigree tell you to think what do the experts say do the experts said that it's not really a superconductor the experts say that a plane crashed into the South Indian Ocean and somehow didn't leave a debris field do they have to explain it no you

just believe what they say should you

(50:54) believe your eyes no don't believe your eyes folks don't believe your eyes believe what the experts tell you this is It's a magic trick it's a magic trick they don't explain how they're pulling the magic trick off but it's a magic trick the sad part is that's nature this is nature even nature is pull is pulling this [REDACTED] so oh a couple people didn't figure Half Baked levitation half Half Baked levitation does this look Half Baked you guys this doesn't look look he even puts a loop around it just to show

(51:32) you there's no wires and magic tricks going on look at this Half Baked levitation yikes man yikes I wish people could think for themselves man I I really do even nature is got full CNN brain Half Baked levitation [Music] by contrast superc conductors that levitate over magnets can be spun and held even upside down guys uh yeah that's why we're looking at a magnet on the side here folks look at this magnets on the side superc conductors that levitate over magnets can be spun and held upside down none of

(52:25) the behaviors look like what we see in the lk99 videos uh are they looking at the same videos that we're looking at right now like they literally don't post the video and they just lie about it they just lie about it like who is this person who is this person van gemp who is this this idiot former condensed matter research at Harvard University I mean these people are just idiots complete IDI idiots this is why science is dead Harvard University doesn't mean [REDACTED] anymore sadly I mean for other reasons too

(53:04) recently but wow man a former condensed matter researcher can't just look at the videos with their eyes this is what blows me away guys man embarrassing man embarrassing I hope that uh Derek van Gip comes out and says yep I'm an idiot I should have just used my eyes to look at it and watched it as opposed to Pro I almost guarantee you that this person never watched the videos and that they just base their opinion off what they read on uh Twitter they probably literally just based their opinion on what they read on

(53:47) Twitter I I hate to say that but that's how people actually work to and then they pretend like they this is a form of disinformation where people absorb the opinions of others and make them their own opinions right even if it doesn't make any logical sense nobody looks into anything they just go oh well Twitter said it was fake so I'm going to go ahead and just repeat and parot what I heard I'm not going to go look for myself come to my own conclusions blows me away man half levitation guys it's full-blown

(54:19) levitation man yikes man anyway okay have we talked enough about superc conductivity and I I think this is very strong evidence that this science is being suppressed in the west this is being suppressed in the west if you're in America if you are in uh Europe Western Europe why don't we have academic papers that are doing this we definitely have the same technology China has well our our Material Science our shops and Engineers should be just as good if not better and yet you don't see any of this stuff coming out of the

(55:04) West it's all coming from China and Russia this tells me that we are having this stuff's being suppressed by us I have slow mode on by the way Nathaniel I actually have slow mode on so yeah it's just it's blowing up man this is this is a huge topic I can't wait to see what comes from this um and again I just want to say this is important because we've been saying this is true as part of our investigation we have been saying that this is true I have been going on 50 plus podcasts and probably on half of

(55:39) them I say that lk99 is real in fact it's on our evidence list guys I already have the evidence list up guys what is this say right here lk99 in the emergence of room temperature superconductivity this has been on the evidence list since the very first time the evidence list was created back in September the whole time every time I do an interview I bring this up and then people go you know what they say to me Oh I thought that was debunked every single time that's what they say we are some of the first people to be the ones

(56:15) to agree that lk99 appears to be legit that we are as a human species we are on the emergence at the emergence state of room temperature superconductivity this is going to be a giant breakthrough for mankind that will change the world 100% and it's one of the requirements in order for teleportation to be real we need room temperature superconductivity because we need to be able to create superconductive properties that can amplify and create high frequency gravitational waves as well as what's our other one called I always

(56:49) forget the other acronym I'm going to have to memorize this high energy electromagnetic field generator guys high frequency gravitational waves high energy electromagnetic field generator we need Super conductivity for this to work are there Extra Spaces in here I hate when there's Extra Spaces guys I'm really OCD okay so I'm going to read these off too because what what can room temperature superconductivity do let's just read high frequency gravitational wave generator generate high power high

(57:28) frequency gravitational Waves by high frequency accelerated a axial rotation Andor accelerated high frequency vibration gravitational waves produced by propagating electromagnetic radiation through strong magnetic fields enable macroscopic Quantum coherence namely possible quantum mechanical Behavior at uh for or of macroscopic objects object multiple high power high frequency gravitational waves focused on a single point I'm going to edit this a little bit can induce a space-time curvature Singularity they can generate a

(58:17) gravitational well in the flight path I'm just going to fix up the spelling while we're doing this controlled motion of charged matter under rapid Exel acceleration transients may lead to room temperature super conductivity controlled motion of charge matter does this sound familiar guys does this sound familiar controlled motion of charged matter under rapid acceleration transients may lead to room temperature super conductivity he's talking about creating Cooper pairs here you can force the Cooper pairs to create

(58:59) if you have charged matter under rapid acceleration transience what let's does that remind anyone in the chat of anything anyone in the chat does this remind you of anything

controlled motion of charged matter under rapid acceleration transients anyone anything that that reminds us of how about systems and methods for generating coherent matter wave beams by locked Martin folks systems and methods for generating coherent matter beads are provided this is what they're talking about in my mind they're talking about using this to

(59:49) create a coherent matter wave beam that can produce room temperature super conductivity this this is one of the prerequisites that we need this is potentially the the prerequisite to be able to produce high frequency gravitational waves as you need a coherent matter wave beam so that's one way to pull it off now if we have lk99 then you can subtract this whole thing you don't need this one you can pull it off with something else nuclear fusion can be engineered Energy may be Amplified to such a high degree as to generate a space-time

(1:00:27) curvature Singularity leading to the total Destruction of a planetoid or asteroid I hear that Jeff wise is an IQ of room temperature yeah sounds about right sounds about right high energy electromagnetic field generate utilization of uh such high power sources um let's do high power sources for uh I don't think I disconnected let's see okay we're we're back we're back that scared me okay it is possible to reduce the spacecraft's inertia uh allows allows for smooth sailing through negative pressure repulsive gravity of

(1:01:23) the Void sound familiar folks sound familiar yeah CIA has entered the chat for sure we're talking a little too much uh a little too much to think today folks you've had a little too much to think we're going to have to take your keys not allowed to stream you've had a little little too much uh thoughts a little too many free thoughts out there can't can't be allowing that talking about high frequency of gravitational waves probably got us um on some lists probably on some lists okay Tim cast got pulled from YouTube

(1:02:10) today for discussing Epstein oo spicy spicy got pulled from YouTube wow Raw alerts sorry I'm just check in the Discord real quick maybe I shouldn't talk about Epstein if it's going to get us uh pulled wait did the list get released I don't think they got released I don't think it's got released yet we got to be careful what people say names we say say as well guys why is Aaron Rogers making me like him why is he doing this to me why is he doing this to me I'm going to go ahead and save this paper in my

(1:03:10) science uh lk99 so I can close this okay I actually have a whole storage area for lk99 stuff we can close that out yeah I want to know why he's making me like him though I wanted to hate him guys oh yeah Aaron Rogers and Jimmy Kimmel are going at it man let's take a look at the news real quick apologizes for claims about Jimmy Kimmel oh so sad Jimmy Kimmel he'll have to cry into his bed of millions and millions of dollars feel so bad for him oh no okay we're not going to we're not going to get sidetracked with clickbait

(1:04:04) uh entertainment stuff wait do we have a a fake Jeremy Corbell in the chat yeah we got a fake Jeremy Corbell in the chat looking to Bob Lazar in Element 115 instead guys don't don't look don't look guys your eyes don't look at the science it will burn you go to channel five subscribers Quantum yoga instructor it's funny okay I love how they think uh people really don't

want you to look at this stuff huh they really don't want us to be looking at people don't want us looking at the videos they don't want

(1:04:52) people looking at lk99 cuz it's being suppressed in the west don't look guys don't look your eyes will get burnt don't look at the videos don't look at the videos folks it's all fake everything's fake except for what I tell you be a good sheep I am for Ron please stop yeah Ron I don't say Ron's name enough either all these people are implicated in this stuff man oh by the way got some **Foya** responses let's take a look at some **foyer** responses let's see what they said oh yeah we got a lot of responses

(1:05:37) Air Force **foyer** response status update on this **foyer** blah blah blah received okay let me see what else we got o temporary password okay so the Air Force has received our **Foya** so no no updates yet but they've got our **foas** I'm not sure about Element 115 anymore folks this this blows element 15 out 115 out of the water this blows it out of the water this is something that will actually change our whole reality element one 15 might not even be real and even if we were to synthesize Element 115 then we have to find a way

(1:06:30) to produce energy and gravitational waves from it right this is actually going to produce gravitational waves this is going to actually lead to the production of gravitational way without Element 115 yeah should we send uh Jeremy kbell another message he'll probably stop following us let's let's actually find out maybe maybe he already stopped following us after the last one honestly if he stopped following me after the last one I wouldn't even blame him we trolled him pretty hard guys we trolled him pretty pretty pretty

(1:07:14) hard nope he's still following me he's still following me he's only following 869 people and I'm one of them so much Pride so much pride does he even post stuff he doesn't even very post that much stuff and his stuff doesn't even get that much views man 68,000 views he's getting like less views on this than we're getting on some of our posts yikes dude he's retweeting people like this fetuccini split loser wow wow yeah okay I'm pretty sure that a lot of these people are just straight up

(1:08:04) controlled man this is one of our biggest haters and there's like this guy's in an actual group of losers who are like they're just like disclosure to them is like their job it's like a sideshow right they don't they know nothing about the science whatsoever it's all about who's a celebrity in the UFO community and what have you and getting noticed by Senpai Senpai noticed me I guarantee you this person was bragging about how Jeremy carbella retweeted them or whatever right yikes man and even then it still

(1:08:37) only gets 41,000 views this is less views than some of our posts get kind of embarrassing man maybe I am a big deal in the UFO Community who knows yikes man you notice it's all these same people why am I following this guy I guess it doesn't matter yeah like we got to get rid of the Old Guard man we got to get rid of the Old Guard here the Old Guard is just they're Obsolete Man they're not solving anything it's just it's a c it's a money-making scheme for these people right and and I'll be honest okay Jeremy

(1:09:19) Corbell has pushed stuff forward he's he's got Bob Lazar out there right but like they just keep recycling the same content right they just keep recycling the same content um what did I see earlier today too there was some new documentary coming out and it's like there's going to be a new clip in it so everybody's got to watch right it's just the dod Navy videos again and again and again and then they just post like oh here's one new 5-second clip that somebody found on social media just regurgitating

(1:09:50) the same content over and over again buy the new movie buy the new book B right let's get some actual pushing the whole thing forward right um I'm not a UK citizen so I would not be able to Foya so in order to Foya American uh um agencies you have to be a US citizen so part of what they make you fill out is your address so that they know that you're an actual US citizen I presume the same would be true for the UK as well so if people want to Foya the UK you most likely need to be a UK citizen so I would recommend if you guys

(1:10:25) are interested in that go ahead and do that okay yeah I mean Bubba that's part of the problem so Bubba Says Jeremy needs to just come out with information that he has that's true of everybody man all of these people out there man they're not just coming out with information they have if you look at what we're doing we're pushing the information out there I'm streaming the information bringing it before we even write it up um all these other people are just out here like you know trying to drag you along

(1:11:04) you know they're trying to drag you along watch their podcasts you know like what what do they actually have right they have a bunch of theories but they're not even scientists they're not even trying to understand the science they're just literally going oh and these objects are floating around in the sky okay I get it how how Co is probably the worst one of them all right to go out there and say stuff like look at Trump like dude this is just clickbait nonsense go wait for Trump he's going to say something he doesn't

(1:11:35) have any inside information about Trump he's not connected like that or it say like oh the thing about the buried UFO is like the biggest BS ever man the biggest BS ever like oh go find the buried UFO it's so large that you can you can go find it on Google Earth like that is just straight up clickbait nonsense if you had any real information you would just tell people exactly where it is you're not going to tell people go looking around for it oh guys my sources are telling me that if you give me another

(1:12:07) \$10 for my new book that you can find a UFO buried underneath the ground like come on man come on uh Ross kohart be a real journalist man and I'm sorry I know some of you guys like Ross kohart you guys might like these guys I don't have anything against them I just want them to tell the truth be actual journalists I'm so tired of fake investigative journalism investigative journalism is dead in this world right now have people actually go dig up pull the evidence up and present it right up forward not announcements of

(1:12:38) announcements and all this crap that keeps happening just the worst man okay yeah they never look into the science why aren't they look into the science man that's the thing I

can't figure out why aren't they actually just looking into the science like we're looking in like we're we're bringing stuff like er equals epr into the Forefront this isn't even a New Concept this is older than the MH370 videos why are people not bringing this forward somebody told me today that this last segment that I posted here has been

(1:13:10) hypothesized that propaga an electromagnetic field can replace the need for negative energy required to keep the Wormhole open this is the key this is the key the electric Fields will allow it so that they can actually continue to Traverse to the end point that's what the orbs are doing that's why we need the orbs like we can only figure this out because we have videos showing us how it's done we have videos showing us how it's done I better follow Dan Boingo as well just uh right now that I think about

(1:13:44) this why does he how do you say his name oh I am following him okay good just in case he actually reaches out to us now I'm realizing we're probably getting a lot of traction with that re retweet I did James O'Keefe is actually a good journalist that's the sad part man he's actually a good journalist he's actually a an investigative sting operator journalist you love him or hate him he's actually going out there and performing on the streets and uh journalism catching people in sting

(1:14:15) operations respect to him right he puts the working he really does man but this is what we're seeing here the reason why the orbs are there is cuz the orbs are probably allowing for the inertial mass reduction and they're allowing for the electromagnetic uh what did I say uh the electro the electrical Fields needed in order to replace the negative energy requirement because the whole point is you need this negative energy to keep the Wormhole open but maybe you don't maybe with the orbs can pull that off

(1:14:48) right this is why it's so big that we have the videos we're working backwards uh we did some prep for Tim pool we probably need to move on to that going to think about this so the first thing I think that we need to do this 181 doesn't have anything to do with anything don't read too much into this 181 guys I've been reading anime online and this is the chapter I'm on I had to save it somewhere so I wouldn't forget 181 that's not any magic code if anyone's into numerology that's not

(1:15:20) don't dig too much into it okay this isn't hand signs or whatever ever it's not a conspiracy it's just me reading anime um the first thing we need is an introduction and we actually have to include lk99 and super conductivity now uh the science we got to start with super conductivity so from talking with Jeremy a little bit his advice was we need to dumb it down for the CNN brains and I I kind of agree we have to not get too deep into the science we have to to keep it on the surface level but we have to

(1:15:56) go deep enough that the people who are the real scientists who are watching that they get enough that they get caught on the hook right we need the bait out there so they get caught on the hook because otherwise if we don't take too much in the science they're going people are going to say the same thing they always say is oh he's just making up scientific

mumbo jumbo man I kind of want to talk to Tim P about just like actual politics and culture stuff though too it's going to be hard to avoid guys it's

(1:16:27) going to be really hard I have a lot to say about a lot of stuff especially when it comes to social media and censorship yeah we probably should name drop some people but I'm not going to make it all about name dropping everybody I just don't want to do all that yeah Jeremy is in Jeremy Reese trust me I'm not going to sound like a liberal I guarantee you those days of my life are over long over my CNN brain is that ship is sailed CNN brain ship has completely sailed that that will not happen you don't have to worry about that I think

(1:17:08) that what we have to do is we have to have an introduction right we have to have something that's like something along the lines of you know we know it's impossible to believe right I have to think about exactly what we're going to say because the reality is people are going to look at this and they're going to go this person's crazy talking about teleporting a 777 right this is so far like I have to put myself back into my brain of when it was early August and I was looking at this and I was having the

(1:17:42) ontological shock right um uh so we have to kind of set the framework yeah and I I'm not trying to hate on everybody who's liberal out there guys I know that I I like the old classical liberals guys the classical ones some of you are probably some of them right the ones that believed in freedom of speech that believed in Freedom of uh you know um bodily auton aut autonom autonomy bodily auton autonomy God why is that so hard to say um and uh yeah you know believed in the principles of Freedom right that's what liberalism used to be

(1:18:36) all about liberalism used to be about being adaptive to change the classic liberalism and now we're in a point where it's just flipped to this like I guess you could call it neoliberalism which is more like fascism than anything else it's it's kind of ironic right where it it's a because politics is a is a Bel or is a horseshoe right I think the Horseshoe Theory uh really fits the further you get to the extreme the more they become the same in the middle um and that's that's the weird

(1:19:10) part about it right is that I think that and one thing I want to say just real quick on on politics is that fascism is not exclusively right-wing fascism itself can be fascism has been leftwing and right-wing it's just a matter of authoritarianism right that's what leads to Fascism is this idea that everybody needs to think the same I think that we are at our best when people disagree when people have different opinions and that when we can express those opinions to one another and we can disagree but

(1:19:45) then we can find common ground and where we can determine what the **truth** might be right the moment you start to suppress people one side and create this homogeneous sphere this is where um we stop being productive where we stop discovering new things right and you see this in lots of aspects of society today it's not just about culture and what have you but that's part of the reason why I'd like to talk to Tim P about some of those things because he's somebody that I think gets demonized because he

(1:20:16) wants to talk about some of these topics now I probably won't agree with him on everything from a political perspective um because I do believe that we should treat everybody equally um and I I think that we should I'm very anti-war you know um but maybe he is too I don't know I don't want to prejudge anyone not I don't want to prejudge Tim p as well um but I think we are going to have a pretty good open dialogue for sure and we have to figure out how do we reach the people that are going to be

(1:20:46) watching right how do we reach everybody keep in mind as well have a good night uh where three oh we are three we are three have a have a good night we are three we have to keep we have to figure out this is one thing we always have to remember about this case everybody this is a reality of this case this is an information war that we are in this is an actual information War I would say that we are in the middle of World War III right now which is a cyber War for control of information and suppression of information and so we have to think as

(1:21:21) well like the propagandists think oh the videos will definitely need to be shown I'm going to have to bring my laptop so we can make sure that they have the videos although they're on my YouTube channel too so it should be pretty easy to pull up um and in fact I'll probably haven't pulled them up on my YouTube channel so that people are watching will be driven to the YouTube channel oh complier what's up my man thank you very much for the is that Euros 5.

(1:21:49) 51 appreciate you buddy thank you sir thank you so we have to keep in mind that we also now we are not going to be propagandists but at some point we have to figure out how do we counteract the propaganda how do we reach people and open their minds up especially like when we have to realize Tim pool himself is somebody who's going to think initially that the plane crashed into the ocean this is how powerful disinformation is is even people who are open-minded thinkers they're susceptible to it as well if you repeat the LIE long enough it starts to

(1:22:23) become the **truth** so the way we're going to reach Tim pool through the science is faster than light communication he knows that faster than light communication is possible which is quantum entanglement so actually I'm going to move this we're going to probably start with super conductivity lk99 when we talk about the science then we move into quantum entanglement which is faster than light communication right because that's something that Tim P will be able to connect to he's going to say that oh

(1:23:13) yeah I know that faster and like communication is possible no he'll know what it is he we when he we got our shout out he actually said that he's seen DOD science and what have you that showed that fashion like communication was possible right and that there alone is going to be the open the way we can open the door up to the rest of the stuff because then we go okay well if you think that's real well that you know you mix superc conductivity and quantum entanglement and now you've got macroscale quantum

(1:23:44) teleportation becomes possible right I think that it's not that that people have shifted

to the right but the Overton window has shifted to the left and then the people that were in the middle before are now rightwing right you see people doing it to me too for the crime of what saying that a guy who spent his time in prison isn't a bad guy just because I hang out with uh in spaces with Jake Chanley people think that I'm uh right-wing qinon adjacent come on man uh people are allowed to like other people even if

(1:24:21) they don't agree with their politics and beliefs right and I just happen to think that Jake Chanley is a really nice guy I mean he's one of the nicest people I've ever run into I think that he would never hurt anybody in this world and if you just listen to the stuff he says you know I think people would come to the same conclusion oh let's see okay so this is going to be hard for people to believe it's going to be one of the greatest conspiracies of all time sloppy cover up technology will change the

(1:25:03) world I think that's how we start right that's our introduction what else what else do you guys think he's obsessed with graphing I also think it's very important that we do well in this podcast because this podcast can be a a gateway to reaching a lot of people not just through Tim P but through other people who are going to be watching there could be as many as 50 to 100,000 people watching in real time let alone the number of people that will watch on recording could be close to a million so this this could be a pretty

(1:25:43) big one guys we need to make sure we hit the the high points on all this oh I know well I think it's important that we let people understand my own background as well that I was never conspiracy theorist and it's that you protested masks during the pandemic yeah masks don't stop viruses guys just spoiler alert put a context on my YouTube but you can't stop a virus with a mask that's not sealed I hope people understand that it's shouldn't be very controversial but apparently it is just spoiler you guys know what my

(1:26:37) job is right I've worked in healthc care it for 20 years here's another spoiler nurses and doctors never wore masks before 2020 unless they went into the room of somebody who had like a very serious contagious disease they literally never wore masks not during flu season never surgeons don't wear masks for viruses surgeons only wear masks so that they don't spit into open wounds while they're doing surgery because there's bacteria in your saliva so I know that's a hard for a lot of CNN brains to accept who might be in

(1:27:17) our chat right now but that's the reality of it I didn't think this would be a a very controversial thing and this is why I fought against the disinformation of this idea that people that don't have symptoms can somehow be sick that's also a complete lie there's no such thing as asymptomatic transmission of a virus just look up at what how viruses work real quick I'm sorry we have to dig into this side Sideshow but look up how a virus Works look up how the viral replication process works works when do

(1:27:54) symptoms happen What even are symptoms symptoms are what happen when the virus is replicating in your cells and breaks free and bursts so if I don't have any symptoms that means the virus is not replicating inside of me that means I cannot be contagious by definition

and last thing I want to say on it is because people have just got we're in this posttruth world where people just believe stupid crap that they hear on TV that their friends tell them right um what was the last thing I was going to say so the asymptomatic transmission

(1:28:26) there's no such thing of it I mean it's funny how they just kind of forgot about the asymptomatic transmission thing right like oh a healthy person should never have to wear a mask so if you guys look at the lawsuit that I did put in there you'll notice it was called No masks for healthy Californians because if you're healthy you don't need to wear a mask the only time I could even argue wearing a mask would be if you're actually actively sick and even then it's not going to do anything but at least you can make

(1:28:54) yourself feel better right just use common sense oh the last thing as well is that I learned in ninth grade biology and I don't know when you guys learned it that you can't make a vaccine for a cold virus the reason why you can't make vaccines for a cold virus is because it mutates too fast and what happened with covid-19 it mutated too fast surprise surprise so you know I don't know why people forgot nth grade biology but all of a sudden we decided that we could create a vaccine for a cold virus even

(1:29:28) though we already had SARS one in early 2000s and we couldn't create a vaccine for it either so this might get me demonetized on YouTube or or deleted whatever but it's the truth so I hope it doesn't hurt anyone's feelings yeah if you want to wear a mask man wear a mask I I don't care no one's going to stop you man no one's going to stop you I'm not going to stop you I've literally never yelled at anybody for wearing a mask in my whole life because it doesn't impact me I don't care it's just like

(1:29:55) the videos like somebody says that the Earth is flat or that Bigfoot's real I mean maybe Bigfoot is real I don't know but let's just pretend like I don't think Bigfoot's real um I'm not going to go tell them that thinking Bigfoot's real stupid I don't bother telling people that I think Flat Earth is stupid I just doesn't doesn't bother me doesn't matter to my life I think it's funny that these people that are obsessed uh with the masks think that everybody's

(1:30:22) against them nobody I guarantee nobody that's worn a mask has been yelled at by anybody it's not a thing that happens what happens is you try to go to the grocery store in 2020 and they yell at you and say you need to wear a mask to go inside the grocery store or you're not allowed inside if you don't have a mask on that happened to me dozens of times so yeah and what did I do I said okay fine I'm just not going to shop at your store I don't care I'll just go somewhere where they don't make me wear

(1:30:51) a mask to go inside that's that's how Freedom Works folks it's great I love it anyway hopefully that doesn't get us uh monetized demonetized but there you go now you guys know the truth now you guys know the truth I mean go nuts with your Mas if you're going to wear one at least wear uh n95 at least wear an n95 right at least wear a mask that seals right if your Mask doesn't seal then I mean what do you think it's doing if your Mask doesn't have a seal around it I don't understand what you think the

(1:31:34) mask could be doing how much virus do you think it takes for you to get sick like I I don't get it it's pretty weird um are you vaxed Ash no comment no you know what I'll just say it I'm just going to say it oh boy this might be risky man might be risky to put this information out there if you're in the health care field it's very this is a very scary question to ask people this is what I'll say no I did not take the covid-19 vaccine I got an exemption I got an exemption be a year before a year before

(1:32:17) it was actually even out there because I knew you don't need to get a vaccine for a cold and what I'll say is a lot more people than you think especially in the health care industry also did not get it a lot more than you think guys a lot more like people think that everybody got the shot you're wrong I've seen information that would waken a lot of people up would wake a lot of people now I don't care if you do again all my family members got it they all got it right that's fine I don't

(1:32:59) care people are free to do whatever they want with their bodies I just ask that they allow me and other people as well the same uh the same courtesy let me do what I want with my body you do whatever you want with your body I've never gotten since since March of 2020 I have never been sick I have never been sick SI since March of 2020 it's almost it's 2024 now I have not gotten sick in almost 4 years that's all I'm going to say on that okay so I haven't gotten anybody else sick nothing I've done because I I

(1:33:35) I can't get somebody sick if I've never gotten sick right so I just want people to realize that for the record guys I kind of give you guys a lot of hints as well what do you guys think uh when I was making those jokes about not dying suddenly did you guys not catch on on those you guys didn't catch on those jokes yeah just I'm going to State it one more time for the record I think that people should be do able to do whatever they want with their bodies if you want to wear a mask if you want to wear five masks you want to wear

(1:34:08) so many masks you can't even breathe go nuts doesn't bother me you want to shoot yourself up with drugs I don't care doesn't bother me just please allow me the freedom to not shoot myself up with some drugs I don't want in my body I appreciate that yeah I feel like it's just it's time to tell the **truth** right it's time to tell the **truth** I don't want to have this thing where people are wondering you know I don't care it's not that big a deal let's not make this about uh let's

(1:34:45) not make this whole stream about Co though I feel like I'm going to get my YouTube strike down you spread in dangerous misinformation he said that he said that he learned in nth grade biology that a cold virus can't be uh immunized against oh man ninth grade biology man YouTube's coming for me okay okay guys gotta be careful with the chat chat you're going to get me in trouble chat okay let's let's focus back on our uh task at hand here let's focus on the task at hand and once again I just I'm going to

(1:35:32) say this one last time I've never yelled at anybody or done anything aggressive towards anyone who's wearing a mask I had to wear a mask as part of my job a lot um as one of the

conditions of my exemption I also had to wear a mask although it didn't really matter because everybody had to wear mask anyway if you were in the healthcare field you had to wear it every time you were in the hospitals until like actually like a year ago I'm not against requirements that are out there as long as you know

(1:36:02) private companies can do whatever they want um didn't mean I enjoyed it but you know I follow the rules when I have to that's how Society works when you can disagree with people and still have your own beliefs folks no I wore the shitty mask that don't do anything I want to be able to breathe so I wore the the whichever the minimum one that was required so the one that was the uh the surgical masks I would actually just like the nice thing is you go to the hospital and they would just give them to you when you walk in so I

(1:36:40) didn't even have to bring my own like and plus like I unlike a lot of people like make sure you throw away just since we're doing we're talking about hygiene real quick I'm going to help people out do not reuse your dirty masks okay nurses and doctors they throw them away right at the end of their shift back in the old days you were only supposed to wear it for like an hour and then you're supposed to throw it in a biohazard trash thing not the regular trash biohazard trash you shouldn't be re-wearing masks

(1:37:09) that's disgusting so and that's part of the problem too is that um the filth that it uh the filth that they create um there's a huge like TR I mean how many mass billions of Mass have people have been throwing away sucks man not good for the environment BS make sure you throw them away please yeah the litter on the ground man Barry the sad part is all the people that are like oh save the environment right turn off your your your lights when you leave the room they're throw we're going through billions of masks

(1:37:42) it's like yuck man okay well we did our our political thing here we did our political thing uh Joe just I think you missed it but I haven't been sick in four years so I'm definitely not spreading uh non-existent viruses that I don't have onto other people I'm pretty sure about that I'm pretty I'm pretty sure still that we can agree that you have to be sick in order to get somebody else sick right um okay let's talk about something else oh yeah I'm ready for political questions guys boy I am ready for the

(1:38:22) political questions yeah we're going on Tim pool on Friday we're bringing Dave Rossy with us Dave Rossy is um quickly becoming I think he's getting pretty close to being my best friend at this point I love the guy um I think he's just a genuine super nice person one of the most humble people I've ever met one of the most smartest people I've ever met uh I've got a a bromance with him for sure going on I think that from the science perspective Dave Rossy would be one of the people to change the

(1:38:52) world and that's why he's coming along to Tim pool I actually asked if we could bring him along and they said yes they said yes so looking forward to it I can't wait to uh meet Dave Rossy in person tomorrow yeah it's going to be awesome and then Friday we're going to be on Tim pool together I think it's about a 2-hour show so yeah I think a lot of this let's see what else

we're going to get through here let's talk a little bit more about oh I want to log off in a little bit too

(1:39:25) cuz I got a flight in the morning um but I want to make sure we get through some of this we don't have to get it all set tomorrow Dave and I are going to go through this list that you're looking at here we'll work on our talking points make sure we got all got it figure it out yeah my plan is to probably have it be like about 1 hour and 15 minutes of conspiracy and about 30 to 45 minutes of sign science I think that'll be good I think that's a good mix right Tim pool is going to be on Friday it's going to be

(1:39:58) on the culture wars podcast it's going to be on this um yeah here you go a lot of the times it's two people against one another but this one's not going to be it's just going to be us with Tim pool I think I asked to make sure there wasn't going to be some kind of gotcha thing so yeah just the streaming on YouTube has 100,000 views on these this one's got 400,000 so yeah it could go for over two hours I could see this one going over two hours pretty easily oh look at that James O'Keefe yeah this is going to be good

(1:40:57) this is going to be really good the topic is just electric too man the Topic's really electric yeah I think it's going to be live I think so um let's see I I'm pretty sure it's going to be live streamed I think the I think they're live streamed theories behind the two unknown passengers um they are Iranian passengers I think it's very suspicious very suspicious if there's an element of Espionage which is certainly something we can't rule out then those Iranian passengers are uh Prime suspects A and B

(1:41:48) um unchecked lithium ion batteries yeah the unchecked lithium batteries are for sure what happened to this plane there was a fire definitely I mean these lithium batteries are extremely dangerous man and they lied about them as well it took them like weeks for the Malaysian um maybe even months for the Malaysian uh Airline CEO to admit that the lithium ion batteries were on the plane of course why because if you tell everybody there's lithium ion batteries on the plane the next day everyone's going to go oh it must have been a fire

(1:42:15) right they didn't want people to be thinking that it could be a fire scenario they had to lie about it pretty obvious I mean it's in my mind 100% lithium ion battery fire is what happened to this plane and we would have never figured that out never would have figured that out without the videos without this smoke Trail coming out of the back of these videos and then talking to Katherine T and talking about the orange glowing plane we would have never figured out that it was a fire never would have figured it

(1:42:45) out that's what's crazy about it that's how the cover up was good but it wasn't that good good right like if you think about it in some sense it's a good cover up in other senses like if we just had to think logically we could have figured out that there was a fire scenario the only reason why people don't think it's a fire scenario is because they believe the lie that this plane crashed in the South Indian Ocean the moment you diffuse them of this idea that the plane crashed in the South Indian Ocean you go

(1:43:10) okay well now that opens up the fire scenario we don't need the plane to last for eight hours we only need to last for an hour that's possible especially with the fires contained in the forward cargo base that are made for withstanding fires I mean look at that two perfectly insync videos everybody just wants to ignore two perfectly Instinct videos how are UFO people how are they not more interested in this these are the best I think these are the best UFO videos of all time I think these are actually the best

(1:43:41) UFO videos of all time the only thing that I think is even close is the turkey UFO video and then maybe the dod videos but even those aren't like this man this is like look at how high quality this is we have it in color we can see the azth here uh or the uh non- radi barrier we can see the monopole I mean these are the best videos ever that's why I don't even care if people think they're debunked or want to say they're debunked like these are just the best UFO videos ever we have two in perfect synchronization with one

(1:44:21) another no hoaxer has come forward no one's been able to produce new source files they have information in them that could only be known by people who are in the know we've got coordinates to six decimal places if you're making a fake hoax video why do you have coordinates to six decimal places that are accurate in your fake hoax video has anyone ever seen a hoax video that's got a satellite designation with six coordinates that accurately shift when the perspective changes man that's there's a lot that

(1:44:56) debunkers have to just handwave away for these to be fake it's a lot that they have to hand look at those coordinates in the bottom left guys look at those coordinates moving six decimal places and I guess I bet if we were to measure it out that it would be accurate to the scale the size of the plane as well right oh we didn't even realize that o the decimal places we can actually measure how much they're moving is that accurate to the size of the plane I bet it is wow keep in mind guys for these these

(1:45:34) decimal places are highly accurate so if we were to measure those decimal places yeah I think this look at you can see the clouds moving man why are people saying that this is artifact compression I mean to some degree there's going to be impression but you can just see the clouds moving look at the clouds move look at this the clouds are dancing folks this is not a 2d background it's so stupid why are debunkers so dumb man look at this Cloud right here look at this Cloud right here the one I've got circled guys look at

(1:46:08) this one look at it dancing look at it get larger and smaller that's not a visual effect it's literally the cloud changing shape naturally look at that oh my God man people wonder why I don't believe in the cloud debunk cuz I'm just staring at the real videos watching the clouds change shapes like you can tell some of this is like some artifacting in here but the clouds literally changing shapes it's not an artifact it's not a compression how just literally changing shape that's only a period of like 5

(1:46:41) seconds or something hey clamp lier thanks again man uh will I bring up regicide probably not yeah the smoke in the fire is definitely the lithium reacting with the water right

that's why it's going to be glowing orange is that they're pouring water on the batteries so if you guys look at the protocols for what you're supposed to do is they have these bags now you're supposed to throw like my cell phone ignites from the battery you're supposed to throw in this bag and supposed to just like pour water on it

(1:47:24) so that's probably what they were doing with the fire in the cargo Bays they're trying they're pouring water on it trying to put it out right and it's going to release bromine the chemical gas is causing the plane to glow orange there's so many fake experts in my replies too they're like oh can't it's not going to do that I'm like well I've got a literal expert who testifies on the hill that says it will so what should I believe some random idiot who pretends to be a scientist on Twitter or

(1:47:49) should I believe somebody who's literally shown me their papers where they have argued on the hill about the dangers of lithium ion battery fires and what they can do I think I'm going to go with the person who's already verified themselves to me okay um so let's think of what else so we are going to start with we definitely need to start with like this is too hard to believe and I want people to understand that I was never really a conspiracy theorist at least before 2020 and then obviously you guys can

(1:48:25) tell from my reaction the co stuff was probably my Awakening because I was somebody that believed all of the official narratives that were out there and then I was in the middle of I I've worked in healthcare 20 years and now I'm watching the lies just pile up on TV and the propaganda and I'm just sitting there in the middle of it going what the hell and I'll tell you guys this too because I I think have I said this publicly if not whatever it's fine it's not part of my current job um I got to be careful here what am I

(1:49:03) thinking yeah okay so this is a story related to a previous job that I had so this shouldn't get me in trouble I don't think um I'm just trying to make sure I'm not going to get in trouble saying anything I think it should be fine um I worked in I I work in it right so the the areas of it that I've worked in in the past not my current job but in the past were Pharmacy and laboratory I've worked on a lot but those were two that I worked on in the past and when covid was happening I was working as an

(1:49:39) architect for both laboratory and Pharmacy design and so when Co happened you can imagine that that is basically the intersection of everything that that was happening like lab tests were we're testing people for covid right and we're treating people with drugs right this was before the vaccines and everything so it was uh you guys probably don't remember but there was all these like uh invector mein actually I some of the order sets that I built we had in Vector mein on the on the order sets because

(1:50:10) before it got like attacked in the media people were literally giving it to people right and then when it was decided it was horse paced or whatever they took it off and said you got to replace it with well REM Desir right REM Desir was the other one but REM Desir was very expensive um so I was the one who was building all that stuff and I was the one who was

building out all the tests uh I was the one actually setting all the tests up the in the system right and you know one the story I'll tell you guys is this it's a very interesting

(1:50:44) one uh I was also the one writing the audits I was the one writing the actual audits that I was providing iding to the people that I was working for um on what were the positivity rates and who are the people that need to be isolated because their tests have come back positive and a lot of people don't realize this but so many people were getting tested in March of 2020 that the reference Labs the ones that we would send the labs too CU people didn't have covid tests like there locally you had to send them off

(1:51:18) to somewhere right they got over overwhelmed they got so overwhelmed that the test results didn't come back for weeks normally the test results would be back the next day they were taking weeks because that's how overwhelmed they were with how many requests they were getting for the tests and they had to ramp up their testing you can read about this in the news that all these people they increased the testing capacities blah blah blah blah and so people were already better before their test results even came back

(1:51:50) that was wild uh so that's the only thing I'm going to say on that cuz I don't want to get myself in any trouble for giving away any other information that might be sensitive um but that was the beginning of my personal Awakening into being behind the scenes and actually watching the process unfold like in actual healthc care facilities compared to what the media was saying where everybody's telling you that it's the end of the world right it's not just Quest and lab core but also AUP Arup is the third

(1:52:22) one those are the big three and I have a lot of experience building those tests out um probably more than a lot of people on this planet uh so and that goes back to some of my old jobs where I I worked as an a lab it analyst in a a past life for several years as well so I learned a lot about how lab systems operate which side note just to relate this to ufology now that I've given this information away the what is it ebo scientist I want to show you guys something real quick we're going to go on a quick

(1:53:02) tangent because I am I am part of the UFO Community now I declared it it has been declared I am part of the UFO Community spread move the side make room Ashton Forbes is part of the UFO Community now part of that UFO Community let's find the ebo sign scientist oh man you can't even find it when you Google it anymore wow you can't even find ebo scientist when you Google it okay let's let me find it I have don't worry guys I saved it you know I saved it this is why I save everything guys in my own personal

(1:53:37) databases we've got it ebo scientist Q&A **Reddit** 2023 okay 6 July 2023 this is this summer and we can't even find it on Google they deleted this person in real time from **Reddit** I happen to think this is a very credible uh thing I'm going to post this in the chat maybe it'll let me pin it or it I banned from pinning stuff can somebody else pin my message why can't I pin anything like I just can't pin my own messages weird man anyway um I can already feel the **debunker** clipping all my stuff

(1:54:21) today it's fine I'm not worried about it um so the reason why I found this credible is that the moment they got to the lab equipment I realized they had to be extremely in the no guys extremely in the no this person's account yeah I can't pin anything I'm pin banned this person's account got deleted in real time while they were replying to people some of the messages were already deleted before they even posted it said deleted and they were posting replies to people which I've never seen anywhere on

(1:55:00) **Reddit** um **Reddit** it is definitely controlled by the feds 100% that that proved it to me that they can they absolutely control the admins they can force people to delete stuff in real time anytime they want they have full narrative control of the website **Reddit** um and that shouldn't surprise anybody who's been paying attention the person this is not the work of one individual this is a whole team of people this scientific like just you scroll through this this is not the work of one person this took a team of people

(1:55:34) probably multiple phds and different phds and backgrounds and this is one person who was familiar with that work who was writing it all up they also probably have a PhD the part where I realized this was real is when they started talking about the labs and the lab equipment the lab itself is located in Fort detric Maryland in a building used for legitimate biomedical research the clandestine operations are carried out in restricted part of the basement out of sight from regular workers contrary to what might might imagine the

(1:56:06) BIOS safety level is not maximal for this type of research indeed the lab containing ebo samples are derived cell cultures is BSL 3 while the lab where the assays are conducted is bsl2 I already know if from this point this person is legit the person that wrote this knows about how lab equipment works and the reason why I know this is because even doctors and nurses don't understand lab terminology like this this is somebody that actually works in a lab and because I've worked in lab it I know and I've worked with um

(1:56:41) lab texts and lab managers and directors of labs this is how I know that this is this part is real so they either worked in a lab the person if somebody made this up then they talked to people that work in real labs and got this information um the BSL 3 area of the facility includes a freezer room and cell culture lab so cell cultures and microbiology in general is one area of lab Lab is broken up into four different areas General lab which includes uh hematology and chemistry then you have uh blood bank which is going to be like your blood

(1:57:20) supply when they have to test people's blood to make sure that it's going to be compatible and do transfusions then you have anatomic pathology which is if you have like growths when they want to look at the growth and try to determine if the growth is like um cancerous or not and so the the anatomic Pathology Lab is like well they'll literally take like chunks of people and they'll cut it up into slides and look at it and then the last one is microbiology so my expertise has been in uh gen lab and microbiology

(1:57:49) for the the most part I'm not very good with anatomic pathology but I understand it and I don't like blood bank that much I don't like being around blood in general um but from the

microbiology standpoint and from the general uh and then there's a new emerging area which is um uh what am I what am I thinking um genetics genetics is going to be the last one so genetics is where they're actually mapping your genome and it's a very detailed assessment and that's the reason why that's so different is that

(1:58:22) the results are way different than the others and and that's generally why they all differ is because they think of like the structure of how the result comes back is going to be different for all of them so the simplest ones are gen lab because the Gen lab result is your hemoglobin is 72 and that's not going to be accurate but I'm just making that that's not accurate to the reference range but your hemoglobin 72 so you just need something that has a numeric field that says 72 when you do microbiology

(1:58:48) you need to know how much growth there is and when they do the gross they also will do susceptibilities so they're they're going to say okay what type of penicillins and what types of uh um things is the growth resistant to is the bacteria resistant to so when we're talking about microbiology we're talking about bacteria right and then when we're talking about anatomic pathology they're talking about does it look like this is cancerous so there it's more of an interpretation somebody's looking at

(1:59:13) it and they're interpreting it and they're giving you an interpretation of yes it looks like there's a moderate risk of answer related to this growth that they looked at in the slide and then in Blood Bank yeah pathology is a nightmare to code that that's why I don't like pathology and I don't like bloodbank for the same reason cuz bloodbank then you're looking at okay what are the stereotypes and all the different relation all the stuff related to like okay you're going to this adds

(1:59:37) up to being you know oh this is two plus or three plus okay that means you're B positive and this is going to be compatible with somebody else right it's over my head so when I read this I go okay this person definitely knows about lab because even doctors don't understand this level of specificity when it comes to the labs the BSL area three includes a freezer room and cell culture lab so they're actually doing cell cultures so this is a microbiology lab they're talking about and potentially they might

(2:00:08) have a genomics lab as well and is only accessible through an anti-Chamber from the bsl2 section ebo carcasses are preserved in horizontal freezers at a temperature of minus 80 degrees Celsius nominal to maximize the preservation of these carcasses they are preserved in vacuum bags and the air in the room is controlled to minimize humidity this also makes sense so especially in microbiology they will have specific rooms where it's closed off and you have to get in the whole thing to go into it now it's not very common in hospitals to

(2:00:38) have that but if you were to go to a lab that's like bsl2 or BSL 3 100% you would have to get into the whole body thing most likely because you don't want your bacteria and your germs to uh interact with anything else out there or you don't want to get you know stuff on you as well but they're most likely concerned about the opposite um there are only four bodies

and none of them are complete so this is interesting information here because what they're saying is that these are probably from crash retrievals right

(2:01:07) they found parts of bodies they don't have a full body here they have parts of bodies I mean why do you think they got real deleted in real time this is probably real and they got deleted in real time because they were giving away super highly classified information yeah I'm going to probably close out in about 5 minutes uh Bernie so send people over to you Bernie if you're interested you could look into this I know you're more into Alchemy and stuff as well but man the ebo scientist thing is

(2:01:33) a this is a rabbit hole my man it's obvious that these creatures have died from result of major trauma so what this means here is they're saying this is a crash retrieval situation right major trauma would mean that these things crashed the bodies were ripped apart I've never witnessed a motorcycle accident fatality but it looks like similar to this so interesting we already deduced that this is going to be a crash based on the two sentences prior and then they say oh this would probably be similar to this this tells

(2:02:04) us that the person that wrote this is not a doctor themselves they're not a medical doctor a medical doctor would know what a motorcycle accident looks like this is somebody who's a PhD this is somebody that's working in like a lab that they're examining looking at bodies because they're doing cellular analysis they are uh doing a bacterial analysis cuz they would want to do bacterial analysis as well to see like what are the bacteria they inside this body because is it going to be the same as

(2:02:37) bacteria that we have on Earth and then they would also want to do um DNA samples and testing right they went on doing the genomics as well they'd be interested in that and and this whole thing we're not going to go into it all tonight but this is why when I read this I'm like holy crap I was like holy crap this is probably real I mean this is this is a bigger leak than anything David grush has ever said just to put that out there this is bigger than anything David grush has ever said he said that we have bodies well this is a

(2:03:08) complete physiology this whole thing if you guys read it it's like 30 pages long this is a complete physiology of an alien body so I don't know if aliens are real but if they are are then I would say with very high degree of certainty that this is legit the only reason why you would delete something like this is because it's real that's the only reason why you would delete something like this you would if this was a lar you would never delete it and we know it's not a lar this is the most elaborate LARP in

(2:03:35) the history of the world if so how do they have all this information about how labs are done and this is just one aspect guys this is just the aspect where I'm sitting here and like I've got 20 years of experience including like almost a decade of experience in lab right and I'm going wow this this is accurate this checks out like this checks out and then this is just one part they they go into stuff about the cellular makeup and what the cells are like in this um of the DNA it it's and they basically say that they have the

(2:04:05) same DNA as us except for that it doesn't have all the extra bits I mean it's very compelling they go into the full physiology they even say that they don't have like they don't excrete waste the same way we do and they can excrete waste through their skin it's weird Man Okay so let's just finish the rest of this sentence this paragraph it is acknowledged that there are more ebo carcasses at other locations the cell culture laboratory as its name suggests is where cell lines derived from ebos are grown and related

(2:04:39) activities are performed that's a microbiology lab I'll talk in more detail about these specific cell lines later on this is also probably a genomics lab so it's probably both a microbiology and genomics lab that they're talking about here the bsl2 part is mainly used for assays immunochemistry genetic engineering immunochemistry and storage okay so this is the part where I'm like 100% this person Works in a lab no doubt whatsoever there's no hoaxer that's making up this detail this is accurate

(2:05:10) when you're if you're a lab tech you talk about assays the reason why you talk about assays is because everything has a reagent so the machine you have the big machine right you put in the assays in there for the test that you want to be able to perform remember when we were talking about covid like 20 minutes ago the reason why you can't conduct a covid test in the hospital is because they don't have the assays for the machine to be able to run the test so that's why you send it off to the

(2:05:35) Reference Lab so the Reference Lab does all the stuff that you aren't prepared to do there locally what this means is they have a very specific lab set up there locally to run the exact types of tests that they want to be able to run they have some chemistry uh they have genetic engineering so they have a genomics lab and then they have immunochemistry uh so they're going to have their microbiology lab as well and then they have to have the storage as well so everywhere where you have microbiology you're also going to have

(2:06:05) storage freezers and refrigerators where you keep all the specimens and samples that you want to keep this is just like where I'm reading this I'm going okay this is legit there's also a cell culture lab there we go but this is mostly used for traditional cell lines so this is where they're actually talking about a microbiology lab here other than those labs there are amenities you could find in any office note that the internet access is limited to senior staff and above however there is an internet for bioinformatics needs

(2:06:39) wow just wow if you think someone's faking this my God man they they lit what did they do they went and worked in a lab for 10 years and there were and then that's this is just one of the requirements to be able to fake this and they know all about ufology and all about uh you know I mean it's just if you guys read the rest of it there's a lot of requirements to have this figured out I mean have jat jat GPT try to create this that's not how chat GPT Works guys we've been using grock every

(2:07:17) day so the reason why again the only people that can understand this stuff to be real is people that actually know the science behind it so if you're somebody like me and you know the

the lab behind it then you know that this what that this paragraph is legit nothing in this paragraph tells me that this is fake everything in this paragraph tells me that this is somebody that actually works in a lab and that's what you need to understand that this whole thing is real and now this is just from my perspective

(2:07:49) of course and again I'm even though I know this I'm still not 100% convinced that aliens are visiting us but I do believe David Grush so I do think that there are some there bodies of being that are um maybe they're our cousins I don't know I I'm not trying to convince anybody I'm just sharing this with you guys so you can check it out I think it's just interesting um but if you go to some of the other stuff you'll find out that there's most likely somebody just to know the stuff about the genetics here

(2:08:19) you probably have to have a PhD in uh either microbiology or some type of biology aspects um in there my guess is just reading this that there's probably four to five different phds required which is not going to be from one person it's going to be from a team of people you're going to have one person that's going to be the expert in microbiology you're going to have one person that's going to be the expert in genomics you're going to have another person that's going to be expert on General biology stuff like

(2:08:45) that this is way way too in-depth that's the that's the scary part for me when I was reading this I'm like whoa like this is a lot of expertise people are going oh one person made this up I'm going one person literally can't make this up who who's the person you think that has five phds that is working months ago this isn't even that long ago seems like all my comments are being deleted I will post an answer at the end of the message yeah and they go and they reply guys after they finish this whole thing

(2:09:21) and this is where look look who it is Punjabi Batman damn okay wow I'm taking you a lot more seriously I'm leaning on you being truthful out of curiosity I want to ask some more complex questions this is when I read this response by Punjabi bat this is before I ever was involved in Punjab Batman of course because this predates the investigation this is when I really realize that Punjabi Batman is somebody who uh he's probably pretty well educated probably pretty well educated to even be able to come up these

(2:09:59) questions pretty well educated this this post right here is actually why people tried to tie Punjabi Batman to Ebo scientist the reason why we know Punjabi Batman's not Ebo scientists is the same reason why it's not written by one person right it's not written by one person and lab techs also can't make this up lab techs are not phds lab techs are just you can be off the street and you can become a labtech that's the other problem with it that's why a lab tech didn't make this up either this is a group of people that

(2:10:38) create a comprehensive body of knowledge and if you're in the UFO community and you don't believe this is real then I question your authenticity this is probably the best evidence of uh aliens visiting us that exists online at all out of anything this is a better evidence than the alien dni video this is simply the best evidence out there if you believe that aliens are visiting

us then you should 100% believe in this and I think the reason why people don't believe it is the same reason why people don't believe the

(2:11:09) MH370 videos because people in general are completely ignorant to the science people in general just do not understand how science works because if you understand how science works then you understand that everything we see here is consistent with science now it's a very Advanced science but it's very consistent with science and then if you look at this as well you understand that everything in here if you read the replies to you'll find out that everything in this whole physiology of an alien being is

(2:11:39) consistent with science in every single aspect I mean nervous system muscle skeletal system this is a complete physiology of the whole body and cellular analysis and DNA analysis it's like whoa circulatory system respiratory system biological system so this is not just one PhD that did this one person it's multiple people folks it's multiple people I'm pretty sure they're not going to wheel out the physical bodies right if they deleted this person in real time I don't think that they're going to wheel out the

(2:12:19) bodies anytime soon folks so I think this is in my mind uh and also interesting it was consistent with what people reported from moment of contact by James Fox not a friend of the show not a friend of ours but from what those uh people said about the ammonia smell from the bodies or from the the beans that supposedly landed or whatever and I'll be honest I'm very skeptical of James Fox and anything he works on um he might be telling the **truth** I don't know I don't know what his motivations are uh but

(2:12:52) this is consistent with his interviews that he did with people in South America which is why I I have think there may be some credibility to what he did there um so yeah if you are interested in uh aliens and UFOs you definitely definitely definitely need to be familiar with this particular situation and this is why I think they tried to discredit this by tying ebo scientists to it or I mean tying um Punjabi Batman is that it's they were able to knock out two birds with one stone Punjabi Batman I think that they were trying to say

(2:13:28) that he's this person because that way they could discredit both Punjabi Batman and they could discredit ebo scientists Punjabi Batman has definitely been a thorn in the side of the intelligence communities perhaps even more than we have been they definitely wanted to make sure that Punjabi Batman is not somebody that people believe on the internet and that's why they banned him from **Reddit** right he he was digging a little bit too much into the videos and I have a feeling I just have a feeling that he's

(2:13:57) been getting some help from somebody it's just a little he he seems to know a little more than he should know in my opinion that's just my opinion could be wrong maybe he's just a rogue actor I don't know yeah so anyway you guys should read through the questions yeah James Fox is probably a good guy but I think he probably has the same thing same problem that everybody else does he doesn't understand how science works and when you don't understand how science works that ends makes you a

(2:14:29) little too skeptical right if you can't understand science you have no concept of science then you're never going to be able to understand the true implications of disclosure and that's why a big aspect of what we're doing here tonight is uh we dig into the science this is why we look at Lk99 because once again the science is Extreme ex important it's you cannot have one without the other you have to be able to understand the science you have to be able to understand how uh a craft could get here from the Andromeda

(2:14:58) galaxy how Buu how Buu can get here from the Andromeda galaxy and the answer is super conductivity super conductivity will lead to Magic it will allow us to achieve super luminal speeds it will potentially allow us to break down the fabric of SpaceTime as necessary yeah so anyway hope you guys enjoy that oh I've watched the fifth kind I've watched it compard I've watched it the movie The Fifth kind that was a scary movie man that movie freaked me out man I like I love those like uh uh corny cringey horror movies they're my

(2:15:41) favorite those are my favorite yeah science-based evidence is step one that's the reason why despite the fact that I believe the ebo scientist post is real I try not to jump too far down into that rabbit hole because I don't want to be making claims that we can't prove I'm just telling you guys my opinion is that um that my opinion is that that's true right that's my opinion summarize room temperature superc conductivity I think I summarized it earlier you uh memory hole if you want to watch the earlier part of the

(2:16:18) stream I'm going to probably close it down here but the idea is that it can allow us to uh create magnetic fields that are extremely powerful that can allow us to achieve things like we see in here high frequency gravitational waves can allow us to achieve high energy electromagnetic field generators which if you read the stuff in here is basically magic um it's what allows us to have an object where we can defy gravity it allows us to have a object that can be teleported we can have force fields um from a more practical standpoint we can

(2:16:53) have hover cars hoverboards we can have computers that are many many many times more powerful than what we have now because we can overclock them without them heating up we can have S database server Farms that don't require nearly as much cooling in order to keep uh keep running we can have transfer of power over long distances without degr a due to heat we talk about not having degradation due to heat because of superconductivity now my cell phone doesn't heat up anymore never just doesn't heat up if your cell phone

(2:17:28) doesn't heat up now you have perfect use of power right so that means the battery life is going to increase on your cell phone it also means that if we produce power somewhere else we can transfer it anywhere else in the world we want with no loss whatsoever just think about that that can mean green energy because that means we can just go and to the places that are windy and take all their wind farms and we can transfer that power anywhere we want and those are just some of the Practical applications and that's

(2:17:57) just me as a non-scientist coming up with a lot of that stuff off the top of my head and from stuff that I've read it's a lot super conductivity room temperature super conductivity will

absolutely change the entire world entire world will change basically everything that we do on a daily basis will change it's it's basically the framework for everything else energy efficiency that's a good way to put it Barry very good way to put it yeah something like 30% of electricity is lost in transmission just think about

(2:18:26) that 30% is loss in transmission and that depends on how far you're transferring it right the further you're trying to transfer the power the more that you're losing in heat if we have perfect conductivity super conductivity and we lose no power due to transmission hello this is where we begin to go from a type zero to potentially even be a type one civilization it it lays the framework for that where almost everything starts to become measured just in terms of power generation and how much power we

(2:18:58) can generate yeah exactly see what starduster just said welcome to kardashev level one and so when he's talking about cev he's talking about type one civilization where you stop measuring civilization you start measuring civilization in terms of how much energy you can produce and superc conductivity is the first requirement let's I'm going to take a quick look at that because I'm I'm curious uh I just want I don't remember what the scale is I want to make sure I'm speaking of it

(2:19:26) correctly because I may actually bring this up on Tim pool the kardashev scale a method of measuring a civilization's I hate going to Wikipedia but we're doing it uh so type one able to access all the energy that's available on the planet and use it for consumption right this is the the prerequisite to achieve this is super conductivity because then we don't have any degradation we can just pull all the energy that's coming onto the planet we can utilize it all harness everything type two this means now we can make like

(2:20:00) a Dyson Sphere around our star and then we can select we can absorb all the energy coming from the Star and then type three is one that's able to uh capture all the energy emitted by an entire galaxy this is where it gets pretty far into the Sci-Fi realm guys okay okay guys well I need to go to sleep this has been a very fun uh conversation a very fun stream tonight I think we had a lot of viewers on this one um I hope you guys got a lot Kathy D I appreciate you also I I appreciate that you're in it as well thank you

(2:20:31) everybody who is uh following along make sure you guys are spreading the word about lk99 and superc conductivity we cannot let it be suppressed again they will try to suppress it again we've seen how this works they the moment things get popular that's when the disinformation comes out that's when they try to tell everybody it's been **debunked** right the **debunkers** are going to come for lk99 I 100% guarantee it they do not want superc conductivity to come out the reason why they don't want superc conductivity to come out is right

(2:21:03) at the top of the list here lk99 emergenc room temp it's a requirement this is one of the requirements to understand the videos to be real so thank you guys very much have a great night and we will talk soon Tim pool podcast on Friday this is going to be the last stream um until Sunday guys last stream until Sunday so I will not be streaming for the next three nights um

I'll be hanging out with Dave Rossy I'm going to be learning from him he's going to teach me a lot I hope to be a lot smarter when I come back I will be

(2:21:33) posed on Twitter but not quite as much as before I'll probably be retweeting more stuff than I normally would so thanks everybody I appreciate

MH370x - Ripple Moon Believers 12/31/23 - YouTube

<https://www.youtube.com/watch?v=nSfMzjEicLE>

Transcript:

(01:05) one last stream here we go oh happy New Year's to everybody who is uh more East than I am and somehow is in uh New Year's but yes it's happening it's a ripple Moon stream folks Ripple Moon stream we're pivoting MH370 is boring it's old and busted we're switching over Ripple Moon get ready get excited folks Ripple Moon um who wants to see some Ripple moons hey everybody welcome welcome to the Ripple Moon stream whoa look at that Ripple Moon okay let's whoa wait can we see the Ripple Moon

(01:55) here unedited clip oh sound no no sound cut this out Okay who wants to see some Ripple moons hey everybody welcome welcome welcome welcome oh so um yeah how's everybody going how's everybody doing uh we're just going to keep it this is going to be a chill laidback stream uh we talk about whatever you guys want to talk about oh you're going to see Ripple Moon cadon what's up if you hang out and watch this you will see Ripple Moon I guarantee it I'm staring at it right now you guys can't see it because I don't have my

(02:40) screen share going right now but I'm staring at it trying clip it to like about there okay Ripple Moon Okay who wants to see some Ripple Moon folks who wants to see some Ripple Moon um let's see let's get into it Ripple across the moon put that there yeah it's G to be a chill stream we're not you I'll ask answer questions but we're not going to get too serious with it tonight it's New Year's I've been boozing pretty hard should we talk SM smack about Victor oh no seems a little p a seems a

(03:27) little p [Music] M so thirsty folks yes those are blue cheese olives yes it's going to be one of those nights there might be a little smack talk coming we'll see let's go wait pull up let's pull up Ripple Moon hello there oh hello there it's been a while huh it's been a while anyway today is Wednesday okay so for those who are uninitiated uh let me switch over over I was chatting with alien addict we were talking about some conspiracies we were talking some politics hey Bernie what's up

(04:10) everybody how's it going how's it going my feds who are out there watching on New

Year's Eve man imagine if you're a Fed watching on New Year's Eve right now yikes all my all my locked Martin Watchers hello okay what is the Ripple Moon I did not know Ripple moon was a thing I've learned about it tonight and I'm already obsessed with it we might just pivot over to Ripple Moon from now on guys MH370 is old and busted Ripple moon is new hotness but I'll be honest that's actually not new it's it's actually old

(04:43) so wait where does the Ripple Moon come into play okay oh here it comes okay guys are you ready are you ready Ripple moon is going to change everything it's coming in 20 seconds I think so we might have to wait here for a little bit but there's going to be some Ripple Moon action here guys we need to get the corridor crew on this we need to figure out how we can VFX this thing up who there it is there it is who a second one okay you guys just saw that right you just saw the Ripple Moon okay one more time one more time Ripple moon is

(05:22) apparently a thing there it is Ripple moon what the F wow wow well um huh fan from cheese you're going to get canceled for that sir you might get canceled for that although it's New Year's Eve we'll give you a pass what are we looking at here who wants to explain what the hell this is all I know is how did I miss this this came out like 2015 or something how did I miss the Ripple Moon craze someone showed me this video there's like multiple videos too there's not just one there's like

(06:05) multiple so let's look at one of the other ones I got three I got three videos I only spent like five minutes looking this stuff up and I found three videos what is this why why this look at this one what what what Ripple Moon no this is not pulsating this is just a straight up Ripple going across the planet going across the Moon is there another one going to happen here oh okay this is the zoomed in version oh okay so this one's just like multiple versions of it okay okay well that one's boring what

(06:52) about this one evidence the Moon is a lie evidence the Moon is a lie guys how did I get started on this investigation well I was on the alien addict podcast and then they showed me a video of Ripple Moon and then I decided you know what I'm going to change my whole life I'm going to base my whole personality around Ripple Moon thought f it you know does that answer your question uh M Walberg Ripple Moon Man Ripple Moon guys I think we should sell t-shirts we should should uh develop a whole TV series maybe we can get TJ

(07:32) Allard involved in this do you guys think that TJ Allard would be in interested in the Ripple Moon do do you think that this uh we can make it onto Skinwalker Ranch with this with ripple Moon do you think there's enough evidence for him oh there it is there it is here it comes here it comes 2012 happy New Year honestly guys I don't know if I'm going to make it to midnight I don't know I don't know TJ if you're out there guys we need to shoot up uh whatam I already forgot shoot up the Skinwalker Ranch uh light we need a we

(08:15) need help oh there it is Ripple Moon look at that why is it going all these different directions what the [REDACTED] what the Ripple moon is going on here folks what the Ripple moon is going on moon is a hologram poent apparently can we uh that's not going to work uh let's

delete all this I want to we need to get some zoom on this delete delete we we Ripple Moon that seems good delete all this let's get this one in here guys we're definitely Ripple mooning this thing up uh what was it five minutes in I no wait this is this the same one

(09:20) jesz delete Ripple Moon guys get ready for my Elite VFX skills look at how good I am do you think the corridor crew would hire me guys am I good enough can we can you see it where's the moon I don't see anything guys guys what was it VFX the whole time where'd it go like 10 people filmed Ripple Moon oh here it is here it is there it is I saw it I saw it Moon let's zoom in and watch it again let's watch it again oh there it

(10:24) is weird second Ripple Moon second Ripple moon is there a reason why there's two weird we're Ripple Moon Believers folks the moon might be a lie guys the moon might be a lie oh here it comes here comes where's the thing where it says coming in 20 seconds what the hell where is it there it is okay come on delet here it comes third Ripple Moon we got three videos of Ripple Moon wait for it wait for it

(11:32) oh there it is about right here oh wait let's see where it ends happy New Year GP appreciate all the time courage effort you put in this investigation if we get teleport Tech in the next few years go credit goes to you oh I don't know if what's going to happen that I thought you were talking about Ripple Moon okay well that's a little bit of a let down I mean I want to take credit for the Ripple Moon investigation but I can't you know I'm just a newbie on this Ripple Moon game okay's let's watch

(12:11) again there's one where's the second one second one wow okay and cut that there delete folks welcome to Ripple Moon welcome to Ripple Moon okay uh how did I get involved in the MH370 investigation um I don't know man I just decided one day I'm going to start doing this and I started writing about it on Twitter and things started picking up and after like a month month and a half people started asking me to come on a podcasts uh initially I was very naive and I thought oh well maybe like Joe **Rogan** will have me on because this is

(12:58) such a crazy thing and then um oh yeah we should play in slowmo good call uh thought maybe he'll have me on whatever and of course no that didn't happen um and then uh yeah so I just kind of kept going with it I mean that's pretty much it wait Did coter crew actually **debunk** this or is that a joke that would be so funny 2D displacement map three different videos with 2D displacement Maps I don't think so man I don't think so definitely got to get the the quor crew on this though huh is that what they do though is they

(13:46) just grift off uh random obscure stuff is that like the cter crew like whole thing it wouldn't surprise me actually I couldn't tell if that person's being serious or not would not surprised that seems to be their grift oh yeah actually you can see it better it's actually going all the way across does it really need to be slow down I feel like it doesn't need be slowed down I think this speed is fine let's get in super speed normal speed here wow yeah I don't think it needs to be slowed

(14:23) down wow Ripple Moon guys why does this exist why does this exist H guys this is upsetting my Normie brain is not able to comprehend the Ripple Moon capabilities here Normy brain is not able to comprehend this guys I wasn't ready for this level of conspiracy I don't know if the Moon's real anymore Ripple moon is uh shattered my perception of reality saving this exporting Ripple Moon file heat vortices on the moon that sounds like swamp gas explanation blame it on all the cameras it's got recorded like 10 different

(15:24) times are all the cameras malfunctioning at the same time H yeah I don't know I need someone to explain this to me I'm sure when I post this on Twitter tomorrow that there's going to be a lot of people **debunking** it I'm sure about that if one thing I've learned about the internet is that the quickest way to the right answer is to say the wrong thing so if I go out there and start promoting Ripple Moon I guarantee we're going to have a lot of people jumping on it guarantee we'll probably get that uh Scott Brando loser

(16:00) guy that bot or whatever I'm sure he'll be posting about it I'm sure he'll be like those CGI artists the fake or expert made this like some literally non-existent CGI artists did you guys see that today it's a heat from a jetliner it's heat from the jetliner guys that uh that UFO interest account today replied back and said that uh they were arguing with me about that that weird triple orb video or whatever that we posted that was supposed to be outside of Area 51 which honestly I just

(16:36) don't I don't even care if it's real or not but he's like oh the the faking expert the faking hoaxer made this and I go to the faking hoaxer YouTube channel and it they literally have nothing showing that any that they've done any work um and I find out that one that one of the UFO interest account uh videos is posted on this this uh YouTube account here I'll pull it up for you guys you get some context I think I saved it where where I put it under which these folders I save it in where did I save it where did I save

(17:14) it oh and he also said I confronted him about all these uh like bot posts and he's like no that was just a bunch of people copy and pasting my comment dude you're not you're not popular enough to have people copy and pasting your comments man uh that just doesn't even happen anyway like even I don't have people copy and paste my comments like that's not a thing that happens that's that's what a bot is it's like yes if somebody copy and paste your comments that's a bot that's what Bots

(17:46) do I'm GNA pull it up so you guys let's let's uh guys I've had a couple of drinks so we're gonna we're going to go ahead and crap on this UFO interest account I don't know if I'm going to be able to find it oh I'll be able to find it I'll be able to find it I know where it was I know where it was guys give me a second oh god dude I have so much stuff in this thing of like sketchy people and sketchy posts here it is okay get ready get ready get excited okay so this account run by

(18:14) what's his name Scott Scott Brando or something this does not happen naturally this does not happen naturally this is Bots this is Bots and just in case you were not 100% sure there's also people on **Reddit** bots on **Reddit** posting the same thing these people aren't copying

this guy's message that's not a thing that people do they don't copy people's messages they retweet people that's how Twitter works this is a literal bot this is a guy who's a scammer who is posting bot comments out there I want to State

(18:52) this for the record Scott Brando is a scammer and a fraud just 100% so I'm looking at you Scott you're a scammer and a fraud you're making up fake content and you're making up fake stuff about videos just like you did when you made the fake uh when you made the fake assertion here that reeside and Nan was the one that created this that's not something you could even know so that's how we know without any doubt that Scott Brando is a liar and a fraud okay so just because and that if that's not

(19:20) enough then let's take it to the next level he got upset because I called him out on his fraud that he's been doing related to this and I confronted him with those uh that evidence so we're gonna go ahead and we're gonna poop on the debunkers real quick happy New Year everybody we're pooping on the bunkers oh oh DM showed guys uh oh DM showed you're GNA see a lot of people saying Happy New Year it's all over okay so apparently he got upset about what video is it this one this is the one 100

(19:54) comments are we going to be able to find them 100 comments oh boy where is it there it is here you go so I said this was debunked by UFO interest yeah that's a bot account that pushes fake disinformation here it is posted it there he is absolutely false I already explained how some trolls copy and pasted my comments on their timeline uh Scott you're not popular enough Scott Brando you're not popular enough to have trolls copy and paste your comments that's not what happens it's not how that works anyway that's

(20:26) not what trolling even is that's what Bing is that's what spreading disinformation is and then I said you're directly connected to the fake CGI artist account this guy claims that someone named the faking hoaxter made this these videos well here you go folks UFO interest this is UFO interest video whose account is it being posted on the faking hoaxter this directly ties Scott Brando to this fake YouTube account there's no such person as the faking hoaxers this person doesn't exist there's no real person who's a CGI

(21:02) artist with two six 700 subscribers which let's go look at some of their content guys let's see what's my favorite one my favorite one's the gravity one where is it how do I how do I check out their videos I don't even know how YouTube Works folks also here's the one where they're factchecking uh the that video right this is the one where this is actually Scott Brando's video video for some reason it's being uploaded on this account right look at all this stuff where they're just falsely claiming they

(21:35) CGI this they CGI this in 2009 with a camcorder this like they're literally just taking real videos and pretending like they CGI them like this is just a straight up fake account like maybe some of this stuff is VFX but that is definitely not and then let's look at this one oh wait no like they this is a CGI show me your Source work buddy go ahead and show us how you made it in fact let's have the faking huser do a live stream let's have them do a live stream where they fake

some of the stuff for

(22:23) us like I'm pretty sure they're just pulling stuff and stealing it and posting their clips and how do they only like 4 300 views on their content where's my favorite one though here you have a space shuttle destroyed in outer SP oh this isn't even the right one this actually isn't the right one weirdly this isn't even the Right video where's the other one let me see if I can find it real quick there's one that's like better than the movie Gravity that this person's claiming that they faked I'm like okay

(23:08) go ahead and show me then because I don't believe you oh here it is so faking hoaxer claims they made this they made this with accurate gravitational movement in outer space are they better than the movie Gravity this looks like early 2000s to me looking at this video they think this is 2D this doesn't look two dimensional to me it's looks pretty 3D there's literal Parts bouncing off of stuff here this looks like an accurate representation of gravity to me here is this the is this the USS Colombia that

(23:49) blew up and outer space is this actually the Columbia this is pretty accurate man why do I get the feeling there's no such thing as the faking hoaxer why do I get the feeling there's no such thing as the faking hoaxer and that what they do is they just post videos on here maybe some real some fake like I think there's a part where like some parts bounce off the actual ship as well here I mean Dam damn dude if this is if this is uh fake man you need more than 700 subscribers dude you need more than 700 subscribers if this is fake my dude

(24:34) pretty sure you can get a job at any major Studio you want this is better than the movie Gravity that came out what year was the movie Gravity 2013 2013 this is better than that here's a part of a flying shuttle yeah not not very many people have seen this this looks like this is actually the Columbia destroyed in outer space in 2002 and then he just adds on created and directed by the faking hoaxer okay go ahead and show us your Source work man Photoshop they made this in After Effects in Photoshop uh okay 2009 how come I get a feeling that they

(25:34) stole this from real video let's let's do a quick search of USS Colombia oh wait or Columbia Space Shuttle Columbia disaster 2013 2003 Columbia disintegrated as it re-entered the at atmosphere supposedly see if there's any video does it look a lot like this space shuttle right here looks a lot like this space shuttle right there this is all we have that proves that it burnt up on re-entry it's a couple tiny pieces burning up while it's coming in that's not the whole shuttle that's just a piece or

(26:23) two do you want to know I looked into this a while back you you know what the explanation was for why this shuttle burnt up they argued that when it took off right here that a piece flew off and broke a hole in it but that somehow it didn't it didn't blow up while I was going into outer space it didn't blow up for over a week didn't blow up for over a week in outer space and then when it came back it burnt up that doesn't really make a lot of sense why wouldn't it if there if it had a hole in it while it's taking off

(26:59) wouldn't that cause it to explode wouldn't that cause it while in its in its in space to have issue it only somehow caused impact when it came back to Earth this is also not Challenger by the way this is Colombia there's two different disasters okay just to be to be clear this Challenger destroy blew up while it was taking off that was in 1986 but sparkling clear morning all the communications between of relief that the much delayed was finally get ready this is going to get dark get ready guys make sure your

(27:48) children aren't watching boom wow wow God I don't even remember I don't think I've ever seen this before that is holy crap well that's definitely real everybody's definitely dead on that plane on that shuttle wow that is horrific so that's the Challenger the Colombia is much sketchier the Colombia for some reason was damaged while taking off but didn't blow up just like I mean if this was damaged while it was taking off this should have blown up there's no way that if this shuttle damage it's going to make it to

(28:38) outer space in my opinion I don't know how it could stay in outer space for over a week as well and the only video we have is these random pieces coming back down to earth that's it that's not the whole ship that's not the whole shuttle there's no way that's just a piece H hypothetically what if this is real what if this is actually real video what if the the Columbia was destroyed in outer space and then these pieces just came down the sky just came down and burnt up what if what if this is the the

(29:12) pieces right here and then what if and I'm just hypothesizing right now what if somebody said crap we need to cover this up for whatever reason there's a video that **leaked** out there so what do they do they upload it to some fake account that said that claims they're a CGI artist that doesn't really exist isn't that a really good way to hide information that's what I would do then if anybody says oh look at this video of the Columbia destroyed in outer space you just go oh no the the faking hoaxer

(29:45) made that they uploaded on their YouTube channel they must have made it I mean this if this is VFX is pretty darn good guys it's pretty darn good this looks like accurate representation of gravity of like hundreds of pieces that are flowing around in different directions that right there is exactly what the Columbia looks like people checked this logo right here with the Nason it's accurate as well pretty weird huh pretty weird anyway that was a fun little Side Story I'm glad I finally found this this video I've been looking

(30:30) for this for a while so apparently the faking hoaxer so if you're the faking hoaxer out there why don't you go ahead and come out tell us who you really are there's no way somebody makes something like this and they don't take credit for it there's no way this looks like real debris in outer space in uh in orbit to me look at that look at this debris I mean whoa this looks clean for something that exploded looks pretty destroyed to me oh okay anyway that's so anyway that's some uh interesting stuff there for you guys I

(31:14) mean if that is if this is uh NASA footage then wow this somehow **leaked** maybe I don't know maybe the corridor crew made this maybe this is one of their first projects I'd definitely

like to see the source work for somebody who made this there's actually audio too wait where did the audio go could have sworn I had heard audio it looks like some people that are looking at the damage to assess the damage that's what this video looks like to me they looking at to see where the damage was right how it could have how

(31:57) this could have happened yeah there's this isn't fire though no this would have been a structural Integrity issue right this would have been structural Integrity plane would the shuttle would have ripped apart into pieces and this one's going a different direction I just noticed man look at this debris free floating outer space this is literally better than the movie Gravity interesting anyway okay so some people came late uh you know what I'm going to post a link for you guys of this I'm GNA post a link for

(32:44) this if you're a conspiracy theorist you need to take a look at that video you need to take a look at that video if you're a conspiracy theorist yeah there's no fires in space it's correct um the Columbia was in outer space it did go to outer space man I think you're getting confused there was two shuttles 1986 was the Challenger blew up 2003 was the Columbia Columbia disaster was upon re-entry supposedly that's what the narrative is yeah I mean I think we're looking at the anyway you guys can take a look you

(33:25) guys can judge for yourself I'm not passing assumptions we're just being weird right now uh no we didn't watch it blow up in Earth's atmosphere what you're watching there is you're watching it burn up you're watching pieces of it burn up in Earth's atmosphere it's pretty wild for 700 Subs huh who says he made any of those videos fun fact guys people generally don't do stuff for no recognition and no money it's a fun fact folks yeah usually people try to make money from it you know so I'm just messing

(34:15) around with you guys right now for um it's New Year's we're not we're not uh we're not taking anything too seriously tonight we're not we're not really doing investigation tonight we're just uh playing around having some good having some fun fun so don't take stuff too seriously tonight how's everybody's New Year's going um you guys want to see Ripple Moon where's Ripple Moon okay guys let's watch Ripple Moon I do think that might be real though I don't know I really don't

(34:55) know I love that that dichotomy of like the **debunker** people where it's like oh that's obviously fake okay well go make it then oh no I wouldn't it's too much work oh but somebody else did okay like you don't even have internal cons logical consistency it's always like oh that's so easy okay well go make it oh no it's too hard it would take too much effort okay well somebody else did for no recognition and no money yeah well people do stuff like that all the time okay go do it then

(35:24) especially these people that like obviously have no lives that obviously have no lives like what what else are you doing with your life you're like **[redacted]** posting on me on the internet pretty sure you got plenty of time on your hand okay Ripple Moon guys if you want to get **debunkers** get ready guys I'm giving up the MH370 investigation we're going all in on Ripple

Moon look at this we're going all in on Ripple Moon folks Corridor crew **Mick** West you're challenged what is this is this balloons guys let's let's put a post on

(36:10) here guys let's do a post let's do a start a poll what is Ripple Moon oh wait can I oh wa I can add more options good okay [Music] balloon uh Chinese lantern or um what's another one starlink okay guys what is the Ripple Moon videos guys I need it's a poll please vote this is a very serious poll guys this is very very scientific this is very scientific guys yeah people need to know about Ripple Moon um so well which one was it then is it a balloon is it uh Starling satellites or is it Chinese lanterns guys what are we

(37:10) looking at here what are we looking at here I mean to me it looks like Starling satellites but that's just me I I don't know oh boy it's pretty it's pretty close guys we need more votes guys we need your votes we need your votes what is this that we're looking at on three different videos oh Chinese lanterns oh boy oh it's close oh it's close folks is close oh it could be aliens and swamp gas too could be could be could be the Communists possibly the Communists maybe it's the Pyromania VFX is that a

(38:02) perfect match this might be a perfect match to the Pyromania oh I think I see the Pyromania VFX guys let's just Photoshop some clouds into here guys it's it's a 2d VFX from 2D picture from Japan in 2012 pretty sure this is just a 2d picture of Japan for some clouds in it how did we get them there who knows who knows okay it looks like and guys look at what it is oh wait how do I end the polls oh guys I don't know how the YouTubes work and polls Chinese lantern is the winner Chinese New Year Happy Chinese

(38:42) New Year everybody Happy Chinese New Year uh guys I think we're going to go ahead and someone actually thinks the corridor crew might have actually **debunked** this I can't wait to hear to see what uh Jordy lege thinks about this um Moon waves uh not seeing it folks I don't even want to give these people clicks is there a way we can look at this without giving them clicks these guys make way too much money off of YouTube that they don't deserve way too much money off of YouTube they don't deserve are these guys are these guys

(39:38) actually even VFX artists this is oh does he always wear these glasses holy crap does he always wear these glasses my God my God did they actually do VFX or do they just sit on a couch all the time yikes man this is cringe yikes yikes so basically they just sit on a couch huh four minutes in that's what this is called oh they they are going to do it well now I know it's real it's all there oh there it is there it is what yeah I see it but that's this is

(40:42) like watching Ghost Hunters guys like this is just like TV for idiots and I'll say that as somebody who's watched Ghost Hunters before there's nothing scientific about what's going on in this YouTube video it's not like all right assume everything's coming through the lens okay well what is this a wave orbiting a spherical object yeah it's a wave orbiting a spherical object I mean it's not orbiting it it's just literally going around it okay then why is the Distortion in 2D yeah why is the

(41:11) Distortion in 2D these guys are actually just idiots right what kind of explanation is that yeah instead of in 3D what what is he talking about what is he mean instead of 3D what is he actually talking about is this just like idiots just making up random words on a couch it doesn't even make sense like dude time why is it in uh 2D uh why is it in 2D uh it should should be in 3D what like are you what what are you talking about man are do you want a 3D video you know what I'm saying like why aren't do

(41:56) we know what you're saying no nobody understands what you're saying we seeing some sort of circular effect that shows like right now because we're looking at a camera that's staring at a a moon that's hundreds of thousand how far away is the Moon hundreds of thousands of miles I think it's about 100,000 miles right yeah 200,000 miles away man that's why it doesn't look 3D cuz you're looking at an object 238,000 M miles away seeing a 2d wipe but if it's way what does he expect it to look like

(42:34) going around a 3D object it's going to have to come to a point and are you saying that this telescope is perfectly lined so I'm saying that the Moon is 238,000 miles away and that's why it looks flat okay it's not rocket science does he know that the Moon is in um oh God I was just talking about I've had too much to drink now um what's the alignment uh God damn it what is it guys help me out folks help me out chat um fix position what is it what is it called what is it called oh titly locked he doesn't tially

(43:23) thank you Hermes you 5 Seconds too late I don't think realiz that the moon's tily locked to the Earth like do you does he realize that the Moon is tily locked to the Earth wave looks 2D what we're seeing here is two-dimensional Distortion yes twodimensional Distortion okay it's definitely not that whatever these guys say is definitely wrong I'm pretty sure these guys are just idiots who just make up random words on a couch I think that's and I'm actually highly questioned whether or

(43:56) not these guys have ever done VFX in their whole lives I actually question whether or not they've done VFX in their whole lives forget what the moon is all about forget who's on the moon you mean like right here where you can actually see like when it when it displaces here you can actually see it come around the edge of the the thing here watch it watch it guys frames per second they could be using a crappy digital camera that has an issue like you know they could using a crappy digital camera guys

(44:22) do you think they're using a crappy digital camera we have the full thing here let's take a look where is it here we go here's their camera does this look like a crappy digital camera look like a crappy digital camera doesn't look like crappy digital camera to me they literally show the setup right here just to make sure that you can't have idiots on a couch claim something wrong about it yikes folks I got have like screen tearing on your computer screen this is what I think somebody was claiming it

(45:00) was like screen tearing well we got three different videos of it dis map wave file going across it and the effect is using that to distort the wow well I I didn't think that I could have any

lower opinion of the corridor crew and yet it keeps getting worse the problem is they're just making other people Dumber right with their YouTube channel 1.

(45:28) 6 million people found this idiot stuff saw watch this they're just making Society Dumber that's the problem with them honestly wow someone tell them that the uh moon is tily locked in 238,000 miles away might might help them Jesus embarrassing that's what happens when you uh spend too much time on **Reddit** guys my God I can't wait for when I post this video and I have people linking to me the uh the corridor crew video in my replies guys it makes me wonder if we're ready for this kind of Technology man it makes me wonder I don't think we're ready for

(46:16) teleportation technology did I ever do a keg stand finally we're getting to the good questions uh can I say what fraternity I was in yeah I guess I can I was in sigchi folks sigchi is what that's what the uh sorority girls called us Sig maachi I'll let you figure out which one that one is uh did I ever do a keg stand I I'm sure I did one I used to drink like a lot I used to drink a lot at the Frat parties the cool thing about the Frat parties and I was not let's say the this like I was never really a frat guy so to

(46:59) speak I didn't even like I I wish I had gotten along better with all the people in my fraternity but it was really like I joined because there was one guy that I was like really good friends with and he wanted to join uh no it was Sigma Kai Sigma Kai sigchi get it Sigma Kai sigchi and uh I ended up living in the house for like I think a year one year but I was like better friends with a different group of people like weren't in the fraternity but the parties parties were awesome parties were awesome like we had

(47:34) a house that was on campus so we would have parties or whatever and it would just be it would be wild we actually got kicked off campus um because we had this party it was called World War III and everybody would wear camo and it was like the biggest party all year and it was so massive that like the whole house was like turned into like a haunted like a haunted house like everything was done up there would be so many people inside that like you could barely walk through it and you know everybody just got like

(48:07) blacked out drunk like all day not even like at the party at night but just all day just obliterated but that's when I learned that some people when they drink and you guys probably know this become completely different people for me I just get like a little too talkative probably some people like literally their whole personality changes like the ripples on the moon like Ripple moon but their whole personality changes it's like the moon's changing well when some people drink they just like they become like they go

(48:44) from like being passive people to being like angry and aggressive and like just weird so normally that's why I don't drink is that I don't want to become like that but but yeah here we are New Year's Eve cheers folks also if you're on the East Coast United States you got 18 minutes we got 18 minutes I'm hanging out with the DG tonight folks I wanted to hang out on Christmas with you all to be honest with you uh but I had a life I had stuff going on and then I was too I was too tired I was too tired after

(49:29) that but yeah no I my drinking days stopped after well not really actually took a few years after college we we still drink a lot after that hey Paul Batten bur let's see what else we got going on guys what other stories should we tell ber eye how many accounts do you have ber ey is that a different account ber ey the Science Guy add as moderator you know what I'm making Sandy a moderator too Sandy you're a moderator don't don't let the power go to your head Sandy don't let it go to your

(50:20) head I'm in the central United States we're on Central time we' revealed personal information Central Time 6:00 a.m. in the Netherlands happy New Year in the Netherlands folks happy New Year Happy New Year I don't know if I'm going to make it to midnight it's pretty unlikely folks it's pretty unlikely don't think we're going to make it been drinking for uh few hours now although that you know makes some of the drinks wear off should we get Lulu should we get Lulu oh new memes have dropped oh okay

(50:54) oh that's what we're doing that's what we're doing next should we [redacted] on Texas No Maybe uhoh meme Warfare oh we're gonna feature uh Dorian uh ceni I don't know how to say his name we have a meme Warfare Channel dorian's been uh lighting it up oh this is this just makes me sad this just makes me sad what were the Lex what were you doing with Elon what were they drinking here why is this cup so tiny are they eating Dipping Dots is this Dipping Dots why do I think they're eating

(51:40) Dipping Dots guys what are they eating here is this Dipping Dots Lex how dare you how dare you eat Dipping Dots with Elon Musk I'll be honest I'm jealous I'd like to eat Dipping Dots with Elon Musk that could be me rolling with Lex that could be me not anymore guys not ever since the cloud debunk Cloud debunk ruined our chances with Lex so sad so sad but for real is that Dipping Dots though I've never seen anything else that looks like that no that's not jello shots he's got straw or something coming

(52:26) out of it it's the Cup's not long enough though like is this VFX did the corridor crew debunk this yeah I mean you know I'm not homosexual but if if this is something that Lex needed if he needed this you know just saying just saying I don't know what they're what they're drinking there oh this is applicable applicable memes applicable memes folks wow this this might get canceled guys this meme might is cancelled guys this this meme might get is canceled guys I'm not sure this meme's going to

(53:23) get past the YouTube sensors this was a good one if you guys haven't seen this movie is I'm not going to say what's going on in this movie but yeah doesn't look good for this guy let's just say that this guy's this guy's story doesn't end well let's say that I'm not going to say anything about what I'm seeing here because I'm actually just afraid of getting YouTube canel we're going to close that one yeah that that's this is golf um he's practicing his golf swing here

(53:59) um that's a that's a golf club and he's teaching this guy how to play golf guys yeah this is the the bear that's what we're gonna say the bear the bear and this guy's learning how to play golf over here he's like hey show us how to do your your golf swing this is a very uh appropriate

appropriate uh meme there's nothing inappropriate about what's happening in this okay oh geez okay we're closing that one I don't know we're closing that one right away no we're definitely not showing

(54:39) this other one either we're definitely not showing this other one oh boy some oh okay here's a good one this one's this one's correct I yeah oh here we go POV your Ashton Awakening from a wed dream you receive a text that says you up come outside I love this this one yeah that was Eli Roth you're correct we're showcasing the memes right now Obama Whispers into my ear I did MH370 oh damn okay okay Mr Obama like damn Obama I I actually was a supporter of you but damn you did that [REDACTED] huh that that

(55:38) MH370 this is the eye of a man who would teleport an airplane right there that's the face of a man who teleport an airplane not think twice about it okay let's see what else we got NRL 39 this is a real patch real patch nothing is beyond our reach I thought this was fake I thought this patch was fake I honestly have no idea what's going on in the Ripple Moon thing I have no idea what's going on in this video you can see the line go all the way down here as well why does it go like multiple directions like this one's

(56:29) going like I mean left to right and it's a double Ripple again the other Ripple moon this is why I love Ripple Moon because I don't know what's going on here all I know is whatever the corridor crew says is almost certainly wrong this one's going up but all of them have the same camera issue they're all VFX artists there's like 10 of these videos out there all by different people it became like what a fad where they all just fake Ripple Moon videos I mean maybe all I know is it's weird as hell

(57:07) and I've never seen anything like it in my whole life it's really really weird it's the exact kind of weirdness that I like this is the kind of weirdness I like Ripple Moon folks we're Ripple Moon Believers we're Ripple Moon Believers folks okay belly flap explained if your cat is a healthy weight but has what looks like a saggy belly that's their ejacula of Transporter can I say that on a stream too late I suppose that's their ejacula of Transporter this protective layer comprised of a fat skin and fur

(57:50) protects your cat's lithium ion batteries helps them move faster and acts as orb storage okay guys I lied we are going to do a little bit of Investigation because I just remembered something extremely important um boat lithium fire five days this boat has been on fire for five days I wish we had video of this if we had video this boat I would be posting the heck out of it the camera refocusing I don't think so man I don't know man I'm sure there's going be a million explanations and they're not all

(58:36) correct but we'll see when I post that video we'll see this boat has been on fire from it's got thousands of pounds of lithium ion batteries in it and it's been on fire for five days we only need our uh I'm going to jeopardize my next \$50,000 payout guys I I hate to break the bad news to you guys but uh I'm not making anything close to \$50,000 not even one not even one tenth of that and that's before tax I mean if you just add up all the money I've made minus the money

I've

(59:12) spent minus the money I've been **scammed** on I'm I'm down money I'm down money it's not that important but I'm down money the good news is I have a real job that pays me very well that I like I like doing it uh your comments are showing up now Isaac they are showing up now maybe you're saying inappropriate stuff and YouTube was saying no sir maybe they're saying no yo I'll take a uh I'll take a job sitting on a couch just making up stupid things and fake words on on things for

(59:46) tons of money 7even minutes for New Year's Eve on the East Coast so this is weird though this thing's been on fire for 5 days but they can still they're just fine all we need is a plane to stay on fire for 1 hour this plane's been on fire for 5 days it's got how much lithium ion batteries in this thing guys you got to understand lithium ion batteries are scary man lithium ion batteries are scary how much none of these say how much lithium ion batteries are in there I thought it was like 10,000 tons it's a lot it's a

(1:00:22) lot of lithium ion batteries they sealed it they just sealed the the cargo bay and somehow it's not making the ship crash oh those orbs are dropping in Time Square should we watch the video the orbs dropping in Time Square yeah it says it's sealed so w you think the airplane uh thing would be sealed as well pretty interesting and that's a lot more batteries yeah YouTube does censor the hell out of people yeah I know I would have to if I'm going to sit on a couch and judge people I need Jord the forge glasses for

(1:01:08) sure for sure guys I don't know how to watch it live all right I think we found it oh we found it we found it it can YouTube tell if I'm watching some of my videos got copyright strided and I don't know how here's **Mick** West's uh sock for Christmas he got coal he got coal for Christmas we're going back to the memes uh **Mick** don't be mad at me these are just people in my Discord who are Ming on you that wasn't me I'm just showing them is this a meme is this one even a meme make a documentary revealing that

(1:02:08) oil and US military Technologies were killing off people that research Zero Point Energy told the companies he was making a documentary about anti-gravity tech companies killed him off by aggressive form of cancer and he died after three months wow is that even a meme or is that just like my future there's a sub**redd**it all about lithium ion batteries and people breaking them open why am I not surprised what the hell yeah they can't smell good can they even smell good I don't know not sure if I believe

(1:02:51) that that's less believable than Ripple Moon folks that's less believable than Ripple moon but we're going to look it up **Reddit** lithium batteries break open yeah I don't believe you I don't believe you sir oh CNN countdown is there a CNN one I don't think we can watch CNN on the internet like this though okay I'll check I'll check I'll check hold your horses they don't have it live damn it damn it ah you're right though watching the CNN one would be the best

(1:03:55) would be the best we've got we've got one ready to go here oh boy oh we got

pixelated I thought that was cuz I'm I showed it over there but no oh this one's ugly is there a better view oh this one's better this one's way better look at this one oh yeah Time Square guys everybody's going to be kissing except for us I'll blow you guys a kiss William Wallace no problem man no problem for the the uh for the follow yeah they're about to drop some orbs on it oh 2 minutes uhoh uhoh it

(1:04:53) crashed the government is stopping time oh wait it's back it's [Music] back I can't tell what's going on in this video oh there we go 1080p 1044 1080p oh someone wants a kiss I'll blow you guys a kiss I'm going finish my drink we got two minutes it's about to happen spicy pillow that's a weird subredd it d That's a risky subredd it click okay maybe one minute we're going to miss it I'm going to be on the spicy pillow subredd it it's my new favorite well this is

(1:06:00) weird uh oh where is it up 35 seconds it's about to go down it's about to go down guys countdown time get ready guys hold on move it away here it goes 10 9 8 7 6 five why are they off 2 1 [Music] wo happy New Year look at all these people their cell phones oh yes hold my cell phone up film The New [Music] Year film it nobody's

(1:07:06) [Music] kissing kisses for everybody it's 24 24 now folks if you're on the East Coast 2024 on the East Coast okay that's enough let's not get copy R tried well that was a delay yeah well anyway we made it we made it folks somehow we made it we made it 2014 feels feels good feels different you know feels very different now feels like we might get disclosure this year you know I mean there's no way but maybe maybe looking for truth I appreciate the kisses appreciate it let's go ahead and

(1:07:59) let's just look at our home profile let's look at let's see what people are posting oh look at Amanda everyone give Amanda a follow oh James Fox James Fox thinks the aliens are outside his window and uh some clip that we found um Can is there a way to refresh this oh there we go refresh it oh look for all my dear for all we take a cup of kindness yet [Music] for Heckle Fish happy New Year everybody yay Heckle fish thank thank you man I wish our New Year's was as cool as this one why is Heckle fish so damn cool guys

(1:09:03) I need a Heckle fish guys I'm going to go harass uh Lulu give me a second we're gonna get Lulu up here Lulu you want tros treos Lulu what's this come here what's this what's this let's see if she let's see if we can get her ohos you want treos okay okay I know I know you don't like being okay I heard you no yes I don't think we're going to be able to pick her up well yep we're gonna have to get a Dodge cam uh she's not uh she just doesn't like being picked up she's not a

(1:09:52) lap dog she's not a lap dog no she just lets me know she just lets me know oh give me one sec water know you don't want to pick up I tried to you guys chat I blame you chat I blame you chat it's because I brought her on stream the last time I think now she like just totally she knows what the deal is right no she just go flips out and just barks at me she'll never bite her daddy but you can tell if the feds come yeah she does not like being disturbed she just like it's just a matter that like some dogs do not want

(1:10:43) to be picked up you guys probably know that but quite a few dogs are not into it oh we should have damn you know we should have done a space where we could all talk oh this person's a troll they got blocked already imagine being blocked by me already yeah this is just like a bunch of people that I don't want anything to do with bunch of people I want nothing to do with the UFO Community needs a lot of help folks they need a lot of help oh yeah let's ask grock some questions good call good [Music] call if you don't have a dog or a cat

(1:11:22) you should travel cuz when you have a dog or a cat then you can't travel it's just too hard I mean you can but then you got to find somewhere to keep them or leave them with your parents yeah uh it's too late for a space for me I'm I don't know how much longer I have oh there we go that's nice o yeah this this makes it even less enti tying all my biggest haters in one in one uh space together it's a hard pass folks hard pass Heidi yes Heidi happy New Year let's post a happy New Year we're gonna ask Rock about uh

(1:12:16) Ripple Moon wait what's this thing on the bottom right I don't like that I don't like that maybe this will be the Year guys maybe this will be the year yeah cats you can leave home alone unless you have a diabetic cat I had a diabetic cat when I was growing up that was that was a lot a lot of effort Cat backpack yeah I don't cats some cats also hate being picked up you really have to get them in uh used to it otherwise you're going to get yourself scratched and bit is this a real picture this is creeping me out folks it's

(1:13:01) definitely not real because this stops right here but it's pretty creepy whoa okay well that might get me banned that might get me banned folks did that we might have to edit that out um huh I'm not sure if that was uh nudity that we just witnessed right there some of my followers are let's say um entrepreneurs they're entrepreneurs we have a very diverse following in this uh Community yeah I think that was just CGI guys don't worry about it that was CGI kids at home uh hopefully there's this

(1:13:48) this was not made for uh children yeah yeah that was that was getting the scrolling was getting very risky there I forgot that I have some followers that are into uh let's say uh expressing themselves in different ways that not everybody may agree with yeah I didn't realize that that would show up on uh my scroll bar yeah I have another follower as well I feel like I shouldn't dox her but she seemed pretty upfront about it uh I'm trying to think of a way to say it that's PG related let's say that

(1:14:37) she likes to show her cat off uh to foreign dignitaries and she's the the cat flasher the cat flasher uh she told me one day she was proud of what she did and you know apparently paid pretty well and she meets a lot of very interesting people I thought wow that's I'm happy for you I'm happy for you no I mean she's pretty open about it if you would follow her on Twitter it's not the person that we scrolled past it was a different person I had a conversation with her one night for about 20 or 30 minutes learned a lot

(1:15:18) it was pretty interesting so yeah I have multiple followers who are um into expressing themselves let's say that they probably have some you know other forms of income that they do

on the internet okay um tell me about Ripple Moon how much did 30 minutes cost no it wasn't like that that's not my uh that's not my thing I've been to uh I've been to Amsterdam and uh that's not what I partake in although I don't I don't judge anybody else I don't judge just not it's not for

(1:16:10) me okay wait what this is not the same Ripple Moon why are there Ripple waves on the moon I swear to God this thing says something about 2D Assets in the corridor crew I'm out grock don't let me down don't let me down well this doesn't explain anything I don't think grock understands what we're talking about guys should I make an only fans this is all that you get to see can you guys even see this oh you can't even see this this is how much skin I'm going to show there you guys go I wonder if this will get me censored

(1:17:04) by YouTube guys not going to show my nipples we're just just that much just that much guys it's it's as far as we go hold on wait God it's getting hot in here guys it's getting hot in here should I be a a streamer that like one of those streamers that just like doesn't wear a shirt ever they're like they're allergic to Cotton allergic to Cotton you've seen them you know what I'm talking about you know what I'm talking about I'm a tease you tease uh how come gr doesn't know about

(1:17:51) Ripple moons folks grock you're letting me down he's not seeing the videos of it okay this is not true though I guarantee that we're not seeing Ripple Moon cuz somebody planted a flag on the moon I guarantee that's not the cause of all the things it might be the cause I'm certain that this is not it oh we got a message guys should we dox somebody should we dox someone am I in Danny Jun Studio no AC true story there actually was not air

(1:18:56) conditioning true story true story the power went out halfway through that interview that was really weird yeah I'm just trying to just trying to seduce Lex trying to seduce Lex folks um how come grock isn't familiar with the I wish I could upload the videos for grock to see I know exactly why I want to show grock the videos how do I do that can I paste the videos in here can you like tell it to go watch the video hey let's let's just watch it for grock here hey grock here's the Ripple Moon video Ripple

(1:19:39) Moon you can see it actually goes all the way down the planet too it's not just up here damn that's weird damn that's weird why is there ripples going across the moon now wait a minute maybe this this up here you see how it's like a like this weird thing here maybe this is some kind of artifact from the camera oh boy all I know is tomorrow all yeah I to learn jiu jitsu and drinking small cups yeah pretty much guys I need more memes this one of my favorite but the problem I have with this one is in his picture he doesn't

(1:20:36) have the plane why there needs to be a a plane in this picture down here obviously fake guys because this is obviously VFX because otherwise there would be a plane down here in the picture obviously this is VFX obviously this plane is not real and this is obviously not Malaysian Airlines wow sad sad guys yeah it does seem like the moon must be VFX huh or [Applause] [Music] gfx okay let's see what else we got this is a good one government mil UFOs

are real MH370 footage catastrophic disclosure folks let's see what else we

(1:21:48) got see what else we got this is not meme Warfare what is this why are all these people posting comments are not me Warfare uh is this going to get me censored I'm pretty sure that this uh stream is uh screwed over uh definitely not going to be getting monetized so we've already had quite a few uh faux PA happen during this stream so that's fine it's fine I'm not going to make the \$10 off this stream or whatever I would have made feels bad feels bad does this feel like about every single day this feels like every single day

(1:22:37) huh feels about right roll the goaty I don't know what that means but it sounds completely inappropriate here's a corridor crew one got a lot of memes why are these guys have turbin on in the background not sure I like it though I like it stream has been compromised folks I don't know what this is uh uh I I like this I don't know what this is but I like this oh was that Punjabi Batman oh that was Punjabi Batman that's what this was Punjabi Batman H

(1:23:48) oh wait I thought I saw this earlier today oh yeah somebody else posted this this is messed up this is messed up but accurate yeah no I hey Andrew how's it going man how how how do people get these cool things you only have three subscribers but you you get the check mark I don't understand why why Andrew why this is a good meme this is a good meme guys this is a deep meme this is really how you piss off everybody with this meme a good meme just pisses off everyone right doesn't matter which side you're

(1:24:33) on here it's a good meme too I like the FED memes the FBI memes are some of my favorite ones this reminds me of [Reddit](#) it this this one reminds me of [Reddit](#) it this is me right now is this anyone else in the chat

(1:25:51) probably okay don't get that oh I do get it mh37 XP MH370 XP there it is that's a good one what are my pronouns uh I don't identify is uh your binary uh system of genders I don't I don't identify that way I go with uh Andrew Tate's uh what's his I wish my bio was as good as Andre Tate this is the only thing I'm jealous of Andre Tate about oh wait he changed it oh man oh man damn this is dark Andrew what the the F guys you've wasted 2023 your life

(1:26:58) hasn't changed you are still a slave what the heck Andrew brutal folks brutal it used to actually be funny now it's just dark I think it was Z Zim right Z Zim was that the pronounce he had he used to have the best bio that's why I was following him also because maybe he would talk to me maybe he would talk to me uh we're definitely not doing this though actually you know what let's click on it risky click risky click uh oh you have to sign up for something this is like only fans but for dudes if you're into only fans but you

(1:27:38) want to like you're like a dude who wants to like be into other like dudes who work out and stuff and this is what you do I have an inappropriate thought right now it's not what you guys think but but for some reason when I look at the production quality of this this is like Isis level production quality like this dude definitely knows how to like sell Market himself and like sell out to like like only fans guys guys that are like desperate they want to like change their lives

you don't need years to get rich

(1:28:21) all you need is my my seminar which will teach you how to be the man that you always meant to be guys I'm pretty sure we're never getting on enterate after tonight that's fine you know what we're going all in on this money making is a skill a hero's year is the most elite and comprehensive system to learn it I don't know what that means oh so you have to buy his his system bu the system we click on some videos and you'll get rich the world's most Advanced Financial education platform it's changed

(1:28:56) thousands of lives it's been upgraded to the final form like he even uses like meme terms final form closing forever you got to sign up now how much you guys think this costs how much you guys think this costs um the power of the real world learn vital life lessons guys uh how much you guys think this cost we're going to do a poll let's do a poll we're definitely never getting interviewed by Andrew Tate after this by the way um how much does what is it called Heroes year under \$100 or over \$100 actually we'll go we'll go over 100

(1:29:55) to 1,000 I'm going to add another one because I I might even be going a higher this over \$1,000 okay guys vote vote vote vote how much you guys think this costs under \$100 between \$100 and ,000 or \$1,000 if it's like a per month thing then we'll go based on whatever a year costs what do you guys think this is going to cost hopefully he tells us before we have to like sign up for something because I'm not signing up for whatever this is a hero's year how much you think a full year of whatever this is

(1:30:42) costs okay lot of people are thinking between 100 and ,000 probably good probably a good guess probably a good guess Ander Tate's probably not going to have us on I think that my arms aren't big enough to go on Ander Tate anyway wait somebody just purchased this oh boy okay let's let's close it out and find out I can't wait I can't wait how what do the polls say okay uh 60% of people say between \$100,000 25% say over \$1,000 and 15% say under a 100 \$50 a month \$500 a year folks okay if you are 60% of you wow

(1:31:32) \$500 a year wow this is more than cable television this is like the price of uh getting internet every month wow daily coin bonus exclusive features special emergency broadcasts guys should we sign up maximum daily coin bonus live calls in amas with experts 247 support and On Demand guidance What The Hell On Demand support yes um I'm not getting enough of my financial assistance can I talk to Andrew Tate no we have to get you in touch with his uh his assistant over 18 modern cre wealth creation methods is that is one of them going to

(1:32:26) be only fans seven distinct campuses I don't even know what that means thousand professionally made video lessons all for \$49.99 with no additional fees wow send me the discount link is there a discount link sign up there's nothing that's just it give us your personal information join with credit card join with crypto might change my life maybe you can teach me how to uh uh Griff people harder how do I Griff people correctly I'm obviously not doing a good enough job guys I'm not making enough money off of this I need to Griff

(1:33:08) people harder guys um \$50 a month and you can be signed up for MH 370x premium plus plus plus uh you'll get nude pictures every day get you nude picks every day uh let's see what else can we offer um not really sure not really sure professionally made videos very unprofessionally made videos live streams uh oh teach me Islam nice pretty sure I can learn Islam for free pretty sure I can learn for free wow interesting well we've definitely burned the Andrew tape bridge feels bad feels bad this was interesting this was uh I

(1:33:54) had to know I had to know at least courses oh these are just links to get to this thing man he should go back to his old profile it was funnier let's talk commission let's talk commission folks okay I think we've we've seen enough Andre Tate for one day um actually I'm probably going to log off I'm tired how long have we been on an hour and a half yeah that's probably good enough I don't think we're going to make it to uh central time uh New Year's but we had uh we had the Easter Coast

(1:34:28) New Year's we had East Coast New Year's I wish I could see other spaces here oh hello top Lobster this guy looks like 20 huh I wish I could find other spaces to join but it doesn't seem to work I don't know what's wrong with this platform someone needs to upgrade it I mean yeah you know I think a lot of people hate anderw Tate but the reality is he definitely makes a lot of money I mean if he's charging people \$50 a month that's a lot of money man that's like cable TV money no wonder he's a

(1:35:16) millionaire he's probably making bank he's got 9 million 8.5 million followers on Twitter I mean man it wouldn't surprise me if he makes like \$10 million a month wouldn't surprise me Michael have a good night have a good night for the record I'm not judging anybody I think that capitalism's great if you can Griff people and make a lot of money off it go nuts man hey UFO chick yeah nice talking to you nice talking to you oh yeah I God I haven't checked my email in like two days man send me an email uh

(1:35:51) Kathy d uh m370x apron. and I will send you a Discord invite tomorrow morning I need to get some sleep though I am tired I'm tired I got to get some sleep and I've had too many drinks tonight so I think we're going to call it here because grock doesn't seem to know what Ripple moon is it's offensive to me quite offensive I've asked it many times grock is just not figuring it out um there are waves that spread across cross the moon what are they please grock please grock there it is transient lunar

(1:36:40) phenomenon there are shortl s shortlived changes in the brightness or appearance of the lunar surface what one possibility is they're caused by the release of gas from deep down below the lunar surface another theory suggests that they might be the result of meteorological impacts or static electric charges hello guys we figured it out grock came through happy New Year grock they got the upgrades 2024 upgrades we will know what they are lunar waves what are the cause of lunar waves I'm I'm in suspense here

(1:37:34) folks don't say the same thing to me grock oh this one says meteoroid impacts grock is evolving folks oh no that one says meteor Rel impacts right there okay interesting guys lunar

waves are real lunar waves are real behave that UFO chick that UFO chick it was nice talking to you UFO chick oh yeah let's have grock make us a PO poem about MH370 and three orbs teleporting the plane let's make us a poem guys let's

(1:38:38) have a poem I want a poem Oh boys oh this is going to be good oh God Beneath The Starry Night a mystery was born a tale of flight and wonder of three orbs in a plane torn from the Skies of Malaysia a boing did depart MH370 a journey to Beijing a course that tore Hearts apart three orbs of light in the darkness they did dance a sight to see a Wonder a moment of happen stance around the plane they circled a dance of cosmic Grace a mystery of the heavens a story to retrace we're going to post this teleportation a theory some

(1:39:25) have told as the plane and orbs vanished a tale of the unknown a a flash of light a Moment of **Truth** a journey to another realm a leap through the cosmic proof through Cosmic proof the world watch in Wonder as the story did unfold a mystery of the Skies A Tale To Be retold MH370 a story of three orbs in a plane a tale of mystery and wonder a cosmic game of gain wow this is awesome we're posting this how do I not post this this is great do we post this I think we got to post this we're posting this oh Jesus why does it mess up the

(1:40:18) formatting nah I don't want it to be funny it's too dark Topic's too dark good grock good grock this is good um do we need to say AI or is that just self-explanatory do we need a picture

(1:41:31) I don't even need to put my name stealing content from AI That's what we've uh that's what it's come to folks that's what this investigation has come to how do I copy this there you go chat Ripple Moon 2024 guys we are uh rebranding into Ripple Moon Ash Ripple Moon uh Ripple Moon X or Ripple X Moon I'm just kidding of course we're not but it would be funny okay guys uh I'm going to call it after that go ahead and uh check out that cool um poem and you guys have a good evening uh

(1:42:27) Happy New Year to everybody else as well and we'll be back tomorrow probably so have a great night everybody thanks for hanging out with me on New Year's Eve and uh Happy New Year's to everybody

MH370x - Sentient Program 12/30/23 - YouTube

Transcript:

(00:53) hey what's up everybody oh I think it's no it wasn't too loud okay get started here in a minute get started here in a minute here we go let's break out theimer Malayan 37 12 breaking

news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] I remembered the line from the Hindu

(02:01) scripture the Bhagavad Gita [Music] Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of worlds okay folks what's up what's up how's it going how you guys doing tonight hey everybody hey okay let's uh let's say hi to people is Mary some random looking for **truth** Joe Anthony Paul Barry JP JP Mike PJ Mike wow got dyslexia going Tracy Anthony lamp what's

(03:08) up hey Jack trading damn that'd be crazy if Maas was still in jail dude had to ask for easy talking points online pretty much just say plane couldn't have crashed into the ocean you can say that we know there's satellites everywhere and then you can say uh that we know there's advanced technology been kept secret from us is it Martini time might be Martini time I should have made the martini ahead of time though you know what I think we will have Martini I think we will think we will guys yeah um the Roy de Herbert thing was pretty

(03:59) good today I liked it a lot um there's this space with uh Steven **Green Street** should we listen to this probably not um I was going to do some uh troll hunting I think somebody told me that I should die today that's wow that's an escalation where' that come from pretty scary so what I wanted to focus on tonight was a satellite I want to make one post tonight on satellite and then I'm probably going to go to sleep after that probably not going to stay up very long although I say that every time uh but yeah it's been a long

(05:01) Saturday already um I'm going to let this play for a second let's see if we can let's see what people say about uh Steven **Green Street** yeah sentient I want to okay hi guys I want to check out the sentient thing let's see what Stephen **Green Street** Sounds like I've never heard him before can you guys hear me I'm using tojin toin unmute yourself go ahead Hey Hey Stephen uh nice to meet you um so you talked about uh like some of the reasons why some of this is is um happening um Steve Greer fan which is

(05:39) great you know be a fan but um it was obviously influencing what he was seeing hey Cosmic Q toast hold on a sec I'm going to let this play for a second and while I grab my beverage making materials um in his in his in his day job so that's my Steve G story I I uh I don't I haven't invested any time in Steve Greer I have yet to feel Justified doing so I hope that answers your question Hey Ocean all right um let's move on to all right uh Chris I'm gonna bring in Chris average Chris go

(06:19) ahead go ahead Chris Hey Stephen uh so I got a couple questions but I just want to start off and say uh you know thank you for what you put out this year uh I came on to Twitter or X back in February and I just like you I actually came in a Believer been you knowy Jeremy was on years now and of course you know UFOs have always been on the so you know what I was pretty uh negatively strongly against Steven **Green Street** before all this stuff began and then I kind of uh had my own Epiphany about most of these UFO people are kind of frauds um you

(06:59) know as was part of the inv investigation here in terms of how like nobody's reached out to us about this even though we've got like the best videos ever in ufology that we're staring at and uh so now you know what we're going to give step **Green Street** a chance we going give him a chance maybe we misjudged him too you know maybe we've misjudged a lot of people guys so uh yeah I'm kind of curious I actually wanted to join this space earlier I just I uh went over had dinner at my parents place so

(07:32) didn't get around to it missed it by a little bit but let's let's see this was uh a couple hours ago so just missed and all that um so the fact that I came in and I I started reading some of your stuff along with Greenwald and other people have put out you know just just quality information that kind of makes you sit back and think D qu information further um so I wanted to thank you for that uh um but I do have three questions here and uh so one one we'll just go with the most recent so what do you

(08:04) think about Jay stratton's recent activity on X uh in his indication of anything in your opinion know to you know the kmf comment and you know then then Jay Straton goes and talking about king milk fart how does king milk fart get talked about think that's indication of anything just like a f tier troll Jesus it's like um sad another quick does my stream like quality look a lot better for some reason in the last couple days feels like it looks just better just looks like more high quality anyway oh yeah feel free to like man we

(08:43) get a lot of people to just jump on hey everybody uh thank you for all being here appreciate it uh appreciate you guys you should definitely check out royy Herbert space I'll do a quick recap for everybody um while I'm stuffing olives here um there's some pretty big epiphanies today with Roy Herbert I actually understood Dynamic behaviorism unironically so Dynamic behaviorism as royy Herbert would explain it is the fundamental rule of uh of let's say the Matrix I'm going to call it the Matrix I I like the idea of

(09:15) the Matrix the only thing the only reason why I have against it is that Andrew Tate refers to the stuff as the Matrix and I don't really want to get tied up with all that although I would definitely talk to him I'll be curious what his thoughts would be but um the reason why I called The Matrix is cuz it's is really the best explanation for what the underlying fabric of reality is right it's a matrix oh that's is that why because it's 1080 yeah maybe that's why has that been why I've been filming lower quality

(09:44) yikes okay um that is why it looks better uh so Dynamic behaviorism has to do with how the univers is reacting to itself it really has to do with the explanation of the double slit experiment okay and the double slit experiment once again is that when we shoot photons through two slits that the photons will act differently depending on if we observe them or not by observing them I mean we actually look and try to figure out which slit the photons go through if we don't look creates a wave pattern if we do look then the wave

(10:19) pattern breaks down and the only way that this can happen is if what we're seeing is uh the Matrix itself the underlined Matrix is reacting some somehow and not just reacting but

reacting faster than the speed of light and the reason why this is important is that we've been able to uh they've been able to take light from stars that are billions of light years away meaning that light is billions of years old shoot it through the slits and the wave function still breaks down which means that time isn't really a

(10:51) factor at all means that it's either going back in time or something more complex is happening there which is you know like a cheat code in a video game that's why that part of the conversation with Roy de Herbert was mindblowing CU you know somebody who works with databases I can fully grasp and get my mind around that right um I wonder if I can have a example of double slit experiment I wonder if we can just do like images yeah there's really not any good ones huh can't there be one image that has

(11:39) both uh examples on it what is this there's not there's not a single situation we have one image with both examples huh okay well here's the wave function so you see the wave function right so this a probabilistic nature we don't know which one it's going through doesn't make any sense and then then it switches to just two bars when we look at it here you go like this one right this is what you would expect for some reason it's a wave function so that was the first thing that we learned Dynamic

(12:12) behaviorism essentially has to do with the idea that it's the underlying laws of the universe that the universe itself is reacting to what's happening now this alone as Roy D Herbert and I talked about in my mind and in many people's minds proves holographic principle that what we are living in is a simulation of some sort yeah time is simply misunderstood for sure do I think it's related to CERN yeah I think cern's got some stuff going on for sure I don't really know exactly what I'd like to dig into it a little

(12:46) bit more but anybody who's shooting particle accelerators definitely want to know what they're up to um now what were the other the other big revelations in my mind was dark matter and dark energy you guys probably saw the light bulbs going off in my mind when I was watching yeah feel free to go ahead and like the stream I don't know what it does but it probably does something cool guys maybe uh **Mick** West will jump out from behind the wall if uh we get enough likes I don't know I don't know what is he saying fact if the

(13:27) military drone was not watching mh37 it would have been fine it triggered the Double SL dude so BBC verify I was actually thinking about that when I was watching you when we watch suskind and uh Malina when they explain how wormholes work the weird part is that they argue and I think I mentioned this with Ry Herbert that you need like a trigger event you need to take a measurement and when you take a measurements on your side then the Wormhole closes it I was actually wondering if maybe the Drone is somehow actually involved in the

(14:00) teleportation by the act of observing it I don't think it doesn't really make like a lot of sense but I I was wondering what if the what if the Drone is necessary what if the Drone is like required in some weird Quantum way in order to like show that it's looking because of exactly what you just said BBC verified not even a joke like what if because it was looking that allowed

the object to teleport and if the object if it wasn't looking maybe it doesn't like that would be bizarre right right I don't think that's the

(14:30) case but it is kind of a weird thought experiment because in Susan and Malina they argue well okay then you're going to pass the information over somewhere else so you're passing it let's say over to the Maldives where the plane's going to teleport to and once you pass the information over there now poof that's when it appears um the universe is living through the same thing that we're living uh yeah I'd say the my interpretation Double SL experiments the universe is aware of itself that's my interpretation

(15:03) it's not really a scientific one but it's just my interpretation cuz that's what happens right it's like someone's watching they're like oh quick we got to change the programming someone's looking they're trying to figure it out right um but that's what Roy Herbert calls Dynamic behaviorism hey Randolph thanks a lot man take it easy appreciate it I did listen to [Green Street](#) and posted a question of if he will start his own investigation m370 that's funny man did you already hear you got brought

(15:45) up on train W's podcast train wre TV the guy on Kick no uh Robert I did not hear that if you can uh send me where I can find that we we'll go take a list I think it's funny that I'm becoming like a pseudo internet celebrity I guess you could say not real life one people in the real world don't have any idea who I am but on the internet at least in the UFO Twitter sphere people definitely know who I am I almost prefer it that way that's really interesting oh really that's that wow no I got to check that out back when I used

(16:27) to watch Twitch I I would uh notice train wreck I had no idea who he was or why he was popular or whatever but I always felt like my personality was a little bit similar to his and in in that I'm a little bit abrasive and I don't really take a bunch of [\[redacted\]](#) from people and seemed like he was a similar um real quick before we get to that we we'll take a look at that yeah quasi celebrity is probably the way to call it I definitely don't consider myself famous nor do I want to be um there's also some disinformation out

(16:58) there there that I want to address real quick uh somebody thinks like I don't know I see stupid comments on [Reddit](#) I know I shouldn't address them but I do want to address some of the disinformation I know the [redditors](#) are watching anyway um there's some people on [Reddit](#) that think I made \$50,000 from this guys first of all I'm going to be 100% clear given the nature of being [scammed](#) for over three thousand or for \$3,000 I have made zero dollars from this okay zero after taxes I've made nothing um in

(17:30) addition to that I've given away over \$500 in uh mostly I give people gift cards to investigators I don't really announce it anymore just because I don't want people to get jealous for people who got money people didn't get money or whatever but I give money away uh that I make to investigators it's not necessarily a certain percentage or anything like that just you know if I get a good income or whatever from either Twitter or from YouTube I like to give it back so especially over Christmas I gave

(18:03) out I don't know \$400 \$500 to people that were some some people were my admins some people were just people who in who've given a lot people I wanted to give back to if I had made \$50,000 from this um I probably would have quit my job I probably would have quit my job also YouTube doesn't pay that much guys I don't have enough views for that somebody else also falsely claimed that I said that I was trying to get \$20,000 from getting a million views no I didn't say that either all I did was say that I I think I mean I don't

(18:38) know exactly how much what the rate is exactly but I think I was estimating I was talking about how other streamers who had gotten like a million views how much money they would have gotten now that being said I don't know where this idea comes from that you can't make money off of doing work the amount of work that I've put into this and given the payout I've gotten is like less than sweat shop level okay like nothing basically not equivalent so anyone that thinks I'm doing this for the money or whatever is extremely

(19:13) misguided so now that we've address that let's get back to the good stuff um so the science with Roy D Herbert the other thing was dark energy and dark matter honestly I feel like I have a really good understanding of dark energy and dark matter I really really like his concept of dark matter matter so Roy de Herbert considers Dark Matter to be uh yeah and the only one who's winning in this is YouTube for sure um complexity complexity is the reason for dark matter and what that means is that as things get more complex as there is a

(19:51) gas of let's say a Galaxy or a solar system as that matter gets more complex that's what allows for the additional dark energy that we notice yeah it's a lot of work guys what I've been doing is a lot of work just a heads up um but you know that's not what I'm doing it of course I'm just doing it because I just doing it because I care want to help people um and and the reality is what motivates me is a science more than anything you guys can probably tell based on the people I talk to but I love

(20:25) the science man I love it I'm obsessed with the science now what I want is to get the answers for the families I probably wouldn't even be digging into the science this much if it weren't for the fact that we're trying to get answers for the families of MH370 cuz I think there's a good reason why this stuff's classified we talked about it today right hey Steve hey Pamela hey Justin hey Sandy um we talked about today with royy Herbert I mean this stuff can lead to Doomsday weapons right like even Roy Herbert like every

(20:53) single person who's in the know about the science realizes the implications they realize the true implications which is doomsday weapons folks that's the true implications here okay so you know we cannot ignore that that is a huge huge situation yeah yeah some podcasters believe in some really esoteric stuff and it's pretty weird that they would then come after me I don't know so dark energy or dark matter can be explained by complexity now this is important because we didn't we can't see dark matter we

(21:31) can't see dark matter we don't know what it is so we need an explanation that is something that we can't see this is why complexity makes more sense right and if you especially

if you're somebody who's a prominent uh if you're a believer in string theory and that's why I asked him about String Theory because if you were to think of quantum information as a string this string is going to get longer and longer think of like a blockchain you know if you're a crypto person the

(21:59) blockchain just gets longer and longer and longer right that's how all information works right just gets more and more and more complex so if you think about information getting more complex as a string the string is going to get longer and longer now what if at some point the string gets long enough where it starts to generate its own gravity right I like that idea it's an elegant uh solution to the problem in my mind so to me that's the most logical explanation for Dark Matter today period that's the most logical

(22:30) explanation so the reason why we can't see it reason why we can't detect dark matter is because it's not uh something a physical concept it's a matter of complexity of the same amount of mass and what I used to think before this was that it was somehow tied to magnetism which maybe it is the stickiness I mean that we have um and just in case people don't know what dark matter is when we look at galaxies we expect them to be spinning around their black hole and we expect the ones that are close by to be

(23:04) spinning much faster than the ones that are further out we expect this ones further out to be going very slowly but it turns out that's not the case turns out the ones that are further out are actually going pretty fast so this is only possible if there's more matter more gravity than what we see and so this is where we think that okay this must be due to complexity now um and then let's I'm going to play this it looks like there's an ad that's about to run I'm going to make my Martini real

(23:34) quick I'm going to play some Steven **Green Street** here and then I'll explain dark energy as well and then we're GNA get into the we'll get into the satellite stuff here for today the main event to your question but it going back time it was like another thing that with elando that really disappointed me was you know at first when elando went public he had this very stately manner about him he see you know he came out in CNN with the suit he was very well spoken he was very articulate um he had this Statesman I'm

(24:06) talking 2018 2019 he had this Statesman Heir about him and uh I was impressed by that I was impressed by his kind of forthright seemed like forthrightness to the point um but then you know because I spent so much time on this you start to learn about these quote uh burner accounts or sh what are they called burner accounts or whatever they're called stock puppet yeah stock puet that's the word I'm looking for sock puppet accounts and then you start you realize some of these sock puppet accounts are L Alando and he's acting

(24:44) like this like teenager and he's like uh this this Statesman this Pentagon Statesman is like rubbing shoulders with like the the the weirdest people on Twitter and and from sock puppet accounts like launching these like immature attacks and AD hominum attacks and you're like oh oh okay so this is who this person is you know and then he later admitted on I believe UCR that

he ran sock puppet accounts he was directly asked about it and and then when you start looking at it differently and in my recent interactions over the last

(25:26) year or two I'm like oh wow okay so he was going on CNN and putting on a show you know and okay so now I'm at your question with Jay Stratton Jay was someone I was obsessed with couple years ago because no one knew who the heck this guy was this is before he came out uh to uh with the George neap interview um we knew his name and we knew some of his positions but we never heard from him you know and I was who is this guy like look at his resume resume is incredible like what kind of stories will this guy tell and

(26:03) then he comes out right and you're like oh oh okay he's on Skinwalker Ranch show oh he's talking cringe Walker Ranch folks oh he's talking about where oh right and it's just like it you get disappointed because you were hoping for something new and it's more of the same and so with the recent whatever you're talking about with the likes he's liking kid he has been on Twitter since 2009 he he liked five only five tweets over those many years two of those tweets were attacking me one of those tweets was

(26:40) from a king milk fart so on the surface you've got this like civilian equivalent of a fourstar Admiral with this like amazing resume access to like some of the most sensitive things in US military and he's like liking immature High schooles tweets from a king milk fart it's just the the contrast there is just so bizarre and like disappointing to me um but I guess like once you get to know this group it's it's kind of the same behavior um over and over again and so anyway so there there we go that's a

(27:24) long answer to your okay well that's enough of him okay um so let me see Chang has big shoot is that my freezer Chang is bit shoot as recent as nine months ago huh yeah I kind want to get in touch with Chang reality is I don't think Chang knows about the teleportation but I'm not 100% sure based on that post that we made earlier what else I mean there's no way that just remote control and airplane is going to cause global implications like he mentions yeah that to me screams he's talking about

(28:03) teleportation time stamp oh thank you yeah it's cool to see the reach of the work let's let's check it out folks from one day ago wow top left corner standing at a whopping 6 foot three wow 10 minutes of introductions many games and one of asmin gold bunch of people I don't recognize oh xqc huh W he gets a lot of people on this was probably a huge huge only 57,000 views I would expected more excuse is getting married H yeah I don't know guys I'm trying not to care about any of that stuff uh blah blah

(29:04) blah 253 wow this podcast actually talked about us with all these people on what operation blue balls guys this is going to be spicy one with the the one with the f8 pilots the F18 pilots who said that what like together in a bunch of f8 Pilots said they saw the Tic Tacs to go up and down that that was [REDACTED] crazy n that's garbage it's also bro bro that's all like debunked [REDACTED] literally the whole thing was dog [REDACTED] okay so we're definitely never talking to xqc we can just rule him out right

(29:39) now he thinks the Tic Tac stuff was debunked so we got a mcwest follower here folks uh note to self Maybe video game streamers are not the best source of information on UFO videos also cheers cheers to everybody out there uh Happy pre- New Year I probably will do a New Year's stream tomorrow folks I probably will do a New Year's stream to be honest with you um yeah just cuz just hang out with people who aren't doing anything else I've never really cared too much about New Year's at least for the last like 10

(30:14) years uh getting too old getting too old to care about it guys it's just another year that's gone by had to walk up hill both ways in the snow in my day I got to keep it a bucket what do you think oh that's Summit right there I didn't recognize that guy I recognize nobody else tfue I think I've heard of it is look into it just look into it I don't remember the exact thing but I remember watching like a whole debunk [ ] about like man this is this is really I'm losing my faith already guys I'm losing

(30:44) faith already here so xqc remembers watching a debunk video so he's sure that the Tic Tacs weren't real even though we've got Commander fraver who's a uh decorated military veteran who spoke in front of Congress under penalty of perjury like what they were seeing or whatever I will yeah I'm interested no you should you should because a lot makes sense the plane disappearing there he is he says it's been really popular lately on Twitter I don't know the Malay yeah Airline disappear and

(31:14) there's this dude that committed his life to like finding out what happened and then he started getting trolled by people that would send him like secret files that were just [ ] just to keep the troll going so we don't know if anything's real or not anymore cu this guy believes literally anything that's sent to him what about the Earth you guys think the Earth is flat around I love how everybody tries to connected to Flat Earth stuff guys like I'm pretty sure nobody I'm pretty sure

(31:40) the combined IQ of every single person in the Stream right now is like uh room temperature room temperature except for maybe this mo guy Jesus Christ is that how down bad we are no that's different that's different level it could be flat though maybe it's curved you're into that aren't you T like like a state part like listen to me I I have a like I have a friend that like I know really well and he's like convinced his flat and like I can't why is everybody that friend here right

(32:12) now I'm pretty sure none of these people have any idea how science works at all I can I can see why though guys like I I think we vastly overestimated the general intelligence of the public which is sad because I had so little faith right so little faith like maybe the UFO Community is the best the public has to offer I hope that's not the case but maybe it is man it's not you he believes it though people believe you don't believe that though what's his friend look like he looks kind of like you but

(32:45) like more fit yo yo CGS Mo you know optic don't make it take off the shirt right now there's a lot under here that you don't know we already saw that though train re should have

me on this one of these the world is round though right then we'll uh I'm a GL unfortunately H me too glow ridiculous to think it but then again there's probably I don't know there's so many things that I think is ridiculous that is probably not that ridiculous anyway so who knows more people think the moonlanding

(33:20) stake right okay well that was interesting interesting to see we got a little bit of a shout out there they didn't say my name though still interesting yeah yes sir um yeah I think the reality is that this science is just too Cutting Edge too Cutting Edge man really is so let's talk about Dark Energy now so we watched some dumb dumb you dumb streamers and now let's talk about Dark Energy okay yeah maybe keemstar can actually link it up I Love keemstar Actually by the way just if keemstar is watching I

(33:54) love you boo I'm not quite as much as I love Lex Freedman but getting close getting getting pretty close I just think that uh I just love people that just like just speak their mind you know just unfiltered right I had a friend like that in high school who were getting a lot of fights with people because he just didn't give a crap about what people thought right I don't know something I've always just respected about that whether not the right or wrong um but yeah so dark energy is is the what is dark energy dark energy is our

(34:29) explanation for why the universe expanded faster than the speed of light right so this is a this is dark energy we think the universe is made up of I don't know 70% dark energy or something like that expanding faster than speed of light but how can this be if the speed of light is the speed limit how can something expand faster than the speed of light this has always bugged me always bugged me well we have the answer now right we're staring at it in a video the reason why I love these videos is it's like the cheat sheet from the

(35:01) teacher they gave us the cheat sheet they said here's what's possible go figure out how it works right yeah I feel like I know keemstar from like 20 years ago by the way uh I mean not personally but that's just how I I mean I'm an old school social media guy old school so it's like we have this cheat sheet saying here's how it works go figure it out well there goes the plane faster than the speed of light oh I see why I see why uh Ken thinks that we're looking at the shadow here he thinks this is the Shadow or

(35:40) something it's really just the line from the the orb um so we're seeing something move faster than the speed of light right you can't see dark matter you can't see Dark Energy the reason we can't see them is cu they're not an actual thing that we can see that's the simplest answer right so dark matter is simply complexity increasing more complexity equals more mass equals more gravitation gravitational force um and then the other one is dark energy dark energy is space moving faster than the speed of light well how

(36:15) is it going to be doing that the answer is that if you were to strip away let's take this box of jelly beans okay and yes there's only yellow and orange ones left disgusting not going to eat them no I'm not going to eat them so you got this box of jelly beans here right and this represents our universe okay and it's expanding okay so all this area out here is the Matrix that

has no Universe in it there's no stuff in it the stuff in here has mass has these jelly beans in it right so in here

(36:46) you're never going to be able to exceed the speed of light because you've got this Mass that's preventing it from happening cuz the more mass the slower your time goes the less Mass the faster your time goes according to Roy Herbert according to dilation Theory and time dilation now out here though there's no mass at all so out here things can expand faster than the speed of light what that allows for is this Mass to expand outward into the open area into the rest of the Matrix so to speak faster than the speed of light this can

(37:13) explain Dark Energy in my mind big Epiphany for me at least guys big Epiphany so I I'm a fan of dilation Theory that's why you see it in my profile here now I don't think it explains everything I think that the engineers have a better fundamental understanding of what it takes to for lack of a better term engineer this to create it to uh turn these effects and Concepts into actually something that we can manipulate and this is what I told uh Roy D Herbert today too is that you have the physics and then you have the

(37:48) engineering and the physics is seeking to understand how everything works from what we can visually see the engineering part saying okay now that we understand how it works how can we manipulate it how can we control it you know and the way we control it may not necessarily be the same as the way we understand it we might be able to find ways to get around it to create the same types of effects but in different ways so yeah okay so that was uh definitely recommend talking or watching the roy Herbert uh stream I'll probably

(38:30) re-upload all the hard TRS podcasts and edit them as well later this week I've just been lazy let's be honest I've just been lazy where are my questions that I posted I just want to see if there's anything else there I'll pull them over here you guys can read them there's nothing secret oh the other one that was really interesting guys was how the aluer drive works so in theory the way it works is it can track space in front of it and expand space behind it my guess is this is not how it ends up working in practice but

(39:07) the concept is very interesting so if you want to increase your speed you contract the space in front of you you know so you make it so that like space closes down let me find a piece of paper do I not have any pieces of paper uh hm I have a bag folks we have a bag with a cookie in it this will represent our piece of paper oh damn it I'm going to eat that cookie okay so here's our spaceship right here's our space we're on our space here right if we want the alabar drive to work we're not going to move the object we're going

(39:51) to move the space so the alabar drive is moving the space in front of the object in order to get it to go here right as opposed to moving the space along the object what if you do the opposite what if you expand the space in front of you and contract the space behind you now you go from this to this would you move backwards or you just slow down I think the answer is you might actually slow down into super position now there's a video I want to find because I thought it was fake and maybe it is still fake but now it's weird now it's

(40:33) creeping me out plain Frozen in space in the air Sky now here's a video that would be hard for anybody to figure out what was going on oh it's actually flying due to the optical illusion but this is this is the one that's weird air it's gone viral was taken by a man from the window of a nearby plane dude what this is weird that would be hard for anybody look at this so imagine if we were expanding the space in front of the plane and Contracting in the space behind the plane would the pain plane just slow

(41:22) down in the a I think it would just stop viral just like this the window of a nearby imagine if we just held this plane in super position an optical illusion it's called a paral effect it's AE visual illusion okay well I don't need an explanation but um there we go without the sound that helps look at that Wonder this is this is what I was thinking about when I was talking to him about it huh so I thought well what could we slow it down as super position I think we actually could slow an object down like

(41:58) this into super position though using this type of Technology pretty weird okay we showed that um let's see did we touch what else did I touch on in the science let's pull this back over here alab Berry Drive ER he wasn't familiar with ER equals epr I thought that was interesting for a guy who knows so much about physics so er equals epr we haven't posted it yet but Einstein Rosen equals Einstein pki Frozen which is general relativity equals quantum mechanics and so quantum entanglement equals Wormhole

(42:38) basically oh that's nice of you guys to say I definitely um I feel like we're covering stuff that is like college level uh science for sure definitely one thing I want to try to understand next is our neutron stars spinning really fast how fast is the time flowing for a neutron star is a neutron star's time flowing really fast or slow I'm not sure the way Roy de Herbert mentions it he says oh well the neutron stars basically becoming like an atom if that's the case then the mass should become very low but the reality is the

(43:20) mass is really high so I wonder how he would describe the neutron star with respect to how fast its time is Flowing if its time is Flowing fast or slow because we know the black hole's time is going slow yeah and spin is relative too but they say that the neutron stars spin like 100 times per second okay I'm going to mute myself while I eat this Olive hey ghost motorcycling how's it going Andy welcome first live stream We Got A Virgin live streamer here welcome um so I want to understand that about neutron

(44:11) stars I didn't ask him about this grock stuff but that's fine this is more stuff I want to put in the evidence in fact I'm going to move it over the evidence we're probably going to do a post on teleportation also I foed the [Music] N okay let's see I want to do something on sentient could you hear me breathing during the interviews is that how strong my mic is feels bad feels

(45:25) bad yeah so that's what we want to find out galac I want to know if time is moving faster or slower on a neutron star in fact I'm going to message Roy Herber right now I'm going to try to not show my DMs although I don't think there's anything that matters my DMs let's close all this wait why does it still show my ha like there's really just no way to get rid of no way to get rid of

your DM showing on Twitter so annoying I'm just not going to bother okay um so let's do sentient post we'll

(46:15) just use the royy Herbert question list here sentient let's see what we can come up with on the sentient okay what was that other stuff okay we start building a post here together um so we asked Gro about sentient actually we need to ask rock some more stuff guys I got to finish up that 9911 uh hijacking thing as well probably tomorrow I'll read the rest of it so if Captain Dan hanley's listening apologize I haven't finished it okay if this reveals my DMs it's not my fault okay I

(47:19) didn't it didn't live stream of the Year call-in show kind of want to call in to mck himim oh look it's Brian Lup what a nice guy this dude is he's got his dog sitting on his lap damn such a dog man D this seems nice is that a pool he's got too oh damn damn such dog folks such dog Brian Lup is awesome dude wow 10,000 an hour um he gave us a shout out on Tim Po hopefully that'll pay off what the is that an airplane what the [REDACTED] I love when things happen in the hood is somebody else in there I love

(48:15) the commentary my God made it I don't think he made it yeah I don't think so man what the [REDACTED] this [REDACTED] is crazy oh no he oh my goodness oh we shouldn't laugh cuz cuz he's definitely dead he's definitely dead is this has anyone got a video of this huh H weird okay sorry what were we doing Gro yeah that's an actual plane crash there um yeah nobody's I mean dude's pretty

(49:24) dead man trying to CPR him I mean I don't know man I feel like he might have just fallen out of the plane I don't think you can survive a plane crash like that man dude what why does it always go to fun mode I hate this what is so grock is actually contextual like it's remembering the past post that I make it was renamed in 2023 pit fuk kick I mean how do you even pronounce this

(50:39) stuff maybe survive that I don't know man seems unlikely I'm going eat another olive give me a sec how is this the real answer it gave me okay well we're definitely going to go ahead and copy and paste this we're just going to let grock to do this whole post guys we'll just let the the chips fall where they may we going to let the chips fall where they may is that a weird response does anyone

(51:48) else think that's a weird ass response from Gro or is it just me that was not even on fun mode that's on regular mode is it stuck on fun mode weird what else can we ask it about sentient let's see if we can find anything else from this article about s is this an image oh that's definitely an image that's going to be what our image is as well uh actually I'm actually post a satellite video in this one instead of that I'm going to post a sid video such dog man although this one's pretty

(52:51) cool yeah that was bizarre man I thought like what the hell it's on regular mode um let's see we need a quote from this we need a quote guys let's look for everything you guys can find

for sentient friends I need any quotes about sentient that tells us we can track planes or anything make a video I'm pretty sure we're looking at the sentient program here would make sense we're going to show the high quality video this is what we're going to tie to the Post someone was arguing there's

(53:56) directional light source what direction do they think the light source is coming from man is it coming from the East if so how come clouds to the don't aren't shaded on the East why is these clouds not shaded down here why they not lit up why are the clouds on the right side there's no directional light source in the East when there's directional light source coming down it would be coming from the East if it was the morning right now they might argue well here these these look shaded but okay well let's

(54:29) look on the other side of the clouds now are these just high in the altitude or are these actually on the east side of it like here why is this not lit up here right it's because it's just lower elevation on the East right here nothing's lit up as well cloud is uniformly lit up at the top of it looks like it's just a matter of altitude to me yeah if we focus only on grock they're probably I mean I don't know I how accurate is AI I really have no idea I need something that's more specific a specific quote from

(55:24) this really gives us nothing huh this is a history lesson now I mean come on black sky I don't want I don't care about black guy I kind of like this H what do you guys

(56:31) think grock would actually lie to me I hope not that' be dark I think we mentioned that grock fuses all this stuff right [Music] h I don't know I don't know guess I almost don't really like this

(57:35) one Let's uh check a different one okay boom there it is booya let's take it informatics and processing apply non-traditional methods

(58:39) to fuse multi-int object data for entry resolution geolocation and tracking boom okay that's what we needed that was what we needed needed folks screw this other article go away screw that for should redacted resolution G location track seems pretty good seems pretty

(59:50) good have you tried the same questions chat GPT uh no these question these answers are fine it's consistent with what somebody told me okay I think this is how we're going to we could have in should we do an introduction I mean this is enough this is actually enough this is actually really good I like this a lot I think kind of want a explanation maybe we do Wikipedia

(1:01:10) yeah so this is directly copy and pasted from that um okay let's go like this let's let's post I think we're good MH 370x satellite update sent toate I'll bring it back in just a sec don't want you guys to see my sweet stuff that I'm working on highest quality take we'll take this I think I

(1:02:21) think they like this better why is there a quote here I don't even like that I like that I like that for

(1:03:46) this is going to be too long isn't it might to shorten it stop bad that was from February 2012 for

(1:05:23) for what give me a sec guys let me see I'll read the chat weird LinkedIn emails what are you talking

(1:06:26) about I don't know I pretty much ignore LinkedIn LinkedIn is one of those things you use when you don't have a job and when you do you just pretty much ignore it okay for seems good to me

(1:07:45) folks what you guys think pretty good pretty good one scre the per Wikipedia I'm going to change this up a little bit what do you guys think does it look good

(1:08:50) I think we're going to send it okay let's just go through it read it together guys here we go one last run through and then you guys can go ahead and uh like or whatever uh m37x satellite update sentient sentient is automated intelligence system under develop my national Rec Constance office we suspect this computer program is what's generating the MH370 satellite video using data from cbers the space-based infrared system excuse me a 2012 Declassified document States one function is fusing intelligence for

(1:09:38) geolocation and tracking information and processing apply non-traditional methods to fuse multi-int object data for redacted entity resolution geolocation and tracking grock AI xai says p HK space base would be a fitting location is the northermost base of the US space force and plays a crucial role in space operations of missile warning while the full extent of uh sentience capabilities is not publicly known is believed to use machine learning other Advanced AI techniques to integrate from multiple sources and platforms complex

(1:10:09) tasks such as three-dimensional processing of moving targets seems good while the full extent of sentient capability is not publicly known there have been reports that the program can track airplane movements in 2021 Senti program reportedly detected an Uniden if object which led to discussions about providing support to the UAP task force this suggests that the program has the ability to Monitor and track various objects potentially including airplanes uh seems good well I think you just read this post that's that's what

(1:10:38) the sentient program is d uh that's that's a pretty spicy meatball folks that's a pretty spicy meatball we could even put the side by side one on here the 3D one what if we put the 3D one on here I think we're just going to go with the high quality one so the high quality one is nice I'm going to post this before I forget okay well I definitely clicked that and it didn't go to it satellite update okay there you go chat if you want to know what sentient is there's your answer you have a link there you

(1:11:19) can read all about it if I missed anything guys from this and you think it's relevant from this it's really only two-page document go ahead and put his post in the replies if you think I missed anything also doesn't this document just tell you that they don't even like Mark stuff

with like secret anywhere on it right like that's not how this stuff works they just gets it gets an approved for release thing when it gets approved for release but oh wait it does say secret right there this weird strikethrough

(1:11:49) doesn't really do anything I don't get the point okay s it uh oh people are talking smack about the Dallas Cowboys in my Discord uhoh uhoh okay sentient boom this could explain a lot man if this is sentient this explains a lot okay guys what should we do next for the next uh probably go for another 20 30 minutes feeling pretty tired tonight yeah it does say secret you are correct

(1:12:55) wait so this was not top secret does this coincide with Edward C Lyn's charges secret it does coincide with his charges wow wow guys whoa whoa okay hold up hold up yeah I'm going to go get Lulu too I think we'll get Lulu oh boy she was sleeping on my parents couch and she gets fur all over it so we had to put a blanket down and then immediately she digs it up like a cat and and gets past the blanket um this is not top secret so Edward C Linn's thing was secret level as well only okay s program what

(1:14:22) the [REDACTED] well we're just going to live with this ex extra uh return right here fuse multi-int multi-intelligence for geolocation for for

(1:16:03) like that then let's go to get the Edward C Lin stuff updated for Edward cinn where do we put it trying to figure out where we put it um uh what's the word I'm looking for retention disseminate uh for

(1:17:36) I just want to put it on there we may have to redo it what is CERN Sandy what do you want to know about CERN Sandy guys uh you guys love love CERN huh CERN is the part particle colliders right yeah this is where they're Large Hadron Collider right LHC they're shooting particles at each other try to have them stuff happen what we want to do is we want to shoot a particle into uh a magnetic field thidal magnetic field a little bit different okay maybe I stand corrected here they are guided around the

(1:18:40) accelerator by a ring of strong magnetic fields maintained by superconducting electromagnets they're built from coils with special electric cable that operate in a superconducting state oh so this is why they have to keep him cool H whoa that's creepy what's this guy doing what are these guys doing here is that Mark Zuckerberg why is this guy's face out I can't what is going on here I can't do this it's driving me wild H maybe we do need to learn more about the LHC

(1:19:44) [Music] H I'm might have to visit this place okay I'm this thing is driving me nuts okay that's enough of that yeah I bet it heats up quick too okay let's learn a little bit of science I want to do some science I love science what else can we find out probably going to do n39 tomorrow the n39 stuff is creepy creepy it started the Mandela effect I don't know maybe feel like the Mandela effect began before it but maybe we sell some good stuff we need to figure out a way to fo

(1:20:53) these people we can't get rejected for MH370 like we got to **Foya** something that's like can't they can't deny us on it's probably nothing though I almost smashed that into myself um let's see what what do we got on our list here there's a lot of stuff on here I think I want to look at this this has to do superc conductors I think I want to learn a little bit more about superconductors superconducting materials seem miraculous resistless flow of electricity has been exploited in some

(1:21:31) powerful ways like the super strong magnets used in particle accelerators and fusion plat we already showed this we already did a lot we already did a bunch on that so that one's done we're done with that that one's done right um maybe Bayfield Brown see what else Google will crack my spelling here folks don't worry let's look at this one lifter huh yeah so just

(1:22:42) electricity wow that's cool okay oops dang it let's read about this now um nothing further on Edward C L okay back in the 1920s a young man named Thomas towned Brown probably good if we pronounce SP spell his name right discovered if you charged a capacitor with a high voltage direct current the capacitor would exhibit thrust in the direction of the positive electrode okay off and on for the rest of his life until he died in 1985 he worked on these devices trying to make a practical propulsion device using this principle

(1:23:30) when in college Brown worked for with physicist Paul B Bayfield and the professor's name was added to Browns when the phenomenon was named the Bayfield Brown effect basically a BB device consists of a small or sharp electrode separated by dielectric material bismuth right isn't bismuth our dielectric let's ask Rock Let's Ask Rock guys oh no not not bismuth I was I was off

(1:24:33) huh High dielectric constant low loss tangent makes them suitable for in high frequency applications polyethylene is probably one of the most common ones polycarbonate okay yeah bismuth is not dielectric dmouth uh di magnetic right or what's the right word I don't know um it's not science gets tough actually when I'm uh when I'm having martinis folks okay um di electric me an insulator that is forms a large or blunt electrode and this form the device is type of capacitor when fed high energy

(1:25:18) voltage DC current the capacitor would develop thrust leading from the small sharp electrode and away from the large blunt electrode Brown maintained the device thrust towards the positive pole and away from the negative pole but modern experience have shown the BB effect works in either polarity what is important is the electrodes must be differently sized hence as asymmetrical asymmetrical capacitor y I need to understand what an asymmetrical capacitor is oh the size has to be different I see an asymmetrical passor is formed

(1:26:22) with the lead the lead negative plate of the lead acid cell is replaced by carbon based counterpart oh man can anyone speak English to me here on this one piso electric is really a capacitor so two plates or something how do I understand this I'm guessing what they're talking about is asymmetric meaning this size here is different from this size here so there's going to be a Thrust effect I don't understand how it works in this one guys it's getting pretty heavy in the

science here okay we let's just read on two

(1:27:24) conducting layers are not the same size okay thank you Mike appreciate you that was just one one thing at a time um I want to understand everything I don't understand related to this so if you guys are watching at home I would say have up your AIS have up your Google image searches to help yourself understand it a lot of people maintain that the BB effect is electrogravitic that is the electrical current acting on the capacitor somehow counters or interferes with normal gravity I do not believe this this effect is clearly result of

(1:27:55) excess ions being thrown off the small sharp electrode flowing towards the POS positively charged large blunt electrode here's a question for you why does it matter if the if the end product is anti-gravity who the hell cares what we call it right who cares in normal air the ions pick and charge air ions add to the Cascade and increasing the thrust in a vacuum or under insulating oil asymmetrical capacitors can still exhibit thrust though it is usually much weaker I wonder if this has to do with the ions coming off the

(1:28:51) Earth alien scientists recreated this huh that'd be big well that's cuz there's really no such thing as anti-gravity right this is because only the ions coming forward uh coming off the forward electrode are present without charged air ions help to push dis instructible light uh teach you how to build one with rotary thrust if you prefer to believe this is a form of anti-gravity you're welcome to do so yeah exactly okay for this short video the rotors turn on a simple uh metal uh lower impulses from

(1:29:43) the and a large motor run capacitor microwave oven Transformer this magnifies the uh sure the thrust show me show me moving yeah okay you see the rotors are turning very slowly now this is at very low voltage compared to some by turning up the dimmer switch at which point in which case the noise the thrusters will get louder and they will third power so to speak as you can see they're moving quite rapidly that's about half power that's half power this seems pretty significant but uh the cockro Walton

(1:30:31) multiplier stages only has five stages so it only increases it by about 12 without power being applied to it I'll go ahead and stop it with my um on the right that's neat the effect will continue until all the charge has been BL huh okay something can't go back oh my God H what else should we look at there the lifter one is pretty interesting science

(1:31:38) direct yeah I think yeah the thing about the orbs is it's very simplistic Just An Elegant design right it's why it's like we don't want to overthink it I I agree with Ian CIA okay yeah I mean I get it what I don't get about this one is where's the asymmetrical part of this I don't get how this part is or is the the table that's just a normal table I don't get how this part is acting as asymmetrical kind of want to clip this let's give this person a let's give

(1:32:45) this person a like it's interesting okay uh what other thoughts do we have on this guys it's pretty wild there's a thin wire on the top with positive and the foil is a negative got it so the wi is what's acting as the [Music] positive yeah electricity is definitely the secret definitely

definitely the secret I never realized how it's it's definitely a secret I mean I've never been more convinced in my whole life in order for any of this stuff to work it all has to do with electricity

(1:33:29) and electromagnetism I don't even understand electromagnetism but I know that that's what's happening Andy how would it go about setting the destination well you just asked the Daily Double question my man uh where is guys where's my rubber band where is it there it is so that's the uh The Daily Double Andy so get my stream up close this okay so uh if you believe the engineers then we need a fourth orb entangled to the other three like this rubber band right you got fourth orb over here you got plane chilling over

(1:34:16) here let's just say that this is our plane this is our plane we got going here our plane is flying over here and we've got three orbs where my fingers are over here flying over here and we got our fourth orb Astan four orbs right here right and now we say oh we're going to cause our phase conjugation event to happen over here we are going to have our orbs condense onto the plane now our plane goes flying over here to this one maybe not over into there but that's you understand the concept there

(1:34:52) so yeah um that's the part where I I struggle with understanding royy Herbert's explanation of the plane just going to warp speed it's like okay well how are you going to slow down I guess alaer drive you just turn off the the contraction in front of the plane seems like it' be hard to control same issue I have with Bob greener's explanation is you need a way to control you need a steering wheel right you need something or a brakes where you can slow down you can figure out where you're

(1:35:21) going to go oh MythBusters did a thing on that interesting yeah we should build some Tesla Towers just get raided by the government it's not a bad idea we need to figure out how to get raided by the government I think the simplest way to get raided by the government is start messing around with superconductors start messing around with superc conductors how much is one of those uh magnets cost Neo Dynam there we go I want a neodymium magnet oh they're cheap oh guys this is like the Joker scene you know the thing about guns and

(1:36:09) explosives and and incendiary stuff it's cheap science is cheap folks we just need some Neo I'm going to buy some of these where Amazon it's cheap folks we need some magnets neoy magnets super powerful magnets and then we need oh yeah this is what I want this is what I want right here \$1 \$1 wonderful wonderful folks wonderful 2in cube is worth is over 200 \$120 where not over here it's not sh it's \$1 dude get as many as I want oh yeah this one does get \$50 yeah I mean one inch is fine one inch is

(1:37:08) good oh we're definitely we're definitely getting raided by the government it's going to happen I won't stop until we get raided by the government so let's see let's make one of these float over some superconductors that seems like the move right and then we start messing around with it like let's go back I think I'm okay to share this because we already showed it on uh if you guys remember from Salvador Pas and Dave Rossy stream uh hard TRS number what number was that guys four I remember I watched that video

(1:37:42) like about a thousand times we're going to watch it again right now remember this one guys look at that that's a magnet that's a neodymium magnet I almost guarantee it is he's got a neodymium magnet and what was this liquid nitrogen I think right I don't know what exactly he's doing here but we can figure it out we can figure it out now Dave is a lot smarter than me for sure that's there's no doubt about that but I can do what I see I'm good at seeing stuff neodymium oh man come on man I don't know how to pronounce this

(1:38:20) stuff whatever super magnet let's just call it super magnet okay let's super magnet floating in some something here and there's some kind of plate and then you do stuff you zap it with some zap zap and then it poofs over here to the ground over here right yeah that's definitely a Neo Neodymium whatever man whatever super magnet need some super magnets we need I don't know about the liquid nitrogen I don't really want to blow up uh my place but I want this I want to make this thing float I want to make this thing

(1:39:00) float folks I want to watch a magnet floating we'll figure it out bismuth how do we get bismuth guys bismuth is definitely feels like it's the answer how much bismuth can we buy um why did this go to me Neo D there we go that's what we need okay we got Amazon folks we got Amazon guys your donations will go to a good cause it's going to go to me getting rated by the feds Amazon's going to have the cheapest prices oh yeah oh yeah pack of two look we can get two two for the price of one here folks \$20

(1:39:53) \$20 one inch magnet you know Amazon's got those prices Jeff Bezos Jeff Bezos got those Cheapo prices look at these 50 pieces 50 pieces oh yeah oh shotgun shells wait why shotgun shells have bismuth in them someone needs to explain this to me yo you guys I'm definitely going to need you to bail me out folks I'm going to do a live stream from prison prison live stream folks prison Live 99% pure bismuth metal this is what we need this definitely seems like a sketchy website though damn \$500 for this well you know

(1:40:41) we're going to do it though what we just melt some of this down damn \$6,000 well that's ,000 I don't know about ,000 um I probably just need a couple pounds oh yeah okay oh yeah we want something like this just meltdown some bismuth apparently you can cook it on the stove uh Whatchamacallit told this Roy de Herbert said it's got a low temperature thing shotgun shells Melt down and get magnet mode huh shotgun shells melt down to get magnet mode I feel like shotgun shells going to be too expensive and I don't

(1:41:24) want all the gunpowder I just want some bismuth I just want some bismuth guys I think I'm going to do this and I think I'm gonna live stream it I think I'm gonna live stream this this could end up in disaster or this could end up with the feds raiding us or you know something in between not really sure not sure it's going to be fun either way though um let's do neodymium Cube neodymium Cube super super magnet Cube oh yeah look at this one six-pack just in case you don't get enough from one you can get six of

(1:42:14) them I want a chunky one I want at least how is one inch that big H one inch might not be enough you need to Electroplate bsouth huh how do you electroplate it guys we we might

be getting on some lists here we might be getting on some federal list just talking about this not sure might be getting on some lists here yeah I feel like when you start talking about this kind of stuff oh yeah \$151 for a 2in one well I know what I want for my birthday I know what I want for my birthday I feel like the 1in one might

(1:43:06) be okay what do you guys think is a 1in one going to be good enough maybe we start with a 1-in one and then we work our way up since the 2in one is like 10 times more expensive Electro play it nah bismuth is what I want bismuth is the super stuff folks bismuth is the super super thing oh wow you can just buy it 5 pounds great for Crystal making can we cook this down got chat can we cook this down wait what what did I just press why why did it do this to me is this will this work or does it need to be more like crystalline or can I

(1:44:00) cook this on my stove uh boy this is a this is a sketchy link this is a risky click folks risky click oh there we go someone just paid for my bismuth uh for my Neo super magnet someone just paid for it is Mary it's your fault is Mary thank you very much is Mary I appreciate your donation I'm going to blame you I'm going to blame you now you you've made me afford the the magnet oh yes it melts at low temperature on the stove yeah I mean 99.

(1:44:41) 99% pure seems good seems like a good amount it seems like what we need so then do I have to run an electric current through it to make some stuff uh Magic happen I don't even know what happen guys risky clicks oh boy oh boy that was a sketchy click folks I don't know what just happened did you put a virus on my computer oh no oh no do I trust my mod I don't know man I click on this link and nothing happens didn't work either just downloaded some viruses on my computer didn't I don't know what it did thank you is Mary appreciate

(1:45:25) you let's go look at ISM Mar's channel oh okay Tampa UFO sighting huh is Mary live stream folks we got a a girl here and she is into UFOs there you go chat we'll give her a free shout out here let's give her let's give her a subscribe I'm I'm the ninth subscriber to Ching now you're going to have a lot of Paris social guys uh dm'ing you is Mary so hope you uh appreciate it um bism is not just for Christmas it's for Life uh storm watch the plane didn't crash buddy how does a plane crash

(1:46:16) without leaving a debris field walk us through that for SEC did uh did our guy tell us how a plane crashed without leaving debris field there was no debris field buddy oh guys oh we got we got a CNN brain in the chat stormat 313 gaming uh just as a statement of fact there was no debris Fields that's is why a plane can't crash

(1:47:20) the ocean without leaving a debris field and the satellites would have seen it from space so welcome stormat 313 now you understand why we're investigating the case cuz it's clearly a conspiracy it's impossible for a 777 to crash in the ocean while leaving a huge debris field visible for miles from outer space and yet there wasn't one amazing amazing yes I think they can search every square inch stormat we we've proven that and just to help you out I'll show you how we've proven that

(1:47:56) okay here is the cers system this is a locked Martin satellite system **I want you** to listen closely Global persist listen listen very closely stormat infrared surveillance Global persistent infrared surveillance do you know what those words mean Global persistent infrared surveillance look at these satellites these satellites are in geostationary orbit these have Hubble telescopes on them Hubble telescopes they're staring at the Earth these are the telescopes we look to we use to look back in time watch

(1:48:33) this critical National Security space mission look at the scanning you think they can't find a debris field from a 777 crashing into the ocean look at this scanning man look how big these scans are this isn't even all the satellites this is only some of them this is just like seven or eight satellites okay Einstein's field equation for Gravity mass and Electro field okay cool cool cool cool probably going to need something a little bit more than that so oh there it is okay yeah I've got it now thank you I

(1:49:30) got the I got the paper I'm probably going to need to read that huh before I can uh cook down some bismuth okay I'm not going to waste too much more time on uh my man here uh we got a newbie we got a newbie in the chat newbie in the chat but yes they're scanning the whole world and there's like another 100 satellites that are scanning the Earth as well well is in addition to the fact they have an AI system that's like able to pinpoint anything they want and the low earth orbit satellites like USA 229 like

(1:50:00) the one that was literally staring down at the plane here we used amateur trajectories to confirm here's the coordinates in the satellite video here's the Dual satellites um explain to me how they were not staring at the plane look at the time at this time right here the plane is right here right about here actually where my mouse is these satellites there's no chance I couldn't have been staring at the plane 0% chance the US government knows what happened to this plane unequivocally yes they should have

(1:50:34) satellite footage of everything that crashes everywhere yes you understand stormat this is how we had satellite footage of the **Russian** Wagner guys um plane crash you ready for this storm watch watch and learn Wagner jet PL plane crash satellite look at this we have satellite footage of the plane crash of the Wagner jet incredible this is a tiny tiny jet we have satellite footage of it satellite imagery indicates the fuselage was largely intact and this is on land this is this is what they gave to the public and this is on land in the

(1:51:20) ocean and a 777 the debris Field's going to be like about 100 times bigger than this and it's going to spread out even more they had this the very next day the very next day on a tiny jet tiny jet so are we good are we good you want me to show you the footage here it is boss you're staring at it six frames per second indicating a computer program assume to be the sentient program which is the AI program that monitors and coordinates the satellites the reason why this is six frames per second is because this is a

(1:52:03) large field of view computer program one of the purposes is to track planes right go ahead and watch my Twitter take a look at it watch it yourself the whole purpose of this this

system is for this okay we're not going to get too caught up in this guy I appreciate you guys you're right okay and this is why there's no crash in the ocean cuz the plane didn't crash into the ocean cuz what we're looking at here is probably real as hard as it is to believe I mean I don't want to believe that orbs can teleport a

(1:52:37) plane either man but especially back in 2014 but this is somehow the best explanation for what happened to the plane fits with the facts more than any other story to date and we don't just have one video we have two videos that are perfectly in sync two videos in sync man two videos in sync they're not releasing footage because they don't want us to know that we have satellite video capability but of course we do because a video is just pictures stacked on top of each other it's not rocket science now this

(1:53:20) is some serious science though anyway I just wanted to show these videos again cuz they're amazing poof there it goes okay let's see what else we got uh so the paper so do I just buy some bismuth and then run some current through it you got to go to the link yeah I've got the link right over here man do I just give me the spoilers do I just run some current through some bismuth or how do I make some magnets float I like this paper though it's already saying all the right words Lang green saying

(1:54:12) Einstein these are some of my favorite peeps Bayfield Brown yes guys look how far we've advanced in just a couple months man I feel like if we add another year we're going to become like straight up experts at this stuff yeah the mq1 C Electro IR video is too good it's too good it's amazing it's amazing nope I'm not married I'm not oh should I get should I get Lulu out guys you guys ready to hear this let's let's do a quick dog break hold on quick dog break come here lul everybody wants to

(1:55:00) see you come here come here yes come here yes helloow it's okay no okay I know you hate being picked up I know noos come on come here come here come get Fritos guys she doesn't really like to be picked up very much especially not if she's on her sleepy spot what's this trees oh we're going to lure her over here guys come here what is this tritos the tritos oo yes there you go there you go good girl good girl no no no brow it's okay no no it's okay good girl it's okay it's okay no okay okay okay okay well I don't

(1:56:06) think we're going to pick her up today she's not having it she's not having it we're trying she does not she does not want to be picked up right now I know should we try one more time I know I know it's okay come here okay okay I tried we're going to have to do a dog cam she's just like not having she's not having it that was a that was a definite no on that one she really really really does not like being picked up like at all guys I probably shouldn't be picking her up because every time I do I think she

(1:56:48) hates it even more she's not a pick up pick up dog we tried uh but I'll do a uh I'll get a dog cam maybe for her but yeah she's she's cute yeah wolves wolves do not like do not like being picked up that feels bad feels bad it's okay an attempt was made next time guys we'll get her she's in a better mood I've been able to get her uh on stream like every time uh except for

uh this time every time before this but yeah she's not a doggy pick up okay let's see what we got going on you guys

(1:57:26) probably heard her uh while she was on my bed as well she has a full on meltdown yeah she's an actual Diva actual Diva it's ridiculous H actual Diva man it's wild feds in the chat we got the feds in the chat the feds are like what's he buying what's he buying on Amazon this guy's trying to buy some bismi chunks okay guys we're going to close down the stream in a few minutes as well uh this is this is not what we want what's this Pepto Bismol wait is Pepto bismal Bismuth I think it might

(1:58:06) be how much how many pounds of bismuth do I need 550 degree melting point h okay Mike well what does that mean in English though what does that mean in English how much zap zap do I have to put through the Bismuth to make the magnet float that's what I want to know how much zap zap do I need like do I have to plug this thing into something and Like Short Circuit the whole uh my whole my whole uh like complex here my my uh my house don't really want to do that if I can avoid it I wonder if a couple pounds is enough

(1:58:56) right if I need more than that alternating current you can create constantly alternating magnetic fields creates resistance at that scales H interesting interesting I'm definitely buying some bismuth guys one way or another I'm buying bismo no matter what honestly I'm probably going to buy it once I get off this Mercury and bismuth huh I'm probably going to buy some bismuth cook it down and then I don't know maybe we put a battery through it or something I have no idea residential power in boxes will not

(1:59:57) take the current damn going need a generator for this yeah bismuth magnesium and zinc dude that's the combo bismuth magnesium zinc but that's for if you want to make a UFO oh you meant magnesium yeah yeah no I just want bismuth I just want to mess around with bismuth I want to melt it down and I want to like do something with the magnet see if anything happens eight pounds of bismuth I feel like five pounds of bismuth might be enough or maybe not yeah I do want to live stream stuff at Jeremy's Workshop I don't even know

(2:00:44) where he's at I I need to figure out where he's at so I can fly down to wherever he's at presumably he's in a better climate than I'm in but who knows maybe not yeah these bismuth crystals are amazing look at this I would I wouldn't even feel good cooking this down look at this this is a this is amazing what how is this real how's this real oh crap well whatever guess we know where I am now um how is this real folks what the hell what am I looking at here this is wild mind your own bismuth look at this guy's fingerprint

(2:01:43) you can see this guy's fingerprint real well maybe we can figure out who this is from this guy's fingerprint you make this or does this how it forms this is this wild it grows like this whoa yeah bismo seems like the secret to the universe that's how it prefers to crystallize wow okay so I got to buy some magnets I like we can scale it it doesn't need to be a big scale right it can be small we just need some magnets and some bism I want to have magnets either way I feel like a neoy magnet or whatever

(2:02:32) super magnet will uh that will wipe out I feel like that will wipe out my uh hard drive if I put it too close though right gotta be careful with that don't those magnets mess up hard drives you can make the crystals wow yeah I need these magnets super magn I need some of those I don't know man not so sure about this the thin layers we'll see yeah I have a solid state drive so it's not going to mess it up

(2:03:38) right yeah we might I might invite um Bernie and Jeremy to stream with me when we mess around with the magnets might do that okay well chat I'm going to go to sleep I think I'm pretty tired this is already like so far beyond my scientific understanding I'll read this later too got a lot of stuff to read guys got a lot of science to get through maglev yeah this is uh yeah the the magnet trains well that's interesting Department of energy hello Department of energy so I mean this is how we get um

(2:04:45) hoverboards right we just need a non cold superc conducting magnets if we just have room temperature higher temperature superc conductor magnets superc conductors and magnets and that's yeah there you go okay guys I'm going to go to sleep uh you guys have a great night thank you all for being here as usual uh boy there's a lot of people in the chat as usual appreciate it um let's talk more tomorrow hey tomorrow we will do a uh New Year's stream I think what I might do is I'll stream tomorrow

(2:05:24) night after I come back from I'm going to hang out my parents for a little bit cuz they got a cool place and I like hanging out their place I like hanging up at the fireplace and then I'll come back I'll booze a little bit and we will do um uh like a New Year's stream for the people who are you know nerds like us nerds like me and we'll celebrate New Year's together probably stay up a little bit later go past midnight celebrate it thanks everybody uh have a good night and we will talk again tomorrow peace everybody

(2:05:56) thanks for looking at the science thanks for doing the stuff with the um satellite

Hard **Truths** #5 - Roy D. Herbert - YouTube

<https://www.youtube.com/watch?v=4mR0xkk2nmY>

Transcript:

(00:04) okay we are live here with Roy D Herbert this is Ashen Forbes you are on hard **truths** number five hard **truths** is the podcast where we ask the hard questions and we get the hard **truths** we seek scientific answers we seek answers about things that are conspiracies out there stuff that people do not feel comfortable hearing about so thank you all for being with us roy Herbert thank you very much theoretical physicist he is also the proponent of dilation Theory which is a theory that seeks to understand the nature of SpaceTime and

(00:33) what it means with respect to our lives roy Herbert thank you very much sir welcome thank you and uh good afternoon to you so let's just get right off to it uh we have uh limited time and I have a lot of stuff I want to ask you so first of all um you know what what is your job what do you say how do you describe yourself to people on social media or people that you run across Etc out there um theoretical physicist essentially yeah um that's what I do um I think about problems within physics come up with ideas to solve them and how

(01:06) did you get interested in it um interest is since I was a little boy essentially fascination with the cosmos and nature yeah um to a degree that I had an uncanny understanding of things um I used to keep my brothers awake at night hopiz in black holes when I was about seven to eight years old and know stupid things like that so who's your favorite long time ago sorry I interrupt you so who's your favorite physicist out there who do you look to for inspiration when it comes to physics and stuff like that my main Mentor I

(01:40) would say would be Carl San Carl Sean Yeah Yeah from the past um but my current I would call my chief officer at the moment possibly uh Cliff burges um oh yeah who who's an extraordinary extraordinary talented physicist the and Theatrical physicist and um we share a lot of musings on social media and what do you think what what inspires you about their understanding of physics or what what do you gravitates you towards them I guess if we're going to use a physical physics concept I I think I it well clipp is one

(02:16) hell of a guy so there's that so it doesn't really matter about his ideas um you know he he has a sort of open attitude towards things and towards people and he responds um so that's a bonus um people usually do not engage uh you know uh that sort of level but clip is one of those people who will engage with eally so he's great those are the kinds of people I like too and that's the kind of person that I try to be as well somebody that uh doesn't judge people based on how many followers they

(02:50) have or whatever just tries to out get out there and answer questions for people it gets harder though the uh more followers you get for sure um yeah I try to answer as many questions as possible I mean some of them are quite silly as you get um some are quite ludicrous um but um the vast majority are very very informed and um even from people who who have not been um sat in the world of physics for for for all their lives or within any level of you know some sort you know professional career yeah and I saw you responding to people this

(03:24) morning as well so uh thank you very much for your effort and honestly I was one of those people once upon a time and look at us now now we're sitting here doing hard truths number five with you so thank you again for being here um you're welcome let's just jump right into the physics so can you explain dilation Theory to us I have it in my profile uh I'm a big believer in it I believe in the Simplicity of it but I want to hear it in your term in your words feel free to take as much time as you want okay right well dation Theory

(03:53) asks us to consider time okay um differently okay in looking at those weird and wonderful attributes of time and um asking ourselves essentially what's going on um that's what

I did and um that's why I come up with dilation Theory um essentially we should consider time like all things within our Cosmos governed by the laws of conservation okay when we do so we find that time holds a fluidity in its continuous nature okay um goes back to a theor called noron serum where things that have a continuous nature within the universe in

(04:36) you know in a millennial emotional order way or any sort of fashion will invoke conservational symmetry we see this with liquid smoke for example where smoke is forced to share a direction and and forc through an apure for example it shares linear motion and then it turns conservational symmetry kicks in and the smoke turns to a fluid well time turns to a fluid though we don't perceive the fluid side of time because we are what one could say abstractions within the flow of time we only ever experience and

(05:10) would consider a now a dynamic Eternal moment where the profit is of any moment to note the particular outcome that gives us a resolution to the paradoxical issue of the double stic spr for example um whereby The Observer is simply an added property of any moment okay they're even looking or they're not properties change see it's a dynamic so essentially symmetries and behavior within things are not they don't break as such as what is the current thinking they are dynamic in that they change

(05:45) according to your changes okay so if we can consider those Nows to be continuous they invoke conservational symmetry therefore time we can consider to be a fluid symmetry so if we use some fluid uh Dynamic analogies that we we are more familiar with we take our minds to say stream okay we look to the banks of the stream the flow of the river there or the stream slows is slowed by the bank if you were to Pro sticks in by the bank you will notice all the plots in there around it is being gathered by that slowing of the flow gathered to the

(06:24) banks okay well what's going on well wherever we get slowing effects with in fluid relativistic fluid dynamics we get a passive transversal inertia that is born that drags that flossome to the shore to the slowest relative speed of its flow but if we look dead Midstream in our flow of our stream as it were the fastest Flow In The Stream there is no inertia so in our analogies to time as it were the fastest relative flow will have zero g the zero nerous speed okay and where time has almost stopped as it were it's very very very slow we

(07:05) have very very high inertia and we see this with black holes so if we use our analogy of our our friends for example the phenomena um we see them whipping around very very fast one could consider that and therefore having no inertia of gravity upon them well they're holding a relative faster rate of time than their surrounding it's as simple as that well and so uh couple things I want to ask on that um then would that hold true as well to let's say like uh small objects small creatures being like bugs and ants

(07:40) and I think dragonflies as well as would you consider that to be a similar phenomenon uh just scaled down yeah exactly if if we take the analogies of the Dragon FL for example it's a very much more simplified thing it's very small therefore it's ultimate you know makeup of it itself is much more less complicated than me and you so therefore it will hold a much faster

relative rate of time um we call its particular relative rate of time bullet time okay because uh we've done some things with

(08:12) them and these things can dodge bullets s species so they can you know they have a much faster relative rate of time wow um let's put an analogy if we were to look at say a wristatch example if we could upon the dragonfly's wrist we can give him one for a moment imaginary um if we were to be able to view upon that wristwatch it would have an incredible rate of time be ticking away very very fast but to him the dragon fly it's normal Tick Tock second I mean it's all frame of reference right yes things

(08:46) can hold different relative rates of time um now one of those funny things is and we just had a result I pushed it in yesterday was with the neutral star um um side data that's just come in from the ligo results one of those um little quotes that come up previously before that a week before that was the correlation of the spin rate of neutron stars to the spin rate of certain forms of quantum in that they correlate precisely now so how is that working well neutron stars essentially hold an extended electron cloud and therefore

(09:26) hold the properties of Quant and are therefore given the phase of Quant yeah hello yeah sorry I'm I'm listening I was just can you see the screen right now I'm not sure I I shared because I think is this the example you were talking about from yesterday yesk matter myself disappearing through me oh it probably confused you for a second yeah so what we've discovered here is that essentially a neutron star is a super sized atom Okay so okay what's going on well basically what's going on is material

(10:03) has been compressed down to such a degree that the the electrons within the actual material of the the actual neutron star can't sit there okay they get extended and by having that extended electron cloud essentially emulates the properties of Quant therefore the universe considers our neutron star even though it's the size of a neutron star Quant so things essentially can be considered Quant if they hold the properties of Quant no matter what their scale I call this thing Dynamic behaviorism in that properties denote the behavioral outcome

(10:41) independently of scale yeah so with respect to neutron star then are you saying that the neutron star can uh teleport move at the speed of light or what what kind of properties are we going to be able to see from uh an object like a neutron star that appears to achieve the properties of quantum here we're talking about like just the pressure is causing the the atoms and uh or the uh neutrons and the protons to I don't know maybe even coales into this Quark matter I think is how it was described um which then allows the whole

(11:10) object to act like an atom you know what what kind of things can we see from that that can prove that to us to prove this unification of very large objects to small objects well we can test that spin rate for example and that correlation to that Quant rate is Sigma okay we can look at the makeup of the neutron star and as we can see from the makeup of that pies that you provided that it it it checks out okay so we can see all these different different bits and pieces basically what we're looking at is we're

(11:43) looking at the behavior of the thing okay and the powers and the scales and the energies that are coming off of it and if we take those and we take and reduce them down to the quanti scale they correlate precisely okay so we can pretty much firmly guess okay that's definitely considered an atom okay by the universe so which provides some issues in that things can HW hiwin the universe essentially into considering them at the micro scale and with it the package that comes with it now when you are at that scale as such or considered

(12:19) that scale you no longer interact with the larger scale in the same way and there's a set different rules that apply to you as you pointed out the rules of Quant okay so certain things can hold superos we can imagine a black hole to be a neutron star in superposition not holding a physical state at all at that particular time because of its underlying Quantum information cannot come to determination of precisely what is there so in other words black hallway is where a neutron St can no longer be rendered within our

(12:58) universe that's really interesting because it seems like that would be the ultimate conclusion of the Quark matter situation right where you get so much pressure so much uh gravitational force there that it you know now causes us to have this uh I would you could even call a non-radiating barrier but you know you see the essentially the shell of the the black hole you know the uh Event Horizon right where we can't see anything past that anymore so it it does seem like it could be possible that a black hole is

(13:26) simply a neutron star and I think physics would say that it is potentially just a more dense more uh massive uh object one that caused that potential phase transition to happen and even a larger state so I think that that's the beauty I think of in my mind the physics that you've put forth is that it provides a underlying symmetry or you I guess for lack of a better term unification of things that are very small versus things that are very large so yes um someone sent me a tweet the other week actually um As Above So Below

(13:59) yeah and it is the case it is a geometric Unity essentially and that geometric Unity is achieved through conservational symmetry do you know where that statement comes from As Above So Below I've heard that so A lot of times curious is that a Biblical quote I I have no idea um someone sent it to me and then someone told me a colleague told me oh don't let them take you down there for God's sake and I said okay maybe someone in the chat can tell us uh yeah um the other thing I just want to quickly back up up again on is the when

(14:34) you were talking about the double slit experiment in time I I think that that's very interesting to me in terms of like the way we perceive times through our own initial frame of reference because now you can still adhere laws of physics but now you can have things like non-locality and quantum entanglement exist where it's like there's an underlying framework that we can't see because of our biology because of our frame of reference that can allow things to move faster Locked In The Box yes

(15:02) exactly yeah Locked In The Box is a good way to put it right um and there's a meme that's been going around recently that I really like a lot where it's the guy that like looks to the

side and looks straight ahead and when he's looking to the side you got the wave pattern and then when he's looking straight ahead then it breaks down to the double slits right um and so yeah I think that your idea and understanding of uh time D or dilation Theory uh seems to make a lot of sense to me um and just

(15:27) to reiterate and you can jump in here here you know for a lot of people to understand d uh time dilation is a real concept right so what we're talking about with frames of reference is it's already been proven for 50 years or more right yes long time long time yeah it's nothing new this is what it is um I'm not suggesting anything new I'm just asking that certain principles that we have adopted um over the last 80 years that being conservation should be applied to time yeah and that time is

(15:57) can be described as an Tropic emergent phenomena essentially that comes from all things within the cosmos even if they hold no physicality at all there's still some determination of what's going on so therefore there is some form of change and there for time see what I mean so where we have nothing in the universe for example nothing at all then we get expansion of the universe and where we have that slowing of time at all we have a compression of the universe essentially so these two things are you see what I mean do you think

(16:35) that explains Dark Energy I we're skipping ahead yes one could consider dark energy to be essentially the canvas of our reality okay it's bubbling up as as a almost like a Deport as it were a Deport determination a null determination as it were um it's it's quite it's quite difficult to get head around but if we look at dark matter for example if we now okay the thing the problem with dark matter is that we cannot equate for certain forces of gravity that we see within galaxies okay according to the

(17:12) amount of mass that's there so that's why we call it dark it's something there that we can't touch we can't see but it's causing this gravity where the big problem was that they never knew actually what was the cause of gravity but if we actually now that down now and say okay if we put it into an abstract form let's say okay here's my abstract complexities of quantum information determination denote On's dilation and dilation stress on that fluid symmetry of emergent time

(17:41) denotes gravity okay so the dilation stress the slowing of time Powers the inertia of gravity so what is that dark matter well essentially that dark matter is now an unqualified form of dilation so what we should be looking for is something that's slowing time what possibly could be slowing time well let's take for example the start of a galaxy in its life cycle it's a hydrogen Cloud a nebula okay let's take its particular dilation rate of time we know that particular dilation rate of time of particular Quantum is like our

(18:21) neutron star very very FAS MH okay needs to get slowed down as it were so that gravity starts to take effect we need some dilation okay more complex forms of energies are created in this Stell evolutionary process that matter now that's still that hydrogen is same stuff but it's now transformed okay it's transformed into more and more and more and more complex forms

of matter is that Galaxy's dilation rate going to be exactly the same as that nebula Cloud even though it's exactly the same

(18:57) mass no of course it's not the complexities of the determination denote the dilation okay so things are getting more and more complex they're taking longer and longer and longer to determine in time okay that gives you your missing Factor also a Galaxy should come to at some point life okay well a Galaxy's audience could also be that missing Factor of unqualified dilation so you would say there lots of unknowns you see what I mean so complexity to look at yeah once we start to look at gravity and time and its

(19:41) relationship between that and energies okay and knowing you know resolving that issue then it resolves not just gravity but all of the issues and it really lays it out in a much more common sense way you can perceive things you don't need a degree you don't need a PhD you just need Common Sense yeah and I was watching a presentation which I want to get into with you in a few minutes but um it pointed out that if you were to just take uh from a Quantum level to try to understand and graph uh how information gets more complex you could

(20:16) look at like a string where the string is getting longer and longer and longer and longer and longer and then the idea there is somewhat the same which is as things get more complex the string just keeps getting longer keeps growing and that could be you could uh analogize that to the inertia right you're getting more and more inertia which is slowing things down which is making things more complex so that's why one of the questions I wanted to ask you is what do you think dark matter is but I think you

(20:40) just went ahead and answered it for us is you know complexity is is the answer right is that you think that's a growth of complexity of whatever Mass you have in SpaceTime right is that is that summing it up Point well it points to it goes back again to the double slit in the it points to the universe be to being stochastic and deterministic rather than probabilistic okay that's what it means it means that there's something else going on under the hood a process whereby a determination it's passed

(21:13) beyond the Paradigm as it were of emergence then is returned and according to how long that took to return that denotes one stallation okay so I call this underlying modor supper Andi Dynamic behaviorism okay in that that basically essentially is all defined in internal Dynamic moment that now okay and your properties denote the particular outcome for you okay and that ultimately um is a form of conservation of well in that it denotes what conservational symmetri should be applied to you in time so this thing can

(21:52) look backwards and forwards in time to determine what it should do for the now to give a more conserved outcome perhaps even in the future yeah and that is explained in experiment right this thing happens outside of our emergent time yeah so in other words there are more layers of emergent time that we have yet to discover aha there you go that's great I love that I wish I had a snow globe right now cuz that's I always think of it like the snow globe scenario where it's like you can shake the snow

(22:27) globe you can watch it go but that's not our time on the outside right it's something else like a mini universe that's going on there um and and to me what you're saying means that there's I'm just going to call it the Matrix I just love the idea of the Matrix right there's an underlying Matrix in which our reality is being projected onto right because that's the only way you can explain how you'd have this a capability to look backwards and forward in time um would you kind of agree that

(22:54) there must be this must imply some sort of construct to our universe yes the double slit experiment itself as I've been saying that form of of dynamic behaviorism um points to if if you are a software developer um you're painting an area of a screen you need to determine what's there by the properties of what the the viewer is looking at properties denote the outcome got it's a holographic paint event the now is a holographic paint event and it is dynamic and I'm not sure if it can be overload

(23:29) H when you say overloaded what do you mean um in terms of uh you know adding more parameters perhaps interesting yeah it does make me wonder if you could hack into the underlying code right if you think of it from like a computer program standpoint neutron stars yeah neutron stars doing just that and so are our friends yeah and we're going to talk about that in in a minute as well before we get to that though I want to stick with a little bit more scientific uh stuff as well so one thing I want to ask you is do you believe in string theory

(24:00) so one thing you mentioned is I hadn't actually heard this that you mentioned in terms of like uh I like to think of as the universe is able to look backwards and forwards and figure out what it should do right and that's definitely what we're seeing the double slit experiment so do you think this supports the idea of string theory or what's your idea your concept or understanding of string theory String Theory fits in there okay I'm not going to destroy every Swampy's dream okay which is a nickname we give

(24:24) for people who work his string um it's not an insult okay yeah um but basically yeah string free fits in there somewhere in that that determination has to change what's there okay so even when that determination done the universe has to perform that actual action of saying okay draw you render you as so now that yeah string Fury comes in so one could say that that's the communication medium between the dynamic Behavior mode of Sanda and the fabric of reality itself abstract okay but what about yeah so

(25:08) that's where the the the fields come in essentially the fields are that manipulation process at work okay but my stuff is more of what's going on behind the hood as it were be you know under the hood and um projecting that as it were understanding gravity more um and and this this geometric Unity that's uh obviously there I mean to be honest with you I'll be totally honest with you I don't want to be egotistic but all this is pretty much Charles bre for me um I've been I've been doing this for

(25:45) like since 1997 I actually put the first thing together so I've been shouting at doors for years and years and years and years and every single result that comes out Ashton it's like bang

more Sigma bang more Sigma and they're still going no we're not listening we're not listening we're still hunting for this over here and and don't matter and no we're sure gravity is like this and they're still going fail fail fail fail yeah you know but it is it really is it's a lot of it's really basic stuff

(26:15) basic relativistic fluid dynamics and laws of conservation and yet it's just ignored it's just stupid sorry it is yeah no I think we can talk about that for a second too because I was just posting yesterday um and I was digging into this investigation and I found this guy Maas Chang and I found this quote from this uh interview he did which was really good where he says that people were asking him what do you think happened what what do you think is going to happen with regards to this plane investigation he says well people are so

(26:42) brainwashed and conditioned by what they get told and people that are the authority that they're willing to believe just at face value whatever someone says in terms of they give them a story from the authority people believe it and that's what I've come to realize and I think that stuff like you mentioned um threatens the Paradigm but isn't that what science has always been it's science is not a process of gradual Improvement what it is is people break through the barrier right and they set a

(27:09) new paradigm and then people adjust that's been my view I don't know what your thought is um it's been going on since Galileo kernus Einstein you name it Newton Darwin you you name every single breakthrough in human understanding has been kicked and pushed into the gutter and you know the person has been kicked and pushed into the gutter as well you know that sort of stuff because there is an an Orthodoxy as it were it that is entrenched with its own interest true um now if I mean I know I'm right okay I it might my you

(27:49) know I'm not alone anymore I've got one of the world's leading mathematicians to go through this in the last two years and go look you're right you know and he's done all the math and the equations and everything else and you can probably see but a am of world's leading physicists that now follow me that you know they know they smell something's right blood in the water they'd say something something feeding time well I say to them don't bloody argue because I'm using their argument

(28:19) against them because we present the invariance and all the data and everything to them we say don't argue calculate and just go with the flow baby yeah that's good given the analogy of the stream I like it um I want to go back real quick to the dark energy stuff because I think that's really interesting that's something I had never considered as well which is that you know the way that uh conventional Academia explains the universe says there's this big bang which let's just go with it for now I'm not sure I 100%

(28:47) agree but the thing about it is that they say that the Universe would have had to expand faster than the speed of light right and this also kind of comes into play when we start talking about Quantum teleport ation right and and talk about super luminal speeds well if you have if you think of the M underly Matrix with nothing projected on it there you have exactly zero

inertia right so now you are going to have super luminal speeds are now possible right and now that could explain Dark Energy how you get this expansion of the

(29:17) universe faster than the speed of light so that's a new uh thing that I've just kind of uh epiphanized on based on our conversation just now so uh do you have any comments on that yes how many systems you're a programmer developer how many systems have you mounted and started an instance off watched it mem CPU yeah quite a lot I've been on a lot of sites across the country go ahead don't mount mount something very very juicy and then kick it into run but as you're mounting it look at the actual

(29:46) pressures and the loads on the CPU and all the memory and all the Heat and the temperature that's being kicked out by your system measure it all in grass and then align that graph to the expand fs and the other bits that were happening within our universe and when we'll find a correlation that's a good idea I didn't even really think about that but yeah I mean in things of like yeah bringing on a new computer system you know watching the power use increase over time get more and more complex you could say that

(30:14) there's this pretty strong analogy to what you know our universe is and even the fact that we even have computers and you can describe everything in ones in zeros almost makes me wonder is that already us hacking into the underlying framework of what our Matrix reality really is so who knows who knows um well we know that you know if we take my my theory we say that time is an emergent entropic phenomena then it's emerging from somewhere okay now my my ideas are that it emerges from what we could we

(30:46) would use analogies as in within the development world as as parental domain for example so that parental domain are emergent contextual Duality emerges of okay okay we could call that parental uh domain the domain of quantum information okay but ultimately I believe there's a methodology at work I that Dynamic behaviorism that modus underlying modus operandi is it look says to me I am a behavioral governed methodology okay the the the similarities are just far too strong okay so one could look at that one could

(31:27) also so usales of a virtual abstract terminologies when looking at our Duality for example our virtual side of magnetism and so on and the abstract side electricity so mean that Duality as it were we are for example abstract that's interesting uh Dave Rossy was just talking about the duality of magnetism electricity yesterday on our space uh giv the analogy of the male and the female one thing I want to ask you real quick on would you say am I defining Dynamic behaviorism correctly when I would say that it's essentially going

(32:07) back to Double SL experiment how the universe is able to look backwards and forwards and determine what should happen is that would that be a good way of describing it yes it is the underlying Moda suppanidi of our abstract reality it governs conservation um which is everything essentially um even time absolutely everything in the universe is governed by conservation even this Dynamic behaviorism so conservation comes from a higher contextuality see what I mean Ashton it has it has parental it has precedence as

(32:44) such in the order yeah it's like so it's coming from much higher it's like if you have a hierarchy of rules right and it's like okay that's the hierarchy the top hierarchy of the rules right it's you got it it's the top constraint H interesting so one yeah and therefore one could in basically Enis therefore that the um and I think um who was it incredibly Gerald T um put out publication a year ago after I went public um proposing almost exactly the same in the the laws of physics are

(33:20) essentially uh an inheritance of those constraints as it were up the scales okay okay so yeah we can we can answer all all the all the problems of where all the laws how that's all coming through and so on and all those bits and pieces but it's like um going back to the point you were make what was the point you were making about remind me if you can I always do this no I think that that was that was pretty much it it was just the idea of this construct and then these rules that we have on top of it

(33:49) and understanding what dyn dynamic behaviorism parental domain I was I was talking about the parental contextual domain yeah um now is that the ultimate contextuality perhaps not you know um where does it stop I don't know um so if we think about okay the three dimensions okay and then we talk about the dimension of the gauge of time we've got four dimensions anything else from that we shouldn't really be looking at it as dimensional yeah we should be looking at it as contextual okay as a form of

(34:23) contextuality okay so we exist in as we know already uh we exist in a few different contextuality you're abstract I'm abstract okay there's also a fluid quum side to us we know that we exist as well as Quantum okay we know what those properties are now we understand it all about that you know that very cold thing but that's part of you and it's not harming you is it so um we we have much to learn about this other side to our contextuality okay um that other side of that contextuality to us doesn't hold a

(35:02) physicality I like that understanding because I've always struggled with this idea of like five six seven 8 nine 10 Dimensions right I think it needs to be simplified down where it's like okay we've got the three dimensions that we see our three axis right I can explain this right three axis and then you've got the fourth one which we can understand as time because we understand time dilation is a real thing right and we understand frames of reference but beyond I like the idea the rest of it's

(35:28) contextual right it's like trying to understand how we all relate to one another doesn't mean there's necess another dimension that's there just means that there's more Properties or more underlying behaviors that we don't quite understand related to the dimensions that we do uh experience it's just different forms of contextuality of the same thing that's where you have the geometric unit and it's that conservational nature of the universe that's providing all that for

(35:55) us and if I I mean yeah yeah if I could opine just for a second too I think that my mind's already starting to get blown from this but I am starting to think that there's a relationship between engineering and physics itself where you need to understand the rules right the

dynamic behaviorism the upper bounds of what those rules are and the hierarchy of them in order for engineering to be able to know how to produce the effects that you want to be able to create right and once you have that relationship then

(36:22) once they kind of mesh now you can I would say perform magic essentially L gry hot please and I don't know if we're talking about Star Trek replicators but um you know why not honestly why not at this point if you can manipulate matter to that degree and you can actually manipulate the quantum information side of the contextuality we could potentially say oh don't render me here render me there and that's what we've been seeing happen with quantum teleportation they just teleported a picture a full picture was teleported I

(36:57) think just last week where I think it's amazing that science is starting to catch up with you know us you and uh you know and the investigation we've been putting in yeah and you know like you said it's been 30 years right and yeah yeah 1997 nearly 30 years yeah 253 years and and you know every day I think that we get more and more evidence that uh you know begins to show that no these types of Concepts aren't just you know crazy theories they're just stuff that actually explains reality better than

(37:26) conventional understanding right yes they it really does and it does so very very simply and one doesn't require a degree just common sense yeah okay that's we so one thing I the next thing I want to kind to go to which is similar to what we've been talking about is uh are you familiar with um Susskind and Malina by any chance ER equals e um no okay no I don't I'm going to get you speed yeah this is Newtonian physics essentially and and spring and field you know the field is and so on most of it been washed

(38:02) away so here's what their theories are they've had this Theory called ER equals epr and what it essentially means is general relativity is equal to Quantum Mechanics uh and this uh and actually before I get to this uh I just want to ask you a pretty simple question and you can answer however you want is do you think that we already have unification theories of quantum and macro uh or yeah and and would you say that your the of time of dilation theory is one of those theories or if not what would you

(38:31) consider to be one of those theories that unifies Quantum and macro to be um Dynamic behaviorism is the unifier dilation theory is the um explains the cosmos of what we see and gravity and the structure of the largest scale whereas Dynamic behaviorism covers the other side of the veil that across the Paradigm as it um so you have have to put them together to unify the cosmos one has to answer all phenomena in the universe not just that what we know and understand now yeah okay so um it sounds like yes saying you're

(39:12) saying yes and so just to reiterate and just to it requires two sides to the coin as it were to be to be sold rather than just the one yeah and go ahead yeah yeah and so that's where the ER equals epr is and just to correct uh something I said before is that I don't think we would describe as Newtonian physics it's more of Einstein uh Rosen physics now ER is Einstein Rosen and what we're talking about there is wormholes uh like a bridge in general relativity um some

people have argue that black holes might

(39:44) have either another black hole on the other side or white hole however you want to think of it but you can think of a underlying bridge in The Matrix right where you can break through and take a shortcut right it's like you find a little shortcut and then EP R is Einstein pki uh Rosen which is uh quantum entanglement spooky action at a distance right and so what susine and maldicen have argued is well these concepts are fundamentally related now quantum entanglement you know what you're talking about Dynamic behaviorism

(40:15) right is it's taking a shortcut it's finding that underlying way through the Matrix same way as the Wormhole analogy is and so what they argue is that there is no difference between the two it's really just a matter of perspective and size similar to what you would argue with respect to your properties that are out there um yes and so when we already have stuff like Quantum we have quantum entanglement we have quantum teleportation literally teleporting pictures right it makes me wonder if perhaps it's just a matter of our

(40:43) perspective is that we're not going to see a wormhole like when we look out there right we're just going to see maybe even just the mouth of it maybe even not that much and it's not like it has to be something that's sitting out there it's not since I think tell you like Star Trek Star Trek Deep Space 9 where this big Wormhole thing appears and you're looking inside of it right that's not really what's going to end up happening right because when we look at quantum teleportation it's not something

(41:06) where like we can see through the whole of where this information is teleporting it's just that there's this underlying framework that we can't see right that's able to do that now what are your thoughts in general about that theory and that unification sure okay well as I expressed the unification comes from the geometric conservational symmetries okay so that explains all the UN if in of of of the scales okay in that um basically the prop the rule of that it's basically a new law the first law okay in that the

(41:36) our properties denote our behavioral outcome those behaviors are the states of matter for example okay like the Bose Einstein coners said that's one of those bace states of matter water as a fluid is as a gas is as Isis and so on so these are not things that we don't understand we don't know about it's just that we different termin technologies okay um now worm hols um yes potentially okay as I said if you can manipulate the contextual domain of quantum information but it's not in the same way you see because this is where

(42:14) they got all relativity wrong Ashton okay in that that underlying thing of the energy tensor is it's right it's right okay but there's more to it as it in that the more entropy energy one has the more dilation one has okay so it's the dilation that's causing the inertia the slowing of time so it's time is the big factor not light not the mass okay but the time okay so if we and and those and going back to the Wormhole thing okay um because we've corrected all of that misunderstanding majority of what

(42:56) they're saying no longer applies so here's an interesting thought on that real quick yeah we have to rethink the whole scenario so let's think of it in that contextuality way can we achieve it okay can we go from point to point within the universe if you could for example amend your Quantum information to say I'm not where I am but I am somewhere else and I need to look after the consequences of the void that I leave behind me and all relevant impacting information and do exactly the same the other side

(43:29) the other end and I can do all that in that now then no problem but I doubt that will ever be the case well so it's funny because that's what uh saskin and Melena actually argue and it's interesting when you watch their presentations about it because the one limitation that seems to hold back macro scale teleportation through a wormhole is mass and they say that you would need the mass because the Mass is like your say it's like your butt trying to get through the doorway and you can't you can't quite fit

(43:59) through right so we can see it works on the quantum level but if we reduce the mass to zero then the equations seem to work out where now you can have a macro object right yeah now that I think is what would allow those unification and then at that point you're just saying I'm just allowing quantum teleportation of a macro object because I reduce the mass to allow it to obtain the properties of quantum right you got it so yes so potentially not as our form as we are in this but in that potential State as it

(44:31) were holding that Z you know Quantum like State okay phase potentially yes very much so using entanglements that's sort of thing you know to of where we are but we we've got to make sure that the outcomes are more heavily weighted that we're over there rather than where we were yeah you me it's like that it's that deterministic process needs to be ticked and the conservation rule needs to be ticked if it's more conserved to do it this way than the other the universe might say it all right fine yeah well so **I want you**

(45:10) to hear this part then too because this really weird I'm have to send you these presentations later because the one part that I was trying to get my head around is they throw someone into the Wormhole and then they take a measurement on the side where they threw somebody into the Wormhole and this closes off that side of the Wormhole then they throw the information over the other side you can think of it as phoning somebody on the other side and when the other side looks at that information that shoots the person out

(45:36) from that side of the Wormhole and I've been trying to wrap my brain around that but it's almost like what you just mentioned in terms of like this level of symmetry where you have to say you have to close the gap on whatever happened on the one side and now allow them to reappear on the other side without you know breaking causality or what have you I still haven't really fully grasped it but um I think there's something there yeah I don't think so mate honestly I don't think it will ever ever ever be

(46:03) possible and we don't particularly need it to be possible because we have Alternatives okay um let's take that in zero nursing State yeah you are now let's let's close our minds you

know open our minds a bit and say okay we're now considered quanta we have a much much faster relative rate of time we don't hold any physicality as such anymore um what else what we're very very cold um what other attributes would we have okay we'd hold zero inertia state so the gistics essentially of the Itis

(46:39) of space time and no longer applicable to us of the largest scales we now follow the rules of quantum okay now as Quantum with that is zero inertia state if for example we were to we know now that any form of entropy I slowing of of time okay creates that inertia that passive transfers to the inertia of gravity so we can now use that for our benefit we hold a zero inertia State any directed entropy in any particular direction will create that inertia and tug us through the universe but pulling the universe towards us essentially we

(47:17) do not move we hold no motion at all H yeah so okay keep going we know that yeah we know that black holes essentially light cannot Escape them why because the black hole is essentially consuming the universe the cosmos as it were faster than the speed of light could travel through it okay so this method of of modus is essentially there is no speed limit yeah and we can speed time up enormously okay so you know speed time and distance time is variable of that equation you speed up the time as it were you shorten your your journey

(47:57) massively okay so yeah it's that sort of stuff yeah so it's we don't need wormholes yeah we can already go anywhere at any rate of speed and so how do we without motion yeah and so yeah that's the part too I'm trying to understand with the without motion part because so what would your thoughts be on the alberry drive right where the alabar drive great idea says yeah absolute winning idea so I'll just do a quick explanation for people who may not be familiar but alabar drive is essentially the concept behind Star Trek

(48:33) warp travel and the big issue when moving at very high speeds is that you have friction you have uh this uh capability where the people inside are going to get liquefied essentially from the uh kind of the effects of moving at a very high speed so what you need is a bubble around the object in SpaceTime which can allow therefore be a different frame of reference on the inside versus outside and once you achieve that you know it sounds like we achieved kind of what you were talking about where we can have zero mass and now this object can

(49:03) move at warp speed if we want to call it whatever speed you want so how do you what are your thoughts on that how do you think we would achieve this alary bubble in order to allow for this zero mass and therefore increase uh local uh speed essentially that you're talking about well that that zero inertia state that mass reduction Tri essentially by the manipulation of time essenti and one's relative rate of time um produces that mass reduction effect so uh like I was saying we can use that to our advantage as well in that we can create

(49:41) directed entrophy to you know shrink SpaceTime essentially in front of us so we're shrinking you see what I mean we're not actually moving we're manipulating the lce essentially okay so we're doing that that's achieving that particular aspect of that puzzle um Jacka Drive is the same thing essentially that entropy is slowing time and that's why he and he spinning up time

at the other end of him so he's getting double the whack as it were a pull and a push you see what I mean yes so you

(50:11) would say you would be contracting SpaceTime in front of you and expanding it behind you is that what your understanding would be yes exactly that yeah interesting that's all you need to do basically if you have say say we had like an egg or anything else if we were to just have an egg in free space okay if one side of our egg had a slower relative rate of time than the other side of our egg it would potentially yeah for its own motion yeah so that's and if were to maintain that  $\Delta t$  that difference then it

(50:49) would maintain that inertia and potentially just go on and on faster and faster and faster and faster and faster f just never end if you did the opposite would it just slowed down then what are your thoughts if you fli around would just well you would essentially just stop but remember we're not emotion so now now you can see our friends how they now do their that's million miles hour and yes weird I never thought about backwards cuz like now you could have something stop in a super position almost it feels

(51:25) like right like freeze in time that would be very weird well they would push up the in if they would yeah oh he's still there uh oh I think we might have lost Roy so I think I'm just going to riff real quick while we see if uh Roy can reconnect here but um oh there you are you're back can you hear me okay we lost you for a second I heard you through there I don't know what happened oh okay good yeah so just to reiterate that real quick I think that so if we think about the alabar drive if we think about

(52:03) Contracting space in front of us and expanding it behind us this is going to lead us to be able to achieve faster and faster let's say outside frames of reference speeds of whatever is happening there um within the let's call it craft or bubble or whatever but then if we reverse it then it's going to slow things down more and more and more and more until you potentially get to a point where you're Frozen in Time as if you were to approach The Event Horizon of black hole right um correct so there's a couple that's a whole another

(52:30) aspect of it that I hadn't even considered but I love the idea of symmetry and yin and yang and you know you can do the you know opposite of things are always possible so um I appreciate the understanding there on that side of it but now that you mentioned uh our friends uh I think we're talking about the UAP phenomenon I wanted to get your thoughts on some of that uh because I do have a lot of people and viewers who are interested in it you know my personal opinion is that um I I think that there's life out there

(52:58) uh probably everywhere is my uh personal belief um whether or not their beings visiting us isn't really that important in terms of my daily life in terms of what I accom what happens to me the technology is what's exciting is that that there's this whole branch of Technology out there I think that we're basically cavemen who just figured out how fire works and then we're sitting there thinking oh we figured it all out we've got fire right and it's like well you've got a long way to go so uh but I

(53:27) do I do find it still fascinating the idea of non-human intelligence what's going on out there so um go ahead and let me know what's your thoughts on it what's your interest in the in the phenomenon and anything else you want to discuss well sing is believing as I say isn't it it's all in the proof of the pudding um I was 13 years old um I was having a family Barbecue with all my family on my 13th birthday I've been at the nagc for quite a few years by that time I was dealing with quite heavy

(53:58) levels of physics already what I saw I pointed out we live near heo airport so you I've mentioned this in my video um you know I'm well used to seeing aircraft I know exactly what an aircraft looks like you I know exactly where they stack where they don't where the helicopters coming what trajectories and what roots and flight paths that everything uses um this thing essentially did not um have the usual attributes of an aircraft in that it had uh a permanent light source um that was orange orange

(54:30) in color orangey glowing red in color um that sort of pulsed more prly in a repeating pattern um so um that caught my attention because it was different um me being you know instant what are you mode you know that sort of inquisitive kid so I'm then asking the smart guy in my family my Uncle Dennis what's that Uncle Dan and he's saying that's interesting you know the usual sorts of thing won't put his finger on it and then you know more and more people's attention are being drawn to this thing

(55:09) as we're discussing it and um as we were this thing left our atmosphere in under a second uh from a standstill position um above about 40 foot above the the skyline of the housing that was about half a mile away so I within three minutes I said to myself that's impossible knowing the laws I know the only way logical possible that that can do that is it holds a relative faster rate of time I'm 13 and I know already that they hold past relative rate of time that started the pursuit of of my understanding about what the attributes

(55:50) of time really were and that that enlightened me that moment enlightened me as it were and then I started pursuing the attributes of time and looking for things in nature that would guide me in that way and I found them in consulation and symmetry um so that then led to dilation Theory but it actually began when I was 13 years old on that evening yeah and It's Tricky too right time is because we're all on the same earth right and we're on the surface and it's a sphere so we are all theoretically experiencing time at a

(56:21) very very similar rate almost indistinguishable from one another right so that's the trick of time dilation why we don't see it now for me I wish I was only 13 years old when I had such an epiphany it was actually for me it wasn't until I watched the movie Interstellar where I realized like wait a minute what time dilation is real and then I Google it because I didn't believe I just thought there's no way and so you know it's been a rapid understanding for me on that front what are your thoughts then do you believe

(56:47) that there are other uh non-human intelligence beings visiting us what what's your favorite Theory when it comes to non-human intelligence where do you think they're from the

cap well as we've explored it the capability to be coming from absolutely anywhere in the cosmos is now as uh it um this slaps Neil ideas you know who I'm talking about right out of the park oh yeah you know not a clue Neil grass Tyson yes what a guess what a guess yeah I'm not a big fan of his theories when it comes to

(57:20) non-human intelligence I feel like it's a very um close-minded approach right to the science well it classical physics I'm afraid tied to classical physics must tied to you know to what he's you know produced all his career and his life and he must stick to it and and I you know salute his stoic attitude to um dead ideas yeah yeah so uh and I guess what you're saying there is and please correct me if I'm wrong is that once you get to a point where where you can have a zero inertia and super luminal speeds

(57:59) essentially quantum teleportation but of macroscale objects then the local frame of reference for the traveler um their time is they're not going to experience as much time as it takes to you know come here from a thousand light years away it's not going to feel like a thousand years for them right they can achieve they can come here basically instantly right so well you would this is the thing you would only need that very fast or relative rate of time if you had something you to negate the gravity off ah yeah okay so if you're

(58:29) passing through a solar system planets and things like that turn on the phase we need to be independent of these guys all black holes or whatever it would give you complete independence from everything there would be no inertia upon you from anything you're the fastest guy in town okay right so you only need that one and the baggage that comes with that would be an incredible age essentially if you were to maintain that yeah so that's the problem there's a hanger aging okay so you know you would rapidly age in that type of Bas State um

(59:05) in that um I mean if I don't know perhaps you don't age when you are the phas of quter yeah I guess we don't know you see what I mean there's lots and lots and lots of things here that we need to test um look at what's going to happen see what the outcomes are there's lots and lots of things that need to be played with us before we even play with this I do not recommend anybody playing with a phas of Quant in their um whatever okay don't play with this stuff do not play with Dynamic behavior in any way

(59:37) possible at all it is extraordinarily dangerous okay your mom will be tidying you up with a mop okay yeah what do you think the implications are of this type of technology I think that's probably a good thing to jump into next um well we're going to have to face the implications of the technology are ontological yeah okay certain aspects of this are ontological I won't go into that you know now unless ask but it it's it's it's a tight Road we're going to have to walk like with anything like

(1:00:08) with the gun like with the bow like with fire like with the wheel like with the aircraft like with any development of humanity we will have to deal with the implications of the change okay now one of the changes is massive benefits to us as resource in that we are no longer limited to any resource why are we fighting what about space well we can go anywhere what

what are we fighting for sorry we've got bigger problems to deal with and one of them is our dogmatic tribalism it's got to end folks okay because if we go we've got to go

(1:00:51) together okay that's the rule okay one rule that I figured out that's the rule you must go together they will not put up with us being feral out there okay end off now if it is a construct a holographic construct as such what are nuclear fion doing what is it doing what are nuclear bombs doing they're reversing the natural order process of the universe by ripping everything apart rather than things getting more and more entropy more complex okay what's going to happen to the underlying Quantum information there

(1:01:31) or the residing data where that's it's all what it's related to you don't know stop playing with this okay that's the point they have no idea what they're playing with at all this is how changes everything Ashton absolutely changes everything agree what would you as a developer if you say you were responsible for this particular construct let them piss with it right that no no from database uh AR architect standpoint you never want anyone meddling in your uh in your sandbox so to speak right you don't want anyone

(1:02:09) pissing with your baby yeah no that's definitely true what do you do you think just going back to the UAP phenomenon real quick of these uh UFOs we're seeing out there I'm just going to call them what they are you know what percentage would you think are potentially man-made at this point Point versus ones that are of un other origin Unknown Origin and I think that this is more of a question of knowing how long this physics may have been out there I mean you're talking about it 30 years ago almost right like

(1:02:37) do you think that what what would your thoughts be on the ratio there and doesn't have to be exact just curious of your thoughts in general I think the morphology is the giveaway okay the morphology tells you the actual levels of the technology when you ultimately realize what it all is and how it all hangs together and everything you realize that those those conservational geometric symmetries essentially are at work there and that if you can emulate quanta perhaps we can emulate other forms of even smaller scale

(1:03:14) geometry okay so that tells you your morphology so is that essentially saying that it depends on what they look like in terms of yeah that tells you their technology okay level now I would say we were probably in the orb region yeah that's probably the simplest thing to do okay all the sorcery sort of stuff that's very easy to do um the cubes that's very difficult to do but once you get Cube Tech sort of level then you can go City tech level neutron star level see what I mean yeah it doesn't matter how big you get when

(1:03:56) you once you've got to that level and this is this is what it's showing this is confusing to me because I see the you know whatever and I hear the reports of different this crop looks like this this cop looks like this this has this morphology this has that and I'm thinking to myself why are they in sources anyway I mean you know if you figured this stuff out and you know that it's dyam that emulation as such is the thing then why would you even bother with the sorcer basic stuff you know which tells me they

(1:04:28) haven't fully figured it all out certain species and that we might actually have to jump on quite a few yeah so I think what you're saying there is the orbit sphere would be the easiest thing to make so potentially if we see spheres out there that would be probably the lowest form of technology that might be where we're at potentially if we're just hypothesizing right when you start to get more complex shapes like that's where it's like okay now you're really able to manipulate the

(1:04:53) effects of the very small level like very uh high levels of control of the quantum effects right on the macro skill level that's interesting because it makes me think about Star Trek again it's always going back to Star Trek for some reason with the Borg and their cubes right uh even though it's not really how it play out but it's it still like shows a level of just complete technological superiority right so yes it does um but like I said once you understand it or it makes you want Ponder like did they miss a trick

(1:05:25) yeah it's like or or is that the cheap budget version well that's what I I think about the the video game civilization a lot and the part about it I think of is there's this Tech Tree and like generally what happens is different people go to different parts down the tech tree and what this kind of is analogist to is this idea that just because a civilization is very advanced in one area doesn't mean they're going to be very advanced in all areas right and you could also look at our past civilizations on this planet and I think

(1:05:54) you could AR argue some of that as well is that some past civilizations may not have had computers but they still understand these Quantum effects at a level maybe even better than we do right now um and so I find that stuff very interesting as well is that that could explain why you might have uh being that are visiting us in a saucer even though it may not be the most efficient method of you know macroscopic Quantum uh you know entanglement or Quantum uh uh coherence but it's still a method where they can still you know achieve whatever

(1:06:23) they're trying to do to travel whatever distances they need to travel maybe they're only coming from Alpha senturi and that's satisfactory I don't know I'm just making it up they could be coming from even nearer they could be coming from say Europa yeah there you go yeah even within the solar system itself yeah or some uh you know T I mean or here these it's it's it's yeah it's really yeah or even here um who knows I mean best guess isn't it really until we actually get you know and ask them hi

(1:06:52) where you from chaps yeah you know it's that sort of stuff um but it's like um what was I going to say yeah I mean those those rules of properties denote the behavior don't just work for the cosmos they seem to apply everything even in nature so if we look at the attributes of them large eyes small that sounds like a Subterranean species to me properties Den know see what I mean the environments as it were and the environments denote the attributes of whatever it is okay so if we look at them and then look at okay

(1:07:33) what are the environmental things upon them then we can pretty much see what sort of where they're from and you know that sort of stuff I mean I think Gary Nolan should should

be digging down that down that one really rather than me um but it seems pretty obvious to me huge eyes well they live in a low light environment you know what I mean yeah just Evolution I mean right I mean it's the idea you adapt to your environment you know especially over long periods of time I mean we can see that even here however we've now got another

(1:08:06) problem which comes up to another issue which is that say they were using that phase all the way MH and that things rapidly age within that phase State unless you've actually mastered uh DNA replication process where your rate of time is no longer relevant to you yeah and you will live forever yeah like an octopi or whatever you know like some jellyfishes can do M um that sort of thing um or would you make them on route or when they're right yeah um some of the attributes of this require that I think to some degree that you require

(1:08:47) sentience okay now yeah Consciousness is linked in here A whole woo crowd out there are going to be raising their arms in again we love you okay yeah it does okay in that everything of that moment denotes the outcome even you what you're thinking okay all that sort of stuff your Consciousness now as I said before we deal with the universe in the way of contextual then one could consider Consciousness itself perhaps an emergent property and that we are therefore if it's a holographic construct as the the

(1:09:23) hypothesis this is looking like it is then you are Avatar I was about to say that okay so now we are all linked in that parental domain as it were and we are all here as Avatar yeah in the abstract your Consciousness out here right and that's in the Matrix somewhere else in the underlying framework and this is our physical body that we're connecting to it right yeah because we do not hold the correct context now he's now he's he developer heads turned on that one see what I mean it's all about one's contextuality and

(1:09:59) one's properties that any one moment so what you're saying there is that you could uh fly your object to another distant solar system without even maybe passengers in it could build the body when you arrive and have your Consciousness somehow Avatar your way into it right and now you so there might even be ways to get around this issue of uh your speeding up of your time uh kind of causing this Mass aging rapid aging to happen to you yes there are multiple opportunities now you see what I mean one thing leads to another it leaves more

(1:10:33) opportunities interesting but you've got to have a total grasp of the whole big picture really before you can even start to look at some of those probabilities or possibilities yeah I mean you were talking about B in all of the probabil are possibilities could there be B yeah no that's the answer to that one no because once you realize as I said what the cosmos is essentially and they will get to that point no matter who you are where you are in it yeah okay then you will understand fundamentally a lot more

(1:11:07) about it in what it is and what his purpose therefore is and what your purpose within it is in that it is of you and you are ultimately of it so you're saying that there would be a higher spiritual understanding as to more of a mechanical much more so much more so incredibly more so okay that's more sentient species of that perception level of perception would consider

everything holy yeah spiritual everything that's interesting it makes me think of uh the idea of Dharma and uh you know holding life to be sacred like

(1:11:49) the way that uh people in India hold cows to be sacred Etc it's like you ACH you achieve this uh Unity with the the planet itself and I think that's a very beautiful thought in general Unity with the cosmos essentially that's the point you would re reach that point now like I said it's some of the bits and pieces are ontological but some of it is ontological to the point of it's actually bloody good news for a lot of people yeah it really is okay now I've been an Atheist my whole life my head

(1:12:23) has been filled with physics and Science and everything else I ask anyone in my family what i' be saying about God forever okay so I'm not going to hold my hands up and and said that I believe in God but any construct requires a Constructor yeah that's the point any construct requires a Constructor and we do live in a construct we live in a contextual emergent uh contextual duality of geometric symmetries with within symmetries projected upon a gauge lattice as a holographic SpaceTime Continuum that is the

(1:13:02) cosmos now we know what the box is it's time to play yeah so on that front and this is I think one of the last questions I want to ask although it's going to bring it back to the dark side of this as well is what do you believe that this type of Technology I'll just throw this out there my understanding is that this is like a Pandora's box once you open up the world as technology it's not coming back in you're get in all of it you can't just pick in shoes you know this isn't Burger King You Can't customize it

(1:13:28) have it your way you've got to take everything and what that means in my mind is doomsday weapons the ability to destroy our whole planet becomes just simple not just a matter of dropping a bomb but like literally destroying the whole planet or destroying the Sun or maybe even our destroying our whole universe what what is your thoughts on that and how do you think Humanity has to be responsible to prevent that from happening exactly that we need to be very very very responsible okay now um we already have that capability we

(1:14:00) already harness antim if we were to allow the antimatter to collide as it were um to nothing that would remove our planet and half the solar system so we already have that capability without this technology to do that and real quick what is antimatter basically it's the other side of matter and how do we have that just because I people argue that we don't so I'm just curious yes we do have it um we have antihydrogen for example we use it at okay so we do hold it um but we only produce very very small micro amounts of

(1:14:37) it at a time and then release that and observe that so it's tiny tiny tiny amounts that we're actually producing and but we do so the capability of doing what you say is already there okay but we haven't done it why because we one loves their children yeah okay everyone wants a better world for their children even the **Russians** okay even the Chinese they want a better world for theirs and so on and so on and if we can come to a common agreement that okay let's live for our children and do this for them and for

(1:15:09) the future and I think we're all going to be in a good place okay and that if we set down some ground rules for example no militarization of this technology none okay this technology can be mitigated when one understands it completely asra I'm not going to go into those details sure but it can be mitigated okay we can stop them okay we can control them if we wanted to with a greater understanding of the technology okay so that mitigates all that oh is we're going to blow up the world with this and we can zoom

(1:15:48) things into things like that conit through matter exactly in that funny state and everything well yeah and no because you can mitigate against this technology as well just as much as you can create it that's good to know interesting to know I mean one thing too Dave R has mentioned is this ability to detect gravitational waves which could be a way where you can detect the use of this technology you know anywhere on the planet and jump in like that what is a gravitational wave now if we look at the dilation serious

(1:16:16) side of it what is a gravitational wave all that is is essentially a ripple of slow time in the symmetry of time MH okay so all you need to do is look for where and and what our friends are doing is that they're doing the other end of that they're not slowing time they are speeding up time so all we need to do is use interferometry in an array and see where time is being sped up y okay we can do that now so we can use these things to track them or or put up safeguards against them or whatever um or so any this obviously when it

(1:16:56) produces into a face tape um is another form of Simply electromagnetism anyway doesn't matter it still is the form of electromagnetism di magnetics reject di electromagnetism okay so diag magnetics can be a shield against them okay um also the properties of diag magnetics can help us create that state in that if you would have a close form of energy associated next to a DI magnetic and you were to put power to it the electrons traveling through that Medium would be rejected by the DI magnetic and become

(1:17:31) extended extended electrons are a property of quantum so it can act as a shield and it can also act as uh potentially a building tool building block or something yes yes where you can create it or reject it as it were using exactly the same material okay so it's extraordinary easy to make this stuff to be honest and the Technologies essentially the same as your um your refrigerator in that all you are doing is that you are uh getting preferential outcomes of behavior by changing one's potential properties which is exactly

(1:18:06) what we do in the refrigerator one of the most powerful diamagnetic elements is bismuth as well I think that one keeps coming back up time and time and time again in this uh phenomenon discussion liquid bisou is 500 fold by the way really than its solid property so again symmetries different things in different symmetries give different relative rates of time and give different strengths of its electromagnetic resonance ability so melting it down might be a a method that you could do to change its properties then yeah well heat it up

(1:18:40) it's it's it's melting point is very low it's even lower than lead interesting so you could have something you know like yeah so liquid form of of bismuth um and then have something

with a high linear um say strontium with like you know High electrons um so that the closer the electron is to nuclear the harder they are to knock off to extend okay the further they are away from the nucle center the easier they are to knock off to extent okay so you want materials that those High electrons that's how

(1:19:18) strontium is good one um Boron things like that um and then have that behind some sort of um D magnetic pump some power through it say um even copper or magnesium something you know something really cool that can um you know you put round in those particular shapes that you need as we see in the aircraft the particular orbits yeah of the electrons as it were um so yeah that goes back to your flight in that um basically what that's showing is a transitional phas yeah in that the orbs are emulating the behavior of quanta

(1:19:54) um because they already hold that superc conductive State and are already considered by the universe therefore qu right okay so it gets into a pattern oh we've got nuclei we've now got electrons orbiting oh Quantum transitional phase okay that incredible speed rate of time instantly the cold environment and so on it looks like teleportation but essentially what this thing has just done is shot up an incredible R speed that way in eye or the camera can so yeah you'd only have to need it on for like second and you'd be three

(1:20:30) four 500 miles that way yeah that's awesome yeah and just for people not following along we're talking about the MH370 videos we're talking about the orbs traversing around the plane and the plane just disappearing straight from SpaceTime with this endothermic event this absorption of energy that we see there I think that a lot of people have their own opinions in terms of how to explain it and that's part of what is so exciting for me when I talk to physicists and Engineers is getting everyone's different theories and

(1:20:56) understandings of how it's it's happening and trying in my own mind to like mesh and reconcile them together so um you know I think that's neutron star essentially the neutron star article look at the other one the correlation with this SP the spin and the time and its rates and so on and pretty much you don't need a degree just like I said Common Sense really look at what you're looking at um examine that what properties of it what does that correlate to do we know anything about that yes does it then make sense yes

(1:21:30) gives you the answer awesome well thanks Roy um I think that's probably a good spot to end on this particular conversation do you want to go ahead and plug anything or anyone or you know thank anyone or whatever you want to do give you a few moments go ahead well obviously I'd like to fight uh thank my gifted uh colleague Martin Gibson who um goes under the account of Unis servant where dilation the in the math and all of the detail and all of that the physics side of the more serious side of it rather than my abstract musings as it

(1:22:01) were um is on his account the more visual side of it is on my account um and also I'd like to say that for any technical reference or any to do with the phenomena um people should be contacting Ted row okay because Ted is fully aware of um the modus um the abstract is one of the people that's actually seeing the nonpublic domain information okay so um if you do

want any I will pug T he's god mode without UAP okay any any such okay and um Ashton keep digging I I know that you're right and I thank you very much

(1:22:42) for your video because your video when it was brought to my attention proved Dynamic behaviorism is correct so thank you yeah no need to thank me it's the world's video to be honest with you and I hope that those videos end up bringing a greater truth and understanding of science to the entire world uh that's really my only objective out here is spread the truth well I'm I'm I'm pre anybody wants to ask me questions just send me down on X or Twitter or whatever is you want to I jump into rooms often

(1:23:12) and answer people's questions as well so I'm always accessible and and like I say it's been a long long time shouting at doors but they're opening yeah so is that the best way to find you on Twitter uh on social media yes it is it yes it really is I don't I don't use um any other form of social media I think few people created a few things for me but I never visit them at all um I'm usually on here because majority of all my colleagues and so on we we we you know we communicate through this yeah so you can

(1:23:41) be found uh Roy D Herbert on Twitter so go ahead and give uh Roy a follow out there he's got several thousand followers already and as he mentioned he's got some pretty prominent physicists who follow him as well so if you want to be on The Cutting Edge of science uh this is the man to follow right here okay guys well we're going to go ahead and close down uh hard TRS number five thank you all for watching today we appreciate it and thank you roy Herbert very much theoretical physicist for being here and teaching us about time

(1:24:09) dilation and dilation Theory have a good day guys

MH370x - Recap, Science, Satellites, and All Evidence Update 12/29/23 - YouTube

Transcript:

(00:18) what's up chat chilling switch it over hey what's up what's up everybody we're flexing we are flexing nothing on TV yeah yeah I was going through just finishing up uh editing down the ma the mathas uh yeah Maas Chang interview man that that interview is wild man he even mentions Ukraine at the end he mentions the family yeah probably getting Shadow banned on a lot of stuff okay so we're probably not going to stream too late tonight I'm pretty pretty damn tired be honest with you uh sound is maxed out sound is maxed

(01:20) out what did I say we' do recap new merch nah this is this has been out there for a while guys I've had this shirt for three months it's not mine either I bought it from somebody who was

spreading on [Reddit](#) back in August back in August thanks yeah got that haircut yesterday actually okay so let's do a quick recap of what's going on um there was a bunch of news articles that came out I did a analysis of those let's go ahead and just look through our Twitter here this will help us out so I

(01:59) don't remember I have never been asked yet I've never been recognized in public yet which is good considering how angry people have been made based on the case it's probably a good thing um okay so first thing tomorrow morning hard [truths](#) number five tomorrow morning if at least if you're in the US uh the reason is cuz royy is in uh he's in UK I think so we're trying to accommodate for his schedule we got it all ready to go got the zoom link ready to go after this I'm probably going to

(02:38) switch over to uh what's it called streamlabs after that after this most likely hard TRS number six will probably be with uh Timothy abirino and I'm going to probably try to get uh Jeremy rean as well at some point in the near future and I'm probably going to also try to do another followup with salvator pas part three I'd also like to do another one with Dave Rossy I mean if you guys checked out the Dave Rossy stream today it was pretty awesome it pretty awesome hey Amanda hey everybody else as

(03:13) well uh Mustafa thank you man appreciate it uh let's see what else we got going on here so the miles Chang stuff wow the miles Trang stuff this guy knows some stuff for sure so what I can say though is that he definitely does not know about tation he doesn't know exactly what happened to the plane uh no alt uh alt good night Joey I I didn't see that although I did get a book that came in today the one I bought from uh Bob greener's uh group matumoto steps to the discovery of the electr nuclear collapse CH Ching it is pretty funny cop

(04:10) tiger huh what a weird name this I there's so much stuff in this interview that's just mindblowing this interview with this guy is like the same level as the Prime Minister level or the uh Minister of Defense level just for different reasons like this guy's a smart dude and he ended up going to jail so one thing I was going to do is um there's another clip I want to show you guys think it's this one export in it real [Music] quick don't need headphones for this yeah I'll take some more requests uh

(05:05) later the end of this month it's been a lot man I'm going to also pick up doing some more other people's podcasts I've just stopped responding to requests because I needed a break for a little bit over the holidays just doing other people's podcasts and doing all this stuff is too much like I've been sleeping in so late because I can't I'm so tired here you go guys term be six months or a year or whatever you can come with any different answer all right because the public is such

(05:39) they've been so brainwashed not to question authority we give the benefit ad doubt to any government that comes up with a pronouncement okay that something so extraordinary will inly labeled as conspiracy theory mhm Ching chaing so we're going to make a post this is going to be the clip we're going to put in that post I love this he basically just defines CNN Brain

before like 10 years ago basically just defines it there's a weird part in this interview where he talks about the uh passengers maybe held

(06:23) prisoner for 10 years and talks about them being liberated 10 years later it's wild it's like he's talking of the future this is up there with the Mike Harris one man this guy's up there with the Mike Harris no one can tell me Mike Harris didn't know what something was going on where is that one I got to save this Mike Harris one somewhere better where I can find it easier here it is please do stay tuned in that way um we got a lot going on can I give you my best silly wild ass guest okay sure somehow somebody opened up an

(06:58) interdimensional portal and that plane went through it and and we don't know where it is or where it's going to come out at but it's somehow it's lost for the time being it will be found again fell in a hole okay all right well that would that that is weird man no this was yeah this was before he was jailed guys he was jailed the situation about him being jailed is super super weird man super weird okay let's we're going to make a quick post we're going to try to be uh efficient today where's my Mias Chang

(07:42) stuff Maas Chang is going to have to be like three or four posts he's got too much stuff going on man um this is weird dude okay let's go solve this is this the one do I have this one open here it is oh yeah we're taking that

(08:53) too I think we're just going to just post this I think we're just going to post this there's there's so much information on Mias Chang that we it's not even we can't even do it justice with one post do you guys realize I was talking to my parents at dinner because is it okay to say all this you think yeah think it's fine uh my dad lived in Singapore for over 20 years and I lived there for three years and so I was talking to him about Singapore and Malaysia and what have you and of course we remember uh prime

(09:35) minister Maher because he was prime minister for like from like the 80s to the early 2000s um so for a long time he's like 95 years old now and Malaysia was known for corruption but the Prime Minister after him uh Ragi or something I'm butchering the name that was the one that was in the 1 MDB Scandal the 1 MD B Scandal was also 2015 2016 the 1mdb my dad was talking to me about that he got a contract and he went to this bank and the bank was the one that actually had the \$700 million in the account in the

(10:13) prime minister's name pretty wild and I was like oh Dad um so have you ever heard of Matias Chang I'm like Matias Chang was representing one of the guys who was The Whistleblower in M1 MDB guys this article here where where is it this one Chang who had recently accompanied clear kudin I'm got kyuden overseas to Lodge police reports on one MDB you guys are you guys not familiar with one MDB this is like the biggest International uh emment scandal in the last like generation he was the lawyer for the guy

(11:07) who was The Whistleblower Chang was the lawyer for the guy who's The Whistleblower what's the date on this September 2015 when was 1 MDB like the guys the conspiracy is getting

pretty sketchy here now folks what is what's the the date exactly on 1mdb 2015 he was he was the lawyer let's see if we can check out this explainer yeah najib that was him naib Rak former prime minister 12year sentence it was was set up in 20 2009 didn't get discovered till what 2016 2018 when was it largest ever klepto uh klepto Cy

(12:13) klepto investigation 4.5 billion when did they catch him when did they catch him so he was replaced I think then by Maher again right I think that's how that played out when was when was it I want to know when it was revealed went unchallenged until 2015 so

(13:19) however let's let's look up one MDB I want to know if this guy how connected this guy was to the the investigation whoa [REDACTED] did he jump on afterwards this is wild man so just just to set the record straight on this he definitely does not know I mean he doesn't seem to know about the teleportation except for this quote that we have in here which is pretty weird it's like maybe he found out problem is I don't know when that interview happened exactly compared to

(14:22) like everything else wow wow wow okay um let's see what we got to go what do we got to go down here um Nico looks like he hangs around outside the chuckecheese after hours Jesus Jesus yeah it's not really appropriate but it's really funny okay let's okay take my shirt off

(15:31) um okay let's see no I don't think he's still in jail um let's link this I forgot to link

(16:41) that MB let see there's I think that's about it that one sucks where' it go for what was it launch a police probe

(18:27) for for h for

(20:27) for okay this seems pretty good this seems like a pretty good post this doesn't need cap okay I don't think we need this part this is

(21:53) wild this will TI us over till tomorrow when I can finish the the last of the clips I got some good ones I got Garcia clip I might have more as well hey everybody how's it going Banner Sandy ghost motorcycling Indo Wars nice to see you nice to see you GP how's it going everybody good to see you sorry it's not uh exciting enough for you guys um I think it's pretty exciting this is pretty legit to me just reread this I'm trying to be productive sorry I'm not following chat

(23:01) once or a year or whatever you can come with any different answer all right because the public is such we've been so brainwashed not to question authority we give the benefit doubt to any government that comes up with a pronouncement okay that something so extraordinary will inly I as conspiracy theory MH term B 6 months or year or whatever you can come with any different answer all right because the public is such we've been so brainwashed not to question that seems

(24:19) good CNN brain okay this is a good one guys this is a real good one make sure making mistakes here share this in the chat go nuts folks go nuts I want to pin this to my profile for now

so anyone who comes on can find this post we're getting deep into the conspiracy we definitely got stuff about remote controlling we got stuff about Diego Garcia in this interview I mean it's it's interview is uh spicy meatball spicy meatball okay only one like on this yikes guys yikes oh Ren Ren liked

(25:27) it one Aston live stream a day keeps the CNN brain away you got it you got it got no music going on in the background today keeping it keeping it chill yeah um Dave Rossy stuff today was really good still a little bit above me this is why I need to bring Dave Rossy with me on interviews hey Bernie yeah wait I think Happy New Year's is like a few days away still af5 dropping **truth** bombs yeah hit that like button folks maybe that make them uh unblock me I think I think I get the context update on every single one of my streams

(26:14) now yeah I mean he's probably got attorney uh client uh stuff that he can't say but from the from the interaction from the interview I've watched the whole thing at this point I'm not sure he know maybe this point whenever he wrote this he knew about the in teleportation cuz the fact that he sent this email to MH370 investigators is pretty weird this is weird typ yeah okay but at the point of this interview he didn't seem to know about teleportation I can just tell from the way he's talking he thought it he

(26:54) thought for sure it was remotely controlled but maybe he could have if he was like a really good liar but he seems like a guy who's being very honest about his opinions very honest so this is your CNN brain explained six months or a year or whatever you can come with any different answer all right because the public is such they've been so brainwashed not the question so brainwashed not to question anything does this sound familiar folks so brainwashed not to question anything folks sounds pretty familiar to

(27:34) me sounds like a lot of the **debunk**ers out there folks it was it was suicide Authority not to question authority sounds about right folks doubt to any government that comes up with a pronouncement okay anyone that comes up with a pronouncement like suicide Theory wild that something saw extraordinary will inly labeled as conspiracy theory MH wow that is uh wild I don't know he sent an email to investigators trying to give them a hint I mean his whole thing if you watch the thing about cop tiger earlier today

(28:18) man like there is so let's recap on what we've learned we need to add to our evidence list I'm going to take some notes that I'm going to put on to my evidence list here in a minute okay so cop tiger there was exercises already going on this is new information we thought that they exercise began in March they actually started February 11th and they were between USA Thailand and Singapore and other people were invited as well February 11th that's new information so they were already ongoing correct assets would have been

(28:56) in the area the Assets in the area would have would have had radar they would have had to have the Assets in the area to protect the or uh to protect the exercises okay um in addition to that flying towards the exercises is the last thing a hostile plane would do right and he mentions as well that there's no reason to avoid radar why would you avoid radar if you're in a

suicide scenario you should just fly directly over Indonesia why would you try to avoid radar makes no sense avoiding radar is completely

(29:58) contradictory to the suicide narrative and why would you and he even mentions why would you care about a planes coming after you he even says if if Jets were scrambled You' just crash the plane I mean this is this destroys the suicide narrative I'm going to post I have Clips in there that I'm going to link together I just have to edit them together um tomorrow I have one that I'm going to edit together from that interview about Diego Garcia and another one I'm going to edit together about the suicide

(30:35) narrative just completely destroys the suicide narrative and I'll post that tomorrow those will probably be the last two for um Maas Chang so let's look I think we can close a couple of these Let's see we can get rid of this one the MDB one think we can close this what about this one we might use use more of this honestly what did Tatum say so somebody mentioned this Tatum guy as well chip Tatum electronic hijacking whoa they're keeping the media busy in the South Indian Ocean while things are being done in other areas

(31:21) Diego Garcia we'll probably have to quote this on the Diego Garcia part okay we can get rid of this part he could be talking about remote aircraft but just because you can remote control an aircraft would not bring global economy to a halt not even close not even close

(32:29) the fake satellite trail to the remote and dangerous South Indian Ocean fabricated by emstat whoa hello hello this is Tatum again wow what the hell so some pretty bold claims here well that's this is a wild article man wow honestly just to be real with you guys 6 months ago I probably would have thought I was crazy hey Brave traveler I probably

(33:32) would have thought I was crazy 6 months ago so I it's hard to blame people that are having a hard time with it right it took me two weeks took me two weeks to come to terms with this like I would wake up every single day wondering how this could be real so I don't know we probably shouldn't go too hard in the **debunkers** and the people whose brains have been Fried by this okay we already posted the ory Tate stuff oh I also Freedom of Information Act requested um the national geospace agency today just heads up i' been I've I've

(34:15) had a busy day uh it's called the NGA National geospace agency I don't think Punjabi Batman watches he posted some stuff too on **Reddit** that we could um that we could post but I don't want to post too much of his stuff is there a particular stream the reality guys is I'm trying to avoid digging too much into the conspiracy angle of the the the cloud images my true opinion is that those images were planted AI is going to have no problem creating those images guys we're talking about teleporting a plane

(35:07) here folks oh but I do want to look in the sentient good call good call call should we dig in a sentient tonight yeah Dave Rossi's actually one of my f favorite people which is why I'm a little scared about getting him involved in this because I don't want him to disappear what what makes a raw file so special in your mind I I'm not sure what's special about that there's nothing

special about the type of file nor the quality guys can you guys see what AI can do these days the military's had AI

(35:44) probably for over 25 years the AI the military is going to have is going to be make the AI on the commercial level look like Child's Play but that's the problem is what they want us to do the reason why the cloud **debunk** is so good is because it's a dual pronged attack first of all the cloud **debunk** makes no sense at all right it doesn't make any sense we've already shown the clouds are moving naturally uh we've already shown that we have you require 3D render to get both angles so it doesn't even make sense on its face

(36:16) but it doesn't matter because they want us to say oh the CIA planted the files because then they what they're going to say is oh well you're just a crazy conspiracy theorist that believes the CIA can plant raw files well yeah of course we believe that we're talking about the government teleporting planes you know planting raw files isn't really uh it's not really a stretch you know we're talking about literal teleportation of a 777 okay um kind of like when I'm reading uh uh Dan's um you know remote control

(36:49) plane uh piece which I have up over here on my other side of my screen um right here it's like while I'm reading this it's like like you had me at remote controlling planes on page one you know I'm on page 22 you're still telling me about trying to convince me of remote controlling planes you already had me at page one I never had a hard time believing that you could remote control plane U but now 20 20 patents later I'm I'm 100% sure they can remote control a plane and now I'm sure that this stuff

(37:17) about not being able to remote control a plane is definitely fake I actually remember a specific article where somebody had actually taken control of the plane using their cell phone using just one of those uh um the systems like in the back of the the heads of the of the seats one of those screens they can definitely do it 100% guys I mean they have autopilot why would they not be able to yeah so that's a little bit of an update on let's see the cloud stuff I'm not going to go too much more into the cloud

(37:54) stuff I I really don't want to dwell on it I made a an explain ER video on it I made an explainer video on the news stuff as well I still need to make an explainer video on the Drone video um the Drone videos are just I mean these videos are too detailed guys especially the Drone video man let's just look at it again it's just too detailed too many small details I mean look at this where the orbs actually get distorted right there in the tail of the plane gets distorted accurate in the tail of plane

(38:26) you someone fake this level of detail you guys got to realize people don't fake this level of detail man there's no fakes out there that go to this level of depth they're always very just straight on your face look they look fake right you you look at them and you just wonder right away that doesn't look right you know when you look at this you don't get that feeling at all and the reason why you don't get that feeling is because what we're looking at a real video the reason why people don't

(38:56) believe believe has nothing to do with how clear the videos look and how authentic the videos look the reason why people don't believe is because they don't believe that orbs can exist and they don't believe a plane can be teleported that's why people don't believe it has nothing to do with what the videos look like if we were to take these orbs out of here and take that teleportation out no one would be trying to **debunk** this no one would be trying to **debunk** this everyone would say yep that's a drone

(39:22) video that's the that's the hard **truth** right the other hard **truth** is nobody has any frame of reference to come up with these forward- facing engines I'm talking to people who are theoretical physicists and Engineers for the dod Dave Rossy today straight up said what we see here is exactly what he would expect he believes the videos are real he says he's working on science related to this I mean man just for the record neither him or I are suicidal I just want to make sure we're all on the same

(39:57) page on that feel like just in case the videos are real that needs to be said probably at least once a week maybe more I mean someone thinks they faked these shots and the zoom and the accurate shake and the turbulence I saw a **Reddit** post was that yesterday or something that someone was trying to claim that there wasn't enough turbulence these people they've lost their minds they've actually they this these videos have broken their minds straight up broken them I went ahead did I download it yeah oh God I haven't checked my

(40:46) email yikes I probably have like 200 emails boy look it's just gone the reason why people can't believe is cuz they don't think teleportation can be real that's really the simple basis for it I mean there's no master physicist and ufologist and gravity technology uh expert who faked these videos the only way they're faked is that the US government faked them that's just a simple reality of it and if they fake them fine okay show me how you fake these and why and how they end up explaining what happened to the video or

(41:21) happened to the plane now here's the dark part guys this is where it's going to get dark okay I'm not even against the remote control stuff at all this plane could be getting remote controlled I don't think it was remote control at this point just because it's descending in like a way that seems very human and it seems like it's moving in a way that's not expecting the orbs to happen could be wrong I'm just speculating um but we don't see any heat signatures of any bodies in

(41:49) here this kind of bothers me it's always bothered me I always thought should we be able to see like maybe we just can't see cuz it's zoomed in and doesn't catch the heat of the people inside I always thought maybe we'd be able to see people on the inside maybe back here this is a heat signature of some people in there that are huddled up but man what if everybody was already dead I don't know just seems seems kind of scary I just don't know why you would do this if everybody's already dead you just

(42:19) wouldn't risk this right you wouldn't risk this so everybody was already dead yeah the fourth or is going to be wherever they sent it there could also be three more orbs on the other

side I just don't think you need three more uh David grush is uh I don't know it's interesting case is what I'll say I believe David grush 100% I believe everything he's saying I think that David grush is not one of our allies why do I say that because if you listen to the space today it got brought

(42:56) up what is the implications of this technology the implications of this technology is the end of the world doomsday weapons David grush most likely knows the implications of this technology so he's doing what he can do to reveal what he can reveal without revealing National Defense Secrets which he's under an NDA not to reveal so what that means is he cannot reveal this type of information right this is what catastrophic disclosure is folks catastrophic disclosure is revealing the information that people who have ndas

(43:35) cannot reveal for the interest of National Security there's a reason why every one of our foas has been rejected for National defense purposes just think it through guys why would there be National Defense rejections for an airplane going missing that the US theoretically has nothing involved with according to the official narrative the United States is not involved in disappearance of the plane so how come every single agency that we Foya is rejecting our foas in total about the plane in interest of National

(44:07) Defense just walk me through it folks what what's the reasons I can't think of any oh this is my old one did we get through all this maybe not so yeah yeah It All Leads back to free energy I think I think the bigger aspect is not just the free energy but the Doomsday it's the Doomsday stuff which Reddit post do we need to go look at Reddit uh I don't really want to look at Reddit today yeah I agree with the RFK stuff I don't like to get I think he meant RFK

(45:10) Jr but not rfj Jr but um I'll probably vote for RFK I haven't decided I haven't decided honestly I'll spoil it for people I'm not voting for Joe Biden so I'll spoil that for you not voting for Joe Biden whoa is this true this is like right after the plane disappeared wait no this can't be oh I think we already read

(46:25) this I think we already looked at this is all basically in this is all in the uh interview huh that's a good question the outdate capabilities of the hexagon satellite system deployed in the 1970 say ground resolution of 6 M okay well let's go ahead and copy this stand corrected this isn't useless c

(47:36) tiger the satellite stuff I mean we've been on the satellite stuff yeah NRL 39 is bizarre man I'm going to take this one because uh the NRL 39 stuff is it's a literal o octopus holding the planet that's piie that's cool too that's a pretty cool thing I like this okay go ahead and call them if you can get a hold of them send them my email MH 370x proton also I'll be sending Discord invites out probably I don't really care if we get infiltrators yeah Egon I'm thinking that that's the best case scenario like maybe

(48:36) the thermal just doesn't can't see into the plane let's hope man let's hope yeah I mean it doesn't make sense that they're going to go to where the joint operation is happening like that's

the reason why they went there 100% right they went to where the assets were there was definitely communication with the plane and they're going to where all the assets are that can help them problem is when they try to land in the ocean they're all going to die so they've got to deploy the orbs it's the

(49:07) only way to save the plane for whatever reason they couldn't land in panang I mean that's a tell yeah compartmentalization is the is the problem right you could also argue that there's an Espionage angle to this it's just the Espionage angle is pretty convoluted certainly possible though certainly possible yeah I don't think they can be UFOs I think it's 100% locky Martin technology that's just my opinion but that's yeah um what

(50:44) yeah it's definitely an OP I think yeah I'm guessing the fuselage is What's blocking it let's just hold that hope that that's the case folks let's hold that hope that that's the case so what we saving thisx docents okay let's add the cop tiger stuff oh yeah we should ask ask grock right let's ask grock grock knows the answer grock knows all trust grock folks yeah there could be valuable cargo maybe I feel like H if it's valuable cargo though like don't you just um don't you just let it crash and pick

(51:31) it up out of the water isn't that easier just can't when you you can't deploy the Trump car to the orbs you know it's too risky man because other other countries could have seam with their satellites which China did right yeah I'm dating all you guys that's the answer I want my viewers to let's get let's get parasocial with it let's get parasocial we're all going on dates together should I host a Twitter space this weekend where I just let UFO Believers yell at me for two hours

(52:19) yes step Green Street might be more hated than me might be more hated than me which makes me kind of like him makes me kind of like him o we're going hard in the 911 conspiracies huh that was funny I should uh check out more people's posts more often uh what we gonna do oh yeah let's ask Rock UAP disclosure dating app is starting to get [Music] serious oh man I'm not doing fun mode okay okay enough grock enough I refuse listen get do it again

(53:25) no fun mode Jes this fun mode cringe cringe mode oh it's unlikely so no oh it's opaque to infrared radiation okay good luck or uh good news good news folks passengers may not be dead good news I don't know if it's a yatsi moment it's not a yatsi moment is good for the passengers though they might not be dead so okay um definitely going to have Mias Chang section we're definitely going to do a cop tiger section as well we're going to put it underneath the suicide pilot stuff suicide

(54:24) myth for okay where's our other evidence for

(56:24) for okay that's pretty good we missed anything folks how's that how's that no I don't think disclos I don't think disclosure is coming in 2024 I don't think disclosure is coming in our lifetimes unless we make it happen disclosure will happen when enough of the people who have CNN brain admit that the UFOs or whatever are real or that the aliens are real or whatever

(57:29) or the technolog is real it's really going to any of these those three things so uaps technology aliens whatever they're all going to go hand inand right now when I say aliens I don't mean aliens in visiting us although it's certainly distinct possibility technology makes aliens visiting us plausible but one leads to the other which leads to the other if aliens are revealed to be true then we know that they got here from they they most likely have advanced technology right uh and that they can travel here potentially

(58:05) although it doesn't necessarily mean that I mean it could be the ultraterrestrial hypothesis like Tucker Carlson talks about um if uaps are real then yes okay there you go there's the answer you know that means aliens are real probably maybe it means their AI or whatever they are who knows um it also means technolog is real and if the techn ol gets disclosed and all that other stuff cuz no one's going to believe that we have teleportation technology just naturally no one's going to believe that then again maybe I shouldn't

(58:37) discount the CNN brains so we just added even more stuff to the suicide **debunk** and we now have a new cop tiger exercises stuff okay let's look back this okay let's see if we can beef up this smas part um

(59:48) oops that's not without formatting this is all caps annoying is that what it said Global impact on the world's economy AI Global impact on the world's economy it would it would also have a have a global impact on have a global impact in the world's economy yeah guys if you haven't got rid of your uh cable TV go ahead and do yourself a favor and wipe that get rid of that if you have cable TV I got rid of my cable TV boy how long ago was that close to 10 years ago

(1:00:56) best decision I ever made I was a little bit afraid that I wouldn't be able to have like sports and stuff but you can still watch sports it's not too hard other than these two videos I don't know if we have other videos of teleportation some people sent me some stuff but nothing that I thought was you know super uh super strong evidence by the way we have a we had a lot of people in the space today for just one between me and Dave rosi I mean there's like 250 there's like 250 people in there

(1:01:33) um yeah get rid of cable TV especially cable news also local news is also trash basically all news is just complete trash the last thing it does is educate you it just doesn't educate you on on current events it tells you how to think you're much better off coming to your own your own uh terms on stuff no the problem is that you got to realize there's a disinformation campaign out there I mean you guys have seen them right out there to try to convince people that real videos are fake 100% I don't even know even I don't even know

(1:02:11) what's real and what's fake out there I don't even know if that orb video we posted is real I really don't know it's just that's how good the disinformation is it certainly looks really but I don't know somebody posted a video out here or a **debunk** where is it Patrick Jackson jesz this guy man Patrick Jackson this dude is just a douche where is it this one UFO interest this is that same **scam**mer uh account bot account UFO interest nothing UFO interest says is legit this is a literal disinformation

(1:03:11) account they literally use this as a bot to post fake stuff to claim that real videos are fake like look at my reply wait where at the heck I guess somebody else must have posted it I replied to one of them this UFO interest account is a straight up bot account we've proven it I have links to the same message being posted by this account and four other accounts as well as an account on **Reddit** down to the exact letter and the pron and the um the punctuation this is 100% aot account UFO interest this one this Scott Brando guy

(1:04:03) 100% I don't even know if this is a real person this is not even most likely not even a real person this is just some kind of spook accounts and it just literally posts fake stuff like it's actually posting fake stuff and look it just it reposts his own stuff like this is your red flag should be going off left and right when people are they're using multiple accounts to retweet their stuff if you've noticed a lot of our haters they do this as well what they're trying to do is they're trying to build a network

(1:04:33) of people that people will believe so you find this group of people that's all retweeting each other all the time right they're all retweeting each other all the time what they're trying to do is they're trying to get you to follow all those accounts and they're making a little network of people that are basically just disinformation some of them might even not even know they're doing it but let's just go ahead and just and blow up this guy's whole world just once again uh let me see this is should be

(1:05:00) one of my earliest ones I have uh I have a whole Channel set up or whole folder set up called fed disinfo exactly for stuff like this just just to blow up people's spot like this guy I've made posts about it um let's find it man I've got a lot in this Channel we got a lot in this channel this this guy's stuff we called him out back in August we caught him posting fake stuff about the videos and we caught a bunch of other Bots posting it as well I think even think tank noticed this this was back then yeah yeah here

(1:05:43) we go oh yes now is time you guys ready 100% proof that UFO interest is a bot account absolutely false this is one of the fakest videos created by YouTuber regid on literally claims that reg out and non created it the same guy who created the fake airliner abduction UFOs often related to The hoax promoters to MH370 disappeared blah blah blah really shameful look at this exact same post look at all these accounts exact same stuff exact same literal bot account Scott Brando literal **scammer** and Bot this is actual disinformation

(1:06:25) 8:14 2023 this is early August you can probably still find these accounts I wonder if they actually post other fake stuff that this guy posted all it does is repost stuff these are literal bot accounts wow hello bot accounts folks wow so Scott Brando not just that guys you ready are you ready for this same exact comment on **Reddit** same exact comment on **Reddit** as well exact same comment word for word punctuation for punctuation [Music] hello you want to know if disinformation

(1:07:29) accounts exist you're staring at it UFO interest is one one of the things that they do that I have come to realize so because we know the videos are real we've been able to watch

and see how they operate one of their go-to plays is that they claim real videos are made by unknown Anonymous CGI artists that's the same thing this guy did in this video that we're looking at here down here watch what he claims he claims that it's made by some CG artist that nobody knows it's an old fake published Years

(1:08:02) Ago by CGI artist The Faking hoaxer that's not a real person that no one exists by that name this isn't a real person at all this is the disinformation how they play this is the same thing that they do with other videos as well that I've already seen and caught them doing they claim that some unknown non-existent hoaxer is the one that CGI it there's no such thing as this person they I've caught them doing the same thing before as well this is what they do and what they claim just like he

(1:08:27) literally did in this one here right claims that reeside andan is the hoaxer of this there's no way he could even know this information they claim unknowable information as **truth** and this is how disinformation operates it's wild look at this even on **Reddit** exact same comments just using Bots these are all just Bots hey Robert Russell thanks a lot man yeah so yes there's a huge disinformation campaign um something else that I've noticed I'm not going to dig too much into **Reddit** today but um when I go to The Airliner abduction

(1:09:06) sub**reddit** the **debunker** sub**reddit** uh I've blocked so many people on there that like more than half the the messages and comments are of blocked accounts and then when I go anywhere else on **Reddit** I never run into those accounts anywhere isn't that weird I've got like probably like 100 to 500 accounts blocked and I only see them and run across them on airliner abduction **Reddit** or on other posts related to MH370 I never run across to my conspiracy I look through the conspiracy stuff never see them I look at ufob

(1:09:44) never see any of them literally only see them when it's related to my content or airliner stuff just to go to show you how many fake accounts there are out there on **Reddit** it's pretty wild and **Reddit** is the number one source of disinformation on the planet Number One Source by by a wide margin they can't abuse Twitter like they used to be able to they used to be able to abuse Twitter much more and censor people more and now they can't do it as much under old Twitter I would have been banned I would

(1:10:16) have been banned they would have made something up about how I'm hurting the families or something and how I have to be banned for it 100% anyway what do these orbs have to do with the ones you've been pushing absolutely nothing uh other than the fact it's three orbs flying in formation and we think it's locki Martin technology I mean wouldn't it make sense they'd be test piloting in this beforehand I have not spoken to any families no families have reached out to me none not a single one

(1:10:58) not a single one okay impact of the global economy what's the word um God I can't get over that he was arrested while he was trying to get one of the whistleblowers of one MDB that's that's wild man ah man if you're into conspiracy stuff man this m Chang thing is that's a deep rabbit hole it's a deep Rabbit Hole His Highness what do we

(1:12:12) got I didn't see it um let's see what else we got here what else we want to do today for Chinese hack the Chinese hack stuff I mean a lot of this stuff is really good really good

(1:13:15) evidence um we'll see what we get a response for the NGA it's Friday so we probably won't get it tonight yeah we definitely have not harassed the family members I don't know why why would family members be upset at this do people people not realize that the official Nar the official story is that they don't know what happened to the plane it's not like they've gotten some level of closure they've gotten no closure do we have any more information about the videos guess we could look at our

(1:14:22) posts we've had a pretty solid 200 plus people watching yeah uh eat them up forever I totally agree with you eat them up forever like yeah people are grieving who want answers will reach out to like literal psychics and yet they don't reach out to us at all even though we have two videos and we can explain the scenario better than anyone today huh wild let's see what else we got going on here disclosure close this um podcast list we haven't we still haven't filmed the cast just closure thing yet I do a little science should we

(1:15:28) switch it up a little bit I do want to get this out but um I just we need to finish this before next Friday or Thursday yeah a lot of them are Chinese Nationals so 92 real people and 100 feds in here probably probably oh yeah black boxes would prove the conspiracy yeah that's why we're never going to find the plane guys there's not going to be any black boxes found they can't actually find the plane they could try to throw some parts in the water and try to find the parts but now we have a good argument that the

(1:16:28) black boxes should be found no way the black boxes can be hidden they'll probably just argue oh they stop pinging though I just got a good message message I might have a way to get in touch with Mias Chang for

(1:18:13) okay they match the real Fleeer image from NASA uh yeah X Milo didn't you send me a link to that somewhere X mil milu or milu can you uh yeah what was your what's your Twitter candle I will I will add that I was actually thinking about that when I was up here we could add to the speculation uh we can actually add to facts where's the thermal match part thermal XM okay thanks let's take a look then let's do a little bit of science or we can read some troll comments whatever we want to do X

(1:19:22) Smo followed you back I'm your only follower uh what's this I think we saw this it's too much for intercepting cargo unless the cargo is related to technology it's too much oh you're the one who posted the questions as well yeah that's good man I don't see a lot of these updates I'm missing a lot of my stuff oh yeah yeah so the problem is this is a plane taking off on the left

(1:20:28) here so I don't think this quite matches unfortunately although the door definitely is in the right spot that's actually interesting this one isn't down here um I don't think this one matches over here and these are not from here either this is during takeoff so it's quite a bit different than when you're at altitude the location is also not really correct here could be

though some of these could be correct the door is good for sure but yeah the problem is these are we need one that's in the air you can

(1:21:11) tell like the it's so cold I actually checked it's 40° colder um in the air at at 10,000 ft than it is at ground level so it's a lot colder in the Sky even at even at the low altitudes they're flying that up here yeah crimes against humanity man I don't think they can actually um admit to any of this stuff man too many implications this is like legit crimes where people go to prison for the rest of their lives yeah the thing is this this plane's not at 36,000 ft it's only at about 7,000 ft

(1:21:59) so it's probably going to be like 30 degrees colder so it's actually going to be pretty warm it's probably going to be like 60 or 70 degrees Fahrenheit it was 100 degrees that night although it could be a lot less it's hard to say you really can't know for sure but it's definitely going to be pretty cold just not the same as being at ground level not even close we could add something about remote control I don't know where we put it though that's probably good enough for now yeah it's not just the prison actually

(1:22:59) the part that's even worse is the um the worst part is probably the legal implications all the people that would get sued we're talking probably we're getting to like trillion dollars worth of lawsuits the amount of law suits over this just be astronomical astronomical and the technology that it opens up and the lawsuits related to that as well astronomical they just the cost is too high to even admit this to be true that's probably just the reality of it so I guess we'll go down as a conspiracy

(1:23:41) theorist it's cool I only believe in true conspiracies yeah I don't see it starting a war uh but could sure could absolutely could man can't really rule that out yeah let's go ahead and close that for now okay let's take a look let's read some troll comments see if we got any our notifications I blocked a few people I just got tired of it I I tried to put up with them for a while but it it was just too much okay Rebecca's probably arguing with somebody yeah there we go guys it's VFX

(1:24:24) it's VFX guys if it's true I'll eat crow happily oh yeah this guy the New York the New York uh NYPD guy I deal in real death with real victims and families left the wa wait to carry this investigation is a slap in the face so show some dignity I'll try to be nicer okay [Music] um

(1:25:53) imagine a New York Police Department detective trying to talk smack about us New York is like the shittiest city in the whole country right now let just ramp it with crime and there's basically no control from the police over it you're going to try to D dunk on us over literally trying to solve a crime wild man this this guy is just fullon CNN brain okay let's what else we got manda's out here doing work against people okay let's see if we can oh Dave Martin top rad we're trying to find

(1:26:49) him okay what's this oh yeah this is super ominous yes yep oh this guy okay this guy will have some good stuff for us what does this guy have oh yeah this guy doesn't believe in

physics the color gradient of the Drone is enough to **debunk** it as being real only need to see the thumbnail for that this guy's a master of drone even though he doesn't know about uh Rainbo right teleportation is not possible guys is teleportation possible well there's a whole Wikipedia page about it quantum teleportation is real here

(1:27:46) here's how it works this is from 2017 what is quantum teleportation people really just don't realize the teleportation is real huh it's kind of wild man you know one of the weirdest situations was when I was on the Julian Dory podcast and they're just grilling me about every single thing and they didn't know that time dilation was real I just thought wow kids don't learn anything these days they just don't even learn science I mean I all I had to do is watch Interstellar to understand the

(1:28:23) time dilation was real people they literally thought I was making up some fake science I'm like man people just don't even know what science is anymore it's pretty wild uaps aren't capable of anything we don't understand every single one has either been man-made natural phenomena or hoaxes anytime you guys point out something that shows weirdness it's either misunderstanding or outright hoax welcome to gatekeeper Behavior wow apparently this guy's an expert at UA and knows that every UAP is man-made but

(1:28:55) that they don't have any nothing special about them guys there's nothing special wild man this is what I'm talking about where it's like breaking people's brains like this this is exactly the type of person whose mind is just being literally Shattered by the videos it means that his whole life Gerald M mcu's whole life has been lie his whole life's been a lie he can't he can't comprehend the C even the possibility that we could have macroscopic phase conjugation be possible because it means that

(1:29:31) everything he's been told his whole life has been just a falsehood scary man I I didn't realize that it would break so many people's minds like this I love this guy by the way I'm more of OD this guy's smart dude I like him yep uaps aren't capable of anything we don't understand uh yeah I mean this anomalous plane thing is not even in the right location folks so I hate to burst everybody's bubble here but this is not MH370 it's not in the right location this is clearly just a glitch on this

(1:30:15) flight radar thing and this isn't even the right location for the orbs either the orbs are over the nicobar islands so um it's we got to be scrutinized evidence very closely guys we can't just jump on every single thing that we want to be real okay so let's look at the flight radar thing together March 9th 2014 this **I want you** to also make note watch this object this is this is hundreds of miles away it shoots off faster than any other object you see this this is not like live radar tracking guys that we're watching here

(1:30:47) it has to be going four or five times faster than any other plane out this is not live radar like this isn't like someone's radar here this is just a computer program and it's pulling information back so what's happening here is that like this is not mean this is orbs this these are only these are only objects that are actually sending AC cars information here guys oh hey Mike

what's up hey nice to see you man been a while um this is only objects that are sending AC cars information here in this

(1:31:19) video so the video just doesn't make any sense no matter how you look at it this is it's not like it's not going to show orbs on this this is actually only showing real planes so what's happening here is that it's like got a lag or a Skip and that's the reason why this plane is look at it teleporting Cuts right it's not really T plane and when it gets out there it stalls out yeah it's stalling out because it's lagging uh it's very suspect on what it did so this as you can see here this is mh3 70 over here

(1:31:54) right so this just doesn't doesn't make any sense it's not related to this in any way there may be something else weird happening but it's not related to our videos our orbs are way over here like an hour and two hours later hour and 30 minutes later so as much as this is an interesting weird little thing it's not necessarily related to our videos so just something to keep in mind on that I know a lot of people are asking me about this in general um and again we have to be heavily scrutinized evidence we can't just tie

(1:32:26) every single thing we see together why are these nut jobs posting weird stuff about this guy who clearly didn't make the videos like these people are off their rocker man literally off their rocker even Gerald knows that this guy didn't make the videos even CNN brain Gerald knows that some random guy saying hey I made the videos is just lying it's not really that not really a surprise okay let's see if we got anything else God this guy John the NYPD guy man just breaks a lot of people's minds you

(1:33:25) know breaks a lot of people's minds I turned off by this specific case there's zero evidence absent theoretical science for any of it that's not even a complete sentence the video the background the orbs were all proven to be false this is why New York uh cops can't solve any Mysteries folks the radar and satellite images too people died in this crash there's literally no evidence of a crash there's actually no evidence of a crash what an idiot my God John you're such an idiot Jesus this is why New York Bronx

(1:34:07) homicide can't solve any cases you know what he made a claim as well that I want to look into he claimed that like 75% of cases were solved murders increased during the pandemic uh nearly half of all murderers in our country are walking free and and a CBS 2 she was happy half of murderers are walking free wouldn't I would not say that being stretched with down to 27% yikes well let's go ahead and uh screenshot this go ahead and screenshot this oh wait that's a video I don't want

(1:35:20) video this guy's a liar as well huh you said that 75% of cases were solved I'm pretty sure clearance rate has to do with how many percent uh what let's let's double check we know what the clearance rate is yeah that's the percentage that are solved clearance rate is the percentage that is solved it's uh it's about 30 20% he claims it's at 75% clearly that's a lie I mean we shouldn't even had to check it because we just can tell it's just at a glance that it's [REDACTED]

(1:36:00) [redacted] claim but now we know Jon's a liar as well [Music] so now we know Jon's also a liar on top of being a broken brain CNN brain send this guy back to work NYPD detectives should be the very last people on the planet that should be criticizing us last people on the planet they should be criticizing us our New York police detectives I'm going to save this we're saving this I feel like this is going to come in handy later on ruthless dude no he is a liar he said

(1:37:07) that the case rat's like 75% 80% there's a zero% chance he's telling the truth complete [redacted] you think the Bronx has a a clearance rate of 75% you need to wake up no chance there's no where probably in the entire country that has a 75% clearance rate on murders yeah this guy claiming to be a detective how embarrassing is this guy how embarrassing let's look at his he's he's posted like 30 times in our replies today look at all these replies did he reply to himself here put me in the lying Camp he also

(1:38:02) thinks that David grush is lying he thinks he's lying under oath to Congress here you go here it is my unit routinely solves 75 to 90% of homicides year to year anyway yeah he's got UFO stuff tagged why look at how obsessed this guy's gotten with us embarrassing embarrassing dude what an embarrassment this guy is John you're a literal embarrassment to the New York Police Department little embarrassment stereotypical this is why New York Police Department is just garbage

(1:39:05) honestly because you got guys like John working for you embarrassing man embarrassing maybe you should send us some of our cases and we can uh solve them for him yeah he wants to date me probably should I take him out for a nice merow have a nice M low out in the Bronx we got to be careful we might get stabbed to death okay uh enough of that why won't Jeremy touch this story I have no idea oh and also wow time flies folks time flies yeah calling grush a liar is also wow okay sure man um we got a lot more stuff to go

(1:39:48) through let's take a look at this paper here that I want to get ready for tomorrow and I got to go to sleep after this because I got early thing tomorrow with um um roy Herbert so roy Herbert sent me this this is yesterday further evidence for Quark matter cores and massive neutron stars neutron star cores contain matter at the highest densities reach in our present day Universe with as much two solar masses of matter comprised inside of a sphere of 25 kmers in diameter these astronomical objects can indeed be

(1:40:26) thought of as being giant atomic nuclei with gravity compressing their cores the densities exceeding those of individual protons and neutrons manyfold wow these densities make neutron stars interesting astrophysical objects from the point of a particle in nuclear physics a long-standing open problem is whether an immense Central pressure of a neutron stars can compress protons and neutrons into a new phase of matter known as cold Quark matter in this exotic state of matter individual protons and nucleons no neutrons no longer exist

(1:41:04) wow wow wow we're talking about this tomorrow folks hello guys we're talking about this tomorrow uh where's my Roy D Herbert info hello hello their constituent quirks and gluons are instead liberated from their typical color confinement and are allowed to move almost freely

wow guys we're talking about teleportation here a strong phase transition may still ruin the day in a new article published in nature Communications the team centered at the University of helsinki provided a first ever quantitative

(1:41:58) assessment for the likelihood of Quark matter cores inside massive neutron stars they show that based on the current astrophysical observations Quark matter is almost inevitable in the most massive neutron stars a quantitative estimate that the team extracted places the likelihood of range of 80 to 90% the remaining small likelihood for neutron stars seem to be comprised of only nuclear matter requires the change from a nuclear to Quark matter to be a strong first order phase transition somewhat resembling that of

(1:42:31) liquid water turning into ice this kind of Rapid change in the properties of the neutron star matter has the potential to destabilize the star in such a way that the formation of the of even a minuscule quark matter core would result in the star collapsing into a black hole wow the international collaboration between scientists from Finland Norway Germany and the US was able to further show that the existence of quark matter cores May one day be either fully confirmed or ruled out the key is being able to constrain the strength of the phase

(1:43:05) transition between nuclear and quark matter expected to be possible once a gravitational wave signal from the last part of a binary neutron star merger is one day recorded a key ingredient in deriving the new results was a set of massive supercomputer calculations used by uh basian uh basian inference a branch of statistical deduction where one infers the likelihoods of different parameters by a direct comparison with observational data the Bayesian component of the study enabled uh researchers to derive new

(1:43:48) bounds for the properties of neutron star matter demonstrating them to approach so-called conformal Behavior near the cores of the most massive stable neutron stars oh boy Dr jonas Jonas Natalia one of the lead authors of the paper describes the work as interdisciplinary effort that required expertise from astrophysicists particle nuclear physicists physics as well as computer science he's about to start an associate professor okay we don't even know about his history it's fascinating to concretely see each neutron star

(1:44:22) observation enables us to deduce the properties of a neutron star matter with increasing Precision uh is that a different Jonas everybody's names is Jonas here Jonas here vonin a PhD student working on the guidance of these other people I'm just going to not push their names on the other hand emphasizes the importance of high quality Computing we had to use millions of CPU hours of supercomputer time to be able to compare theoretical predictions to observations and constrain the likelihood of quark matter course we're extremely grateful

(1:44:56) of the finished supercomputer Center CSC for providing us with all the research we needed guys time to Google Quark matter whoa CERN a link to CERN oh that's a con that's a conference here's a better one I like physics.org is this the same article oh that is okay that was the same article another

(1:46:10) one I was going to say is quark matter just another name for Bose Einstein condensate Hermes in the chat says yes I was going to I think that's what it seems like to me too it's just a Bose and condensate I mean the way they described it it sounds exactly the same let's ask you know what you guys know who we got to ask we got to wait what's his name again grock we got to ask grock oh no no no no no no no no stop it stop it stop it I refuse I refuse regular mode regular mode oh no no no no no was this grock dead guys

(1:47:01) okay grock is alive folks grock me up folks Quark matter is a phase of composite composed of quarks and gluons the fundamental particles that make up protons and neutrons in the nucleus of an atom in this state quarks no longer confined within hadrons such as protons and neutrons and instead form a plasma like state where they can move freely quark matter is believed to have existed in the early Universe during the quark epoch sounds made up and it may also exist in the cores of neutron stars the study of Quark matter is an active area

(1:47:39) of research in nuclear and particle physics and can provide insights to the strong force and behavior okay is yeah we'll we'll we'll ask grock about macroscopic phase conjugation as well uh Hermes they say no sound the same to me folks they sound exactly the same to me uh I don't really understand how

(1:48:42) they're different because of the temperatures I actually really like using AI for these scientific questions I think it's a really good use of AI because it's pretty much just like Googling it right whoa macroscopic phase conjugation is a physical phenomenon which light waves are reflected and redirected in such a way that they appear to have traveled back in time this occurs when wave front interacts with a nonlinear medium such as a Bose Einstein condensate and the phase of the wave is reversed wow this is what Dave was

(1:49:32) telling me in our private chats the result is the wave appears to have traveled back to its source rather than continuing in the same direction this phenomenon has potential applications in fields such as Imaging Optical communication and Signal processing huh so if we think about uh the right hand rule and the pointing Vector you could think of the Matrix as a grid right and you've got your wave your wave formations what if you reverse it now so you have wait guys am I a witch let me check am I a witch so you got your wave formation

(1:50:13) going this way and then we have another alternative we reverse it going back this way it seems like that would be a way to break down or you know do something weird with the um the wave functions let's get scientific up it is theoretically possible to teleport an object using macroscopic phase conjugation but is not yet achievable with current Tech technology in macroscopic Phase conjugation the phase of a wave is reversed effectively sending it back to its source this phenomena has been demonstrated in various systems such as

(1:51:01) Bose Einstein condensates and Optical systems however to teleport an object one would need to encode the object's information in a wave reverse its phase and then reconstruct the object at destination it doesn't have to reconstruct the object this process would require deep understanding of quantum mechanics and the ability to manipulate matter at the quantum

level while there have been successful experiments in quantum teleportation the teleportation of macro scale objects Still Remains a distant goal

(1:51:33) wow hello we might we might have to ask him about this uh grock is my new best friend folks guys Quantum ejaculation Transportation do we have to use the word ejaculation can we just not use the word ejaculation oh so it's pretty much the same thing yeah I mean we just need a better

(1:52:38) word than ejaculation I'm not going to say ejaculation on a on a podcast I'm just not going to say that word on a podcast we need macroscopic phase conjugation okay um anything else we want to ask it I think that's probably pretty good for the science for tonight that's that's a pretty spicy bit of science we found here guys their theoretical calculations suggest that liquids are different both types of liquids produce vortices when they rotate but in Quark liquids the vortices carry color magnetic fields

(1:53:18) similar to an ordinary magnetic field there's no such effect in nucleon liquids I don't know what any of this stuff means whether nuclear matter is distinct from Quark matter in other words separated by a phase transition is an old question in the study of strong interaction specifically the theory of quantum chromodynamics similarly science SST ask whether or not it's possible to provide a sharp definition of confinement a lot of this is just theoretical though right I mean it's not like we can see inside

(1:53:57) neutron stars Landau Paradigm considers the suggest that quark and and nuclear matter are not distinct let's ask about Landau Paradigm grock where you at grock ask about CERN I give me an exact question uh we haven't gone that far down the electricity Rabbit Hole just yet I we kind of changed over to the physics side uh um so yeah what why did I change over the physics side well once I read um Dave rossy's paper I started to

(1:55:01) understand a little bit more what we needed to understand the electrical engineering side is probably the part where we have the most area of Discovery I mean a lot of this stuff is just so deep and so rich it's hard to even wrap my brain around it I'm honestly more of a theoretical physicist when it comes to science than I am like hard math and equations guy so it's really hard for that but what I need to understand is just the idea of waves and everything being a wave um and then the idea of like how

(1:55:27) they propagate right so our universe everything's right angles and there's a reason why sine waves and patterns keep coming back over and over again it's because that's really the basis for how our universe the basis structure of our universe we can't see it when we look but there is a basic underlying structure of our universe Quantum ejaculation is what I'll claim if I'm asked if I'm the father that's a good answer it's a good answer folks the Landau Paradigm known as the

(1:56:00) Landau's theory of phase transitions is a theoretical framework developed by Soviet physicist Lev Landau to describe the behavior of system undergoing phase transitions the theory

is based on the concept of an order parameter which characterizes the state of the system and changes during a phase transition in the context of quark matter and macroscopic phase conjugation the Landau Paradigm can be applied to understand the behavior of the Quark matter under different conditions for example as temperature or

(1:56:33) pressure of a quark matter system changes the order parameter may change indicating the phase transition from one state to another well we're definitely copying this holy crap wow guys we're going to have a good talk talk with Roy Herbert tomorrow wow hey Diamond what's up dude this is wild diamond diamond you need to get into the teleportation game my man maybe you were already in it I don't even know but dude this is definitely real there's no way we would have found all this science that backs up the idea

(1:57:09) of teleportation unless it's unless we're looking at real videos like if you had talked to me six months ago I would have said this stuff's like science fiction now like 4 and a half months later I'm just sitting here like what the hell how is this not out in the public because people just can't believe it right the answer is because people just can't believe it it's so far Advanced that normies cannot wrap their brain around it like when do you think they're going to reveal teleportation

(1:57:42) Tech like I think we're like a hundred years out there's no way they're revealing this anytime soon the way this would get revealed is if we have some type of War and the tech gets used and it's undeniable and even then people will be saying it's fake science is just not science is slow man yeah disinformation is key Diamond definitely is disinformation is definitely key they would do literally anything to keep this secret literally anything I do I believe they would kill people to keep this secret 100% think of

(1:58:18) what's on the line think of all the lawsuits think of the people that would go to prison for uh defying the Constitution they would do anything to keep this secret I'm sure that's the reason why I say that I wouldn't kill myself like pretty much every single day you got to keep saying it because otherwise what they'll do is they'll claim that I had some kind of like breakdown due to being trolled or something like that right and they'll be like oh he was he was depressed from all the trolling that we did to him on

(1:58:46) social media like that's definitely the play it's psychological Warfare man we just asked about Landau Paradigm and it literally says Landau Paradigm all we did is ask about that and then it's telling us about Quark matter and macroscopic phase conjugation is it doing this because of the previous questions is it doing this because of the previous questions does anyone know how this works is it like learning from the previous questions or is this just randomly says this like if you guys

(1:59:18) ask the same question does it say the same thing it is doing that wow huh that's that's interesting that's weird man AI man AI scares me more than teleportation scares me AI scares me more than lithium ion batteries scare me in my plane I'm pretty sure AI is already won guys I'm pretty sure it's already one I'm pretty sure we already lost to AI and oh look at this first

mention in 2010 wow threedimensional processing of moving

(2:00:24) objects hello we're looking at the sentient program we're looking at the sentient program oh my God that's what this is that's what this is we're looking at the sentient program we're looking at the sentient program cbers is is just a system to send it the information it's just a satellite this is the sentient program this is why they're trying to attack us so hard on the videos machine learning to integrate multiple sources are satellites and perform complex tasks such as 3D three-dimensional processing of moving

(2:01:15) targets Bingo here's the question I have for you guys here's a question let's say so this is 3D we know for sure the debunkers are trying to say that YouTube did this would there be any difference between YouTube creating the 3D video and the military's 3D video would they be different why would they be different I almost wonder if they threw the YouTube thing out there just to use as information against this this is a 3D video If you don't believe me I'll show you the the video in 3D let's let's just

(2:01:57) watch it in actual 3D we're watching the video in actual 3D here you can put on the glasses if you want you can watch it they think we're looking at 2D static clouds none of this story makes sense for it to be faked none of this makes any sense for it to be faked weird whoops the mouse changes colors the mouse changes colors depending on what it's hovered over why would a hoaxer add that in I don't know what to tell you guys the mic is working the mic is working it's not muted nothing I can do about it it's

(2:02:47) probably from uh streaming it's probably a YouTube issue or a bandwidth issue weird where's grock come back to me grock um providing support to the U task force you might have to reload if you if I'm cutting out you have to reload probably it's not on my side

(2:03:59) okay well there's a new post for us for tomorrow or in the near future well there we that's what we needed the orbs changing orientation might also be something okay well I thought we were done but we just keep coming across more and more spicy stuff a dense Quirk matter blah blah blah okay where is where's where's grock oh it was right next to us that's why I think we're looking at the sentient program folks um did I save that stuff yeah there it is Gro okay okay man man I mean I don't think

(2:04:57) we could find all this stuff if the videos were fake no there's nothing wrong with my mic guys sorry it's not on my side um let's take a quick look at this wa this is creepy this is super creepy here's the satellites feeding it um oo geospatial intelligence no longer simply means pictures from satellites wow yeah guys oh yeah sentient was definitely

(2:06:13) involved s was definitely involved in this man we keep making discoveries I can't believe I I glossed over this sentient thing wow we need to find out everything we can find out about sentient we're going to have to foer the nro about sentient okay yeah they don't say anything about this stuff this is 1960 imagery right here

(2:07:17) this is 1960 that is uh 60 years old 60 years old hope everyone's having a good night by the way we're going to close down in a few minutes I don't know about this predicting the future stuff that seems like a little too out in the woo can we just all agree that they have video playback black Sky didn't somebody mention this name interesting we might have to look into these companies guys maxar black sky and

(2:08:25) Planet how would these companies not have seen okay we got to write this down how would these companies not have seen MH370 it's not even just the US wow I need something to explain we already have a piece on here that basically admits they have video capability black sky might that to keep track of

(2:09:36) positions of **Russian** Jets well this black Sky company seems like uh Hydra this is pretty wild questions about who and what sentient moners are equally persistent and also nearly unanswerable NR 39 there it is again depicts the yellow octopus okay I think do I have that

(2:10:44) patch yeah I do this is a real patch can you believe this nothing is beyond our reach what the December 2013 wow this was already up when MH370 disappeared developed as part of a future imagery architecture program wow this was 4 months before MH370 they had their octopus thing W

(2:11:48) that is real nothing is beyond our reach except for MH370 apparently wow wow well we're uh Foy and these these people we need a **Foya** okay so what do we need a foer we need a Foy a sentient and N

(2:12:54) 39 let's see what Gren tell us there's no chance in hell the US government doesn't know exactly what happened to MH370 no matter what you think about the videos there's no chance yeah John Greenwalt is most likely a stoe of the government just keep that in mind nobody who's put in 10,000 **foyers** is not completely under the thumb of the US government he's only allowed to release probably whatever they tell him he can release he's most likely part of the slow drip disclosure process if I had to

(2:13:36) guess he also seems just kind of like an idiot honestly just my personal opinion does not disclose the identity of the satellites or their specific purpose radar Imaging satellite can track satellites on a global scale I need if someone can recreate the flight path at n39 that would be huge no we can't really trust anyone is the **truth** man this has been a just an adventure of Discovery man I can't I would NE man six months ago I would have known nothing about satellites that's how Wild the satellite stuff is that's how much they keep us in

(2:14:35) the dark just about the satellites we didn't know anything about what these satellites could do and now we've discovered so much just from two videos we just looked at two videos and from two videos we can figure out all this stuff 3D video here 3D video and even if it wasn't produced in 3D whatever I mean I believe it probably was produced in 3D because that makes more sense for tracking planes look at the you see the mouse change color there look at the look at the mouse it's not black there anymore

(2:15:11) it becomes white so you can see it with an outline you can see that right there it's like white and then it changes to Black when you go over the white clouds see that right there the mouse then it changes the black when it goes over the clouds like that's something the hoaxer would not put into their hoax do you love how VFX experts say that this are that they think this would be easy this is not easy to fake man you have a perspective change eight times have you guys ever seen a video where the persp perspective changes eight

(2:15:50) times or even more even once wow this is the sentient program probably pulling data from cbers maybe even from NRL 39 directly man if anything I've decided there's definitely an elite group of people that uh control the planet and keep us all in the dark of that I'm pretty much sure oh there have been reports that the program can track airplane movements save that save that damn grock is spilling the beans man the

(2:16:57) CIA is gonna have to kill grock off dude grock's talking too much uh saying more than it should be wow okay guys well wow I'm gonna get some sleep for the thing tomorrow that's anti-semitic talk Ash yeah you got to be real careful what you say the elites are going to uh yeah they're going to start saying that I'm uh alt-right racist or something whatever the next play is yeah the Danny Jones VFX expert was uh real life **Reddit** mod really was man and they are **redditors** 100% those guys are Corridor crew guys they are

(2:17:40) **redditors** legitimately it's embarrassing how dumb **redditors** are honestly I wish I mean that social media site should just go away it's should just be done with Twitter is the future honestly that's why they're attacking it so hard anyway guys uh thank you all very much for watching tonight I appreciate it this has been fun uh we actually found more science stuff we we went for another 45 minutes longer than I thought we were going to go tonight grock has been uh doing some great work here wow

(2:18:12) really doing great work uh thanks everybody for investigating tonight I hope you had a good one tomorrow uh 11:00 a.m. eastern time Roy D Herbert hard TRS number five should be a good one uh probably going to try to keep them a little bit shorter I like when they're like with an hour to hour and a half it's just otherwise they get a little bit too long I want to keep them pretty tight in terms of our discussion um have a good one guys later peace

Advanced Science - Dave Rossi Space 12/29/23 - YouTube

Transcript:

(00:07) okay sweet I think I've got it streaming now so sweet welcome everybody Welcome to our space here um Dave pinged me the other day thought might be a good idea if we do a space

related to um some of the advanced science Concepts that we've been talking about and of course I thought damn that's a really good idea and I know a lot of people have been wanting to do spaces as well um on Twitter here or X whatever we're calling it now so uh I think that the way this will go down just in the interest of

(00:36) time is we'll start off with uh some introductions um then uh I'll kind of talk with Dave a little bit about some of the science stuff and then uh we'll start to bring people up who want to ask questions and and dig into it um but the main idea here is that we wanted to uh understand the best of our abilities these Advanced science Concepts like how we unify Quantum and macro what the implications can mean in terms of breaking down the SpaceTime vacuum and then we can go into some of the stuff like what does this mean with respect to

(01:07) UFO Community uh uaps that we see flying around Etc um how does that sound to you Dave that sounds great yeah because there was a few things that I wanted to break down to attempt to help clarify some basic concepts for everybody and uh I I really I really like that so we can discuss and then go to um chatting with everybody here awesome man so I think I'm just going to start with I'll introduce myself and then uh you can introduce yourself however you want um and then we can just start getting into some of the

(01:39) discussion I think this is going to be more of just kind of free flow discussion um so yeah let us just talk for a little bit and then if uh when we open it up to questions we can bring people up and people can kind of chat ask whatever they want so uh my name is ashon Forbes I am the uh organizer of MH370 x i call myself an investigator because I've been looking into the MH370 videos and the thing that I would say about what's got me interested is that I feel like I'm in a scenario where as you guys

(02:07) can probably relate that we have like the answer sheet to a test and we're staring at the answers but what we need to figure out is how do we show our work how do we prove that this is actually how we get there when I was in physics class science class math class you couldn't just have the answer you had to be able to show your work as well so I almost feel like we're working backwards and we're looking at the end product and going okay we know how these things can fly now we know how the science can

(02:33) operate now let's figure out how it works so my goal here uh my goal as always has been to just try to understand the science understand the technology and understand its implications on humanity and I hope that we can drive that conversation forward go ahead Dave all right thank you so um first off Ashton thank you so much for putting this together brother I really appreciate it and uh some of you here may know me already uh I am the host of The Generation Zed podcast and then in the last couple years also was gracious

(03:02) enough to be uh through an interesting set of events pulled into the uh Contracting SL Consulting world to try to bring uh a fair amount of this technology out in in conjunction with others because there are quite a few others that do believe this should come out and I think that uh by breaking down a couple of basic concepts uh this may help I guess not necessarily

Enlighten but perhaps help people concisely uh discern between the different phenomenon they're seeing with craft and and whatnot because there's a few different

(03:33) things to to break down that I'm going to try to do as best as I can as basic as possible and um just wanted to know Ashton if there's anything else you wanted to jump in with or if I can go ahead with it um yeah I mean I guess I'll just listen what you have first and see if it already covers I I wrote some notes of stuff that I wanted to talk to you about but you know I'd rather have you just kind of uh say what you want to say and then I may jump in here there if uh I have stuff I want to kind of expand

(03:58) upon sure thank you I appreciate it okay so couple things uh with regards to I already see some people uh Tagg me in a couple tweets under the thread they're asking me some uh questions and I I will do my best to answer all of them so there's a few different things we have to realize and one of them is that we need to realize that there are a few different we could say apparatuses or avenues that make these craft operate now I'm not saying that I claim to know every single way that these craft operate there's certainly more than one

(04:25) way to skin this cat I would dare to say there's probably anywhere from five to eight ways to tap this type of energy and to tap this type of phenomenon that we're seeing with that said though um at the end of the day what we have to realize is that when we look at something for example like uh what has been called inertial Mass reduction that is basically causing an object to lose its internal weight essentially now something like that in a particular instance would be more so when one is seeing a craft sort of slowly lift off

(04:56) the ground in a certain regard and that is indicative of a slow slow but gradual resonance occurring around the perimeter and arguably inside the craft that is allowing the craft to begin to lift up now when it comes to the concept of when a craft is immediately seen zooming off to the point where it almost doesn't even look real that is a that is a separate concept with regards to what we can call graviton emission so that would be a pulse powered situation uh whereas the inertial mass reduction would be

(05:27) more of a spin resonance sort of uh uh method or setup whereas the pulsation that make the craft immediately zoom off again to the point where it doesn't even look real at all um is something that would be a pulsed graviton emission situation now the final thing is the um third concept which is the polarization of the vacuum essentially which means that you are polarizing the sort of like if you were to be put yourself in a boat in in uh in water and you were to make the the boat move quicker the same way

(06:01) that one does when a surfer surfs on water right this speaks to of course the aluar warp drive and all of that now the idea with that is we use electricity and magnetism to create a situation where there are for lack of a better term uh fractal toroids that Encompass the entire craft not necessarily observable to the human eye uh but certainly allow the craft to move at extreme speeds as well as put a warp bubble around it so then it can go into water it can go into different environments and not have anything affected because this

(06:34) electromagnetic polarization the same way that one surfs on water is constantly creating a shift where one doesn't even need to uh where there's sort of a separation uh in the in the vacuum around the craft but without getting too much into that I just wanted to start off by laying out a few of the different concepts that seem to be um I don't I'm not saying for anyone here but in general seem to be misunderstood by many uh which I can understand because it's very difficult to to grasp this

(07:03) type of science when there's not really too much of a foundation and especially when in my humble opinion many different scientists that advocate for the transparency of this type of physics and Engineering are possibly saying the same thing just in their own uh their own ways or terms and so that's when I would very much say that anywhere from 40 to 60% of understanding this is simply uh just I call quote unquote translating from one form of interpretation to another and so I think that just jump in

(07:33) right there Dave so just to reiterate I mean what you're saying is that there's two different elements that play two different uh things at play especially if we talking about let's say hypothetically three orbs that are circling around a plane um right one is that they are freely floating and ignoring gravity inside of essentially a bubble uh the non-radiating barrier that I think we see in some videos out there that allow it to completely suspend themselves from Gravity because now you've got your mass reduced to zero and

(07:59) now you're not going to be affected by the local gravity of SpaceTime around the earth um can you elaborate just a little bit more on that part is that the one that's the pulse graviton emission just so I can kind of separate these Concepts in my mind in terms of what would be causing them and how they would differentiate from a scientific perspective sure no problem you pretty much laid it out fairly well with with what you just said there but with that said to give a very basic example for everyone here and I'll connect it back

(08:23) to the situation with the plane so for example it's always been it's been thought classically that if you had a kid on a swing and you push the kid on the swing eventually you know the swing like a pendulum will oscillate back and forth depending on how hard or soft you push the the the kid in there for the swing um the child will eventually get off the swing and once they leave the swing classically it's been thought that once the swing comes to rest that's it the swing is staying still but in

(08:48) quantum mechanics it's a very well-known understood concept that at the plank or Quantum level whatever we want to refer to it as the swing never stops oscillating just because we cannot see it oscillating after we think it looks like it's still doesn't mean that it's actually still and so the question then becomes is it possible to lock in using perhaps lasers lock in to or with that oscillation now for those that may be saying well is this even possible please know that you don't have to take my word

(09:18) for it you can look for example at what the Germans called the zitter buong effect which I'm if I can uh translate Loosely um if anyone wants to search it up you're more than welcome to

it rough uh translates to I believe the some type of uh Jitterbug or some type of oscillation which speaks to what is called the heis uh the Heisenberg certainty principle where if one knows the position of a particle you cannot know its velocity and if you can measure its velocity you can therefore not know its position so you can know one but you

(09:50) cannot know the either know uh both at the same time and so this speaks to the notion that matter at the plank level all around us is constant ly oscillating moving back and forth like a little Jitterbug even though we cannot see it now in the case of the plane if the plane had a particular resonant frequency what what I mean by that is if the metal around that comprised the plane itself had a particular resonant frequency it could be possible to in fact in a certain situation use lasers for example to lock in with that

(10:23) resonant frequency and then create its own form of rotation on its own axis that will then allow for the plane to lose its internal weight it would then therefore allow for the orbs to polarize the local vacuum around the plane and then finally allow for a potential graviton pulsation which would highly be in would highly be indicative of the final uh alleged disappearance that we see on the uh the footage itself that's interesting now what about the like the orbs themselves though cuz is that just the same mechanism that's

(10:56) on a smaller scale cuz I mean when I look at some videos out there and I'm being koi of course uh you can clearly see that it looks like this orb this sphere is just a non-rating barrier it's not necessarily like a metal sphere out there so is it the same concept that would be used to you know cause that to happen a plane that is happening on a smaller scale or do you think that's something different well this is where it gets interesting because and it's a great question because when there are certain

(11:23) situations as I understand it where these orbs are actual we could say physical mechanisms whereas in other cases they could in fact be comprised of what's called a Bose Einstein condensate and for those not familiar it's basically a much lighter version of plasma essentially and if we think of this as potentially being the window between this is where it gets controversial for some uh this is where a lot of physicists have no problem discussing it in theory but the second you talk about you know experiment or

(11:49) practicality they lose their crap but this speaks to the notion that past this plank level there may in fact be something that is not material but is coming through into the material and expressing itself as a Bose Einstein condensate that from a distance would in fact look quite solid to you know for example uh human beings for examp uh in certain situations but under the case of say different Radars or different forms of special detectors May in fact be able to show that it may be not be as solid as it looks with that said though it is

(12:22) also of my understanding that there are in fact physical orbs too so I don't want to sit here and say that um I I I know the exact answer anyone that claims they do in my humble opinion probably is lying but there are a couple different approaches that can be taken there in terms of not just the way they operate but what you're deploying and what you would be

operating from the perspective of an orb type situation now the reason for example that we see or that I have proposed in the past on your show Ashton

(12:51) is uh of there being four orbs instead of three is because it speaks to this notion of first off to put the physics side for a moment it speaks to this notion of squaring the circle that many of our ancient ancestors seem to be doing I know Graham Hancock has spoken about that extensively but it speaks to this notion of taking all four polarizations of the photon to then induce a gravitational effect now what I mean by that is I'm essentially saying that there's a direct connection between light and gravity and

(13:22) so it has been in the past observed from uh astrophysical scales uh that this isn't in fact the case although has later been retracted whether in uh you know papers published that were later pulled back for quote unquote controversial reasons and so on and so forth which is one of the reasons that uh you so kindly and graciously posted that uh research uh manuscript that I that I put together in an attempt to try and show that this type of science has been around for many decades the papers have been published but they either get

(13:53) retracted or very mysteriously disappeared but it can be it can certainly be done now one final thing that I will say is that for those that may be thinking well is it possible to be do you need a certain type of metal is it possible to you know use any metal well it depends the type of power densities one is trying to achieve with that said though this is where it gets quite controversial but I agree entirely with Dr Sal payz when he says that one does not need any type of special meta material to induce these effects and to

(14:25) that extent I do agree now with that said people have talked about you know rearranging the uh the um the nuclear Isotopes in certain materials to uh induce what are called half Inger spin States because then you can sort of if you spin one say for example piece of metal clockwise another one counterclockwise you can potentially nullify or create a sort of void in between those uh counter spinning uh we could say cones uh or materials that would then create a very similar effect to the zitter buong effect that would

(14:57) sort of break apart that local SpaceTime and create a sort of a void in between the two uh but there there are quite a few different ways and and I've seing some people here also asking why hasn't this been uh let me see here why hasn't it been done and so on and so forth and we we'll get to that shortly I would say that it in fact has but um I'll leave it there for now just to just to let you jump in brother uh sorry I was trying to get back to it yeah and I think this is a good point to

(15:26) say that um I don't think Dave or I or uh none of are suicidal we don't plan to go on any uh permanent vacations to bise or anything like that so uh just want to throw that out there it's just important to repeat several times um and just in case you know you do think that what we're talking about is real which I think both of us do um one thing I wanted to ask related to the orbs again too is one thing like so if they are like a Bose Einstein condensate which just for the people out there understanding why

(15:54) Bose Einstein condensate so important is that this is almost this is where like uh We've looked looked at like I think Anon petrov's uh YouTube videos where he looks at some of the more advanced Sciences on The Cutting Edge stuff that's just come out the last few weeks even where you can have fermion convert to bosons and that's kind of what Bose Einstein condensate can allow is that you super cool certain elements like lithium 6 and it goes from being something that is uh taking up space that you cannot have the same atoms take

(16:22) the same space up to a point on which is like a laser beam where you can focus it down to a single point and I think this speed what do you have the waves making where you have these waves get into a coherent State now my problem with that is okay let's say that these orbs that we see are doing well sorry Ashton brother if I could jump in very quickly please well if we think not even a correction I want to make a quick addition if we think of lasers as very Advanced particle accelerators basically making a particle

(16:51) essentially accelerate slash run I'm trying to simplify as best I can from the moment One turns the laser on to the point in which the beam ends or stops at or hits a certain surface or what whatnot if we think of electricity moving ACR like a little electrons moving across an elastic band for example let's actually hold on let's imagine Ashton you and I stood in a room and there was carpet on the floor and we attached a big elastic band around each other and we started scraping our feet on the floor and then we touched um uh

(17:23) the door knob and we started getting a shock for example a very Advanced version of that would be a very strong laser pulse now the reason I bring this up is because if the photons that are being emitted from that laser the light particles as well as the electrons if we throw an electron beam in there but let's stick with just the photons for now if we can get those photons right after they're pulsed or even before they're pulsed out to lock in with the resonant frequency of in this particular case the plane one

(17:56) would be able to utilize lasers to encompass essentially the entire plane and it it sounds so what I'm about to say here sounds so far out there that uh many people may even laugh at it but if it technically in principle would be possible for a laser beam using what is called a phase conjugate pump pulse width modulator to essentially lift up something as large as for example a submarine and the reason I say that is because there's a difference between the mass of an object and the weight of an object

(18:29) so if we think of mass being the internal Resonance of every object basically everything around us including ourselves is resonating within it at a particular rate has a certain resonance within it and some people you know they've called this scalar waves people have called these this you know many different names and at that to that extent it doesn't it doesn't really matter as long as one interprets it or understands it to the best of their ability that's that's all that matters but imagine every single object has

(18:56) within it a bunch of dancing particles if you you can get the photons emitting from your laser for example to dance at the exact same rate at at uh as the object that you are trying to

essentially control you would be able to enable this not not microscopic but macroscopic macroscopic effect which would be very indicative of what we we've seen in the um the the 370 footage although not just not exclusive to the 370 footage but certainly something that I in my humble opinion I would say is quite uh um quite quite similar to

(19:30) certain things that I've observed in in the laboratory on much smaller scales yeah and I see two best hand up which I'll let him speak in just a second then um and so is that same effect what would be allowing the orbs themselves to float freely and then if so or if not how can the orb bolt displace SpaceTime itself but then also have this capability to produce its own geodesic do you think that there must be something mechanical in there somewhere uh it speaks to the notion of of um we could say Casimir cavities um putting two

(20:04) little uh you know metal plates next to each other and running a resonant frequency to through it um and then having a whole other set of Casimir cavities on top of that one and that would be one way that one would be able to develop or assemble an orb that could both nullify or polarize or void SpaceTime and still induce the effects needed while remaining outside of SpaceTime but having that for example in the case of the orbs with this certain maybe laser beams be within the vicinity of SpaceTime whereas the

(20:36) orb itself is not and so yes ultimately what I just described is conceptually the same way that uh that uh you can describe what you were asking there as well yeah thanks for that Tupa do you want to jump in sorry I just saw your hand up oh yeah I'd love to man this is an amazing conversation uh lasers right uh it affects like light I'm asking um where did the if indeed a laser could be pulsed at the same rate of an object and um to to affect it are we talking about affecting the light like making it

(21:08) invisible or or as sending it somewhere else if so where else that brother great to see you by the way it's it's been quite a while and uh great question I appreciate it so a few different things that we can look at here because those are great questions so there's a difference between um in the case of lasers actually generating a we could say a gravity wave and if you can if you can control gravity waves or you can emit gravity waves you're essentially opening up the door to everything from

(21:40) uh Stargates to it again science fact begins to outstrip science fiction very very quickly um you start to go into for example there was a paper I think from the late 90s that was called super luminal electromagnetic waves in free space um speaking to what you were asking there uh Tupac uh But ultimately the it's interesting because when you look at how photons work and how photons behave it's possible that within photons themselves there is in fact what you could call gravitons and now there are different

(22:17) types of of gravitons we could say but they all behave um just like electricity does now what I'm trying to imply there is that this is what we call a second order effect or a topological effect so in other words if we had electricity and magnetism meet certain conditions we can then turn photons or light into gravity and where we could for example transport objects would

not be an issue whatsoever with regards to things like distance for example because distance is only um we can say one can argue strongly an

(22:52) optical illusion and if one is able to manipulate or perturb those optical illusions relative to the source that you're then emitting the photons from you space doesn't become an issue at that point you begin to um you begin to bridge points in uh space through the shortening of time in a certain way if that makes sense but sorry Tupac I didn't mean to drift from what you were asking could you repeat if I didn't catch everything no that was amazing um yeah curious like uh did the would in

(23:24) the m370 case would the orbs have made the craft invisible or sent it somewhere and I think you answer the question in my opinion it would have it would have likely sent it somewhere the invisible aspect it it doesn't really and actually I think it's on Lockheed Martin's website they've openly admitted to it it it the invisibility factor is something that's very very old school if you can bend um gravity then the light will bend around it so light and gravity waves are very very they they hug each

(23:53) other basically but if you can bend the gravitational wave or field you can then bend the light if you can bend the light you can then bend the visible spectrum that we observe as humans and as humans we can only see photons directly uh everything else is sort of just a you know a little bit of this a little bit of that etc etc and so by bending or perturbing that you would then create an invisibility factor and then amplifying that even more you would then be creating a sort of warp bubble situation as I was speaking of earlier you would

(24:23) begin to polarize the local space around you with that said though I do think that in the case of 370 that it it was sent somewhere so that warp and polarization of the vacuum there that's what we're talking about with the alabar drive right I mean we make a field that you separate yourself from SpaceTime and now you know from the local frame of reference inside the field you know you're going to have a different frame of reference than people who are on the outside observing you this is what allows for you know super luminal speeds

(24:50) to become possible right where we're not actually breaking causality or anything here we're not breaking physics I I think as you pointed out we're just taking taking a new approach to Old physics right and yeah 100% to the point where I'll even give everyone an example here just because at this point it's it's got you know a lot of people have been talk space just crashed hope it doesn't crash the space I can't see what it says how do I how come I can't

(26:00) reconnect come on man what's going on here lit literally won't let me reconnect to the space I can't I can't reconnect I can't reconnect to the space what what am I supposed to do guys come on come on man there we go we're back and gravity is linked with time right it's force over time or whatever right so like that's very interesting very ve very much so time is a bit of a difficult concept to grasp it's um I mean it might or it might not be it it depends on how one looks at it the the

(26:54) notion is that and this speaks to a lot of what's been missing from physics to uh complete the unified field Theory but if one looks for example or envisions that all around us we can't see it but there are these longitudinal waves that are not even straight waves they're more like super long slinkies that are that INF that are essentially infinite in distance and each Loop or ring of the slinky represents a point where for example I uh pick up my phone and then put it back down I go wash my hands and

(27:25) then uh turn the water off every time I complete a task ask one of those loops on that Slinky has been completed and then sort of like a move like an old film reel we move to the next frame rate or Slinky if that makes sense moving through time right moment by moment choice that would be exactly and that that would be the description of time and so if one thinks okay if we can break that or if we can get out of that um by surpassing the speed of light barrier you would then be able to manipulate time at as well as

(27:59) essentially multiple spatial Dimensions which would then enable the anomalies that we now see which would speak to the notion of well my phone was super blurry when I was filming the event and then this brings up you know people debating online well hold on it was either just a pure pixelation or maybe an actual phenomena happened well I would argue in fact that the phenomena caused this pixelation because the renderings of our cameras do not know how to render this higher symmetry electromagnetic phenomenon and so therefore it's only

(28:29) going to show the flat intersection of these concave events but these concave events are fueled by these slinkies essentially and when you say concave you mean like uh bending into the fourth dimension or something right bending outside exactly which speaks to spin which speaks to the notion of again um squaring the circle it speaks to this concept of you know what our ancient ancestors would Drew on the cave walls of you know spirals over and over and over again again I'm I'm pretty sure that they uh that some of them figured

(29:01) it out and tried to leave some messages yeah can I ask another one question here then real quick is this um Dave would you consider this to be a wormhole in your opinion or is that too crude an approximation of what we're talking about no I I would I um in a certain instance if you're if one has enabled a situation where you're not just making an object disappear into uh an un not set of into nothing basically then that's a little bit different because then you get into some temporal issues there but if you had a situation

(29:33) where you specifically knew where you wanted to put an object from one place to another then it would be a traversible wormhole uh very much like the Einstein ER equals epr yeah yeah and just for people who want to know what we're talking about ER equals epr um and I'm gonna oh sure that's the Einstein that's the Einstein Rosenberg uh Bridge so if we actually let me give a very basic example so this would speak to going faster than the speed of light but let's just put it this way imagine on

(30:00) the surface of a say of a a road or a street where one exists and is walking down the street things are going normal etc etc however there is a Subway underneath right where you

are walking and that Subway just so happens to go much much faster than the people above ground and so if this subway goes faster than the people above ground to the point where it goes so fast that not even a second goes by and that Subway is already at its next location that would be an example of how essentially one would be using wormholes to essentially

(30:34) bypass not just uh space and time but surpass the speed of light in various aspects which by the way for those that may be interested it was shown out of Los Alamos that Hargraves and Visser showed that um it is in fact very feasible to do yeah and then when we're talking about epr then we're talking about uh quantum mechanics right so that just includes has Einstein, Rosen and then is it P P Oh uh yes sorry I forgot his name but yeah e yeah not getting it right hold on epr um but yeah from that perspective

(31:11) what we're doing here is we're talking about combining um uh general relativity which is the large World macro scaled world and quantum mechanics um which is uh pki and the thing about that then is that um people like Susy and Malina have oh I put put his spell his name wrong in my space here but no they've pretty much argued that these things these concepts are related so that the idea of quantum entanglement and quantum computers is similar to the concept of a wormhole and if we look and go back to the double slit experiment we

(31:47) can see that information is passing faster than the speed of light and we know this because when we're shooting something through one of two gaps we get a wave pattern but when we try to detect it and and look at it it changes it reacts something that we would not expect from science and physics so this would mean that something here is being moved faster than the speed of light this is what brings up non-locality and that's the same concept as from general relativity of a wormhole something's able to move faster than the apparent

(32:17) speed of light and if I can add very quickly to your as your point Ashton if one took a fish bowl for example or even just you know a glass of water and they shot a laser beam through that glass of water essentially what you'll find is through the kinetic emission reabsorption emission reabsorption of the photons going through the glass through the water and all of that you have essentially slowed the speed of that particular laser beam down now let's think for a moment that we know if one puts a human being inside of a body

(32:47) of water where the water is the precisely to a te the exact same temperature as that particular person at that exact point in time that person other than having issues breathing would not know that they're in water and so if we think of that concept and we compare it to what we know as or what we people have called the quantum vacuum or you know the ether or whatever you would like to call it it makes one think okay hold on a second on a much more if we think about those who have done psychedelics you know fractal zooming in

(33:15) and out and all of that if we think about for a second the fact that and I say this in a very crude manner I'm not trying to say that this is my belief but in terms of a scientific H thought experiment if there was a big laser beam that was being shot through say an environment that we would be in that laser beam would be determined by us to be the speed of light and so this

notion that for example people have said in the past it's not possible to break the speed of light barrier there is in fact very there is a

(33:48) shortcut there is a way to get there which is why I also think that that speaks to the what we see with regards to this sort of contradictory statements by Disclosure figures and I'll kind of just leave it at that um I think that's representative of infighting behind the scenes some people say this stuff can come out others say not so much so but yeah yeah if we think of that concept of the laser beam shooting through a glass of water um we see some very interesting similarities and it may in fact be more

(34:14) in literal and in our faces than than we may think in that sense and now if we think for a moment that if we combine that experiment with a again if we bring this full circle a Bose Einstein condensate it's possible that if we deployed that Bose Einstein condensate in that glass of water with that laser beam shooting through it it may in fact be possible to notice that the laser beam may not act as laser like as we're used to meaning that the Bose Einstein condensate May in fact create a situation where very at a very uh small

(34:46) level just within the containment of that class there is sort of a doorway that has opened in a way that normally would not have been possible the same way for example that um when you're inside of a pool it's much more difficult to get to the for example get to the bottom or the deep end of a swimming pool and stay there because of how much pressure there is but if there's a way to break that pressure and sort of create a void inside that pressure then you'd be sort of creating a shortcut um around a lot of what

(35:17) mainstream physics has said is not possible yeah so what we're talking about here is not Star Trek teleportation but we're talking about Star Trek warp drive right or even Star Wars with the uh Imperial Battle Cruisers that you know go to their super speed uh out there and the thing that I found is interesting after I read your research analysis that you did that I posted was that it was a lot simpler than I thought uh initially I thought this was going to be very complicated but you know it really just goes back to the alabar

(35:45) drive which I think a lot of people are familiar with and then to bring it back full circle with ufology you know I've said this a lot but if there are uaps that are visiting us that are showing these properties that we see I mean they're not going sub light speeds they have to be going very fast speeds in order to get dozens if not hundreds if not tens or hundreds of thousands of light years away from us to us you know we need something that goes faster than the speed of light to quote step Greer the speed of light is too

(36:14) slow that's that that's a that's a very good point so when we think of this notion that for example we so there's there's a phrase that has been that's not really well known uh which is that char parity inversion is equivalent to uh reflection now what I mean by that is if we take for example two particles and we electrically charged them in a Bose Einstein condensate and we met a couple of other conditions electromagnetically we'd be able to find that these particles will in fact appear then

(36:45) disappear then reappear then disappear almost as if the ether or the quantum vacuum all around us is behaving like one big jiggly um oscillating mirror and so when we think of something like that and we think of what we The Ether or the quantum vacuum as a set of mirrors for example the question becomes can we resonate those charged particles and so if we can resonate those charged particles whether we see them or not is not the point but if we can resonate them to a certain degree it may be possible that those particles will be

(37:18) entirely view observable but enable an effect or a phenomenon that is at this at this point I would say IND discern IND discernible for magic but at the same time something that would be um I think would a lot of a lot of mainstream physicists at least would have a very hard time uh accepting the same way that it took like 30 or 40 years to accept the Aronoff bom effect which is a very basic a repeatable experiment that shows um there's a phase shift which implies that something is occurring in The Ether or the quantum

(37:50) vacuum etc etc so and this is actually Ashton I want to thank you for doing this because I think that if we relied on mainstream science we would not get there ever so yeah so the other thing I want to ask then is you know what would it take what kind of power levels what kind of uh requirements would it take to you know break the fabric of SpaceTime you one thing that I've been hypothesizing recently is that you know we've been talking to Bob Greener um and he's been talking about fractal toroids which is

(38:20) donut within a donut within a donut he mentioned I think on the space we or the uh YouTube that we were on the Stream with alien scientists that it would take at least three uh fractals like know deeper and deeper and deeper of the of the donuts in order to achieve a shape that will essentially uh cause like a focus SC of any type of like let's say particle accelerator electrons or anything that you would shoot into it um what is your thoughts on that or what the requirements would be sure well I can I can say one thing which is that um

(38:53) and again I will give as many practical examples as I can and uh I will be honest in saying that this is not something that if I those in the audience listening whether now or later can go and replicate but certainly helps with regards to more of a practical uh correlation so a lot of people have claimed to see craft exhibit extremely bright colors uh before they immediately take off in a very surreal Type of Way um and so I'm going to bring this full circle to your question Ashton and one of the things that I would like to give

(39:24) a hint on for anyone that's willing to to look into this is that if you look at how ultraviolet Pulses from lasers work how they look etc etc it's very possible that what we're seeing when the craft take off are the exact same colors within the ultrav Violet Spectrum which indicate that there is a UV pulse occurring that has now been scaled up and Amplified to the extent that it is able to Encompass and there for transport um an entire craft uh whether it's through extremely fast speeds or going at the speed of light or

(39:57) even super luminal uh FTL faster than light travel with that said I know there was a gentleman that had uh uh he was I think he was a marine and he claimed to see in 200 I think

eight or nine a craft in Indonesia um he testified uh quite some time ago I think at the Steven Greer Press Club conference earlier this year as well as uh he was on a I forgot that I think Shawn Ryan was his name two or three weeks back anyways point being is that they what he claimed to see in terms of the colors the way that this

(40:29) black craft took off and all of that uh he what he's describing is identical to an UltraViolet pulse in the lab and if we think of these fractal toroids as you mentioned Ashton we then Wonder okay fractals and we fractals speaks to the notion of you know big small zoom in zoom out etc etc if one can somehow amplify that ultraviolet pulse from a very small level to a very large level using for example uh room temperature super conductivity or using a certain type of uh you know resonant frequency that would Encompass the entire craft

(41:04) one would in fact possibly be able to create those as what we call here in the the name of this space tonight uh macroscopic effects so not just super small effects at the quantum level but bring that Quantum effect to uh full-on observable reality and essentially enable these effects using a laser a laser beam pulse particularly an Ultra a UV an UltraViolet pulse in in particular why do we need room temperature super conductivity to achieve this something I've always kind of wondered maybe that think the people no we we we don't uh to

(41:39) be honest with you we actually don't it it could be done with with um high temperature superconductors too and and low temp ones you don't there's more than one way to skin this cat yeah but why is super conductivity important in general um because there's zero resistivity to the electrons uh Within within the bulk material itself and so what happens in that particular case is it just enables them it okay let's let's put it this way and I wasn't planning on saying this tonight but I figured I

(42:07) might as well there's a few different one one approach is an electromechanical approach which involves what we were discussing earlier with the aluminum cylinder spinning and whatnot another approach is a solid state approach which is no moving Parts in that particular case you would then have perhaps certain instances where you would have uh certain superconductors in certain Arrangements that would then be pulsed with a a UV laser or with some other apparatuses that would emit uh in this particular case gravitons themselves so

(42:37) there's a few different um and this is one way that this has been able to be hidden in plain sight with regards to how these contractors develop the tech it's possible to have the tech developed at these fabrication and wafer factories all around the world and then what would happen is you then have it shipped back to you and you assemble the final product in house but the um the power densities the materials the chemistry all of that is all there in order to enable these effects and I I say this in

(43:07) a very unfortunate sense but regretfully but the way the system has been set up whoever devised it or whoever uh whatever set of individuals over time developed it in terms of being able to keep this stuff right under our noses while still having manufacturers develop the necessary materials to enable the effects when lock he assembles it back in their you know

home base has been it's been completely manipulative and terrible for Humanity but I I extremely smart I love lock Martin out there we're just we're just calling him out by name

(43:40) now yeah at this point I mean at this point come on at this yeah yeah I mean who else is honestly doing it there's only a few handful of people possible I really like the idea that you just threw out there though is that each of these components can be built in different locations right and then you pull it all together this is one of the requirements in order to keep stuff secret it's compartment mentalization right so people know they're working on Advanced microchips maybe they're working at a

(44:01) company called I don't know free scale semiconductors or something like that right and then they send their piece over to you know ship it to America maybe let's say a high temperature superc conductive microchip something like that you know maybe that's an essential component sure and not and and let's actually scale it back to everyone here that's listening because a lot of people here I believe uh the people that I see here that I do know or know of are very good and very Avid researchers and

(44:25) and I encourage you guys keep going to give a practical and prime example is that there are there are pieces of information on the internet that when are scattered and are not connected in a certain way are considered harmless and uh not a threat to National Security etc etc but when compile if if certain information from all across the internet is then assembled in a particular way it then becomes classified and so it it's something that in fact certain people have in fact stumbled upon and the information is out there for tapping

(45:00) this stuff it's just a matter of how one puts the the pieces together and has to separate the wheat from the chaff essentially and that's one of the biggest problems as well as under understanding what one is attempting to develop or emit uh because again as I said what with uh starting this uh this space here we must realize the difference between inertial mass reduction so getting a craft to slowly lift off and lose its internal weight essentially a full-on graviton pulse and then the polarizing of the vacuum to

(45:32) make the warp bubble these are three separate things but they're all they're all very vital in conjunction with the phenomenon that we see okay yeah great so the nural mass reduction this is something I've been confused about um that I want to just touch on real quick is what allows something to become weightless right is what we're talking about but it's also been used in terms like where you're like Pro protecting the occupants of a craft that's moving at Super luminal speeds from being liquefied as well can

(45:59) you just um kind of separate those two concepts for us are they based on the same idea uh sure well I mean it depends on what one is trying to achieve but at the end of the day for example the inertial mass reduction would be able to create a situation where you can Encompass with a dielectric material your uh you could say cockpit of of your crew and your craft that would then be unaffected by the outer skin of The Craft which would then be in a certain going at Super luminal speeds for example and so the the this speaks again to the

(46:32) polarization not of the vacuum but in this case the polarization between the occupants inside the craft and then the actual outer layer of the craft and the physical environment outside of that craft and so you are separating you are polarizing your state of for lack of a better term existence in other words this is this is spacetime metric engineering for anyone that may be thinking if is this you know P off SpaceTime metric engineering ing it basically is but you would be polarizing your cockpit or your crew from the rest

(47:02) of the craft itself by having an internal dielectric shell uh or dielectric um an encasement um that would be enclosing you and your crew essentially okay one last thing and then we can take some questions as well that I wanted to uh address is so I when I was watching uh some scientific presentations by suskind and Malina about  $E = mc^2$  equals  $p \cdot c$  one thing that I think they both mentioned actually two different aspects one that we've already touched on which is that if you want an object to be able to go through a

(47:32) wormhole its mass basically has to become zero because if you try to put some Mass through this Wormhole it's a very uh delicate uh situation that's created then it's going to cause the Wormhole to potentially collapse or if other stuff falls into it a potentially collapse think of like if you have a big butt and you can't get through a doorway kind of situation um right the other thing though is that they talked about needing negative energy in order to sustain the Wormhole and one thing I found

(47:58) that was interesting about this concept which I want to get your thoughts on are what we see in the MH370 videos an endothermic event we see an absorption of energy which is really the opposite of a release of energy and I wondered about what's the relationship there between this absorption of energy this endothermic event and potentially the need for negative energy could it be that the negative energy that we need is being absorbed there or is this just a matter of when you break through to let's call it the Matrix the underlying

(48:26) framework behind SpaceTime that the endothermic event is just kind of it collapsing on itself what is your your view on that sure the endothermic event is a result of the induction of this negative energy what we've been discussing this entire time is actually inducing this negative energy in various ways um other than the actual genuine emission of gravitons putting that aside the inertial mass reduction and the polarization of the vacuum and the uh alub barometric uh warp drive and the warp bubble that would all be negative

(48:59) Mass negative energy whatever we'd like to call it essentially yeah okay um let's go ahead and do you have anything else you want to say before we take some questions here no no I it's actually I think we're approaching an hour and unfortunately within the next 20 30 minutes at most I I myself have to take off so I think it's good if we jump to to questions and I appreciate you so much brother for doing this because I wanted to just do my best to lay out to the community for those that were

(49:24) gracious enough to listen uh the difference to my understanding of what these different effects are and uh and yeah hopefully some people can read between the lines here with

respects to um my not just saying that this is theoretical there are it has been done experimentally and I know I don't expect anyone to blindly believe me because unless someone has seen it in the lab themselves I don't blame PE I don't blame anyone at all um but yeah okay so just uh we're going to do questions I'm

(49:51) going to give some uh quick uh rules for the questions here uh I don't want to to hear anyone's life stories uh I know everybody's got experiences that's great we have a limited amount of time so please keep your question high and tight uh and we will try to address as many as we can if you want to speak feel free to request to speak and put your hand up and I'm just going to go in order of who I can see if you don't have hand raising capability wave at me and I'll take a look so let's start with

(50:16) tupacabra thank you again for your time guys uh quick and easy questions Dave uh do does the MH370 video as presented to us you know what we can see do the shape and behavior of The Craft and the whole event itself align with your research uh into this kind of like future Tech to the point where I it's Goose it's Goosebumps like I get goosebumps I've uh yes to the point where yes on smaller scales experimentally yes um this is what one of the things that I was trying to uh try and explain using the research

(50:53) uh U assem uh manuscript that Ashton graciously published for me to to try and get more uh more attention because I wanted to lay a theoretical groundwork with that particular uh compilation of of papers to show that people like Eric Davis have done papers on it showing it's possible 20 25 years ago it then later got retracted um you know some of the papers that were published in that that package that I and Ashton put out there uh are screenshots of papers that are not necessarily classified but they're not public either um and the way

(51:23) that I got a hold of them is a different situation but the point being is that there's I'm very frustrated with the fact that there it looks like there's an attempt to put all this back in the box and although some people may think that it's this stuff is not possible in my opinion it is thank you and one last question um I know that we've been talking for over a year about this stuff and you seem to be on the on the tip of the spear you know even to the point where it's dangerous to talk about it at

(51:50) times right what is the likelihood in your opinion that a special effects artist from 2014 was able to produce this video to such a realistic degree to your current research now in 2023 what is the likelihood and this is I'm just gonna and I appreciate the question brother um I'm just GNA give everyone here my honest opinion anything is possible but in this particular case um I don't mean to be so declarative but I I would go as far as to say I know for a fact that the effects we've seen in

(52:23) the in the MH370 videos are are precisely indicative of a qu what's called a quadruple mass oscillation moment which creates and induces these this negative Mass this negative energy facilitates the effects um or at least facilitates the possibility of these effects to occur so you know it's anything's always possible and I'm not a betting man but if I was I would bet huge

money that that event was was real awesome thanks Dave appreciate that uh Dr one of one you're up alrighty thanks so I'm a full stack

(53:01) Quantum engineer and it's ironic it's ironic that we're talking about Advanced Quantum science yet we're discussing black holes wormholes portals at at our own detriment so you know word to the wise think about how this technology could be useful as opposed to it end in humanity yeah I I appreciate that brother very well said very well said I I couldn't agree more I I really couldn't this this creates a um uh what we could call a dual use situation right which you may know better than myself uh

(53:54) it's the same thing where you know you pick up a hammer right you could uh fix uh fix a bench with it or you can hit someone on the back of the head with it it comes down to that so my question is quantum computers solving all our problems where is the good outcome that's an interesting I'm I'm of the humble view that I think that uh we need to evolve in the dare I say spiritual sense more more than relying on quantum computers to solve everything for us and I say that just because it is of my experience um that and

(54:33) understanding that quite a few of the so-called problems we face today were and I were solved quite some time ago um whether it's through the understanding of this type of technology and and physics or through other things in conjunction with this and so I'm not necessarily saying that the path we're taking as saying you know Quantum AI computers and all of that will fix everything for us is bad but I think I think that we need to re really revisit the like the core core basics of physics science um and and realize that or try

(55:05) our best to investigate the possibility that the knowledge that may enable these effects to practically occur may be so right in front of us that we've actually forgotten that it even exists to the point where it's like holy it's like you're kidding me you're in the lab and you look and you go my God that that's that's the that's what we've been missing and it's like Jesus like it's just yeah so I'm I'm yeah yeah I just want to jump in as well because so I

(55:35) totally agree what Dr 101 just said is really important to me this is actually what I bring up to everybody who I've met who is a prominent UFO disclosure Advocate is would you still be for UAP disclosure UFO disclosure let's just call it what it is if the reality of the technology meant the end of the world world because we have good effects that we can get free energy fusion power we can have the ability to change how Transportation works right we can change the circumstances of millions if not billions of people on the planet I say

(56:08) this all the time this is what my motivation is for revealing the technology and even when we talked to Dr stepen Greer I asked him this question same question Dr one of1 just answered is can this technology destroy civilization and he said yes that needs to be hidden but going to the conversation and argument real quick let me finish this up and then you can jump in okay so then the argument and conversation kim.

(56:31) com had with him is well why don't they just give us the cure to cancer because it's not

like that it's like unleashing Pandora's box once you've unleashed the technology you get everything you want nuclear power you get nuclear bombs right we're talking about this technology can absolutely create doomsday weapons potentially doomsday weapons that a single person could destroy the whole planet go ahead Dr one1 you want to follow up yeah so it's actually against our odds that we even exist so Neil deGrass Tyson said that if the sun was

(57:02) any size larger its gravitational pull would like throw our whole solar system out of whack if it was smaller we'd be moving faster um so you know this is this is not normal that our solar system is the way it is and there's not other solar systems like this so a shooting star is you know a phenomenon like a super a supernova is a phenomenon and the life expectancy of a star you know Ms years old or something like that where where you know the life expectancy of a human is 100 years old you know or you know less than

(58:06) that so you know it's absolutely ridiculous that we're even having this conversation because you know people die in in their youth the probability distribution is very low compared to yeah no I get what you're saying yeah yeah 100% um one more thing I'd like to add before we jump to someone else is that this is something that uh I'll probably bring up in more detail in the future but there's um someone that I met along the way within the Department of Defense that had developed a handful of years ago a

(58:43) um graviton or gravity wave detector which was essentially uh something that could see through all physical objects U so it would uh do tremendous benefit to uh combat combating human trafficking drug trafficking etc etc and I encourage people to make of this as they will not asking anyone to blindly believe me but this I'm sure I'm certain and sure this is not the first time this happened but this was the uh one instance that I know of where a very very intelligent very highlevel individual within a very

(59:15) discreet branch of the DoD developed a graviton detector to combat human trafficking etc etc and essentially was not allowed to have a deployed uh for political reasons uh again I know that may be a controversial statement but it had there have been attempts in the past uh the same way that for example certain individuals get funded by the Air Force or the Navy in in North America and they you know they get given you know a couple million for their project and then you never hear anything after that it's and then you find out later

(59:46) that you know that project got scuttled off to DARPA or something like that well if the project didn't work or the experiment was not successful as was publicly claimed why is it going to DARPA why is it receiving more funding etc etc this has happened time and time again and for someone I saw someone here ask uh is it possible to replicate the theory in the lab if yes why hasn't it been done yet this was one of the examples although I am unfortunately highly limited to the examples I can give um at least for now the saxel and

(1:00:15) woodwork Woodward example of the rotating aluminum cylinder that was electrically charged that would then lose its weight that's one example of a basic but a proof of concept or proof of principle situation that was recorded was logged was repeated and was just you know

quietly dismissed sort of like what jacqu valet had said quite some time ago when he said people write some very interesting papers on some very interesting phenomena they can produce in the lab they claim to get results and then you never hear from it again or

(1:00:45) from them again yeah and I would jump in and say as well that you know perhaps the answer to the great filter and firmy Paradox is the exact technology we're talking about perhaps any sufficiently advanced civilization uncovers this uh secrets of the universe and ends up destroying themselves I think that's something we have to be very cognizant of um let's jump to some other questions here uh we're going to go to Max next and then I think we'll I'm not sure if JK Philly fan or Star Captain want to

(1:01:10) talk they don't have their hands up but we'll ask them after we go with Max here go ahead and if anyone else just wants to speak up uh please request and we'll either I or red panda can help pull you up um and I thank you I just want to sa price Ashton and red and Dave and Sam a lot of people in the room but particularly you Gentlemen Just greatest of respect for everything you do everything you put up with and all of your hard work I really appreciate it thank you sir but no thank you thank you

(1:01:42) honestly but Dave if there is a time at a later date we could possibly speak privately there's a lot I'd like to share with you not sure I don't I don't want to waste time as Ashton said talking about personal experiences but there are questions I've been wanting to ask someone such as yourself for 10 years and it relates exactly to these orbs these spheres of light whether physical or coming through in some kind of non-physical way um you know if I can put it right um the flashes of light

(1:02:13) that I know that you've mentioned previously because I was getting Goosebumps when I've listened to you talk before because of what I've experienced and so these flashes of light would they be ultraviolet kind of Dopp effect visible to the naked eye they'd say if a sphere was to shoot off at a high rate of speed yeah secondly the trace lines visible Trace lines like a ghosting effect when they shoot off I think you mentioned that on the same talk you gave on I foret yeah that if I could say very quickly that would depend

(1:02:43) on the material of The Craft itself uh some people have claimed to see things like for example what's been coined angel hair you know falling off of like you know sort of a white Mist sort of material falling off of the craft after it's zoomed off right yeah oh I see so it could be possibly one version not another right I'll go even as far sorry to interrupt you uh uh Max I'll go as far as to tell everybody here that there have been cases I've seen certain documents that have let's just say there have been

(1:03:16) cases where craft that have taken off in a forest when they're closer to the ground for example after they've taken off the plants that were near the craft during the takeoff were then studied by DOD Etc and the plants aged two years within less than 10 seconds which speaks to the notion that whatever the craft was doing it was harnessing a form of particle acceleration that was able to break the speed of light barrier and therefore manipulate the temporal

elements of the plants around it I think it was not intentional I think it

(1:03:54) just had to do with the take off of that particular craft but those cases have been recorded over and over again exactly you've just literally answered one of my other questions so time dilation in proximity to one of these objects um if you are a local Observer let's say and you've just answer the question but let's say you're within 80 ft of a plasma engulfed object um and you do not have any breaks in your linear timeline of exactly what happens appears to last let's say six or seven

(1:04:23) minutes to The Observer that's close but in actuality outside of that bubble let's say of proximity uh let's say 45 minutes have passed um so that would make perfect sense right excellent and then and this is also why there's people see quite often and this is where I would say this is our Tech when i r meaning humans people see craft take off but they quite often they see a huge mist or plasma uh emitted around the craft before it takes off that's entirely because the craft cannot tap that zero point field fer cannot void

(1:04:55) the local reality or SpaceTime metric around us by simply penetrating solids it needs to penetrate that Bose Einstein condensate that surrounds it first because it acts as the doorway to essentially get out of quote unquote here could I could I ask D silence that'd say many people uh report this of course um how could you explain a an absolute vacuum silence in proximity to an object like this and if you mind if I can bang out a couple of questions and I can finish um the coloration of the orps uh if people are seeing red let's say

(1:05:33) over power lines high tension power lines obviously the coloration is the energy um and we pick up as a color spectrum but red Amber white uh would there be a temperature drop and static charge in the air extreme static charge could all of these things be uh explained by the physics of this and finally I think you answered earlier about the um electromagnetism being coupled with light at least visible light to the human eye this would explain would this explain for example plasma shards of light emanating from an

(1:06:09) object which seem to be retracting and extending as if I know this is a silly way of putting it but somebody once put it to me this way as a lightsaber in the movie from Star Wars or something so if shards of light were retracting an extend ending and slow motion waves around plasma engulfed object would that make sense given the physic you understand yes you just described everything that can be done with lasers extremely high voltage uh capacitors and a couple of other things so if I can try and answer that all in one shot this

(1:06:42) notion of coronal discharge this notion of you know people have allegedly claimed they've seen craft you know like to go near lightning uh because it seems like it there's something that the lightning has that that the craft May in fact be uh uh pulled towards for power purposes or for other reasons we if we think of the planet as one large capacitor and if we think of a Vander graph generator those things that when you touch the the metal uh ball head your hair goes up if we think of that basic electrostatic

(1:07:11) concept and we think of when you pulse a vandergraph generator with a smaller metal ball you see those very large spark discharges if we think of what we call lightning and coronal discharge in the sky Etc as extremely large um electrostatic pulses it then really simplifies our understanding because then we say okay what needs to be done in combination with sound light electromagnetism and certain resonant frequencies that can in fact induce these effects so in other words Max I would say that everything you're saying

(1:07:44) I would very strongly agree with and yes the the physics behind it um the physics analysis and all of that is all covered in a in a unified approach that that covers all of what you said there yes yeah for anyone that is interested I would encourage people to look into the work of uh Dr myON Evans he recently passed away but m y r o n myON Evans which he dealt in most of his work I believe was largely classified but he dealt in higher Symmetry electromagnetics and very quickly to make a quick physical and metaphysical

(1:08:18) connection if we think of a the same way that a a male and a female when uh intimate they birth a child if we think of electricity and magnetism electricity being the Divine masculine and magnetism being the divine feminine if we think of using electromagnetism to in a certain way phase conjugate or make love it could be possible that the birth child of that effect would be a gravity wave so yes yeah um so I think we're going go on somebody else here as well just because we don't have a lot of time Max

(1:08:53) I appreciate your uh your question questions there you can probably reach out to Dave if you have others that you want to get to otherwise maybe the next space can jump on ask some more um I want a few others so JK Philly fan if you had a question I'm not sure if you can raise your hand go ahead and that's my pleasure uh Ashton and Dave uh the question is um you mentioned electrostatic U field and my question is does the water vapor in this organizing this um electrostatic field at a dielectric constant to create

(1:09:24) in essence this warp bubble that you're mentioning so is water vapor a key component to this that's all water uh water yes um as well as um certain you can and this is why I say there's more than one way to skin this cat so water is one of them um hydrogen is another one um there's a few different yeah there's a few uh few Bose that's why I'm saying I've when I say Bose Einstein condensate I'm I'm hinting towards what you're asking there I just have to watch my words a little bit but yes

(1:09:58) yes you need follow up J JK go ahead all that's it thank you for my I'll give the floor to someone else thanks yeah thanks for being here man appreciate you uh star Captain do you have anything you wanted to say hi how's it going there Ashton and everybody doing all right um so interesting thoughts on on this top topic and the technology so I think that uh knowing about the time space warp Tech is one thing but uh applying its use ethically which is what we were talking about is is really the bigger

(1:10:27) question um Society needs to debate if we want this technology to be made available for the public uh now that we're aware of it so we kind of need to consider like the uh and

debate the ethical legal and societal implications um and discover by that process of debate how we are going to govern over that technology should it be made public because obviously there is the Dual sword you know good and bad uses for this and that needs to be considered and I think by by openly debating that process and like you know how would we

(1:10:59) roll out teleportation technology and have that be secure right how do we ensure that there's privacy and security um that are that are taken into account right how do we prohibit the development or use of uh warp weapons and you know things of that nature because those Technologies would ultimately have to be discussed and legally looked at and ethically looked at before our to actually roll out anything of that nature right so I think that's part of the bigger discussion Society needs to have if we want to

(1:11:30) really Advance um you know bringing that disclosure forth because if we theoretically come up with ideas of how to govern that technology and then you know kind of shovel that to the government being like hey come on we can handle this [REDACTED] now like we're writing the laws for you um you know kind of get something done they they might look at it a little bit differently than being like well we're going to roll a Teleport technology well the public is writing the laws for you and giving it to you so

(1:11:57) yeah roll it out if I can actually add to what your to your question or to your statement there star Captain it's a very great point I would dare to say that this is exactly what's being discussed behind the scenes right now and one of the reasons that I'm for far more transparency on this than otherwise is because what if a lot of what has what if there maybe not on mass but what if to say a fair extent over the last five six decades in especially um what if this technology was tested on people unknowingly and the fact that it was

(1:12:28) hidden for so long creates an issue where you then have a situation where I'm not saying this will be the case but you know for example people particularly people in Europe and North America are going to demand Insurance payouts from their government because how many fighter pilots good people actually saw something and all of a sudden now you know they lost their pension they lost their family just for reporting what they saw how many people were dare I say and this is where it gets into a very touchy area with you you know things

(1:12:54) like psychotronics and and whatnot but how many people were perhaps behaviorally affected because of a psychotronic event that was then never never later reported and because it never officially existed and so what what do you how do you deal with that and I'm not claiming to have the answer all I know is that if we hide this stuff even more it's just going to get worse you're going to have people debating about whether an event actually occurred or not when in reality you know you have some you know group that's not even

(1:13:22) officially legally s IED using psychotronics on anyways you know where I'm going with this but I'm sorry that I can't answer in more detail I would say that this is one of the the dilemmas that is occurring right now and I'm not saying that we should leave it up to the people behind the scenes to uh even decide it for us which is one of the reasons that I want to engage

with the community more through things like this because it it's it's a very touchy subject because a to someone that asked

(1:13:49) a little while ago well what if you just released the cancer curing stuff for example well what if the core conceptual framework of the physics of the cancer curing is something that within an afternoon could be adjusted to become an extremely lethal psychotronic uh Direct Energy weapon um this becomes the problem yeah and I'd say what we're talking about here is the legal implications I'd actually like to do some podcasts or maybe in some spaces where we just dig into just that in general because I mean you can imagine

(1:14:15) guys there there's a lot of legal implications let's try to get to a few more questions I think we're probably going to just be able to address a few more that we've got on here mid Jin what did you want to say uh Hey guys uh Great Space um thank you Ashton and thank you Dave for everything it's great information um I'm just going to make a statement um for everyone in here um if you want this technology to be able to help the Earth um we have to advance spiritually um we have to stop

(1:14:43) um offis skating and you know being KY around everyone and stop the violence um part of the reason why this technology is being um held in secret is because there's a lot of global tensions and you know wanting to um keep this as a weapon uh you know as leverage for um whoever is holding it is you know corrupting um the spirit is corrupting the the human psyche like we we can't keep um like techn technology that is that could potentially change the world as something that should be hidden just because we have tensions you know

(1:15:22) between each other so if you're wondering what you can do to advance in terms of um getting this out um I would encourage everyone to just love each other um even more and I promise that this will um rever reverberate um across the entire Earth and we you know that way we can remove like the stigma around this subject you know um it's it's a lot of power this technology it's enormous power and I think that the first step to be able to wield it is to remove this the sort of violence that we're sort of experiencing

(1:15:58) here on Earth yeah thanks M Jin totally agree with you man uh let's do a couple other questions because we don't have a ton of time left um William I think you were up next hello um I think we cannot keep hiding this because it's based on a little trick and as soon as you know the trick you see it everywhere and because you can see it everywhere means that you'll know whether you're being attacked by it or not so I just have a really simple question because I'm out about can you answer me about what the

(1:16:30) difference between gravity and magnetism is sure you could say that they're they're related you could say that gravity is magnetism's cousin You could argue that if one manipulated the a field which is the magnetic Vector potential on the theoretical side via the Dell cross operator as Richard fan proved you'd be able to induce um what have been called gra gravito or gravito magnetic effects um I'm not going to sit here and pretend that they're not connected they are uh there's gravity waves are proportion

(1:17:06) when they're emitted their power intensity and density depend on the um square root of the static B field that is uh perhaps controlling that gravitational um emission so I'm not going to sit here and pretend like they're not connected they are directly hopefully that to explain this it's a little bit a little bit better if you don't mind can I just say it real quick like it is gravity is magnetism it's the same thing and magnetism is what electricity does when you okay so from my understanding of

(1:17:50) gravity and electromagnetism electromagn ISM has a it's a spectrum so light is on the electromagnetic spectrum gravity is a Quantum scale electromagnetism that Stacks upon itself the electromagnetism we're used to seeing is light and magnets and stuff like that and electromagnets but because it's on a Quantum scale and it stacks and accumulates upon itself it we don't really we can't really measure it the same way but it does have the effect of gravity I would say to both William and to Crow

(1:18:26) I would say that um I both agree with you I agree with both of you magnetism cancels out gravity now there's a difference between this is why I was trying to discern the difference earlier a difference between the cancellation or the Nullification of gravity within the vicinity of a magnetic uh fluctuation or a magnetic event compared to the actual genuine emission of uh gravitons or gravity waves but with that said I do very strongly agree agree that magnetism is directly correlated it's not a coincidence that um craft have been UAP

(1:18:58) UFO have been seen all over the planet very close to very strange geomagnetic anomalies um I will not sit here and pretend like that's not that's not the case you look for example at even prime numbers work gravity is like the prime number and and electromagnetism and regular magnetism are like higher forms of that but it's like it's like when you stack enough gravity on top of each other it's a whole another thing but gravity is its own thing in itself that's much stronger but it has similar

(1:19:30) effects uh if I'm understanding you correctly I would agree yeah the be the gra the behavior of the gravitational uh waves Fields effects are behaviorally likened and Akin and connected to that we could possibly say through an entanglement to that of electromagnetic uh foundations yep so uh appreciate that um Dr 101 I think we'll have you do the last question if you have a followup okay great so I'm going to say a theoretical premise that is um based on the scientific method of proving a hypothesis

(1:20:12) so solid liquid gas atoms the way that the atoms are arranged in a solid is they're they're um more closer together and then in in a liquid they the the atoms are are uh well H2O but are L are looser and then in a gas it's much the atoms are much free freely so on the quantum level of of of an atom the the the proton neutron is in the nucleus while the electron is on the the outer edge and then so even a atom has empty space in it so all things are either made up of atoms or the absence of of space in in an

(1:21:14) atom so the human brain let's say the human brain is solid but the the the the the the synapses and the neurons in the brain functioning you know like memory would be you know

um the quantum Neurology of an idea of a thought so the the premise and theory is that I've neural well the brain is quantum AGI Quantum AI the the brain is quantum Ai and that I've neurolink with a a quantum computer so my my brain is pretty much a quantum computer yeah I think we probably both agree with you I think that you know Dave and I I let him speak

(1:22:03) for himself but I think that we both agree that there's something with Consciousness right that you could uh analogize to Quantum Mechanics right where the brain and Consciousness is a singularity and then we are living in this macro World which is this projection that we see perhaps put on top of I like the Matrix analogy myself but um the idea uh asht I put something in the nest about that about Quantum Jumping uh and biophotons you're talking about photons earlier on biophotons are something that the body uses um and and specifically

(1:22:36) the nerve system of the body uh I believe it's tied to the concept of the light body um that that our our spirit is connected to is actually our bof photonic um form yeah appreciate that um I'm just so I think we're going to kind of close this down because I want to respect Dave's time but I want to see if Dave has any last thoughts or anything he wants to share if you want to plug anything Dave and then I will also do the same at the end sure I appreciate it um no that's pretty that's that's pretty much it I

(1:23:08) want to thank you so much Ashton for for doing this and for hosting this and putting this together I want to thank everyone for uh for showing up I actually didn't expect as many people to show up as as have and so I really appreciate that and for anyone that's interested of course uh I think people most people know by now that uh you know we do we have a i i on the side I have a patreon uh in conjunction with my uh uh Consulting Contracting line of work and so for anyone that's interested you know

(1:23:35) I'll publish papers on there and whatnot and it uh for a small amount of money every month it keeps the trolls out so to speak so um other than that I mean basically I have the generation Ed Channel and if anyone again not necessarily here to advertise this but if anyone's interested in having more discussions or even again I do not just DOD uh Contracting but even private institutions private groups if you had to phase helix.

(1:24:03) com p h h l ix.com then you can uh you can see some of my patents some of my stuff and then you can you can get a hold of me there if you if you would like as well so but other than that I want to thank you so much uh brother for having me on and I want to thank everyone here uh truly from the bottom of my heart for for coming out and and listening I I didn't think it would get as much traction as it and so I really appreciate everybody here and uh let me just be clear in saying that I'm not claiming to have the answers I'm

(1:24:29) claiming to have a set of answers based on my research experiments and experience that hopefully I can I can discuss uh uh one day with respects to some of the things that I've been privy to so other than that I thank you so much everybody yeah and I just want to say the same thing thank you very much Dave Rossy uh you're one of my favorite people on the planet I think you're an extremely intelligent individual I still find it hard to believe that you are as young

as you are it seems like you I would still say that maybe you figured

(1:24:55) out how to reverse aging and you've uh gone back in time or something like that um but yeah I'm G to thank everybody who followers and watching along I agree I didn't anticipate this many people uh as well as a lot of people who are watching the live stream so thank you guys for listening to the science here um I think the big takeaway would be the responsibility aspect of this right so let's just say for the sake of argument this technolog is true we have to have really serious conversations about how

(1:25:20) we utilize it without potentially destroying ourselves um these are geopolitical implications in terms of how we get this information out there to everybody um so that's what I would urge people especially in the UFO uh Community to kind of have those conversations push that conversation forward from the conspiracy people angle who are in here you know I think that that uh what we need to get done is we need to uh get Congress involved in conspiracy hearing around the technology like yes I know that the UFOs and the

(1:25:47) alien stuff is very interesting um but in order to get that to come out we have to say here's the technology that's being hidden from us here the companies that are hiding it locked Martin I'm looking at you and then when we get that to come out everything else will just like a string of dominoes it's going to all fall right um so I also want to say that we have a pretty exciting announcement potentially coming up I'm not going to announce it just right now yet but Dave and I are potentially going

(1:26:12) to uh be together um on a potential podcast in the next week or so um and once that is official I will go ahead and announce it for everybody uh but until then uh stay excited and I hope everybody has a wonderful Friday evening here and you guys have a good one we will talk soon I'll see you guys in some other spaces uh other live streams Etc thanks you everybody appreciate everyone thank you everyone okay guys that was awesome I think that was an awesome space uh just as I mentioned Dave is one I think one

(1:26:44) of the smartest people that I've ever interacted with um it's incredible to me that you know just several weeks ago I didn't even know who he was and you know now we're we're doing spaces and I'm learning about you know Advanced science from people who are literally working on it and that this stuff is being kept hidden from us uh some in some cases right out in the open especially the part about this being an alaer drive it's like we've known about this concepts of uh Einstein Rosen bridges

(1:27:16) for decades you know so I think that a lot of this stuff is it's very complex at the same time it's all just out there and it's it's not as hard as I thought to really understand so um yeah we've got some great stuff coming up guys uh once I have more information to share I will it's one of those situations I want to make sure everything is been you know locked down before we get it out there just because you know the nature of toxicity and the trolls that are out there in general but I look forward to

(1:27:44) big things with Dave in the future and going over more of the scientific Concepts as well as of course the MH370 videos so thank you everybody hope you have a good night and we will talk again soon appreciate you everybody on the Stream

MH370x - Matthias Chang 12/28/23 - YouTube

(00:29) Manion 37 contct [Music] 120 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] okay just kidding we're going to get started um how do we listen to this are we on are we listening to the radio

(01:36) [Music] now is listening to the radio considered copyright probably what's up everybody buddy uh stations someone said can't read anybody's names because I have streamer mode and turned on classx radio.com I need like an exact link to it this better be it I don't see any other hey everybody probably a little dark in here

(02:49) huh oh yeah a little dark oops what's up we're waiting for this song to come on I guess looking for **truth** William Moonlight Kyle Aaron what's up everybody alien pun win Jo alien pun win uh I don't really care about advertisements don't you want to support people one sec might have to get a second

(03:59) light what's up everybody is our music playing yet I don't know if I'm listening to this the radio or not feel like I'm not listening to whatever is live right now you got to give me an exact link if you want me to go to this just give direc me to a random website isn't enough they usually don't play the radio over the internet I'm pretty sure this is just an a thing that's like automated pretty sure that's just automated what's up everybody okay well I really wanted to listen to this song

(04:49) that's being dedicated to me but I don't think I can listen to local radio in Cincinnati over the Internet like that I mean maybe I can but not really getting it she'll have to record it for us I'll put it over the side just in case okay guys what's on top for tonight um see we got to get the space setup with Dave Rosy for tomorrow uh then we're going to also have hard TRS number five with Roy de Herbert on Saturday so that should be exciting um let me see what else we got on here we need to do all evidence tonight I was

(05:41) going to clip this uh America Shaman uh clip here that I thought was pretty good just not sure how long I want to go with it he was a nice guy um I'll play it for you guys let me let me see vital to the future of civilization and the future of humanity and when you do that you're going

to behave as though that is the case and will be the posi motivational and it will exponentially grow in snowball in ways like I said you can't possibly imagine um okay so uh Dylan and then Andre okay I think I got the clip

(06:18) already actually I'm just going to play it we'll see if we got the clip you can do things like holding the door open for people the next song you can do things like complimenting somebody on their shirt you can do things like if there's a homeless person you know on the side of the road panhandling and you don't want to give them money you can at least ask them what their name is and ask them how they're doing you can at least allow them to be seen allow them to know that they matter you can treat others the way

(06:49) that you want to be treated why is this not [Music] working no cell phone's fun think once you tell people this is too loud once you tell people that you're going to post their phone number on the social media or on the live stream I think it stops a lot of people I've been reading uh his thing which is right here I think I'm actually on page 22 I was reading on my phone I madean 66 pages so it's going to take me a little bit it's not I can just it's pretty deep it's mostly about the

(07:38) patents related to the remote control so we can look through that just I don't know it might not be too exciting you know oh maybe I don't know about Shadow bands I just don't really care anymore we're already big enough that it doesn't matter if they're they're blocking us go we've got a lot of eventually turn it up and just like out ason his s and Jess and I'm not sure if he's an Allan Parsons fan or just an ion a sky fan but here you go Ashton turn it up [Music]

(08:58) folks [Music] [Music] [Music] [Music] a [Music]

(10:09) don't think Sor he so [Music] said don't try turning tables instead you've taken lots of chances before but I ain't going to give anymore don't ask me that's how it goes cuz part of me knows what you're [Music] thinking don't say words you're going to [Music] regret don't let the fire R to your head I've heard the accusation before I'm not ain't going to take anymore believe me the sun in your eyes and some of the lies worth

(11:16) beleiving I have the eye in the sky looking at you I can make your mind I am the maker of rules dealing with fool I can cheat you BL and I don't need to see anymore to know that I can read your mind looking at you I can read your mind looking at you I can read your mind looking at you I can read your mind don't bre false be don't cry I ain't changing my [Music] mind so find another fool like me before cuz I ain't going to live anymore believe some of Liv while all of signs

(12:25) are deceiving I am the eye in the sky looking at you I can read your mind I am the maker of rules dealing with rules I can cheat and blind and I don't need to see anymore to know that I can your mind look at you I can leave your mind look I can your mind look I can your mind I am the eye in the sky looking at you I can make your mind I am the maker of rules dealing with I can cheat you blind and I don't to see anymore you know that I can be your

(13:34) mind I can be your mind look you I can look I [Music] can [Music] classx radio working on a night move every Thursday night starting at 700 p.m. with our 70s hour thank you very much Sandy appreciate that let me turn this I'm going turn the volume back down uh oh I revealed my network it's a

(14:41) problem let's see desktop audio Mo this down okay we should be good right yeah I don't know about Element 115 maybe certain seems like it could be possible um let's close this I was going to play this clip America Shaman you can do things like holding the door open for people you can do things like complimenting somebody on their shirt you can do things like if there's a homeless person you know on the side of the road panhandling and you don't want to give them money you can at least ask them what their name is and

(15:24) ask them how they're doing you can at least allow them to be seen allow them to know that they matter you can treat others the way that you want to be treated love thy neighbor as thyself and when you do that the effects are far far reaching far more far reaching than you can possibly imagine think of it in the in like the whole holding the door analogy let's say you hold the door open for one person right and they say oh thank you and they walk through the door and then when they leave they hold the door open for

(15:59) somebody else and they say oh thank you and then that person that they that they held the door open for goes to another location they hold the door open for somebody and then this act of kindness just snowballs and snowballs what you think say and do is going to affect your immediate area and far beyond your immediate area in ways that you can't possibly imagine yeah that's a good clip that's a good clip folks uh Sandy thank you very much appreciate that a lot uh did we notice something new they are changing

(16:35) orientations here right before the zap like if I had too much prco or like so you see how it's going right now right it's rotating counterclockwise and then something happens right there something happens right here it's rotating counterclockwise you can see it clearly relative to the position of the camera and then right here it does something weird right there see it change directions or something or I can't tell what it does corrects itself look at the one of the one on top here one of these two so it's already

(17:22) doing it it just flipped let me see yeah this one's doing something really weird and then it's stops spinning like right before it starts to enclose right here so it stops spinning and then it just kind of like turns clockwise not even sure whoa that is weird that is really weird this right here whatever it's doing right here I don't think that's just blur I think that the orbs are doing something to reorient themselves right before the [Music] zap this is bug me out guys I'm going to have to ask some

(18:04) people about this like right there it just did like a flip right here get ready for it boom right there what's doing there is that just Distortion I need somebody to tell me okay I don't want to get too sidetracked with this okay so so far my summary of the N 11 pilots. org thing is first of all what I want to say is this let me go in my soap box for just a minute everybody um first

to the uh people who are watching either the people who are supporting or the people who are just like hate watching for whatever reason

(18:41) just remember you have two options in life you can be somebody that's building stuff up or you can be somebody that's tearing stuff down one thing you'll find uh about people that are you know generally not nice in general is that they don't put themselves to the level of scrutiny that they apply to other people so the first thing I want to say with respect uh to to the captain um is that you know I'm I'm glad that he's putting his ideas out here related to uh the remot remote controlling the plane

(19:08) like we need more people who are brave enough to put their information out there and not be afraid of the trolling and the scrutiny that's out there that says a lot more for the captain here than it does for like a huge percentage of people that um are like experts supposedly so Captain Dan Hanley appreciate you man appreciate you for putting your information your ideas out here for people to uh judge them determine them CU it takes a lot of guts to do this frankly again the people like an in independent group they're not bold

(19:41) enough to put this out there right they just go along and say oh must be along the flight path somewhere we can't we find it so appreciate that so as I've dug into this I'm only 22 pages in um but my notes are that we need to learn more about AC cars this this uh report mostly digs into like the history of the technology which to be honest with you um Captain Dan uh I hope you it's okay if I call you that um or I can get I guess I call you by your last name but uh you had me at page one you had me at

(20:19) hello you had me at hello Captain you had me at hello no um I didn't need to be convinced too hard about the ability to autopilot a air craft and I think he does a good job so far I mean I haven't finished it yet in terms of summarizing the technology that's already been out there since potentially even the 70s and of course we have stuff like that I mean we literally like what's the difference between that and just autopilot for an airplane right very very little very little difference you just need to be

(20:45) able to hack into it right so I'm sitting here talking about teleportation so absolutely if somebody's talking about hijacking a plane you're not going to have to convince me too hard about the capab technical capabilities um definitely possible um I would say that if I'm being um if I'm scrutinizing I'd say he just goes into it a little too much I'd rather just get to the you mean you had me at hello I don't need to be on 22 Pages later still learning about it um but that it helps for people that are more

(21:13) CNN brained who you know think that whatever CNN says is true and if it's not CNN then can't be real um let see what else it's interesting he talks about how the Americans would use it to Rescue Planes that's kind of been the design and yeah then basically what I already just said so that's pretty much where I'm at right now I've got a ways to go on this I'm not going to make us sit here and watch but uh recommend checking it out on Twitter I I already probably blasted it away didn't i y I

(21:48) did okay so if you want to read the report yourself which again I recommend people go through the effort it just kind of sucks because it's you know takes a lot of time but that's the world we live in 66 Pages here um I'd say he also he lays out the plan for like how the technology is form it goes all the way back to like when computers started in like the 70s at least you know commercial Computing and I think the big question that I'm going to have at this point though is like did this plane actually have it you know now

(22:20) if you're just making an argument okay they all have this capability okay sure you know the bigger question is okay so where where exactly did it go right where how did it fly like why were they flying it towards this airport same kind of questions that we have so I think that our research most likely will fit in pretty well with this because the other thing too about the remote control situation that I want to talk about is um I don't know if the people were like still alive in a fire scenario it's

(22:46) pretty deadly even just the toxic smoke getting through the air conditioning system right so and the depressurization capabilities like that can take out the pilot and co-pilot too so so it could be a situation where it was literally just being remote controlled maybe there's that I mean we can't rule that out based on our evidence like P plane start starts on fire you can make the same argument that either it's been hijacked and that's you know it was Espionage is pretty much that that scenario which

(23:14) we've had on the board um and then when it gets to the part where our videos happen over here on the left you know is is everybody still alive at that point I don't even really know like maybe they remote control it even after the teleportation Maybe we maybe people don't let live you know maybe it is a test and in that scenario you could definitely use some autopilot to uh land the plane safely at Diego Garcia so so far I don't think there's going to be anything really contradictory to the evidence we put

(23:46) forth just a matter of plausibility this also you know the hijacking scenario also brings back in the Iranian scenario right the Iranians the two uh people that are the fake passengers what's up Ellie uh what's up Intrepid Soul Banner nice to see you guys um so yeah I don't think there's going to be anything wrong with this oh let's watch this real quick this is three minute clip yes I do not believe the murder suicide hypotheses check you already just won big points there only 5 seconds in folks

(24:22) and he already said doesn't believe murder suicide hypothesis I probably should have read watched this first guys I probably should have just watched this first uh 66 Pages or three minutes of accurate uh it's very easy to blame dead Pilots for an accident because they cannot defend themselves but there is a viable alternative explanation for what possibly could have happened to Malaysia Air 370 and it's very similar to what happened with the 4911 aircraft and that all five aircraft veered wildly off

(24:56) course they so I don't like that we're just just trying to connect it to 9911 right now that's uh you know I would just say friendly advice is I wouldn't try to connect it two things just let

people determine the connection themselves here right this is part of the reason why I don't try to like you see what he just did there with the 911 thing like this is why I don't try to connect anything to any other conspiracies as well because now you've tied your beliefs somewhat to another

(25:21) conspiracy and now people are going to attack that one and say oh well he's a 911 truther or something like that or is that the right term I don't even know the right term is um he lost communication and they'll use that to try to discredit him so that's just some friendly advice uh Captain Captain Hanley please uh just you know be careful they're going to come for you they also lost their radar transponder that air traffic control used to identify the aircraft if you Google Boeing Honeywell

(25:51) uninterruptible autopilot the first thing you'll see is a Wikipedia article that's somewhat misleading oh a misleading Wikipedia article no no Mis misleading Wikipedia article Say It Isn't So say isn't so it states the stated purpose of this system was is to prevent wouldbe hijackers from commandeering a commercial jet aircraft in flight by remotely taking control of the aircraft autopilot and flight management computers and guiding it to one of many airports in the world and safely Auto Landing it uh the article is misleading

(26:32) because it states Boeing patented in 2006 well that may be true we have proof that the technology was developed and produced in the mid 90s so our contention is that this okay so we had the ability to hijack an airplane it doesn't surprise me at all like not even a little bit so let's see I mean when you're talking to conspiracy theor you don't really got to you don't have to sell us on the remote control in the airplane that's small potatoes this system was in fact employed on 911 but not to hijack

(27:09) an airplane and take it someplace to land it but to crash it into buildings and uh because of the similar flight so once again I would use a different story uh cuz now you've tied the uh you know your MH370 stuff to 911 right this is part of the reason why too I avoid like if you imagine I was talking about mh17 even if I regardless of what I was saying about mh17 because reality is I would not be linking them that way but if I were just to talk about it in general people would be tying my beliefs on that plane on the mh17 it's

(27:45) MH370 patterns between uh the four hijack aircraft on 911 and Malaysia at 370 we actually believe that uh uh we believe that Malaysia a 370 may very well have been hijacked because who's we in this scenario did he start an investigative group I don't mean that to be snarky I'm just actually asking electronically because if you look uh there's no sign of any wreck it's a viable alternative we cannot prove yet that these systems uh were employed but we are working on that right now we established a global uh

(28:29) Grassroots uh organization called 911 pilot whistle blowers and we have a website at uh it 911 pilots. org and we'd ask everyone that's listening to this program to please go to that website for important information regarding what I just discussed and what it is our intent is to collect affidavits from Pilots around the world who are willing to testify before for camera or

a committee uh as to the absurdity of the government assertion that these poorly trained and inexperience alleged Muslim hijackers

(29:08) could have passing and if they did not have the experience to do so they were only trained in light cess aircraft that's an interesting point I don't want to go into 911 but that is an interesting point is kind of hard to believe that Rand people who only learned how to F single FL single plane um small planes were ones that hijacked a 777 cuz they are quite a bit different right oh Hermes wow so Hermes here is the person that upon seeing my phone number get revealed decided to instantly text message me and then he had the audacity to get

(29:53) upset at me after I said his phone number on the stream and for the record I deleted it out so that you wouldn't get doxed but despite that still so upset that he decided to make a personal attack on me in my YouTube CH comments amazing amazing folks so much emotion well Hermes goodbye Hermes was right is gone poof poof not even going to look at your other comments not even going to look at them have a good day sir okay um see what else we got okay let's not get too parasocial with it let's not get two PA social with

(31:00) it um I want to get to some work here so I accidentally closed all my windows last night I accidentally hit the power button on my on my computer and computer didn't turn off but it did close all my windows so that sucks let's see I think this is good sure here we go okay we're back I've got a list of stuff here let me make sure we're handling all this stuff oh space for tomorrow kind of need to set that up first folks we're probably not going to be digging to Too Much science today and I'm obsessed with

(31:49) these jelly beans I need to stop eating okay for the record we're all in on this EP ER equals epr stuff guys we might actually be doing some science I might have lied have I considered twitch yeah consider twitch I had a Twitch account deleted is everything I could off of it literally I mean I didn't have much but yeah I wouldn't go back to Twitch anyway I'd probably do uh kick should we listen to some music here probably I'm going to need to listen to

(32:52) some music while we do this folks so hopefully I won't get a million complaints about how there was music on the stream wait [Music] what what's the o'keef IBM tapes okay guys okay is there a new James o'keef thing guys we might be getting sidetracked this looks like a week old oh oh anti- okay yeah we're going to we're going to avoid that topic yep it's a race based topic guys we're going to going to steer clear going to steer clear no I'm Martin fman Foundation yeah uh Richard chill out uh

(33:50) the reason why at so if you somehow got my phone number do not message me I think it was clear about that if you do then yeah your phone number might get read out live on stream and I reserve the right to reread the ones that you guys already messaged me so don't do that it's not cool let's see what else we got here okay I think let me look at my list yeah I don't think Jeremy was going to talk to us anyway not worried about it folks foas okay so what's F fors got to say wait what space force ship was launched

(35:07) is there wow [Music] really well this is really interesting actually let's look into this for a second okay so a secret space plane this is interesting for sure what our videos could be from a space plane I know we got space planes space planes interesting **China** has space robots too why do I feel like this is the

(36:14) beginning of the mo of the Gundam anime they called it Divine Dragon man they give their thing a badass name shenlong this from Dragon Ball Z this is the dragon and Dragon Ball Z **China** actually stole Japan's stuff rest in peace Punjabi Batman rest in peace guys now he's been replaced by his brother unjabi Batman um it lands like an airplane wow wait should we send this to the guy should we send this to Captain Hanley

(38:18) [Music] oh man I had no wonder it sounded weird audio's back folks so you guys notice that how do we get one of these on ours how do we get one of these on ours yeah sorry I muted it cuz I was eating jelly beans feels bad feels bad folks I want to get one of these on ours guys it's kind of badass this link may be unsafe too much information may make you think outside of your bubble okay let's send him a link which of these things do we reply to he really wears his Politics on his sleeve huh I mean I'm with him though I don't

(39:24) really agree with uh Afghanistan a bunch of Saudis attacked us on 911 so we're in Afghanistan okay sure makes sense yes I did just eat a black Jelly Bean

(40:31) H so Bo's making some sketchy stuff too guys can fly for up to three years so Elon Musk definitely can't talk about anything guys he definitely has an NDA 100% 100% dude SpaceX is a third party contractor I mean they're definitely under an NDA they're like directly involved in operations and deployment they basically anyone touches that is probably going to have to be an under an NDA I imagine so that's probably why you can't say anything did he actually say that Eve I've heard that but I don't know if

(41:30) that's true or not huh okay fo okay sorry about that chat I won't do any more ASMR um I'll the Avid these jelly beans next evidence is the **foas** where do we put the **foas** we need to stack more **foas** up I think we just like make a whole category for it these two need a thing is it this one go

(42:58) okay so I'm going to do I think we're going to make a whole section for the **foas** right am I muted no not mut good um I want to I want to try to do some some work on this here do we have to put links to everything it's probably too much if we do links to everything where did I put the **Foya** stuff don't really want to pull up the whole thing with my information in it hold on you know what I'm going to do I'm going to switch my view real quick where's the foer yep it definitely was going to show

(43:57) up right in my right in the main view glad I switched that over that's not even the right one here it is okay move it over here which should be good now switch this back over also we're in 1080P now sweet sweet now you can really see all the pores of my skin um okay we have this is the same thing that O'Reilly Tates had happened right uh what's the actual wording matter

specifically authorized under the criteria I'll just post it here what is this we need to delete all this

(45:13) part I think hers was exactly the same I think it really hits home when we just collect these I want to foil some more people FBI okay we need more uh we need more **foas** folks let's I should change

(46:24) this when was this was like 100 plus Days Later never a straight answer uh yeah in the early days I would say I used to say that we would get NASA after this NASA's full of crap 100% that's why anyone I see wearing some kind of NASA stuff that's how you know they're full CNN brain NASA is not the kind of uh people that you should be wearing their their content they don't deserve it well this is interesting Jeff wise commented on this to be honest guys this does kind of feel

(47:30) like a mystery movie doesn't it doesn't this feel like a mystery movie it's it's like almost like we're in the movie stranger things but it's about MH370 we just keep coming AC on new weird Clues like like Jeff wise was running his blog basically spreading disinformation about the case incredible hey Luna what's up yep that's exactly the same as what we got it's exactly the same why would these **foyer**s be getting rejected for this reason guys why we guys we have to think why is this

(48:29) being rejected for National Defense or Foreign Relations why would foyes related to MH370 in the United States who supposedly has no relation to what happened in this plane being rejected does this really have to be spelled out for people like Jeff wise I guess it does yeah of course they have material otherwise yes of course they wouldn't reject it what me they might not what is is this guy this is just Jeff y's brain right here where did they say that this Foy doesn't say this at all Jeff Jeff wise writes it in just such a

(49:29) stupid way like dude why I even bring these sentences up just delete this from your paragraph of course they have material you're not rejecting **foas** with because they have nothing doesn't make sense radar signal detection why would that be what are you talking about man why would that be kept secret in the interest in National Defense why would you have to keep information like that secret you could just redact it whoa

(50:34) H maybe we need a Foy of the FBI under a different pretense this website doesn't work anymore this is a completely different reason man Jeff wise he's the worst okay well that's bad out of all the investigators that are out there the whatever official ones Jeff wise is by far the worst it's just like he's just like stumbling over stuff right just can't really seem to keep a coherent thought in his head okay so this is the **foas** let's see here who else should we oh actually I already

(51:37) have some other people that we should fo let's go check out the foer process real quick sorry we get sidetracked National Geo there it is hope you guys are doing well by the way you can't lie on a **Foya** that's part of the I think that's part of what we're discovering people assume

the government lies but they don't mean lying literally I know I keep eating jelly beans uh what they mean is like they are deceptive right it's different to be deceptive and to lie what they can do is they can not

(52:30) State stuff they can State stuff in a cute way but if they were to lie then they're put in whoever is tied to that lie at legal Jeopardy right think about it so interesting the very first one is our thing is our reason right there well we're going to Foy these people too I'm just thinking is there a way we can Foy these people without them being able to use this exemption maybe if we fo something more specifically what if we **Foya** free scale semiconductors we have to get around

(53:41) this yeah we're going to Foy Job 38 little time for little Job 38 the whole thing it's a little too long we may come back to this later what do you guys think does anyone trust Lou alzando I wouldn't I've just learned that basically everybody everyone in the UFO Community is uh they've got some agendas that's the nicest way to put it they've all got agendas seems like I don't have agendas folks I just do things speaking of which I need to post the space so give me a second

(54:45) guys I'm looking for my Joker thing I definitely need to organize my files better it's getting to be a bit much folks um all I have to do is email these [Music] people crap oh wait okay that's if seeking information about myself okay this should be easy okay let's prepare our email to these people over here I'm going to email them

(55:59) I'm going to have to pull up my Foy request for the other ones actually I want to pull up the oiy Tates one just in case I reveal something my orbs will blow your mind um well there she is and she just gives her email and phone number away it's interesting probably doesn't even work though where was the original one all these links are broken oh no just downloaded it it's probably going to be a virus huh no it's

(57:04) legit okay here we go any and all documents in possession related to the missing Malaysian Airlines flight MH370 okay we're going to go ahead and just copy this I wish I could sir can I copy and paste it [Music] what [Music] whoa whoa okay hello April 24th six weeks later

(58:10) folks had MH370 crash would have a huge easily visible debris field countries with satellite surveillance systems and the partners know exactly where the plane went Boeing and his engineer manufacturer Rolls-Royce also know since planes and engines have GPS system sys you can't buy a GPS system for a little over 100 or you can buy one for a little over \$100 even the imrat satellite pings that we have uh have we been told can only sweep a broad Arc of possible locations could be in reality be used to locate

(58:40) the aircraft with some Precision due to the fact that the radio Transmissions vary in signatures according to the time of day sunspots and so on the hunt for The Airliner pedal to the mainstream media is clearly a charade I agree this is spicy what he served as the political secretary probably need a copy this guys probably need to put this into the evidence page wow we ran across something interesting here ran across something really interesting here Shang

said the Malaysian government

(59:48) sealed evidence by one or more foreign governments concerning the fate of MH370 as a condition of receiving that evidence Malaysia is not allowed to divulge it holy crap guys he served as the political secretary to the Minister of Defense one we were talking about in the videos in the in the interview this is before the interview as well probably right around the same time the same time that guy's looking to the side the whole time wow whoa is this website still on it's gone okay wow holy crap the website's also

(1:00:54) gone please please please please please please please please yes that's 2015 yes okay I think yes yes okay yes oh boy there's more whoa what if not only would it be a security issue it would also have a global impact on the world's economy things using your broad sense and you

(1:02:00) have to think what things that would come to a complete halt almost a complete shutdown the airline industry wow he's talking about thinking it's UFOs people wouldn't fly ever again holy crap can you be talking about teleportation technology holy crap well we're posting this do we wait for tomorrow we just post it right now I think we're going to post this tomorrow this is huge whoa what is who is this guy who is Chip Tatum wait no no what this guy sent an email to MH370

(1:03:07) investigators we need to talk to Maas changen find Maas Chang find this guy folks is he on X there's too many Maas Changs this is somebody speaking Japanese wrong language well these are just a few years ago what what where' this article come from search and rescue search and rescue mission search and rescue mission we just connected Edward cin we

(1:04:19) just connected Edward cin directly to the plane two manifests in two flight two manifest in Flight Su from a code that included search and rescue code names let's go let's go is this going to be my Mias Chang again we need to find Mias Chang folks we need to find mitias Chang if Mias Chang is still alive we need to find this guy he was trying to leak information to people holy crap holy crap how do we come upon this it is it's Maas Chang he oh my God he knows he knows this guy is in danger this guy

(1:05:17) might be in danger H holy crap I got a message for him wow this is huge guys this is the biggest thing we found since Edward C Linn there's a guy out there that knows the answer and he was the the uh whatever liazon or whatever to the Prime Minister the political adviser to the Prime Minister holy crap Cobra gold and cop tiger so this so

(1:06:24) uh Captain hanley's thing mentioned cop tiger as well taking place right in the area as well they had the military Assets in the area as well they actually use assets that are related to search and rescue man this is huge wow we found a lot of stuff tonight we also just found that the the exercises there were related to search and rescue as well so now that we have the Assets in the area as well wow wow we have a guy who knows we have a guy who freaking knows man and we just found out more information about the

(1:07:15) exercises I found it's funny that two articles now I've seen to mention cop tiger the uh the captain his piece as well the 66 p P one on like page four I think it mentions that the exercises where cope tiger was happening in the andman sea there between Thailand and and USA which we already kind of knew but we didn't know the details okay so let's see um where was the tie exercises we didn't have tiand exercises here this needs to go down here hope I'm going to say

(1:08:22) assets I mean it's presumably if you're actually like doing search and rescue missions we don't say assets we'll say missions let's keep it let's keep it accur can probably be a quote okay we need that listed make sure that gets marked down here okay we need to copy some of this evidence this one as well okay I got both of them okay whoa the theme was search and rescue they definitely had the assets there oh boy okay man we we just have so much evidence we

(1:09:27) have so much evidence they had the Assets in the right location the theme of the exercise cop tiger which is the one that was in the animy was search and rescue okay this is this is give me a new post holy crap dude wow sorry I'm posting this guys welcome to the old school investigation I didn't think we would come across anything to S exciting ever again this is wild man this miles Chang thing is creeping me out hey we just found some big evidence for people watching make sure

(1:10:34) you hit that like button cuz then I don't know more people watch I guess actually I don't really care should we make a post or just wait till tomorrow we have cop tiger and we have miles Chang Maas Chang I need to write this down is that how it spells the

(1:11:39) name no why dude how does this guy know everything yo we definitely need to get in touch with this guy yeah Mias Chang might actually be in danger I wish I was joking God what else can we find Sputnik news okay so if it's if it's **Russian** Le news on this incident I probably trust it more than American News what what day was this published 2021 [Music] Chang is quoted in in Florence Chang's

(1:12:44) book that's where that quote comes from huh I wonder if Florence of changy would like Captain Dan uh his uh whatever God sorry I don't mean to be disrespectful um his theories yeah this uh this mystery solved one where we found the Mias Chang thing we found we just went down a rabbit hole we started with oril Tat's Foy request and then that led us to this website which is only findable on the way back machine and then that's how we find this guy Maas Chang I might have to like write this down the story of how we

(1:13:38) found this is wild sec I'm right I'm writing this down so I don't forget it to Maas Chang that let to cope tiger amazing so we started with the **foyer** request and then we read this thing about how any 77 that crash would leave a debris field so then to find this website we can only find on the way back machine and then when we get here we find about Maas Chang which we hadn't heard of then we Google Maas Chang we get back to Florence to changi's book and then we get this source that basically says that

(1:14:39) that year was uh the year of search and rescue for cop tiger operation impending disintegration warning but this wasn't within North Vietnam I think she just misread the location I need to ask her about this the report says I came from Thailand not North Vietnam this is getting weird guys they EV lines up this is like a movie where the evidence everybody else got it wrong the evidence lines up towards us cuz our theories is true I mean oh my God I just wow it's really real man I don't want to

(1:15:44) be real more than anybody man that's the sad part of this whole situation can't believe this stuff I don't even care if people say like oh you're crazy it's like I just time I feel so confident the time is going to vindicate us in this it's just a matter of how long that that stuff doesn't bother me sinful quick toe what's that I want to see any any more stuff about Mias train guys if you can find

(1:16:48) anything on Myas wait what if you guys want to help out look for anything anything related to Mias [Music] Chang he's a Malaysian lawyer as well whoa what dude definitely someone needs to find Mias Chang please find Maas Trang guys

(1:17:55) he write this did he write this he wrote This Wait guys did he write this wait where where is the part where he started down here or up here wow he's not in prison there's no way right if he is I would actually go visit

(1:19:02) him this is getting bizarre yeah this is oh he yeah JK Philly fan found at the same time as I did okay I'm going to read this is my hope following the publication of this article Malaysian mass media will focus on questioning the Integrity of US's assistants to Malaysia in the first three weeks of the SAR Mission I'm going to pause the music actually I'm just going to mute it um I don't know what the SAR missions oh search and rescue not withstanding the recent offers uh I take comfort in my reservations about us and its

(1:19:55) intelligence Services as well as other intelligence Services closely linked to the US especially British secret service have more than Vindicated by Reuters in its news report on March 28th 2014 entitled geopolitical games handicap hunt for MH370 the search for flight MH370 Malaysian Airlines jetliner in the vanish of the South China City on March 8th has involved more than two dozen countries in 60 aircraft and ship but has been beveled by Regional rivalries with the United States playing a relatively muted role in the sort of

(1:20:27) exercise until recently it would have dominated experts and officials say there was no real Central coordination until the search for the plane was confined to the South Indian Ocean when Australia largely took charge part of the problem is that Asia has no NATO style Regional defense structure though several countries have formed alliances with the United States Commonwealth members Malaysia Singapore New Zealand and Australia also have an AR arrangement with Britain to discuss defense matters in times of Crisis a mystery deepened over the fate

(1:21:01) of Boeing 777 and the crew it became clear that a highly classified military technology

might hold the key what the f what this guy's going to get killed this guy's gonna get killed this guy's actually gonna get killed is this guy actually alive are you guys are you guys reading this it became clear that highly classified military technology might be the key this is the craziest crap that's happened to the case since Edward C linnn what the hell maia's Chang holy crap Maas Chang this is this is this real this is

(1:21:59) where I begin to ask again is is this The Truman Show am I be punked is Ashton coocher G to come around from behind the wall this this actually feels like I'm being punked right now I can't believe this what what whoa what there's an interview holy [REDACTED] we found somebody who knows what happened to the plane like actually knows what happened to the plane was in a position to know the information the investigation became deadlocked over the reluctance of others to share sensitive data this is turning into a spy

(1:23:04) novel they're never they can never allow the black box to be found they can never allow the black box to be found I just realized they can't allow the black box to be found if it is it'll just destroy the entire narrative they can never allow it to be found just think about it the plane didn't crash in the South Indian Ocean the Black Box will prove it they can never allow the black box to be found we we're just going to put that on the list Black Box will never be found it can't be if it's found the whole narr

(1:23:32) the whole thing disappears we can say just confidently they'll never find the Black Box there's no chance anant on Fontella thank you very much appreciate you that's super nice of you you're translocated I think you mean translocated thank you I appreciate this story I'm glad you're still alive black boxes I mean if they can fake P cloud pictures they can probably fake a black box but it would be too hard it's like it's the black box is going to have like really specific data good question whoopy

(1:24:39) wowers wow you have a link to the same RT news that's okay we're good with this for now this one's fine the only country with the Technical Resources to recover the plane or at least it's blackbox recorder which could lie miles we deep in the water may be the United States we're the only ones that could find the plane too basically man if this is a serial killer movie I think we're staring at the serial killer United States yeah I'll post a link in the chat doesn't look let me like pin

(1:25:25) it wow I wonder if social media is going to claim I'm still stealing all my stuff from Reddit even though I were literally finding this live on stream they'll probably steal it from us okay met with political stonewalling along the north Indian Ocean where Chinese forces operate along other sides of other nations to combat Somali piracy current former officials say all sides are almost certainly quietly spying and monitoring on each other at the same time United States has taken advantage

(1:26:32) of the search for missing Malaysian Airlines flight to test the capabilities of China's satellites and judge the threat of Chinese missiles against his aircraft carriers wow this is getting wild somebody get me in touch with Maas Chang the US has more and better satellites but has

not taken part in the search for mh37 wow whoa whoa that sh satellite picture getting leaked is definitely spycraft dude what they wanted to know what China knew because they St they stole the plane that's the only story that makes sense

(1:27:34) here United States stole the plane dude what let's save that we might have to make some posts here guys I'm I'm going to start writing them up well I guess we're pushing off all evidence again keep running to more okay let's let's take some clips here um how did we find this we're just looking for Miles Chang how do we keep finding all these articles oh yeah miles Chang wrote this miles chain wrote this okay Maas chain I keep on Miles Maas chain this is wild dude look at this

(1:28:48) quote we only found this from O'Reilly's uh uh blog t uh O'Reilly Tat's uh blog God man this is wild okay well we're investigating in real time here thanks for taking this time with us Maas you're Maas Chang you're a very famous attorney uh author a bestselling book on political strategy you're a political consultant everyone that I've met here uh quer said you're the man in the know you're the man to go to and that's why we're here let's go let's go we got him

(1:29:29) this dude definitely knows 100% this guy knows that's a face of a man who knows the truth right there folks he's in the know everybody says that he's the guy to go to to go to and that's why we're here to see you holy crap holy crap okay is there any more what else is we need every find everything about this guy everything he's ever said about the plane folks find everything this guy has ever said about the plane I think I think we have to post this I think we have to post this folks I can't wait I'm too excited it's nine

(1:30:10) o'clock okay okay this is going to take a minute to write this H I'm not going on to put because I gotta clip some of this too I don't know if we're going to be able to have enough time to do this for tonight this is what we're working on tonight though now we got we got a new thing now Mias chain wow just wow we might have to watch this I don't mean to say it that way oh 360p yikes yikes okay it's downloading did this I want have a tall order I don't think I'm the man to go to

(1:31:12) T mahti is the man to go to well we're here and I can read it for you if you want to we've had this major incident occur here what people call a mystery wish was look through this and find some clips for this um and we've had been more than a month since then we've seen a whole evolution of people here going from great hope to finding this plane assuming it was hijacked and then the mood changing when uh reports you know they were started to look for the wreckage and people began say it crashed

(1:31:44) mid ocean yeah I saw that the whole change of stories and I think there's two points man this is wild uh um okay we downloaded that we got the full interview let's just close this then one minute thanks for taking this time especially in the first three weeks when the uh who arrested media will all out to condemn Malaysia is he still alive uh that we are just bum of n weeks what doesn't know what's going on we don't have the capabilities inefficient blah blah blah and July 205 in London bombing haai and

(1:32:26) who who will be which country enormous the route is not exactly the same over two oceans two major and there he across sorry flew across the peninsula into the S malaka and went north passing the an SE towards Thailand all right okay now what surprises me what's this guy going to say right here at that material time and I like the uh technology to go more detail but sub hopefully in time to come I'll do my research there was a huge huge military exercise going on Wow Cobra go and cop tiger C was yes and c

(1:33:11) tiger W cop tiger 11 February he even double says cop tiger There To Remind people that's the one right to 21st March okay and from February to March he just says for the last what 20 years the main countries involved in that two exercise wow we found out about cop tiger too Thailand and Singapore and it was related to search and rescue Indonesia was invited wow what a night guys wow Malaysia and this year 24 China was invited as observers I think they sent a delegation off 20 of them as pure observers and this particular

(1:33:51) exercise 24 wow there was a special component what's he about to sayar and rescue a special component of the search and rescue all right now so I like to ask the listeners of R radio and and yourself okay well we're clipping that there's my editor where's the Cobra gold thing that in there was that about 7 minutes why would the plane turn back wherever the powers that be who wants the plane to turn back all right go through that area but I I don't care what wow he just connected it to the he just connected it

(1:34:51) to the operations why would they go to that area cuz that's where cop Tiger's going on that's why they rued there dude what he's just spilling the beans this guy's gonna get killed is he still alive guys this is nine years ago he's he's looking kind of old oh my God is he still alive we need to get in touch with this guy man I like the uh technology to go more detail I like the technology to go to more detail was at that mat time was at that matal time and I like the uh technology to go

(1:35:42) more detail but sub hopefully in time to come out do my research there was a huge huge military exercise going on Wow C go and cop tiger CRA was going on yes and cop tiger M from 11th February he says cop tiger twice to 21st March okay and for last what 20 years the main countries involved in that two exercise were led by USA Thailand and Singapore all right and then subsequently Indonesia was invited South Korea Japan Malaysia and this year to four China was invited as observers I think he sent a delegation of 20 of them we

(1:36:27) miss the thing about the in this particular exercise 214 there was a special component of search and rescue Ching all right now so I like to ask the listen of R radi I wonder if we cut it a little bit after that right right here yeah wow just want to see that again a component of search and rescue all right now so special component of search and right yeah okay that's a good clip wow well there's our clip right there folks wow a listeners of R radio and yourself why would the plane CB whoever the powers that be who wants

(1:37:33) the plane to turn back right go through that area clip that where I I don't care well I I don't care sorry sorry FR sorry right go to that area perfect I care what altitude you're traveling

yeah eye of the military exercise storm all right the most advanced aircraft will be there was there were there the most advanced aircraft will be there this guy knows man he knows navies of the three countries okay and of course when you have such a huge exercise the most ADV you must have the all the equipment the radar and the

(1:38:31) surveillance equipment all there all the surveillance equipment there to put the entire Armada of ships and planes is huge so why would normally heavily surveil so why would heavily surve area precisely fieldis so more so during this exercise Mass so why would that plane be heading towards that direction in the first place and before turning towards South I think it's a very critical question I don't have the answer all right but he doesn't have the of that nature you have of play aax be that all the time

(1:39:29) okay so the first question wow po into my mind when the MH disappeared this is too good me straight the way was I'm blown away right going on since was February 11th all right and The Coincidence of 911 exercise another the cover exercise T was attack in 7 July of 205 all right 7 very morning okay let's move forward let to watch this later I'm not going to get through all this tonight this is going to have answers though 100% 100% 54 there be another lay of uh forse flag in in Europe so I think uh those of us who are in a **truth**

(1:40:31) movement so analyze the template used for 911 the template used for 7 July 205 the tempate he's making the classic mistake of tying too much stuff together here though just like uh Captain Hanley use for exposing the torture all right for the I mean I brought back photographs really yeah you're oh the exercises destroy the suicide pilot story because there's no way they wouldn't notice them good call wow yeah can't be suicide pilot c tiger exercises would would have noticed them wow whoa this is wild I don't think I'm

(1:41:30) going to be able to post this tonight I'm going to fall asleep before we get this done the effects of De uranium of children MH of the chosen it was in Iraq and Palestine I brought him out no impact no people are saying we can't take it can we speed this it's horrible and I tell them right if I don't put on the front page of a newspaper how the freaking **[REDACTED]** can you know what's going on yeah if your wife your sister your sons your daughters have been raped and murdered and plundered right just got really dark all

(1:42:09) of a sudden yeah wouldn't go there with all the Radars they see but the public will not accept it why not it's a fact why not you see can you see what I'm trying to say the mindset is such that people are very closed off selfed I know wow please I want to leave my little cocoon well well let's get more specific if you are one if let's say these people p are still alive a hostage of a foreign power who is not very friendly obviously not going to treat him well United States youve were on the Gaza Boat Lift you

(1:42:42) were arrested you were put into an Israeli do you at any time when they cut off your Communications feel that your fellow Malaysian have forgotten you abandoned you that you're going to be there for the rest of your life and they're just going to write you off as a collateral damage or did you feel somehow that you would be free okay so answer said the question right

this is wild you as individual your strength okay I don't know what he's talking about here oh okay wait now I was lucky in a sense

(1:43:15) when I say I was lucky in the sense that prior to my mission to Gaza okay don't care about this all right let hunger strike okay because you must have that Faith the **truth** are out so even if you would die your death is not in me I don't need any of this stuff said a nightmare I Dreaming we need some CS all right the problem is he doing going too many stories I just want know MH370 details in the course you know well Maas you you have done the impossible before as you have in Gaza you fought many impossible cases here in

(1:43:56) Malaysia against raise money I know I know I know but I think uh you know have a section says right enough is enough a false flag yeah that's a good idea we can do that because false flag yeah they they they just weaken after entire no we must fight that and I think we have to tell the families fight yeah the free energy Mak sense no closure no closure until you know for a fact that they are dead no closure and that again and that again requires that the public opinion Global yeah to tell the families email them you know no

(1:44:35) closure we we wow I'm probably G to save that clip too you know must confront this whole precisely initial and say like I'm going to Crime enough is enough and hopefully I mean I I do watch I do visit Ren website and I think Ren can do more than just near sorry I'm going to clip this part here yeah this is wild especially what I'm going to I'm going to save what he says here about families right here yes Global all right and I think he should uh I went too far back reserve a segment of his huge web

(1:45:15) page because there's too much advertisements too much yeah one needs to raise money I know I know I know God dang it delete this we don't need this needs to raise money I know I know I know but I think uh you know have a section says right enough is enough get used to it yeah they just we us Global to tell the families email go cross would you no otherwise everybody just ticket is another atrocity you know they get used to it yeah they they just weaken after entire no we must fight that and I think we have to tell the families here

(1:46:02) we go so it's right here and I think we have to tell the families it that no closure no closure until you know for a fact that they are de no closure we I post and that again and that again requires that the public opinion Global to tell the families email them you know no closure we we we were try to go for a rescue just like you did go being Cal murder you went in for a rescue yeah and even if it fails at least you broke through the L you at least show they we're here yeah see what else it says here I think that's what

(1:46:47) it's all about we're here une equal contest but so what you did it before I'm coming I don't think it's unequal I don't want give them too much credit that they so the machine gun they so powerful right all right I think the the weight of public opinion is very powerful very powerful well thank you very much wow that wild delete this how long should we play that clip for starts right here no closure and you know for a fact I think I'm going to just make it real they are no closure and that again and that game

(1:47:29) requires that the public opinion Global yeah to tell the families email them here we go no closure we we were try to go for right about here closure sorry I'm trying to clip this correctly no closure we delete this export clip it's going to be called No closure every single time someone says we're hurting the families I'm going to play this clip for him I'm going to post this for you guys this is what we're going to post tonight wild guys he posted on YouTube this year we need to find this guy

(1:48:21) guys this is this is the wildest thing we've run across in months and I think we have to tell the families oh yeah no closure no closure until you know for a fact that they are dead no closure and that again and that again requires that the public opinion to tell the families email them you know no closure no closure no closure folks I'm never stopping now I'm never stopping no chance not after watching this nothing can make me stop at this point not until we get the **truth** this these people know the **truth** man people

(1:49:06) out there know the **truth** 100% 100% sorry guys going have to suffer here maybe

(1:50:19) uh for for

(1:51:53) we need a Biblical quote no closure no closure until you know for a fact that they are de no closure and that again and that again requires that the public opinion Global to tell the families email them you know no closure and I think we have to tell the families F that no closure no closure until you know for a fact that they are de no closure and that again and that again requires that the public opinion Global yeah to tell the families email them you know no closure I think we have to tell the families that it requires the public

(1:52:31) opinion Global yeah to tell the families email them you know no closure and I think we have to tell the families that no closure no closure until you know for a fact that they are de no closure and again how's the sound guys this is definitely an interesting turn of events so

(1:54:19) what think that's good maias Chang folks booya let's make it go let's make it go viral folks this is a big one this is a big one this is huge wow we're going to get more clips from this for now that'll do wow I want to listen to it one more time chilling no closure no closure until you

(1:55:24) know for a fact that they are de no closure and that again and that again requires that the public opinion Global to tell the families oops sorry yes no closure no until you know for a fact that they are dat no closure and that again and that again requires that the public opinion Global to to tell the families email them you know no closure and I think we have to tell the families wow okay that is pretty spicy um I'll clip through this more on my own tomorrow wow so we already clip this one this is the one we just listened to right that

(1:56:17) di yeah okay we can delete this now wow there more stuff I want to clip in the beginning too I was going to make a super cut but I think I'll just take pieces out of it this one's crazy okay let's post this over here let's read a little bit more about this stuff there might even be more man let's finish the rest of this article Malaysia's about a victim honestly if the United

States government took the plane then Malaysia is a victim they really would be a victim

(1:57:21) none of these say anything about [Music] fire god this is a crazy article man thanks City future P [Music] forward that's a book by him actually I don't know but if I want to see the first word being Zionist doesn't fill me with uh

(1:58:48) confidence I think this started we were actually going to send a **foyer** request to the national geospace office we went down quite a rabbit hole here folks was this doesn't work or what you guys bombarding his website now he's a prisoner what for H

(1:59:57) bribery this is different this isn't very interesting here we go where's his email address is this recent what was Ellie saying no closure without disclosure

(2:01:00) there you go it's a great tline there no closure without disclosure folks Jeremy Reese is watching Bernie if you're still watching s to Jeremy no closure without disclosure uh that's him oh there we go got him guys don't spam his email [Music] address I want to get to him [Music] first um what should we say to

(2:02:13) him close this what do we say to a chain yeah I got the email thanks appreciate it second I'm ready start this up real quick um I'll just read it to you guys uh I don't want to reveal my email address um two videos have reemerged the show MH370 being teleported by some orbs

(2:03:18) that I've determined to likely be locking Martin technology either way we know us satellites USA 229 we're staring down at MH370 at approximately 1840 UTC in the plane was at the nicobar islands [Music] what are your thoughts blah blah blah here's the coordinates and then I'm just going to tie the video Throw the video in there side by side let's add the all evidence as well [Music]

(2:04:48) well you can follow me on Twitter at JT thank you sir thank you sir for any information and Advance Ashton okay he has an X account it's not active he talks about B the b77 having a remote Tech 22 minutes call yeah you guys can look through this in semic Clips any any Snippets you think I should grab to me I think we should focus on the tree yeah the tree all right the tree mosquitoes okay if the plane then was taken say let's Diego Garcia another place there's not too many places with long do you just hear

(2:05:49) what he just said right there let me tell you every day in school the first thing before you enter classroom is ingrained in that generation okay this is your government too you're talking about they went to these schools these private schools everyone everybody today still the rich the of this country sent to Mother England the private schools rather the public schools true har eaten and what have you they do send all their children rich people send their kids to the West in Southeast Asia to be fair to the

(2:06:29) others me to me I think we should all right three mosquitos okay if we're playing then okay let's R this stuff up the schools every day in school we don't need this three mosquitoes

okay if the plane then was if okay if the plane then was taken let's say let Diego Garcia another place there's not too many places with long enough Landing field wow does this and then you say that everything found in the South Indian Ocean the flatsome and Jet some nothing significant traces the pings were very far apart and they just say Diego Garcia

(2:07:23) we're coming up empty in the South Indian Ocean and yet the stories persist of something happened toia do you think the passengers are still alive and help some okay can I just backtrack a bit I want to backrack a bit right uh I've studied your articles I I I wow uh still alive and H someone okay cut that can I just backrack a bit DOD that question the scenario that totally dodged that question for whatever reason okay you issue statement denying okay but I want to go to another scenario first in that okay

(2:08:11) supposing the who knows all right who is going to be on that flight why that particular flight that particular play okay this people came from all over the placees right I mean was from America I mean right he was on the way to China he had stopped by just see if there's any else clip this he was a security expert I I'm saying they were coming from America yes okay whoever The Who would know where they're going yes okay whoever The Who would know where they're going they knew ahead precisely okay they must have known no

(2:09:02) so I'm for a moment let's stop for a while what and put free SK okay what's he talking about if a plane is going to Beijing why turn back there's other ways to stop that product or that technology or the uh the technicians so to speak we insult them before one a better term right in this interview pram engineer okay if you want to them from GRE China thousands ways they could have done in America so why allow them to come to Malaysia do their thing embark on mh37 or take off right and that at the critical moment that

(2:09:55) juncture of the Tre airspace when one is closed off huh MH good night MH this guy seems to know the answer Vietnam and within he was in the no and he was adviser to the Malaysian Min of Defense guys the one the sketchy on all right he knows something so I would like to I'm trying to figure out how much he knows another scenario which is someone changed their mind someone changed their mind doubt about that I mean they were supposed to maybe turn earlier someone changed their mind in that maybe just maybe all

(2:10:36) right someone knew what was the purpose of that play MH okay not so much with fre scap but something else M the pl could be weaponized for I know and the mission was leaked he had to be aborted and the turned back right he could be it could be within the free scale uh scenario what he just presented another theory you guys get that where does this start mine no doubt about that I mean they were supposed to maybe turn earlier someone ch mind where did you say that so I would like to P so I would like to pose another

(2:11:31) scenario wow okay which is someone changed their mind well there's no doubt about that I mean they were supposed to maybe turn earlier and they someone changed a mind in that maybe just maybe all right someone new I'm I'm think I'm going to cut it here actually maybe where is it right here someone changed the mind yeah right here someone changed the

mind in that yeah he mentioned free scale maybe well now I'm wondering maybe there's someone else on the plane all right he says there might be

(2:12:14) another operation what was the purpose of that plane what was the purpose that plane not so much with free scape but something else the plane could be weaponized for all I know and the mission was **leaked** he had to be aborted and turn back right it could be it could be within the free scale uh scenario or something else because they even talk about the the timing of the turn back okay let's say I think I'm going to cut it after the free scale scenario the time this was it that was it right there because or something

(2:13:14) else call this one uh aborted operation got that anything else that's good in there the pilot turn back the turn back thing I don't know the pilot can only turn back on instructions cuz the pilot it was not suicidal okay because we already discounted the suicide Theory so he turned back man he even just said it wasn't for some reason assuming he turned back on his own free will assuming yeah the fire he must have turned back on turned back cuz the fire CU a pilot train so he doesn't know about the fire scenario though so he

(2:14:07) doesn't know everything to the cockpit to say turn back but he knows that there's something sketchy going on and if did not turned back on his own Val he had no control of the plane then the plane was turned back then it raised another question how was he immobilized all right I'm not worried about the passengers cuz on those flights to **China** Upon take off I think 80% go to sleep yeah it's a night late night flight it's Night Flight people are asleep some of them have a little meal ever go to sleep someone just I

(2:14:44) wonder if the fire would be immediately apparent on the back seat the explosion would be right go to sleep and you're flying backwards to Darkness not flying for to morning so if anyone is curious to lift up the you know the panel the window the P hole they will say it's still dark yes so everyone would be in the dark yes all right so the cockpit just think about it the cockpit they imize for some reason well yeah I'm going to probably call pretty tired now in the bo Pat besides REM control remove right here now in the this is to

(2:15:35) cut it right here now in the Boeing patn besides remote control they have also the capability of to release is a kind of tranquilizer gas that immobilizes everyone because if it's a hijack you have to immobilize a hijacker MH for the remote to trigger in and for the plane to divert it so even the crew can be immobilized presumably in theab with whatever precisely so huh that's interesting so even the crew can be immobilized right presumably the this clip call this one um remote control we got some good Clips here guys

(2:16:47) okay yeah we're getting tired out here we're getting tired out here uh we definitely found out about mithas downloaded this clip close that okay we need to add probably a whole section we'll have to add stuff here not going to I hope he doesn't go too deep into to the 911 stuff it's going to be too hard

(2:17:50) to use them as a source whatever precisely so in that system I don't have the pon

number off my head I don't have it but I can give it you later if the plane was turned back after the immobilization of the crew and the passengers all right that again it further narrow down who because the only certain people have their technology access to this Boeing system I mean really serious now the other thing is right now the other thing is definitely implicated in the United States here guys it' be surprise

(2:18:29) that system allows someone on board with a laptop to do that beside the satellite or aox there is a system whereby they can use the floppy disc for one of a better term right I don't know the term they have right basically the software software yeah all right that can be downloaded or controlled from the passengers you do probably on a smartphone today precisely okay so if it's a hijack okay plane can definitely be remote controlled no no doubt someone in the plane they don't want a lot of people know they done it beside the

(2:19:06) Satellite by the awax so that would narrow down is to who now whether it goes to the boldes and someone say okay that would cut here I'm going to cut all that part out I already have I have the whole thing if I need who now whether it goes to the moldes as someone said you know the FW past mives and then down south to yo gcia I would not for sure was I I like the capabilities of research but from your paper you're very confident that is it there all right and then obviously we have to ask a big question what happened to the

(2:19:55) passengers of course it wouldn't wow what happened to the passengers wait I clipped the wrong part we have and obviously that's part I want and then obviously we have to ask a big question what happened to the passengers folks what do you guys think he's going to say of course it wouldn't surprise me at all they are what we call Collateral Damage I mean everywhere in the world when the drones hit Pakistan thousands have been killed no one bets an isid American is protests wow the people died under drone attack

(2:20:41) no one scream war crimes okay wow it's like this news there was a lot of collateral damage precisely precisely precisely so then next thing comes in will be okay assuming the plane landed in uh in the island of Garcia in uh assuming the here collateral damage they are what we call Collateral Damage I mean everywhere in the world when a drones hit assuming the plane landed in uh in the island of the Garcia they still have to find a way to get the plane at the

(2:21:45) passenger subsequently all right how did they get rid plan the pass I had the plane ditch somewhere else later because we have you talk about 30 days right right no the first three weeks no one knew what was going on all right they were searching in Ocean right somewhere else you know okay so that time they can do wonders right this is technology to uh this is the most credible investig like interview I've SE seen so far related to MH370 he clearly knows information right the question is how much does he

(2:22:24) know reply the plane and ditch it all right reply the dit but I don't have the evidence as a lawyer I'm going to be very cautious because I I would want to make a statement okay reply the plane and ditch it cut that there want to make a statement about the evidence I'm more like who the who well ditching is hard because uh it's easier to land and ditch that's what I think

yeah fight after landing right then you can tear it apart and and landing right right then you can tear it apart man there's so much good Clips in here

(2:23:23) yeah and of course you got to hide it but there's only so many air strips in the world that can handle the 777 so we have a very finite possibility if we're looking at those three suspect countries us Israel Britain which of those countries have a he going to say us right here around larger Indian Ocean Middle East uh Oceania this whole area how many air strips are there and again a lot from a lot of EV from gar Australia Israel you can make a direct shot in undetected through the Red Sea OFA so it's possible so this is why the

(2:24:03) People Israel they've got probably other air bases but you have to go a long ways I think Afghanistan gr Airfield I think that you would be detected by all sorts of Iran India so I don't wonder what they did with the plane guys what do you guys think they did with playing RI maybe the French have something I don't know you know that they would loan to a fellow EU I was watching a film uh I was watching a film okay we're going to call it there it's pretty interesting though pretty interesting

(2:24:38) folks man we got aot lot of stuff to go through tomorrow I'm going to watch this whole interview I'm going to make some notes of some clips I've already pulled a p uh hold a few um tomorrow uh 2:00 wait no 3:00 I think 3 o'clock Eastern we're going to have a space tomorrow with Dave Rossy we're going to talk about uh Advanced science and quantum entanglement Q E equals epr and then um Saturday morning at 11:00 a.m.

(2:25:14) eastern time United States time we're going to be interviewing uh uh uh with um geez royy Herbert so I'll probably post that in the morning I think I'm going to get the space out there tonight last thing for tonight and yeah I'm G to try to find the blur's creatures link as well I'll post that tomorrow too so lots of stuff coming out we actually have more content than I am even wanting to post so we may it may be a busy day tomorrow blurry okay guys uh thanks for watching tonight thanks for watching this clip uh

(2:25:50) we're going to look through some more if you guys want to help out feel free to watch that whole video it's linked at the top right now go ahead and save that if you find any good Clips Mark the times down and let me know and I'll take a look at them there's a lot of Diego Garcia evidence here this is pretty wild okay guys have a great night everybody good job on the investigation tonight uh just reminder everybody this is a marathon not a Sprint we're not going to solve it in one night uh we're

(2:26:17) going to you know slowly get to the answer here so great find on this stuff guys have a great evening we will talk soon peace out

Transcript:

(02:58) Manan 370 contact 120 [Music] 9 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(04:03) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds welcome to the stream we are here oh man do you like that intro I think I got to figure it out now I'm getting good guys I'm getting good at YouTube get be afraid I'm editing stuff and doing stuff on YouTube Welcome everybody to the post Christmas uh stream I hope you guys had a wonderful Christmas I wanted to stream last night and hang out with people that um you know maybe didn't have a lot going on uh during Christmas but uh I it

(04:41) was too exhausting uh so we're going to doing it today instead so hopefully people are here and you know ready to hang out have a good time we're going to play a little synth Wave Music in the background as well just because why not um so hey everybody let's see who we got in the chat here today Banner looking for **truth** booya shto Paul Ripsey Tracy PJ Mike cart blanch Paul again welcome everybody awesome let me know if the music's too loud should be pretty good I turned my mic down a little bit too cuz I was

(05:23) listening to some replays and it was pretty uh it was pretty loud so let's do a quick recap we had the ocalypse happened yesterday I might turn the synth wave down just a little bit more though that's as low as it goes I'll turn down to like that I need to have something in the background to listen to yeah alien scientist is alien scientist should be on my live streams from a few days ago you definitely should be hearing some music there's a little bit synth wave in the background should be hearing

(06:05) it um so what is the post I want to highlight let's go to my profile let's go to full screen so first of all you should check out quadruple mass oscillations by Dave Rosy this is a research paper technically not a scientific paper a research paper reason why it's a research paper is it's a paper where he is revealing other papers that are out there that may be less known like this one by Eric W Davis literally talking about producing gravitons pretty interesting he's got salatar Pi paper that we've already reviewed on here as

(06:41) well um as well as some additional papers about high frequency gravitational wave generation so these are all some pretty big names here that uh when Dave Rossey goes through this he is explaining how electrical engineering can be used to produce these type of gravitational waves here's our right hand rule I think I might have added this one I added a couple uh images as well to better understand it there's our toyid right there right donut shapes seem to be very common uh capacitors you know what is even a capacitor here I I added that one

(07:16) personally but the idea that the Earth itself is a capacitor pretty interesting and then the real spice here is here's our Matrix this is the reality that we live in essentially and then this is how you can bend it aquaberry drive this is just an aquaberry drive right here Star Trek warp drive now if you think of our reality is a matrix of itself where the projection of our reality is onto it then we can break through that reality um so uh before we go to our next thing I want to show you what I mean one of the things that I've learned

(07:52) we're probably going to talk about sus and uh Malina today I've been watching a lot of their stuff getting caught up to speed with the physics I feel like I've learned a lot in a very short period of time and I'm still obviously an amateur at this um but here's our video I'm going to Speed it ahead here now when we get to the zap one of the things that Malena argues there's two things that I would humbly disagree with him on is that first thing is he says that in order to get an object to go through your Wormhole would

(08:23) have to be the size the mouth of it would have to be the size of the Earth itself seems like a little bit too much of a stretch there if we can Mass reduce the object the size of our object we don't need the mouth of the Wormhole to be size of the Earth anymore in addition to that one of the things that they argue is you need negative energy for the Wormhole did not collapse well what do we have in our videos folks we have an endothermic event this is an absorption of energy that's happening here this is not a release of

(08:57) energy so I wonder if there's a relationship between the negative energy requirement and the absorption of energy we see in our video here in our MH370 video also if you can reduce the mass of your object to zero now the big issue with these wormholes is that if you send mass through it it's like it's going to get stuck like if your butt's too big and you can't get through the window or get through a doorway right same idea here it's going to theoretically the mass of the plane would cause the

(09:28) Wormhole to collapse but if your mass is reduced to zero if you take if you create a bubble around the plane the same way we have with these spheres these spheres here now you can theoretically Go Through the Wormhole and get around the other side so the science that we will be talking about today is  $E = mc^2$  which means Einstein Rosen Bridge equals Einstein I think it's poiny Pinsky let me let me see what grock said hold on also there's a grock tab now it's cool neat Einstein Rosen Bridge equals

(10:03) Einstein p uh Podolski Rosen and so this is basically saying that a wormhole is essentially the equivalent of quantum entanglement this is our unification theory of quantum and macro this is at least a option for unification Theory which is that if uh um quantum entanglement is real then the idea is the same somehow quantum entanglement is allowing for faster than light information communication and that's the same idea as what we need for an Einstein Rosen bridge to allow a macroscale object to move faster than

(10:38) the speed of light is that you create a bridge same way I love this idea I think it's a good way to unify the two concepts so we'll be talking about that a little bit later before we do that

there's a **Reddit** post that I want to highlight and take a look at we're going to investigate a little bit would it freeze everybody inside not if there is a barrier around it you want me to turn the music up a little bit sure let's try this this sound out some people are going to probably complain some people say no music some people say

(11:16) they want music I don't know it's hard to it's like when I'm in the UFO community and some people wanted to be aliens and other people want it to be VFX so you just can't please everybody you know I'm just in the middle pissing everybody off saying it's humans saying it's art technology does the M let me see if the music is working please give me a confirmation I mean it looks like the music should be playing good day my normies okay um but yeah so as part of this uh I think it's actually um Malina

(11:50) as well is one of the three so you know what's funny is Malina is one of the people that I was looking into their Wormhole papers early on so I'm going back to thinking this is a wormhole the problem is we need to understand what a wormhole means it's not as simple as Stargate although it could be maybe right uh I couldn't translate the neural Regan newspaper Mr Fish I might need some help on that you guys really don't hear the music why don't you guys hear the music says you guys should hear the

(12:28) music hm why would you not hear the music even OBS says you guys are hearing the music I don't get that huh maybe I'll refresh it I'm going to refresh it okay give me confirmation if you can hear it yeah okay other people hear it yeah you guys are just trolling me it's just quiet I think it's just really quiet yeah yeah just quiet I'll turn it up a little bit but I want it to be quiet I don't want it to be overwhelming the I don't want to be overwhelming on the the stream I just want it so I can jam with it a little

(13:20) bit yeah it's very soft it's just background music guys it's a chill trance okay yeah it's it's synth wve so if that's not your thing it's not your thing but I don't I don't want to hear like singing and crap I'm trying to actually like do stuff it's you know the music's not supposed to be overwhelming it's just supposed to keep me in the groove okay so we got it music's good we it's been confirmed thank you um so let's start with that **Reddit** post I saw did I

(13:45) actually pull the video we actually need to investigate this whenever I see a **Reddit** post get downvoted then I get interested then I get interested I want to check it out um pull this over here so somebody claimed they found um actual blue infrared video and I want to see how accurate it is if it checks out or not we have to be very careful about anything on **Reddit** CU almost everything's fake God these nut job **redditors** man these guys are just literally nut jobs there's no there's no nice way to put it

(14:27) they're just off The Rocker Man the definition of burden of proof let me guess I don't have to read this this person thinks that if they like poke one hole in something that means it's fake right yep there it is guys we know what the burden of proof is that's why we have 13 pages of evidence these people are off their rocker man they're mentally not well there's not a better way to put it they're just not me well mentally you you can never go to there's no other

community you can go to where you find

(14:57) so many people so r rabidly obsessed with trying to convince people that something's not real you can't go to the Bigfoot community and see this you can't go to Flat Earth community and see this it's literally just these videos are breaking people's actual Minds especially like in almost all of these people are like sick of fans of **Mick** West like actual cultists the reason why they try to call us cultists is cu they're actual cultists of a guy named **Mick** West scary stuff man they just desperately have to

(15:30) believe there's nothing special in this world cuz it would just break their reality if they if they did these are the kind of people you probably see like going to religious subreddits and trying to tell people that religion isn't real and stuff like that it's like dude no one cares let's see where's the one here it is way down here when I see something downvoted yeah **Reddit** man I'm going to tell the **redditors** one more time as well even though I don't even like talking about them because they're

(16:03) so just sick in the head um just you have two choices right either be somebody that's being positive influence on the world or be somebody that's being a negative influence on the world you got to decide a lot of these trolls are like literally trying to speedrun to get on back on the block list cuz they're just such terrible people they're just so negative people people that are just trying to tear people down never built anything in their whole lives you know it's like just you can change the

(16:30) circumstances of your life if your life is miserable it it's probably because of the way that you treat the reality and people around you so this person here pool request initially wasn't somebody you know they we've gone back and forth pool requests and I have I don't have them blocked um but and then this person here is a **debunker** straight up **debunker** like no life job person made a v made a post about about how all the video the Drone video looks wrong even though they have no experience whatsoever in it they have

(17:04) no basis to make any of the claims that they made they have no actual proof for anything that they're claiming just like classic **debunker** **redditor** like loser person right um and so of course pool request comes along and says whoop turns out we do have a footage of it what was the year on that 2004 let's take a look folks free flight look at that look at that folks that is a blue infrared video that is a blue infrared video right there in fact we're looking at the same video three different uh infrared

(17:43) perspectives look at that [Music] Ching okay so this looks legit is there any comments to go along with this seems good to me what do you guys guys think's we're going to look at some of the the supporting evidence to make sure this checks out I don't want to jump to any conclusions but I am going to go ahead and uh download it then wait what there it is how many views does this get only 3,000 views sad guys uh we got to give pool requests some credit here pool request you will get credit for finding this of

(18:26) course because I always give people credit um this is a good find this is actually investigative work here like pool request did actual investigative work the the aliens are sad album guys I was actually watching oh yeah let me go back to that real quick so if you missed it I did the unblock alypse on there's my dog by the way I figured out how to do more than one video at once you have to do it on your phone you can't do it on the desktop that's why God damn damn she's cute God damn she's cute I have a cute

(19:02) ass dog um so I did the unblock lips 30,000 views on a YouTube live uh post it's pretty wild so we did the unblock alypse we unblocked everybody and then uh king milk fart harassment archive which is like the best YouTube or best Twitter um I can't believe they only have 482 followers guys this is like the best Twitter account on Twitter he did a mashup of it where it's like 30 like 27 minutes of it and it's just like me going through unblocking people and it's it's pretty damn funny even I was laughing I was watching part

(19:39) of it this morning I was laughing at myself that uh yeah the aliens are sad one was probably one of the best we'll go ahead and play that it's down here he's on the cover of an album he's got a self-titled album coming out aliens are sad by UAP James UAP James it they'll be on sale 1999 you get all all the hits all the hits see we definitely we definitely wrestled some jimmies guys with that they're they were just not happy with the fact that I made that post about all of them it uh definitely wrestling jimmies

(20:23) folks okay let's let's get back to the investigation I don't want to get too sidetracked here folks don't want to get too sidetracked uh where did it go where where' the post go here it is okay blah blah blah pool request is such a a logical dude right he's he he straddles the line right he knows you got to like stroke these people's egos because like on **Reddit** it's not about what you say that's **truth**ful it's about how you make people feel right so he say it doesn't

(20:51) discredit the the Drone model or the or the **Jonas** pictures I just made some comments ago that the military IR currently exists and this thermal style exists as well you know contrary to this **debunker** guy even though I was told many times I'd never find one I did find an example of a non-traditional non-black and white military Flier that's the whole point of this post in before that's not military that's NASA oh nice the video was taken okay yep so they can actually remove whatever they want including te telemetries and

(21:34) reticles which shouldn't really be controversial I mean of course they can like okay well let's see what we got here we're just going to take a look at this also this is the plane taking the video nice or is this the video of the plane I don't really know this seems to check out though pool request youve just made it on my list whenever somebody drops a meme like this guys let's put this in the chat pool request your russling Jimmy's pool request this is a 2014 report about this what is this missile defense agency seems to

(22:41) check out folks seems to check out oh yeah one of the other things that the other guy made that he made multiple false statements this **debunker** person here tried to claim that there was no black and white footage that you can't take aerial footage with these cameras like

these these **debunkers** are just completely off their rocker man it's not just that they make stuff up that suit their own egos but they're just wrong just objectively wrong it's like yeah it's wild man it's they're just not well man not well I hope they

(23:17) get the help they need they they desperately need it I hope they move on to uh other stuff maybe they can go **debunk** uh I mean they probably already the NASA Mami stuff is already old news maybe they can go back to **debunking** like orbs and stuff like that calling everything a balloon maybe we can bring Chinese lanterns back the Chinese New Year's coming up so pretty soon they can call everything a Chinese lantern so that should be exciting for them exciting times are coming I think we're good on this let me

(23:45) see I want to just check out everything else make sure we're not there's no um Rick Ashley stuff in here yeah this is this is dense so they were this was a video camera of a rocket okay we're definitely posting this pool request you're legit pool request we're we're literally on **Reddit** at the moment so yeah we're talking about **Reddit** we found this this uh 16-hour old clip from yesterday that pool request posted that seems to prove that there are capabilities for these cameras to be in blue just like we see in our

(24:33) video and I would go so far as to argue when we compare the two of these oh what the hell somehow I got some virus thing installed on my computer or downloaded I would go so far as to say when we see this here there we're probably seeing this in daytime right maybe not though oh there's sound separation [Music] I mean look at this this is in blue right here guys I mean cha-ching chaing we've **debunked** another **debunker** fake post it's like I love how they demand that I answer all their fake their fake

(25:14) assertions there you go guys I would argue that this almost proves this is at night otherwise you're not going to see all this interference like this it's cuz it's night time cuz this is Pitch Black and we're looking at infrared cha-ching folks okay I can't do the sound on this [Music] chaing this dates all the way back to 2004 as well which means that it's plenty of time for our cameras to have this type of view perfect folks pool request you get Ashton's gold star for the day pool request good job good job

(25:55) sir good job okay I think we're going to go ahead and post this I think we're going to go ahead and post this folks should we link to this as well or do we just credit pool request I don't really even want to link to this sub**reddit** sub**reddit** it is just disgusting I'd rather support other sub**reddits** um let's see the amount of complexity that would be required to fake these videos is just astronomical actually at this point between the shake the stuff going through the clouds the accurate nighttime V visuals the

(26:35) interference the physics the electrical engineer the engineering of the plane like it's wild it's wild okay where are what was the other sub**reddits** called uh man I've already forgot the names of the other sub**reddits** hold on I want to promote some of the other sub**reddits** uh uh airliner abduct 2014 no that's not it boy I don't I don't remember the name of this I've read anymore folks why do I have all these chat gbt things up hold on guys I got to close some menus

here um trying to find the link for you guys

(27:35) guys is this one it nope one sec how do I I don't even know how to work this I don't even know how to work **Reddit** anymore how do I check other favorites how do I check other ones that I've been to oh is this one it okay this one's kind of dead but I'm going to go ahead and promote it anyway it's MH370 abduction okay let's do **reddits** MH370 abduction okay so here's the other one this is a public one guys if you want to join this public one it theoretically is this this is the one I think created by the guy who got the

(28:33) other yet another sub**reddit** it was banned so we have this other one um but there's a private one as well the private one is three orbs let me pull that one up if you want in the private one there's there's no trolling in the private one so I mean if you join and you're a troll in the private one you're going to get yourself swiftly banned so we got the private one here I'll put these up so three orbs is a private sub**reddit** this means no **debunkers** are allowed I didn't create this what it community space for uh

(29:13) productive discussions on the value regarding three orbs and reg side on videos so it actually this one isn't even like necessarily a Believer sub**reddit** but it's definitely a non-roll sub**reddit** so just a heads up if you want to be involved in those those are the sub**reddits** for you now let's go ahead and post about what we found here or not we but pool request found oh also don't troll in my um don't troll my YouTube stream or you will be blocked I the uh the Twitter thing doesn't apply to YouTube I I don't care

(29:55) if you guys are uh if you're trolling then you're going to get blocked so history Geeks your last chance buddy stop being a nut job history Geeks you're going to get yourself blocked in a few seconds and you're going to go do something else I don't want have to treat you like a little child but you're acting like a little kid so either act like an adult or go somewhere else history Geeks Last Chance history Geeks I told you last chance either shape up stop trolling or get out that goes for anybody else Who's

(30:32) acting like history Geeks okay just relax and enjoy the stream or go somewhere else and you know go touch grass as they say don't act offended either Jesus Christ man the lack of like any type of social skills from people today is just alarming you're not a victim man okay let's go ahead and make a post I'm going to move it over here while I pull up the video the ham radio evidence yeah what the whisper evidence is nonsense sorry to break it for you if the whisper data stuff on the ham radio stuff worked then

(31:37) um they would have found the plane right they would have found the plane I have looked at the whisper data you can go back to my old postloaded all the way back to August whisper out was the first thing that I looked at that was the first thing I looked at Albert you got I'm going to put you in **timeout** for uh 30 minutes again guys don't troll in my chat just don't do it if you can't figure that out then it's going to be blocked and you won't be back I'm doing you a favor Albert by just not permanently Banning

(32:09) you normally I just make it so you can never comment over again so history Geeks is gone so like this is you just have to learn it's a hard lesson for trolls to learn but if you really can't control your behavior and you can't control what you type then you lose the privilege permanently Parish they did look that's the secret they did look they've looked multiple times where uh the whisper route thinks that they went they've looked multiple times they've been wrong every single time and they just keep

(32:47) changing it saying that oh well there's a new spot now I've I've reanalyzed the ham radio data now we have a new location they literally looked everywhere they literally looked everywhere man that's that's because they literally looked everywhere there's nowhere for a debris field visible from space to hide along the seventh Ark they searched above and below water everywhere man the idea that nobody went is just delusional nonsense Richard Godfrey's whisper route doesn't make any

(33:13) sense at all I actually read all 300 pages of it I'm probably one of the only people that's read all 300 pages of it the reason why they don't look is because they know it's nonsense and they know they've already looked everywhere yeah I mean the thing about trolls is like once you get them going like they can't stop it's like it becomes like personally offended to them where it's like you tell them to stop and then just they cannot they don't have the capability right and then they just get

(33:46) permanently blocked and then they can never post ever again so I mean I warned them I warned them man that's what I'm talking about these people have real issues that they need to like work out right yeah I stayed up all night one time reading all 300 pages so I'll just do a quick recap while we're waiting to post this the the 300 Page whisper report it claims it's fine until they get past panang the first problem after they get past panang is it overlaps with UA 343 which is or UAE 343 there's no way the plane couldn't

(34:26) have seen mh3 70 so if the whisper report's correct then UA UAE 343 would have seen MH370 but it didn't but it didn't so first thing we already know right away doesn't make any sense now there so again Parish you need to chill man they already looked everywhere along the seventh Arc above and below water there's nowhere for a debris field to hide they checked everywhere that's the reason why they're not listening to Richard Godfrey cuz there's nowhere else for them to search there's not some

(35:01) mythical spot in the ocean the plane doesn't have any extra fuel the route hasn't running out of fuel go look up the search rods of where they searched they searched everywhere they even search along the flight path this is why when the experts talk about this stuff I just say where do you want them to search exactly how where do they not find it right yeah I no one asked you to contribute Midas this is the thing about trolls right nobody asked you to contribute that's how you get yourself permanently blocked just if you can't

(35:33) prevent yourself from being trolling then go somewhere else man go somewhere else Parish if you think that Richard Godfrey knows what he's talking about I strongly suggest you

read The Whisper report yourself just to be clear the whisper report doesn't make any sense as I've stated many times whisper data cannot be used to track planes it's like trying to track somebody with a white shirt on in a sea of white shirts and all you have to do to realize it makes no sense is actually just read it that's all you

(36:09) have to do it's impossible for UA e343 of not have seen the plane if the whisper report is accurate The Whisper report has the plane cutting along the coast of Indonesia which isn't that's not how you avoid radar that's not how a plane even flies it then has the plane making a cutback literally says in the cutback it makes a cut back as if it's looking to see if there's a plane behind it this also makes no sense it's not even something you could infer from that type of data then it has the plane doing a 20

(36:42) to 25 minute holding pattern this also makes no sense whatsoever you're not going in a holding pattern in the middle of a hijacking or suicide route nothing about the whisper report after panang makes any sense and even from the very beginning when when I believed that it was real I still couldn't understand how that made any sense so yeah our community is going to be better than some of the other communities out there you know I'm not I'm not really going to let people troll like this if they want to troll on

(37:15) Twitter they can troll I mean it's fine I'll just Farm them for engagement the funny part is I literally told them I was going to farm them for engagement and that's what they're actually doing on Twitter actually just being farmed for engagement so if they're upset that I'm uh making money off of this or whatever well they're the ones who are enabling it Parish I'm not going to have like a one-on-one discussion with you if you want to read through all my content you can check it out

(37:45) man you can check it out plane can't last for 8 hours on fireman could barely last for over an hour the main reason reason why they discounted the fire scenario is because they didn't think the plane would last for more than 15 minutes but it can it can the fire extinguishing gas can last for up to 3 hours now is the plane really going to last for 3 hours probably not cuz at some point the fire is going to burn through the cargo bay and cause significant damage to the plane but it's definitely not lasting for eight hours

(38:16) definitely not lasting for the six hours it needs to get to the holding pattern or maybe not six but five five hours or so okay um H should we call it Fleer update we'll call it evidence update we might change that I don't know kind of like it I would also say I hope they go search everywhere there's been one of the things we're going to do here is um we're going to go look at all the art articles where they've claimed they know exactly where the plane is in the last 4 and a half months cuz there's like

(39:01) probably five or six of them and there's never a followup so if they're so sure where the plane is I just when are they going to find it it's been quite a lot you have to go back I've been 100% consistent Parish go go check out my go watch um the confessionals and you'll realize that I did not know if this was an emergency event or some type of anomalous UFO phenomenon

I've been pretty clear about that and then later on after we determined and we found the glowing orange plane the witness was there

(39:46) looked at the um iMat pings and realized the anomaly at the same time the witness saw the plane that's when we determined it was a fire and then we found the other 18 witnesses as well that that's how we were able to determine this is an emergency emergency situation and it turns out that fits with everything that fits with the evidence of the videos fits with the whole story of the plane to date explains the reason why some of the debris that was found had burn marks on it you let me know when the uh the

(40:14) official experts uh want to address the fact there's burn marks on parts of the debris that was found some of the tiny some of the few tiny bits of the debris actually has clear burn patterns and burn marks on it when people want to address that then I'll start to take the official experts a little more seriously wait how does he spell his name I like to make sure I get the capitalization right for

(41:54) uh is it this is all in bold by the way guys I'm loving the black and purple let's look at this again for

(43:25) for it's pretty good there is no debris field that's the problem Parish there is no Deb field we didn't find a debris field that's a big problem no debris field no black boxes no acoustic detections no Radars it's all the plane no Witnesses along an active shipping route it's not possible folks we would have seen the plane the next day from satellites I'm going to go ahead and give you a 30- minute **timeout** Parish so just chill a little bit uh I don't like when people are trying to dominate the chat trying to

(44:22) engage with me and um I mean everything that you're asking is is already been addressed so I'm not trying to make this stream all about you and you know trying to relitigate everything if you do want to learn and you want to learn about the case which I absolutely am for please check out my tweets and Twitter posts everything you are mentioned has already been addressed in the past yeah fire suppression system I forgot about that too good call guys this is how hard it is to just double check for yourself

(45:09) MH370 fire suppression device b777 malds okay this is all it takes you can search for yourself just press the images button Kaboom there it is this is a b77 fire suppression device you can just clearly see here's the the four boxes you can see this is very clearly a b77 fire suppression device literally can't be anything else washed up in the malds couple weeks later you want to explain what the hell what's going on here why can't I scroll back up what is going on here what the what is happening

(45:47) here okay here we go hey look at this lithium mobile phone batteries whoa what is this hello that's it oh yeah this is the one we already we already discussed this one yeah we already discussed this guy Okay cool so I mean where's the daytime one here's the daytime one you can actually see a serial number right here 8219 can actually see a legit serial number right here look

at this thing look at that is there more numbers there there's even a serial number on this thing completely ignored by the official

(46:45) search fire suppression device I mean slow weird their fire suppression device washed up from a b777 just a couple weeks later in the Maldives completely ignored not investigated MDES were excluded intentionally from the search the batteries were motor roll but we don't know if they're lipo or uh lithium ion uh thanks uh thanks Hermes for providing the link for people what's U block origin guys you know I'm a boomer guys I've got the Boomer in me I don't know what all these softwares are ises that block ads

(47:28) probably you block Mike Harris I don't know there's a lot of people I'd like to get in touch with now I want to get in touch with uh I think it's Leonard susin suskind and um Malina the physicists those are the people I want to talk to those are the people I want to be talking to man I then we just go with that I kind of want to

(48:55) put think that's pretty good any any errors you guys see what's a pricks I don't know what these words mean yeah I watched sper Susan's uh presentation the other day and then I realized he's the one who's been pushing ER equals epr with Malina who has whose scientific papers I've been reading and I'm like wow everything's starting to come together that's their eighth zero day exploit yeah there's going to be a lot of zero day exploits oh yeah JK Philly fans talking about the actual report

(49:58) okay I think this is probably good I just hate having airs in my my posts there we go okay here you guys [Music] go um actually I need to post my thank you as well over here okay we'll post this one let's see what else we got here blue infrared for evidence okay not bad not to bad

(51:09) dude okay yeah I did uh email Muk Kaku but I'm pretty sure he's a little too high-profile for us I don't know if he would reply as well honestly I think a lot of this stuff would break the minds of even physicists themselves the problem is I can't believe that this type of Technology can be real right even though they're little physicists who work on it I accidentally clicked the sound button on my stream that's why you may have heard that there thanks everybody for being here right now as well appreciate

(51:41) yall is it time for science let me look at my list let me look at my list we did that one oh let's do all the articles that claim to know where the plane is that's going to be a fun one we have a bunch of stuff to add to our evidence list as well did that I'm just looking at my to-do list I have over here on my other side of the page and just uh make a quick disclaimer

(52:52) guys I am not a soothsayer I've got a lot of people that message me stuff and they send me very long messages and emails about stuff they've got going on reality is I'm not somebody here who can answer all the questions for you I wish I was I'm just somebody who's trying to investigate these videos trying to get the **truth** out to the world about what is seems to be advanced technology that's kept hidden from us I know that a lot of people have a lot of stuff out there that they want to expose um you know I

(53:23) just I don't have the capability to do that for everybody I just don't have the time but you can feel free to send me anything you want you know I do my best to try to get through a lot of it I'm only about 150 emails behind at the moment yeah I think Hermes I think one thing that um you've got to realize is that uh a lot of people aren't going to be able to understand a lot of this stuff okay good job I don't know like how these people get so upset man I've never seen people get so mentally broken from just some

(54:07) videos right these people need like actual psychological help it's not even a joke like they actually need like somebody to talk to maybe in their life I just feel bad there's never been a situation where any videos broke people's minds like these videos have they have literally people who are filming and recording my streams 24/7 just to try to find some little thing that they can use to try to embarrass me that's how mentally unstable these people are it's like actually like in the old days these people would have

(54:44) been like following me around walking around on the street and in the cyber world is just cyber stalking it's just it's actually scary man okay let's go ahead and do uh what we got like just to give you guys some um just to give you guys some background of like how mentally unstable these people are like I got sent messages where they have my phone number and they're talking about like who's going to call me or send me like spam harassing messages from fake numbers thankfully they're like all like huge

(55:27) huge cowards so none of them have cuz they'll know that I'll be able to track that down and give it to the police right they know that but it just goes to show how mentally unwell these people are the literal Discord messages that people sent me from their Discord of them talking about there's one even talking about them sending me AAR files so like it literally was that Discord that committed felony fraud like they're actually committing real crimes from the Discord that's how mentally unwell they

(55:53) are and like yeah I mean I it's it's scary stuff man like really scary so once again what I want to reiterate here is that if anything does happen to me I legally blame Discord and **Reddit** they are at fault they have enabled these psychos to perpetually harass me to engage in criminal Behavior against me as well uh so if anything does happen to Me **Reddit** is legally responsible and so is Discord they haven't taken action against these people who in my mind it's just domestic terrorism they're being

(56:26) radicalized on **Reddit** to harass people in real life you know and I hope that section 230 um which is the law that protects social media from people from what people post on there I hope that gets overturn cuz if it does then the lawsuits will shut **Reddit** down immediately for for Behavior just like this okay so we're going to go ahead and we're going to search over here so once again if you want to go into some sub**reddits** that are not potentially controlled by **debunker** people and people with like mental illness then this is

(57:00) the public one MH370 abduction don't know how long it'll last I'm not a moderator or anything on this one um and then this other one here is the um this is the private one three orbs

so you would have to get a invite for this one this one I am like a side moderator on I don't ever actually do anything but they made me moderator just in case like I guess it gets banned and that or that their account gets banned or something like that cuz there's been a lot of targeted reporting that these

(57:32) people do as well like it's just it's an information war and they know it's an information war and so what they're trying to do is they're trying to censor everybody else that doesn't agree with them and trying to spread the false perception that everybody thinks the videos are **debunked** you know that's how information Wars work so we kind of just have to be above it yeah Elena it's they have this sub crit that uh they control this one here they have a Discord and the Discord is

(58:00) about me 24/7 this is where they coordinate their attacks against me this is where they dox me this is where they um perpetuate the criminal activity including uh felony fraud this is where they talk about you know calling my phone and harassing me in real life um it's it's reached the point where it's actually like scary like it's actual terrorism activities at this point and it start to get to the point where it's like actually um you know potentially going to be threatening to my safety which at first it was kind of a

(58:33) joke right but now these people have worked themselves up into such like a mental uh like rage that it's it's it's alarming it's actually alarming um they probably have a link to their Discord somewhere yeah right here if you want to go see for yourself go check it out you'll see for yourself within minutes I've got all the screenshots I've been saving them so that I can give them the authority um yeah it's it's complete ngy and you'll see it you can see it too on my Twitter I just unblocked everybody a lot

(59:04) of them are on Twitter they join a lot of them just joined Twitter for the sole purpose of trolling me because they Banned Me from the Discord as well or from the uh sub **reddit** and I'm banned from the Discord as well although that was like months and months and months ago like I joined this Discord and they immediately all attacked me because I didn't think that the non-matching bfx Matched and then they booted me and Pres banned me I never went back that's the lore that's the lore behind it yeah I mean mental delusion is what

(59:42) motivates them right it's mental illness there's really another no other way to put it right that's the motivation hatred and mental delusion there's never been a situation where people attack videos as hard as these people did and their arguments are just so dishonest right you're hurting the families you're hurting the families that never got any answers by trying to solve the case like does anyone really believe that no families have reached out to me or the other one just let it go just let it go it's like how about

(1:00:16) you just let it go and go do something else stop being an obsessive psychopath it's weird weird very weird Okay August let's go from when the videos first emerged to now I want to see how many different articles there are okay so here's two claims already right off the bat should we use wo n news doesn't seem very reliable I want to make a list of all the times where

they've claimed that the the stuff can be found yeah you're hurting the families one is the clearest fake one ever the people that say that you're hurting the

(1:01:08) families are the people that have never cared about anybody in their whole lives except for themselves that's the funniest part about it the people that are literally trying to **debunk** real videos that could answer the questions and solve the mystery are the ones telling us that we're hurting the families imagine if the videos end up being real who do you think those same people are going to take their own advice and and apologize to the families for lying about the videos being fake no of course not they'll be saying oh I was

(1:01:35) just it was just free speech it was just free speech I I can already hear their excuses wait is this real when how long ago is this three months ago here we go here's another one three months ago possible location found so we've already got three we've only been looking for about 5 minutes and we've already found three different times where they've claimed that they found the videos they found the location August 31st 2023 there you go almost a million views on this okay let's go back okay should we find another source

(1:02:30) or should we just use this W news this is probably fine I mean there's like a million sources that say the same thing this was December 26th we should also put we should actually put the headline as well [Music] this is actually funny isn't it there's like so many of these um and then there's the fisherman guy right fisherman guy this is like they had two back to back they were just like pushing them out as fast as they

(1:03:39) could I'm not going to put the snub by authorities part because it's not relevant December 20th okay let's see if we can find find some more feel like there was like at least five yeah don't worry man if they actually like call me or anything like that then they're going to link themselves back to something that the authorities can find them not worried about it oh the Barnacle one guys remember the Barnacles I forgot about the Barnacles guys the Barnacles the Barnacles guys you have to be an old school

(1:04:26) investigator for going back to the beginning to remember the Barnacle Story the bar they were going to find the the where the plane crashed because of the Barnacles this is actually just ridiculous man Barnacles the Barnacles one where that's where I was like okay what the heck every single one of these that comes out people message me about them every time Barnacles guys when are they going to find the planes it's like five we already found four articles we've only been searching for 10 minutes we've

(1:05:09) already found four different articles where they claim that they would find the plane already four I expected five now I don't know if we're going to get to the fifth one groundbreaking report Airline ratings is uh actually I think Airline ratings I think is run by one of the old school investigators which is probably why they've never solved anything oh it's Richard Godfrey again Richard Godfrey again guys I want to know how many times Richard Godfrey's claim to know where the where the planes

(1:05:40) crashed maybe he's right because the whisper report only came out in like 2020 so maybe it's only been a few times I just want to do the ones just since the investigation started oh oh the Cambodian jungle one as well September 5th 20 oh yes oh yes and the Cambodian jungle one hilarious this was a rehash of one old one as well Newsweek of course the one who had posted the fake **debunk** wonderful has the flight been found in the Cambodian jungle my God man my God September 5th we've already found five five types where they claimed to

(1:06:27) have found the plane no it wasn't found in the Cambodian jungle unlike uh Patrick Q Jackson Patrick Q Jackson literally looked at this and thought yeah that makes sense for a plane to be there with no no crash or anything it's just just sitting there in the middle of the dense forest guys it's a it's a plane over this when they when they took pictures there was a plane in the air it's not it's not rocket science let's see what else we got so that one was December 15th maybe we need to switch

(1:07:07) this oh here we go new probe urged oh actually this one is respectable this is a respectable one the families of the victims have not given up I almost want to put this out we're going to put this on the list it's not technically related to it but this is one where it's like just to remind people the family still want to have another search cuz they know the official story is **[REDACTED]** look at all this stuff we're finding we got to see the barnacles yeah you know what's funny we actually Patrick bellany Captain bellany we

(1:08:02) actually um quote him in our evidence somehow he thinks that you can turn off the apus now I have him quoted saying that one person can't turn off the four apus simultaneously he's actually quoted in our evidence link you guys ready for this I actually quote this guy directly there it is there he is right there Captain belly suggests whoever is in command of the aircraft would have had to intentionally disconnect all four electrical generators and Apu does that sound like something that you can do from the

(1:08:39) cockpit not to me chat but he thinks that the plane was hijacked and now the reason why he's saying hijacked is probably because he needs to somehow have an explanation for how somebody pulls this off this is not flipping a switch you can't make the plane go completely dark from the cockpit practically impossible for a single person to connect all four generators and apus simultaneously so now they're thinking I'm guessing if if you look at his theory if you actually were to question him he would say oh yes there must have

(1:09:09) been the maybe the Iranian passengers were involved or something it's just getting too convoluted man just too convoluted Hermes dude Hermes yeah it was definitely not autopilot oh no oh no Get Up and Grow you got banned because you said my ego got the best of me and you feel like you're a victim for that wow that's so sad that you feel like you're a victim for being a douchebag troll have you considered just just being a good person maybe you wouldn't get blocked by the way I've unblocked everybody so you're not

(1:09:59) blocked just heads up so you can go back to trolling and uh you know I will um I'll Farm you for engagement yeah I don't have to work for this entire week so I'm going to be grinding

out uh MH370 stuff and the science it's going to be fun it's going to be fun we're going to be grinding it out all week probably so I'm going to do some storyboards cuz I'm going to get some videos out there we're going to start posting some more videos we haven't made videos in a while one of them is I'm

(1:10:36) going to go through this this is why we're doing this right now I want to just show people how many times just in the last four and a half months they've claimed to have found the plane we've already got five different types five different times already oh that's an instant block instant block what was this message yeah instantly blocked man oh he's gone already this is how obsessed people are you know what's funny too is they actually have to subscribe in order to comment on my uh on my stream I'm going

(1:11:22) to skip the ads for you actually I'm I'm not going to skip them sorry you guys can skip them yourself it's only takes 5 seconds I'm going to farm those uh Farm the trolls for uh engagement as well on YouTube so that when they complain that I'm profiting off of this that they can only have themselves to blame I also love how they can't say that I've blocked everybody anymore now so what's their new what's the new troll uh argument do you guys think they're going to go back to I I can't answer any

(1:11:53) questions even though I answer every question what will be their new argument I have no idea okay we already did this one let's see what else we can find the Barnacles man oh the Barnacles new Clues what's this one what's this one oh man what what is all this you guys what do you guys do on this this stuff pops up this must be some kind of legal thing that happened every time I open a website ask me like to agree with a bunch of stuff oh it's Richard godre again oh yeah cuz he's the MH370 search

(1:12:53) Guy interesting let's see what else he has to say here okay let's take a look at the report folks let's take a look at the report okay these guys are just literally reading te leaves on this right is there any burn marks on this I can tell yeah I would actually argue that some of this is from MH370 interesting some analysts have argued

(1:14:04) the debris item appears to be white but the underside of MH370 was gray that cast out on it huh it all depends on the light level not really it's just either gray or it's white it's not really depend on the white light level the paint can fade we're not looking at faded paint man where's the one with the burn marks on it there's definitely some damage to this okay this is almost done we're not going to go too much F further on

(1:15:15) this Providence so they found a new item and they think that it's part of MH370 that's what this report comes down to huh how how are they determine whether or not the landing gear was extended this seems absurd the active pilot did not follow normal procedure as successfully applied by Captain solenberger the US Airways foot to extend the flaps but kept the

(1:16:19) undercarriage retracted in the up position neither of us can tell who is flying the airplane or why okay should we have include this one too I don't think we're going to include

that one let's see if we can find anything else how are we doing chat we doing good today the beauty of our arguments is that time will likely prove us right if this plane got teleported then the science will end up checking out we've only been able to understand what we even get to the point we at now where we can begin to understand it to be real

(1:17:15) based on the science that's appeared after 2020 from people like Leonard susin and um Malina right cuz as time goes on they'll never find the plane right and then you'll get to a situation where um you know people are going to have to start taking other theories serious what about this one do we have this one we don't have anything in October now they think it's way down here oh this is the one with that weird crash picture look at all these different people that think they know where the plane

(1:18:09) crashed they think the plane got all the way down here is that even possible I don't think the plane has enough fuel to get down there man this is a good picture saving this look at how many different experts think they know where the plane is look at all this we might have to use this picture by the way they searched everywhere and found nothing so all these people are wrong but I wish them all the best I really do I hope that when they don't find the plane at any of these locations that they consider the fact

(1:18:44) that it was a fire and there's no way the plane could have made it down here we probably are going to include this one oh man unless it's some kind of **scam** what's the date on this October 2023 determine is there a way to get this article without this sketchy website Yep this is another one this is yet another one um this is research gate publication maybe we can find another variant of this we need one from October I think this is it right here is that the same one this is probably all of them I mean

(1:19:45) if there's more though this might be another one this might be another one how many are there man yeah I think that's the same guy yeah it is Petri yeah that's him this is the one maybe this one won't be as sketchy what what's downloading my computer right now oh it's downloading an actual article can we stop that this is actually just downloading it oh man I think it's this one okay this is the one I literally just downloaded the whole paper so whoops okay let's include this one here

(1:20:28) does it have a date oh October 23 perfect perfect guys we got another one got another one we found another one six six different articles now they're all unique now some of these others might be referencing it actually it's not even possible for them to be referencing it this one wasn't published October 23rd let's getting spicy in here see what we got we got that blah blah blah determining the location okay not bad folks not bad six different articles guys where they in the last four and a half months six

(1:21:14) different articles that claim that they know where the plane crashed amazing it's amazing that they haven't found it given that so many people are so certain oh this is the one Captain bellany yeah wow September 7th was when that happened let's do we have that one is this a different one or is this just they're just now reporting on this from September 7th is this

let's check is Captain bellony all over the map on this or what why do I have a feeling that this is an old rehashed article

(1:22:20) yikes real yikes um hm maybe another one look at the underwater search area guys look at how much they searched guys people really think that they didn't search everywhere look at this they searched entirely along the seventh Arc entirely along the seventh Arc where is Diego G the military base right about here right about here so could all this stuff have washed up here from Diego Garcia military base absolutely absolutely you know what I'm saving this picture too save that picture anything else we got here what's going on

(1:23:09) folks welcome new people who are watching welcome our hate Watchers who are recording everything that we do you're also welcome to be here yeah my computer just got a virus probably I'm going to grab some more coffee and then we're going to move on probably to some science and some storyboard stuff here I want to do some storyboard stuff I want to make some videos either tonight or tomorrow I've got a lot of free time this week so I just think that making videos is more effective in this day and age right

(1:23:58) you guys so I'm going to ask I want to put a poll in the chat you guys think that they're going to find um you think they're going to find debris from MH370 in the next 3 months before the 10 year anniversary okay I posted a poll do you think they will find more debris before March 8th 2024 you think they're going to find some parts of the plane mysteriously before the 10 year anniversary since we've investigating what do you guys think we've got looks like we have 1 two 3 four five six

(1:24:42) different reports of claiming they know where the planes crashed six different ones even though we're looking at an image that shows they they've already searched above and below water everywhere imagine if Captain bellan he actually listen to the 19 Witnesses and they came up with something that was like actually made sense these people could have solved it by now it's kind of embarrassing we 9 years later nobody's talking about fire scenario yeah there's just 500 lb of lithiumion batteries let's just ignore

(1:25:21) that and car go back okay yep burnt up a bunch of planes before this but we're just going to ignore all that cuz hey guys we saw 10 rows on an XEL data spreadsheet that nobody probably even looked at it's wild if the plane had a depressurization event there's not even enough oxygen for the plane to last that long that's another problem so to this from this point here to where it gets over here is like 2 hours maybe a little bit more the oxygen would already run out if the was plane was depressurized uh over here

(1:25:53) it's going to run out probably by here a little bit down here and yet the whisper report has it flying all the way down here even though we have satellites that would have 100% seen the plane I'm going to take this I'm going to save this image too it's like guys look at all this detailed information we know and then they just decide like oh no we just went down to the South Indian Ocean over here it's like what if it just ends right here right where the witness sees it right where our video happen what if it

(1:26:24) just ends right there and all this is nonsense nope can't consider that the only thing you have to understand in order to realize that our videos are real is you just have the only thing you have to throw out is the imrat data after 1840 UTC that's the only thing you have to throw out if you want to believe that the plane crashed in the South Indian Ocean you have to throw out 19 eyewitness accounts you have to throw out b77 fire suppression device as well as a m d sighting um you have to throw out basically basally all logic and reason

(1:26:54) in order to think that the plane crashed in the South Indian Ocean we have to somehow come up with a way where we couldn't find a debris field despite we're searching everywhere despite the fact that we have satellites everywhere it's literally all of their entire theories hinge on the ersat data every single expert's theories hinge on ersat data all of them do it's wild they think that there was a controlled descent into the ocean where this this plan's oh after 8 hours of flying around

(1:27:30) on a suicide route I'm going to do a control descent into the ocean so that nobody can find the plane guys this is so convoluted it makes no sense whatsoever makes no sense whatsoever okay we got the PDF I think we got the link of the PDF in here as well this one was October 23rd any more are there more is this another one is this another one this can't be new right this has got to be a rehash yeah this gotta be a rehash I'm definitely not clicking download video on the sketchy website that's a risky

(1:28:34) click that's a risky click folks I think that's probably all of them that's enough though should we ask Kora Kiora whatever this is let's ask Kiora H wow the fact that we found a couple pieces of debris to this person means they know where the crash were crashed hilarious simply means it's a big ocean everybody this is the dumbest argument ever the ocean's really big yeah and we have satellites scanning the whole globe including the ocean debris field would have been tens if not hundreds of miles

(1:29:21) wide would have been literally impossible not to see it Ocean's like really big though yeah and the ples runs out of fuel there's nowhere else for it to go it's not flying to Antarctica guys God I it's blows my mind like how dimwitted some people can be honestly has anyone has a single person address the fact that you can't have a 777 crash into the ocean without a debris field just not addressed by anybody right nobody can address it wow we we got we're a 50/50 split here some people half people think that

(1:29:55) we are going to have debris found very interesting yeah I mean we have PL plenty of Doubt as to whether or not it's actually from MH370 but even if they it is from MH370 it's consistent with our Theory that's why I don't get people think that oh they found debris you found like two pieces of debris that how is that inconsistent with the uh macroscopic phase conjugation event that we have going on it's not inconsistent at all in fact when we look at these videos and we see this zap it seems very plausible

(1:30:28) that some pieces of the of the plane could have gone flying off of it not to mention that wherever it shows up then you still have a whole plane right like do we really think that this

event isn't this is a very chaotic event that we're seeing here although it's somewhat organized in the same sense really think couple pieces of debris could have gone flying off from that seems pretty likely that we're looking at this you could have pieces of debris going flying off in this plane it's clearly over the ocean staring at

(1:30:56) the ocean down here you can see the clouds moving like you can see this Distortion here like it's just an after effect okay which after effect exactly can you go ahead and apply that and show us you should be able to recreate it I imagine if it's so easy like you see this zap like I mean these could be literal pieces of debris flying off here we don't even know and wherever this plane's showing up okay now you just rip it apart right man this is actually on the when it's not scrunched together you can actually very

(1:31:31) clearly see the circular ring around it right pretty wild it's just gone H it's honestly amazing I love these videos guys I love these videos oh yeah we're going to keep pushing we're going to push until we get uh actual answers from the government no FS given once again if you want to join a public uh Forum that talks about this that is not obsessed with like **debunking** you can check out this uh sub**reddit** here feel free to post content you can repost my content if you want as well you can repost the stuff in my tweets I don't

(1:32:11) care and if you want to join the private Forum where it's just only people that are not de bunkers and they're going to be filtered out then you can come to three orbs you can request uh it won't be me proving it's going to be the person who started this sub**reddit** the only reason why I'm even on this one is just in case things get banned we're just doing a test to see how fast like will **Reddit** even ban a private sub**reddit** it maybe not sure we'll see we will find out I'm going to leave those up for a

(1:32:41) second while I go grab more coffee let's go ahead and take a look at our evidence here yeah what what what is this what is this what's this I don't know what this is but oh

(1:33:47) another oh yeah yeah yeah we're going we're we're working on it we're working on a D5 see we're working on it d5c we're working on it my man I don't think it's all distraction guys I I think that I mean it could be distraction I I I shouldn't say that definitely could be distraction I think that they're just never going to find those planes right as we found that you know how many times that we've uh you how many times look how many times that we've already they've already claimed to

(1:34:23) find the plane just in the last few months look at all these look at all these times six times already in just four and a half months that's more than one per month and it's 10 years later oh also guys I got the YouTube premium that was a big **scam** I can't even download stuff with YouTube premium like don't I don't the only point of YouTube premium is no commercials it's like \$10 \$11 a month or something like that maybe even \$12 a month kind of kind of a **scam** I I don't know if the **reddit**itors

(1:35:01) found a new **debunk** nothing that you can read on **Reddit** it especially on the **debunker**

subreddit should be taken seriously we've already had two different people falsely claim to have made the videos with no evidence whatsoever like no evidence whatsoever like these people are not they're not well some Joe Lancaster guy like who clearly like the funny part about him is they already looked through his his uh Reddit posts and he already outed himself as being just a liar right he already made previous post saying oh

(1:35:31) I knew right away when I saw the videos that they were fake that's not what you would say if you made the videos you would say oh I made these videos and then there was somebody else that was oh I made this as a part of my school project which of course I don't have any evidence for that it's like okay man if you made the videos go ahead and just recreate them should be pretty easy since you know you made them yeah until we find the plane the black boxes and identifiable DNA I think you're right advert 4 that's really what

(1:36:04) we need right we need hard evidence not just nonsense how how are 238 bodies disappear how did the black boxes disappear how was there no debris field you know none of this stuff makes any sense right okay guys uh bear with me for like 5 minutes I'm going to go grab a new coffee and then we'll grind out some science and work on some yeah happy New Year everybody and also happy holidays we'll grind out some science I might set up a a Lulu cam as well I'm thinking about it might set a Lulu cam up I hear that uh people who want to

(1:36:39) grind out uh engagement have dog camps plus my dog's super cute um but no we're going to look at some science here uh around wormholes and we're going to work a little bit on the um storyboards storyboards a little bit as well be right back 5 minutes guys or less okay okay chat we're

(1:41:00) back so um let's see here what we got sorry for leaving y'all hanging um the next thing I want to do I actually want to figure out is Leonard susine either these guys on Twitter [Music] all are any of this him probably not huh huh this second one that comes up is Lex fredman it was meant to be Lex fredman it was meant to [Music] be what's this

(1:42:10) interesting I'm guessing this is not him about Juan mesina oh nope that's not him this is him nope feels [Music] bad I thought I was revealing DMS again I'm pretty bad at that okay so neither of them Mor on interesting Joe it's funny dude the more people tell me not to talk to somebody the more I want to talk to them it's my little rule okay um let's see what else we got going on here 177,000 views on that not

(1:43:20) bad not bad not a lot of trolls we might have got to them by telling them we were going to farm their engagement that's my uh little reverse psychology play okay um I need to go to the bathroom real quick but while I'm doing that where's the science we're going to download a few videos here um give me a sec connection betweenity we're going to we're going to probably clip some of this as well so this is why I'm I'm downloading it proba why you hear that just there are we listening to

(1:44:03) stuff okay download this okay that's being downloaded let's check the next one

downloading three videos here real quick Copy link download that one okay download that there's three different videos one is going to be by suskind hopefully I'm pronouncing his name correct susin suskind one by Malina and then there's actually one that actually references both of them uh which is about uh wormholes quantum entanglement the theories behind it all really interesting stuff we're probably going to post some clips from

(1:44:51) that later tonight or tomorrow I'm not sure and then we're going to go ahead and we're going to work a little bit on storyboards and then we'll probably call it after that I'm not going to let them play right off the bat because I don't want to get copyright strided that badly I can avoid it so I'm probably going to have you guys sit for another couple minutes while I go to the bathroom should be should be pretty quick wait what the heck is this CR download this isn't right that's not right the last one

(1:45:27) didn't work oh maybe it just wasn't downloaded yet huh I don't know pull this in here we might even be able to put both of them in here let's see yeah neat oh yeah so this is yeah so the one the one mandena one didn't work I'll have to redo that one okay give me a second guys I'll be back uh AFK 3 minutes be right back um let me put something up to keep you guys busy here's some of the science that we're looking into we actually got a lot of stuff listed on here we also need we got to add the new

(1:46:16) one here what's all this what the hell what is this oh did it download oh it did download now okay cool cool okay never mind um put that one in here too it was just long as why yeah okay now we got all three of the videos here I'll post the links um in the chat for you guys to take a look and watch yourself I'm going to start I'll post the I'm going to post the summary one and I'll pin it to the chat for you guys so you guys should take a look at this video here how do I pin this uh be

(1:46:54) back in uh a few minutes take a look at that video yes okay

(1:49:06) chat food for myself I know you guys those streams where I'm eating so we're going to do that as well okay let's see what we got here yeah after we watch this I think we'll realize that there must be a fourth orb I'm 100% all in on the fourth orb Theory guys 100% all in feel like I should set up the camera to the side angle as well but whatever it's fine okay so let's start with with uh Leonard susin yes I'm going to talk about some connections between gravity and Quantum mechan must exist one always involves

(1:50:08) mechanics very ER is Einstein Ros and bridges that means gravity Einstein equation and so forth e is basically quantum mechanics and in each example there will be two sides like that and I want to demonstrate that there's a lot of similarity a lot of overlap and a lot of um basically one is very man you can really hear me crunching feels bad so let's begin I'll mute it when Happ meaning of an Einstein Rosen Bridge Okay so first thing we need to know Einstein Rosen Bridges so first thing we need to

(1:50:42) know is  $E = mc^2$  okay so you saw me post this earlier today Einstein rosenbridge

equals Einstein Pedro Ros so basically what we're talking about is um general relativity equals quantum mechanics so this is a theory of unification this is what we've been looking for chat this is what we been looking for can I just make this like bigger but not full screen can I make like this stuff go away guys how does technology work what does this button do what does this button do this feels bad feels bad yeah so why for orbs because you're

(1:51:26) going to find out because we have Einstein Rosen Bridge which is a wormhole equaling quantum mechanics what this means is that you need what we need is quantum entanglement we need entanglement in order to figure out where this where this plane's going to go I also now think that this also may require a quantum computer in order to teleport the plane like we see may also require a quantum computer a classical General relative ity Solutions but they're fundamentally Quantum they only occur when there's

(1:51:55) entanglement and creating one always involves quantum mechanics always involves quantum mechanics interesting so let's see he talks about messages being perfectly securely transmitted so that they can't be intercepted this is um faster than light communication as we would know it classically this is not possible but this is teleport of information we know that's real yeah I think we're going to maximize this and the and the chat's just going to have to struggle can't there's not like a way

(1:52:31) to wait I can't make it bigger what does this button do oh man we made it worse we made it worse chat okay we're going to have to deal with this and I'm going to fast forward to through some of this so he explains quantum teleportation I've already watched this whole presentation you guys can watch it I'll post the links in the chat as well I think I already posted one um and so really he's starting to explain like the double slit experiment and how we can teleport information from one location to the

(1:53:09) other okay so this this is the part where I think I want to relativistic laboratory I mean that everything think we want to watch some of this everything that we everything that music down for now necessarily has a velocity which is much much less than the speed of light in the laboratory and number two that the masses of all objects are always much less than the radius of the laboratory divided by gab this will ensure so I think he's saying that the mass needs to be small so you can fit the mass through

(1:53:42) the the black hole if we can reduce Mass to zero then solves that problem we can fundamentally ignore gravity and we can fundamentally ignore special relativity in effect the speed of light is infinite Alice has in her lab shell a large sperical shell and that shell is made of doped silicon I don't even know what doped silicon means here we go this is the part conformal field Theory this is the part I want to watch we have an object now which if everything we think is true about ads CFT should not only have a boundary but

(1:54:21) in some sense there must be bulk physics that goes along with it and I'll assume that okay now the idea that so did you hear him say the boundary as well now imagine this is an orb right same idea we've got this boundary theistic laboratory has the advantage for Alice that by

the time it takes for a signal to go from one point on the sphere to another a short distance Alice can Jo jump back and forth many times look at that so she's unrestricted but do that I mean so they he just showing teleportation again I'm not even going

(1:55:01) to try I won't won't get it right okay so she gets to be able to exceed the velocity of light on the shell in other words the velocity of light in the bulk Theory and she can do therefore anything she want so wants that's consistent with quantum mechanics that's the advantage of thinking this way uh things that we couldn't even imagine to be able to do with astrophysical black holes Alice can do because she has this incredible power to be able to move as fast as she likes relative to the uh to the Shell okay so

(1:55:37) she so this shell here is supposed to represent the Wormhole okay and so what he's going to talk about next here is that we can tap on this right so we can send a message and then someone can listen and that message and information can transmit instantly this is quantum teleportation part I want to get to though okay so by communicating with the bulk Observer Alice can determine that the bulk contains gravity waves gravitons black holes however one might think that you can't probe the interior of a black

(1:56:10) hole no signal from inside the black hole interior can reach the so the idea here now is if this is a black hole that we need perhaps there's no way to send information outside of it that stuck in there however that doesn't seem to be true according to what Leonard susine says here well in fact I think that's too pessimistic here we go now get good example of have to save this let's bring Bob in with his shell Bob also has a shell okay I think we might be cutting this here I want to take a note of this

(1:56:41) time 13311 I couldn't remember when the parts were that I wanted to cut I think this is it though oh no not like this chat I clicked wrong here we go a shell and Bob's shell and Alice's shell have been allowed to interact and become entangled so they're going to they entangle these two so now think of this like if you're clever enough so if you think about this you can already figure out where this is going right we have two entangled shells now think of these as the mouse of the Wormhole right Wormhole a wormhole B

(1:57:24) this is how we are unifying E equals epr same idea in quantum mechanics is that if we create entanglement entanglement is the same as a wormhole that's what this is all basically comes back down to them in the thermofield double state if you put them into the thermofield double State then at least from the bulk point of view we would say that there should be a wormhole between Alice's black hole and Bob's black hole why because they're entangled from equal epr on the other hand from the point of

(1:57:58) view the two shells are also entangled because from the laboratory point of view and the laboratory is also described by the laws of nature of quantum gravity and so forth it must be that from the laboratory point of view there is also some form of Einstein Rosen Bridge connecting them are these two the same so this is your fundamental theory of E equals epr for our scientists in the chat guys this is how we are showing that we can combine general relativity

now this may not be the ultimate answer but logically it

(1:58:28) seems to make sense the laboratory version of the Einstein Rosen bridge and the bulk version yes I think they are As Above So Below I think they are the same I don't know what that means but sounds badass and that's what makes me think that there's some sense in which quantum mechanics of these shells is really in some sense genuine gravity and not some just some simulation of it okay so let's now it's going to get good here we go teleportation through a wormhole folks so I'm going to take a

(1:59:01) note of this time 1429 H tanglement I'm probably not going to clip all this but maybe I can clip some of the stuff together it starts to get pretty spicy now and Bob can do with their entangled shells so this going to be good in particular they can do teleportation we can call it teleportation Through the Wormhole teleportation folks we start with Alice and Bob with their shells draw it as a wormhole ready for this Tom who I've drawn as being smaller than Alice and Bob some small so we're going to shoot Tom Through the Wormhole here

(1:59:43) folks time to send um time to send our test dummy Through the Wormhole we can think of injecting Tom into the CFT for example by applying a Tom what is CFT I don't know what that means let there be a Tom operator weer problem with science they use too much acronyms into the CFT or we can try other ways of doing it merging Tom state with CFG damn I don't know about merging Tom state with the CFT that sounds a lot like the Philadelphia Experiment folks side side quest side quest Philadelphia Experiment if I'm just

(2:00:24) going to look at the Google images in Philadelphia Experiment where's the ones where the people sticking through the the hall oh yeah oh God side quest uhoh merging them with the with the the portal uhoh let's hope that they they solved this guys so we throw Tom into the black hole and then we wait a waiting a scrambling time has a couple of advantages first of all it simplifies the mathematics of um of uh teleportation but in this case it's doing something else we're going to have to cut this for sure time theho

(2:01:03) will grow as the Wormhole grows it's just too long Tom is stuck at a point in the Wormhole the Wormhole grows outward and Tom winds up deeper into the Einstein Rosen I don't understand how the Wormhole grows that's something I didn't understand watching this if anybody knows let me know Bridge than he started and that has an advantage for him he is protected from some very very violent things that Alice is going to do he's far enough away deep enough into that what Alice is about to do will not

(2:01:35) hurt him what Alice is about to do is to do a complete set of commuting measurements so this part is interesting too guys so think about the orbs and the videos with what we're about to see here okay I'm going to pull up the videos as well they're doing measurements he talks about doing measurements and then sending the measurements over to Bob Alice is going to send the measurements over to Bob which allows Tom to appear in the same state in which Tom teleported away does that sound familiar to anybody doing measurements does that

(2:02:08) sound familiar does that look like what we're looking at right here what if this is measuring the plane because they're preparing it for quantum entanglement and they need a the information about what the plane is to the other side and that's what allows it to show up that's what triggers the entanglement the more and more I think about this the more I think that this is the measuring it right we're measuring the plane now we're switching over and now we're preparing it for quantum

(2:02:40) teleportation we're going to cause the phase Singularity we've entangled it to the fourth orb now we go ahead and we trigger The Singularity poof and now this is going through an Eisen Einstein Rosenberg bridge and it's going to appear somewhere else wherever that last orb is pretty interesting on her side of the black hole on her black hole okay yeah black hole is not really a good example the cubits in the computational basis so also we're not really talking about black holes what we're really talking about if we have to

(2:03:12) dig into it is we're talking about breaking down the fabric SpaceTime why is this important because we can uh get energy or actually not sure that's the right way to phrase it but what we can do here is we can cause a rip a vacuum in the quantum state of uh in the state of SpaceTime here we cause this rip to happen and then we see this endothermic event which is the rip of SpaceTime kind of filling back in on itself instantaneously so it looks like an intermediate black hole but it's not technically a black hole in the

(2:03:49) tradition additional sense I mean wow it's an endothermic event which is technically what black holes would be but maybe it's so instantaneous I'm not really sure that's the part where we'll have to dig into more but I mean this is already we're when we're watching these videos here of sus and Mal Deena these are the people on The Cutting Edge of this these are the people on the very cutting edge of this science right now anyone that pushes it past them is broaching New New terminology new uh

(2:04:20) information she'll get results results so she's measuring something on this side right now this is important too cuz when we watch the next video that's the short video you're going to see that they actually are able to Quantum teleport information like this they can actually Quantum teleport the information to an entangled pair and that this whatever happens here even if you change something over here it'll automatically appear over here this is what has happened where we've already been able to teleport a

(2:04:48) picture so we'll do a little side quest on the picture right after this numbers to the extent that we can think of the black hole is made out of cubits and Alice can record them in her notebook another thing that will happen as a consequence of this is that Bob's and Alice's side will become disentangled Alice has made the measurement she's projected onto some State it's become disentangled and the result is that the Einstein Rosen bridge is snipped cut cut Alice's end so this is interesting too

(2:05:22) he says that once you measure it okay now it's cut right what is this crap so it's like okay once you've cut this it's almost like the idea of once you look okay now you're going to

send the information over to Bob and now the information is going to appear pretty weird is safely inside the wormhole on Bob's side Tom is sa what did I say Bob yeah Tom is safe me thank you okay next step wonder if I need to make a snip of this what was that uh 1710 when did that start probably like 1640 okay 1640

(2:06:13) 1710 PR is is a little slow I'm going to have to speed it up I think um I don't know I'm getting better at editing so 1640 information through teleport it won't make you guys watch me do the editing it's boring Alice throws her notebook over the bomb Bob one thing I should say about this is that the numbers in the notebook have no correlation whatever with the state of Tom they have none whatever they're completely random relative to the state in fact so the numbers here don't matter

(2:06:50) all about the state of Tom that's pretty bizarre it actually makes me wonder if just observing the effect on the thermal is enough doesn't have to be information about it you might not even have to scan it just a bunch of random numbers and so if eve were to intercept the message she finds out zero about Tom she can destroy the message but she can't find S like it's an encryption she throws her notebook across the Bob and Bob does an operation in response a particular operator he applies that depends on the

(2:07:25) result the that depends on what he reads in the notebook and outp this is pretty weird guys do you understand the implications of what we're watching right here basically saying okay we're going to send you some random numbers now this is let's say the Mal Dives right now the Mal Dives there's another drone send the information to the Drone which is like a a code sheet read the code sheet and all of a sudden the plane pops out that's Quantum tation but you can call it quantum teleportation through AA

(2:07:58) chaotic Channel if you like or you can call it quantum teleportation through a wormhole okay so that's 1803 but do keep in mind pretty good all of this is supposedly happening in Alice's non-relativistic laboratory let's see what else we got this is not happening some some uh the but vary a little bit side or in effect report that there was a photon on the inside so now he talks about you can shoot a photon in there and then it may it's going to change what's going to happen which it's

(2:08:41) hard for me to really grasp the idea is like oh well Bob would see or Tom would see a photon when he goes through there because we also send a photon in um look Malina there he is right there the negative scrambling time he tries to geometrically explain it here I think that was the key part that we want though this part's interesting here I think he answers a question diag is to tilt it cuz the idea here is here's the information that you're sending that book and then this is them shooting Through the Wormhole the information

(2:09:12) going directly to the other side inward tilting it inward happens Photon a low energy Photon uh we can trace the photon backward but for the moment the photon was not there in the past okay I'm skip ahead and come out slightly different than had he not uh so this is weird too because this now imp implies that whoever is Goes Through the Wormhole might actually

be distorted by sending the information through there yeah I've done two interviews with salvator Pius already probably do another one in January the photon

(2:09:49) in fact I want to get my scientific understanding up to the point where I can keep up with these guys like Dave Rossy and Salvador Pas they're pretty pretty smart dudes can get entangled with a photon the other part IID say about this real quick I'm going to go on a quick tangent about um salvator Pas is that he may seem eccentric but put yourself in the shoes of somebody who's been watching this technology and knows that the world has been kept ignorant of it you'd probably be pretty eccentric too

(2:10:19) I mean this is the type of technology that they have to have staff psychologists on staff because people see the technology and then they go home and get in their gas powered cars which should be completely Obsolete and go back to their normal lives right it's pretty it's it's it's dark man it's dark folks it's entangled with a photon Tom will come out in an impure State because he will be entangled with the rest of the black hole with the stuff with the photon that fell into so this is

(2:10:48) actually now I'm starting to understand this a little better so maybe they are cleaning the area when we watch the video cuz you can't let other stuff fall through the black hole you need the information to be exact if anything else falls through the black hole then you're going to have an impure state of the thing coming out on the other side the question here is when they come out on the other side are they going to be unaffected or are they going to be like reverse people or whatever or whatever we call it um

(2:11:17) Bizarro Bizarro pilot Bizarro MH370 right um that's the real question I'm going to pull up the video one more time so maybe they are cleaning the area around the plane so to speak so that additional photons additional thing cannot collapse into it maybe they're doing it at night time because of this maybe it has to be at night time otherwise the sun's rays are shooting photons beaming down on the plane but you'd imagine there would be stuff beaming on the plane from everywhere every direction they create a field powerful

(2:11:50) enough maybe it can prevent all of that stuff from impacting the plane though definitely think there has to be a barrier of some sorts in order to get this to work just in my mind I I can't see how this could work without some type of barrier around the plane doesn't have to be a physical barrier but it can be like electromagnetic barrier Singularity or another way of saying it is that Tom does not get completely disentangled yeah for most temp powering psychic Evolution It seems impossible yes but it does seem to be

(2:12:25) possible that's the crazy part about these videos it does seem like they are in fact creating a wormhole but our definition of Wormhole needs to change I'm going to put this pull the chat over here our definition of Wormhole probably needs to change because if we're talking about  $E = mc^2$  then Wormhole is not going to be a visible thing that we're seeing right you're just going to see the like we see in the videos you're just going to see something disappear and then it's going to appear somewhere

(2:12:51) else it's going to be equivalent to quantum teleportation now let's go on a little side quest side quest guys here is another thing here that we've got now this is quantum teleportation scientists teleport images and Star Trek Discovery I I definitely need to add blocker this is killing me um I mean what is all this crap popping up man oh my God they figured out how to teleport images across a network without physically sending them this is actual quantum teleportation information appears to travel to the receiver's end without

(2:13:32) physically traveling to the sender two communicating parties physically send information from one to the other traditionally that's how it works now using teleportation and this is not Star Trek teleportation at all no this is incorrect this is actually more like warp drive we're not dematerializing something and rematerializing it that's not what's happening the information is just instantly transmitting faster than the speed of light it's closer to instant transmission which is what we're

(2:14:03) literally just re we're listening to we're just listening to it right now on the background here which just popped up over my screen sweet okay um let's see this could not prevent a cheater from sending or keeping better copies of information to be teleported which is how we would end up with clones yeah this is the part where starts to get creepy guys where it's like what if you were to send other stuff in there and you have the person come out in pure so that they're not the same person as

(2:14:34) when they left here we go there's the there's the study okay here it is here's the actual study we're going to save this we need this it's getting sciency in here folks uh boy why does it add all these things at the end of it pretty sure this is all I need is this part right here let me just double check yeah that's all we need adds all this extra stuff that I just don't care about okay quantum teleportation of higher dimensional spatial information with nonlinear detector information exchange between two distant

(2:15:21) parties where information is shared without physically transporting it is a crucial research in in future Quantum networks doing so with high dimensional States offers the promise of higher information capacity improved resilience to noise but progress has been limited here we demonstrate how a nonlinear parametric process allows for arbitrary higher dimensional State projections in the spatial degree of Freedom where strong coherent field enhances the probability of the process this allows us to experimentally realize Quantum

(2:15:52) transport of higher dimensional spatial information facilitated by a Quantum Channel with a single entangled pair and nonlinear spatial mode detector they're talking about sending a picture using some frequency generation we upconvert one of the photons from an entangled pair resulting in higher dimensional spatial information transporting over to the other we realize that  $D$  equals 15 Quantum channel for arbitrary photonic spatial modes which we demonstrate by Faithfully transferring information encoded into an

(2:16:20) orbital angular momentum hermite gaussian and arbitrary spatial mode superpositions without requiring knowledge of its state to be sent our demonstration merges the  $N$  the nasc

fields of nonlinear control of structured light with Quantum process offering a new approach to harnessing higher dimensional Quantum States and may be extended to other degrees of freedom as well I'll post in the chat for you guys if you want to read it I'm not going to read the whole thing this is posted in nature so they're talking about sending

(2:16:55) information here uh through the speed of past faster than speed of light yeah whole plane can't go missing um they can't go missing I mean that's the problem right the whole reason why we're even doing this is because 777 can't go missing like it has just not possible and you guys can tell just from that abstract there that there's we heard uh things like coherence we hear things like the magnetism approach and electromagnetism like all this stuff is going to be linked together we need to

(2:17:30) understand all of this in order to be able to understand what is theoretically macroscopic phase conjugation teleportation of a macroscale object um I don't know what demium if if you're talking about the cloud pictures they actually can't be found on a reverse image search that was part of the problem as well the cloud images actually didn't show up on reverse image search even though they should have showed up because they're 12 years old or 11 years old they didn't appear before 2016 and they were also not in

(2:18:04) any Torrance that included every single picture from the CG textures website so uh and if you need more evidences to **debunk** the cloud pictures uh they also had a modified date on them of December 4th 2023 which is inexplicable if you know anybody who works in databases like I actually do you do not update all the data elements on every single thing in your database when you make updates that's not how that works I know for a fact because I work with databases like this where they still have things that are 10 years old

(2:18:34) from when you started the system that don't get updates on them um as well as the fact that the textures.com owner is a troll and that doesn't do them many favors either if if you're actually trying to discredit a HOA the last thing that you should be doing is trolling people so the textures.

(2:18:53) com person is a literal clown and an absolute loser and they discredited the whole **debunk** themselves so if any **debunkers** are watching and are mad you should be upset at uh the textures.com person who completely discredited your **debunk** attempt if they all they had to do is take it seriously if they had done that then probably the whole thing would be over right now but instead they acted like a complete utter troll they made a uh they actually even made an announcement to make an announcement to troll people that's how like quackery that they were

(2:19:24) about the whole situation so um and especially in a situation where we can't find the images on their own website from the what the person who found them even told us to go looking for uh adds a lot of Doubt so hopefully that answers your question I don't really want to have to address it every five minutes thank you uh from the um from the black hole and this I would call exploring the Wormhole Tom gets to tell Bob I saw a photon on the inside this part's

kind of boring I'm G to move forward grow with

(2:20:00) time okay this part's interesting that is complexity growing Quantum mechanically at least I believe so one thing I want to say about the complexity growing thing something that Roy D Herbert told us was that complexity as complexity grows this is what causes more stickiness this is what causes dark matter now dark matter is simply a situation where dark matter is not a physical thing we haven't been able to detect dark matter no one's been able to see Dark Matter dark matter is the extra gravity that we

(2:20:30) can't account for given the amount of mass that we see when we look in outer space what if complexity causes more uh stickiness more gravity if that's the case this could be strong evidence for string theory because idea is the strings grow more and more complex as they're getting more and more complex we don't see them because we're not looking at the underlying framework of the Matrix we're only looking at the projection on top of the Matrix but if the Matrix itself is getting more and

(2:20:57) more complex in the space that it's being projected then that could theoretically account for the amount of gravity and when we count dark matter we see it as like a haziness around um galaxies and some have less and some have more perhaps it's because the more complex you get the more Dark Matter there is uh in the um idea that the complexity of States grows with time of complexity of States grows with time and that that Evolution makes sense the tendency of okay let's keep going there a sort of iconic figure showing the

(2:21:30) growth of um complexity we're learning science folks this in any great detail the only thing that I will explain is on the top diagram no trying to remember if there any more good diagrams for us to pull up here here's the Wormhole before it expands before it grows I think this is mostly math here to be between the two yeah this is mostly math now I think and that would be  $C$  over  $s$  yeah so I mean if you want to dig into the math here falls into the singularity so that can't be the right answer thought is there's no really need

(2:22:06) to build shells oh this part's interesting quantum computers quantum computers here we go computers which are built we can make a shell of quantum computers instead of a shell of atoms just um buil a quantum computer which had similar output or similar Behavior to what we expect for these shells but maybe just even simpler than that I think he just entangles two quantum computers for example here are two entangled Quantum circuits two entangled quantum computers if you can build a quantum computer see how they're

(2:22:39) entangled right so because their patterns are the similar so if you know if this one moves that this one's going to move up one it doesn't have to move exactly right so let's say that this top bar right here on the left moves up one space we know this one's going to move up one space right because they're entangled or actually we know it's going to move wait we move this one up it's going to move down one right moving this one up one we'll move this one down one automatically so no matter how far apart

(2:23:05) these two computers are because we've got them entangled into a system here we know that yanking this one up one unit is going to force this side to go down one unit that's the idea behind it it's pretty simple and if you can build two of them you can entangle them now can you really do this in the laboratory I don't know you'd have to ask a laboratory person but I don't see any obstru guys do we know any laboratory people uh Jeremy alien scientist guys think we need to Quantum entangle some

(2:23:32) stuff being able to uh to entangle the two quantum computers so there's two entangle okay I won't even describe it the picture is this is the same sit situation where we're passing the information back over from one to the other two sides by random class let's move forward okay this this should be good as e to the minus complexity s of course you I the equations are too much for me I'm not a math guy roughly speaking I can understand Theory though some estimates of it and we can check that

(2:24:02) the correlation function behaves the way we think it should uh and that would then oh we need a foer people too satisfying I would be laboratory uh experiments testing things which are very close to gravitational things all right what is gravity really gravity has to do with apples falling I've never mentioned apples yet and we've been half an hour into this seminar so let's talk about apples falling I don't okay apples falling but not too fast and I'll quantify that in a moment great picture he's got too also

(2:24:40) things scramble that's a quantum mechanical thing oh not too fast he talks about scrambling here those two facts uh do I have another five minutes so okay I can't remember we're going to skip through some of this here basically talks about how scrambling is and create an order out of scrambling so like imagine you're looking at your TV and you're seeing the snow on the TV that's the underlying electromagnetic vibrations pulses currents whatever that are constantly happening everywhere in the Matrix that

(2:25:17) you would see it now we need to create order out of that right and when you create order that's how you can theoretically in my mind at least break through to the fundamental reality it's fundamental state of the Matrix itself behind what we're what we're seeing that what's growing the momentum is in fact related and in fact is equal to I believe uh the operator size the operator okay I think fir on the operator grows with time and it grows exactly in this fashion e to the 2 pi over beta T to me when I listen to this

(2:25:50) this this correlates with um royy Herbert's theories of complexity increasing let's see so yeah you guys can check this one out um I'll post a link to this if I haven't already let me post a link if you guys want to check this out I just posted the link if you guys want to watch the whole thing trying to skip through it I don't want toon do all of it here theow of okay so complexity okay so this is the part that I was talking about so this if you think of in terms of like string growth right like as time goes on

(2:26:31) things are getting more and more complex now imagine looking at your television okay and you're looking at the static of your television and in the early States let's say if you go back

billions of years right when the universe begins you're going to see very few lines on your television maybe it won't be a staticky as things get more and more more more more complex the reason why you're going to see more and more static is again because look how much more complex it's getting as the strings just keep moving

(2:26:56) around bouncing off one another never stopping right measure of the size of the string also grows  $Z$  to the  $\omega$  suggest okay in Quantum circuits it happens it's the Hayden preskill um growth uh holographic theories folks also called scrambling so here's a suggestion then first of all assume that radial momentum really is operator size this one then suggest the gravitational force of the grow of the momentum is a manifestation of the tendency of complexity to increase in other words a second law of complexity

(2:27:35) at least in the neighborhood of a black hole second law of complexity interesting this correspondence between a gravitational thing and a quantum mechanical thing quantum mechanical thing being both of complexity last thing I'm about finished but let me point something out now if I look at how things fall through a horizon what I find is there are various possibilities first of all the fastest the thing can fall through the Horizon is if it's moving toward the Horizon with a speed of light in other words a

(2:28:06) light signal falling through the Horizon this part kind of goes above me does grow just as  $e$  to the see given the relationship between  $r$  time and uh uh okay look at this look at this screenshot Quantum phenomenon gravitational phenomenon traversable wormholes quantum teleportation through chaotic channels growth of the black hole interior second law of quantum complexity complexity growing why do apples fall because of gravitational attraction near the Black for ho second law of quantum complexity fast scrambling so these are him attempting

(2:28:46) to Rel all these Concepts together Quantum complexity or fast scrambling again seems to govern it and of course the laboratory protocol would be measuring out of time order correlation functions of course many obviously this theme can go pretty far behind me on the some of Beyond me think of involving Hawking radiation all kinds of interesting things that do have these kind of parallels which would okay here we go that's the part I wanted to do I think that's all I have to say make a note of this oh no it's not quite was

(2:29:21) this 40 yeah okay back 4625 let me compare all of this Alice's whole story here with another story that she might have tried to do namely to simulate the standard model forget gravitation so you say I can simulate the standard model on a crystal or on a crystal of um of computers so think of the crystal I just think of the universe the universe s think of the Matrix itself uh just the you know ordinary lattice uh gauge theory on a lattice I can make observers on the inside of this lattice quirks and gluons

(2:30:02) and so forth I can communicate with them by tapping the lattice and sending signals in I can read out what's going on with my stethoscope it's is this real is what's going on in the crystal real of course what's going on the crystal is quite real and if so this part's already interesting right so if you can impact it you can have information flow through here is what's

going on in the crystal let's think this is our universe this is our Matrix is it real yes of course it's still real

(2:30:32) something's happening there right what does real even mean right real means that is our reality flowing of course it's flowing so this this is important because to me what this means is that there's still purpose to life life still matters right even if we're in a matrix even if this is a simulation doesn't make it any less real to us the person who's inside in fact you could open up the crystal you could stop the time Evolution open up the Crystal and see that in the inside these people are

(2:31:00) really there or these objects or these protons these hadrons or whatever the neutrinos they're really there so it's very real yep we're really there um this next part's interesting that with Alice's shell so I'm going to go ahead and clip that around 47 47 let's say 30 reality real yes okay and then he goes and Compares it to the Shell right this part's really weird somewhere there's a bulk associated with this this is our universe now says I'm going to open up that shell and see what I find inside

(2:31:42) nothing in there the answer is she finds nothing inside the bulk is not the interior of the shell in the laboratory in fact the bulk is nowhere in the laboratory it's a pure manifestation of entanglement and complexity you might think you might call it imaginary but I wouldn't call it imagin what is he saying right now guys he's saying that our reality is a projection of potentially our Consciousness it's not really there if you crack in there but it's still real in the same sense pretty weird because we did all these

(2:32:21) experiments detected that it's really there we detected it's there but um we don't we can't pull it up and see it mag trick it's a magic trick sort like a hologram sort of like a hologram better so better my view is wise words that the thing we really call gravity is not disconnected and different than what's going on in Alice's laboratory it's just a version of the same same thing hydrodynamics of massive amounts of entanglement so gravity general relativity is a massive amount of

(2:32:56) entanglement now this why is this interesting guys because what did we just say about the strings the more complex they get they can create more gravity dark matter right this is the unification Theory we're looking for here is that gravity is simply a construct that's happening due to complexity increasing and it's proportionate potentially to the amount of mass but it can grow beyond that as complexity continues to grow one more point this is huge this is I was only going to do one more point and I've done three more points already

(2:33:31) I might have to make a note of that is interesting you can ask in hydrodynamics you can ask how many particles do you really need before you start to see hydrodynamic Behavior where is the crossover between just ordinary particles and hydrodynamic behavior is it 10 particles put 10 particles in a box is that enough to see some hydrodynamic Behavior I suspect the answer is yes 10 particles but certainly a thousand particles is certainly more than enough to see some elements of hydram we need that string thing to be

(2:34:04) clipped it's a very interesting question to my mind where would we see the crossover so now he's asking like so how do we measure this right how many cubits of information do you need before you get to a point where you can actually measure the gravity right where's the break point between quantum mechanics and general relativity where the complexity gets to be so much we can actually measure the gravity and he's going to argue that you don't need very much we might call ordinary quantum mechanics of small

(2:34:34) number this presentation is huge guys this is not think this is what we needed as a general this blew my mind when I was watching this yesterday and gravity the crossover between um massive amounts of entanglement I don't even care if we get copyright strike here dynamic Behavior I think it's a relatively small number of cubits 10 15 20 25 maybe 100 and if that's true that means you can explore the crossover between ordinary quantum mechanics and gravitational Behavior he's basically the same what I just

(2:35:11) mentioned right at some point you can reach the crossover field of normal quantum mechanics and general relativity at some point there's going to be enough complexity that you're going to start to feel the force of gravity on a relatively modest to me this is a unification of quantum and macro we're listening to it doesn't answer all our questions but it gives us the framework we need so let's go scroll back to where the strings are did I clip this this part's really important where are the strings getting

(2:35:43) longer somewhere over here right huh there it is maybe I just need the scene of this I just want to listen for this like one minute or however long this goes jeez so oh here's some other example okay that's 40 45 did I mark that I did not 40 45 strings complete okay so I'm going to clip some of this stuff I might even just edit it together so that we only have the the parts we want and then I can post that other examples coming from other places yeah I posted the link to the video up above to scroll up a little bit in the chat size

(2:36:34) growing as Things Fall toward the Horizon is in string theory this is a Monte Carlo simulation of string growth that was done by myself and my colleague kof want caros grow Carina with some computer simulations see how far it goes actually the growth of a string as it falls toward the Horizon of a black hole a horizon of a windless Space 4 and in fact what you find is that the length of string which is also a measure of the size of the string also grows as  $e$  to the Omega all of these examples are examples of something that's called

(2:37:12) branching diffusion and uh they're all of common origin okay I think we in fact branching diffusion I think we do branching we end it like right around here and uh they're all okay Fusion right there 4135 so it's not too bad okay I've got these marked down okay so that's susin right guys I'll post the link to the video one more time for you guys if you want to watch it yourself highly recommend checking this out uh pretty amazing presentation I mean this is mind-blowing stuff these are the people

(2:37:57) who are on The Cutting Edge of uh unifying quantum mechanics in general relativity pretty interesting I think the the complexity thing here is really what's blowing my mind because

this is consistent what physicist Roy D Herbert's been telling us we're definitely going to be talking to him soon about some of this stuff Z to the Omega power I don't know what that generally means but awesome um okay so sus or uh hello every boy how damn it let me delete this you go back to the beginning on this bad

(2:38:37) boy and then we pull this guy down here now this one is Malina um what is this oh I don't know how this works I'll just remove this one oh you can put them on top of each other interesting so maybe the move that I do when I'm making videos for our stuff is that I clip them into here and and edit them together not sure not sure how this stuff works starting to learn how edit stuff okay now should we do Mala or should we switch it up a little bit maybe we should switch it up it's a little too much science for one go

(2:39:25) huh a a lot of science happening here um we can do a little storyboard what is storyboard we want to do you want to switch it over do a little storyboard action we can come back to this maybe see see how the trolls are doing new article yeah I think let's work on the storyboard for those articles real quick guys switch it up let's see what we got here okay let me see what we got here um where's our thing okay here they are okay how are we going to do this let's turn this into our

(2:40:43) storyboard oh you're not late depleted uranium Cowboy you're not late okay we found six articles in the last four months that have claimed to found the plane pretty amazing six articles so what we should think about now is what do we want to say about this my cucumbers are like leaking or something I don't know they're delicious though uh they're not doing anything related to the strings the string stuff is more of a dynamic Behavior or property of matter itself the string thing is just think of

(2:41:43) like time the the Earth is four B billion years old so over those four billions of years complexity on the earth is increased increased and increased to the point where we have our Dark Matters increasing as well uh we already have we already have this one accounted this one's already accounted for that's this one right here but thanks Hermes yeah if they can find it so easily how come we already have six articles in the last four months claiming that they could find it when are they going to find it I think one of them even argued that

(2:42:30) ocean Infinity was going to search okay so this is going to turn into our storyboard should I bring the music back yeah I think of the universe as complexity constantly increasing in the universe think of it like that think it helps to understand what we're talking about any day now um what just happened in the

(2:43:35) background wonder if grock can tell us is grock just like Twitter's AI does anyone know yeah let's get some D let's get some music up on this bus nich also here are the subreddits once again guys if you want to be part of the public subreddit MH370 abduction there's not really many people in here right now at the moment this is the public one if you want to be part of the private one that it'll be harder to get banned then you're going to be part of three orbs you need a private uh you need to get an

(2:44:04) invite feel free to post any of my content on three orbs any any of the content you want um you know this is just for discussion that's going to be uh free from trolls pretty much I'm probably going to close these now though I'll close them in a few minutes once I find the music oh here's the synth wave of Music we're back we're back with the synth wave yeah order to disorder I think will also applies I think it's all consistent with everything all the theories that we're throwing out there start out ordered and

(2:44:43) it's going to get that's the the whole idea of like static right I like my chat my chat's smart man we got the smartest chat out here honestly chat don't play I kind of want to get one that's not a YouTube of this one here let's let's watch this one real quick see if we can get ourselves not copyright tried for watching this and that disturbance is recorded So British aerospace engineer Richard Godfrey Richard Gody team of experts have been working as I said for four years it's Richard Godfrey again that's

(2:45:37) actually different than these other ones though it's actually different wow it's actually completely different the Richard Godfrey one this isn't Richard Godfrey this is Cambodian jungle this is one where some other independent people did this research fisherman this one might be the Richard Godfrey one again just rehashed we're going to mention how some of these just seem to be recycled this is wild this got a million views these people are making a lot of money off this fake stuff imagine if I had a million views I

(2:46:14) think you'd get like 20 \$ th000 from YouTube yeah I'm going to make a playlist I am been lazy Tracy Scott I'm going to make a playlist of just the hard hard Tru stuff there you can even make podcasts just been lazy on the YouTube stuff been busy it's definitely on the agenda for

(2:47:56) let's see what else we GNA do here uh Hermes I'm not sure that's something you want to brag about I wouldn't brag about that see what we got going on here okay um how should we go about this how should we go about this should we just detail each one of them I want to keep this under two

(2:49:01) minutes what I can do is I can show like little pictures of each one and then just talk over it take a look guys oh let's find a better Barnacles one

(2:50:17) that's that's our one this is our clip we're using I'll do single quote since it's not a direct quote I modified it slightly let's change this okay um and you know what let's just let's

(2:51:39) just really crash crap on their thing here whisper cannot be used to track planes here it is whisper can't find MH370 who is this Victor of independent group guy who hates us with a passion ianello is that you say his name let's go ahead and take a snip of that we might need

(2:52:43) that okay we did a little science now we're doing a little bit of storyboarding yeah this is going to be a storyboard video that summarizes the these articles down here all the times where they've quote unquote found um that they found the plane or they claimed the know

they plane this post AOC apocalypse it's the postapocalypse guys I'm scared to go look at my my notifications guys scared to look at them \$40,000 worth of drugs every month well you might want to keep that to yourself just heads up we probably have

(2:53:27) feds who are watching every single thing we do so I'd be very careful of what you guys admit to on this stream I'd be very careful that's all I'm saying okay uh then so that's the first two the Cambodian jungle one we're probably going to crap on what's his name Patrick Jackson Remember When Patrick Jackson the orb expert thought that the plane was in the Cambodian jungle that's when I lost all respect for him that's when I realized the dude was complete fraud if he doesn't even have the

(2:53:59) logical critical thinking abilities to realize that the plane's not in the Cambodian jungle uh then I definitely don't don't believe anything he says about the types of orbs and being some kind of orb expert sorry if people believed in uh Patrick Jackson but you got fooled you got fooled for

(2:55:31) you know we might have to find that orb uh claim where he thought that uh Patrick Q Jackson thought that this Flew Over the thing we might just have to crap on him with that let's take a look here what we got Patrick Jackson H I feel dirty even going to this guy's uh going to his Twitter account yikes big yikes on this guy what is this man he just makes stuff up he just literally makes stuff up type one type two relays like this is just like I don't even want to crap on him anymore more man it's just not even fun

(2:56:16) man it's like when you're picking on like people who are like yeah let's just not we won't even where was that nonsense he was posting he just circles stuff Interceptor formation just made stuff up she literally makes stuff up look at this okay where I mean this was a while back I'm not sure I'm going be able to find it the Cambodian jungle thing is where I lost all respect for this guy I thought he might not be off his rocker before then oh he just keeps reposting the same image over and over

(2:57:04) and over again huh yikes man guys you got to be careful about people who say that they know everything and how it works especially about stuff that's like literally unknowable like how orbs are operating and like how they would communicate with one another it's like he's not this is just some random guy he's not in any position to know any of this information can you imagine being Patrick Jackson and uh posting **debunk** videos when you're just like some dirty grifter who makes up fake stuff about

(2:57:42) orbs all the time like this is the height of hypocrisy right here complete height of hypocrisy you're literally looking at a real video of orbs making a plane disappear and you're supposed to be an orb expert and you're posting **debunk** videos from janky McDonald's VFX artist quality people who are like literal idiots idiots of a feather flock together what can I say embarrassing man this guy is a complete and utter joke someone told me too someone with my DMs told me that Patrick Jackson gave Gary Nolan an orb which I said okay go

(2:58:27) ahead I I youtubed I Googled it right and uh it never really happened I said can you give me any evidence of that of course not didn't never really happen if this is a real tweet then I've lost lost all respect for Gary Nolan Gary Nolan if this is a real tweet by you then I've lost all respect for you sir complete in all respect if you can't tell when somebody's just a complete grifter loser then you obviously have no idea what you're doing Gary Nolan and you shouldn't call yourself a

(2:59:03) scientist someone clip that for Gary Nolan the same guy who you think knows what he's talking about thinks we're looking at a plane in the Cambodian jungle on Google Earth where is that we got to be coming up soon right how long ago was this how long ago was this man did he end up deleting it no no he couldn't have deleted it could he jeez man where is it oh here it comes here it comes guys we're here he makes polls he makes polls to determine what he thinks is real here it is bingo got him got [Music]

(3:00:05) him Patrick Jackson you get to be featured in my next uh piece buddy congratulations let's take a screenshot just in case he deletes this before uh before we finish it up we don't need to even show the likes we just need this part right here oh wait that's a video yeah can feature quacks in our uh in our thing here okay let's go and save that okay we need a new folder for news storyboard Patrick Jackson Cambodia okay we got it we found it that was a brutal one we had to go through this uh this quack's uh entire Twitter

(3:01:06) for that yikes brutal yikes that is Gary Nolan yikes guys Gary Nolan man we lost a lot of credibility lost a lot of credibility man Gary Nolan you should do a stream with Patrick Jackson so we can all watch I have a feeling it'll be very hilarious he can tell you about type ones and type two orbs and you can pretend that you think it's real yeah all respect I have for Gary Jackson uh Gary Jack uh Gary Jack Gary Nolan just went out the window feels bad okay let's finish this [Music] up okay what else we got okay we're halfway through

(3:02:14) then there's a scientific study let's take a look at this [Music] one officials and experts you notice always they just mention officials and experts never name anybody let's let's download let's download this how long is this don't be 50 pages just don't be 50 pages the best part anime review stream the best part of uh Patrick Jackson stuff is that I first look at his I go to look at his you Twitter page and I'm not judging him ahead of time right I'm

(3:03:17) actually trying to be oh my God 149 Pages how is this 149 Pages man no it's not it's only eight pages right okay is it no okay it's only nine pages thank god um and I go look at his Twitter page the very first thing is that he's sitting there begging people for money if all my 7,000 followers just give give me a dollar I can continue my orb uh research and then I go okay well somebody messages me and thinks he's like some kind of expert and I'm like okay I'm just going to Google his name

(3:03:55) right one of the first things he's got nothing on Google about him right except one of the first thing that pops up is this book review by Mr Fireside who's somebody that reached out to me early on to do a written interview so I look at it's a book review of his book his book is

complete utter nonsense it's just gibberish just complete gibberish I read through the whole review it's just complete nonsense just wow and just to be clear I don't prejudge anybody so I mean you know we did a space with Dr Steven Greer he's

(3:04:29) talking about beu from the Andromeda galaxy right but he actually has information that makes sense right and if you believe that Steven Greer actually is inside information it's hard to believe but not just gibberish right okay let's take a look oh here we go this is what we need oh so they're definitely using the whisper report so another thing based on the whisper report God everybody's just using the iMat pings right every single one every single one of these so-called experts oh we already pulled these

(3:05:17) images so we can show the images is this the one that we pulled already let me take a look images Yep this is the one we pulled where's the one that shows the search route oh yeah there it is and search route's already been searched as well okay let's go ahead and save this sorry this might be a little bit boring documents news story board expert locations put that expert locations search area save image let's do this one as be called search

(3:06:24) area we might need a different search area image as well okay so this one okay let's make a post or not make a post but let's add to our storyboard here I think we're going to do this I think we're going to go to the fisherman one next and then the rest of these are all just based on the whisper report so we'll we'll sum them up with the whisper report the rest of this stuff and then we'll show the image of how everybody's got their own idea of where it crashed even though we've

(3:07:03) already searched all those locations before and you would find a debris field so seems pretty good everybody seems to know um for that's

(3:08:46) I may edit some of this yeah why exactly the sudden interest maybe we even make a little koi comment about that for I think we're just going to delete this part we don't need this we'll do like this because we're

(3:09:50) talking about all this stuff anyway let's do

(3:11:12) this let's CH let's change this how'd that go guys how's that sound this is pretty short I think this is pretty good I don't want to leave it too long

(3:12:15) the shorter the better on terms of this so let's just run through it see how it sounds guys give me your feedback please during the course of the MH 370x investigation there's been no less than six distinct reports of knowing where the plane crashed as we approach the 10-e anniversary of the plane disappearing there seems to be renewed interest in the media except for our extensive research and fire Theory um we might change that say except for our extensive research except for our sens of research which

(3:13:00) has been ignored by all mainstream media first was the Barnacles that supposedly could pinpoint where the plane went down by reconstructing debris drift path based on Ocean

temp data stored in the shells back in August let's say we could say something about there not being any followup to any of these situations either are the orbs interdimensional I don't know man I'm not I'm not Patrick Jackson you'll have to ask Patrick Jackson if the orbs are interdimensional as I repeatedly say I do not have any special information I am

(3:13:32) only passionately curious only passionately curious I don't pretend to have all the answers I would say in a sense if what we're looking at a non-radiating barrier around the orbs then they could be interdimensional I mean in a sense yeah because they've broken themselves out of our SpaceTime and in a sense that is interdimensional let me play it first sorry for chewing so because these are seem to be a non-radiating barrier here not a physical object You could argue that this is extra dimensional that whatever's inside of this is

(3:14:16) extradimensional I also um humbly disagree with Bob greener's analysis I do not think that these are pure energy I think because we see these lines in front of them there's got to be something mechanical going on here in my mind I could be wrong I just don't understand how something that's pure energy that you would deploy as like a weapon uh could create these geodesics that seem to be changing this seems to require some sort of mechanical arquin on the inside could it reappear in the future

(3:14:47) technically yes technically yes so the options on where the plane could go are another dimension if you believe in string theory uh it could go to another timeline Dimension however you want to think of it could go to somewhere else in the universe right it could go to the Moon it could go to zed reticuli depending on where you have the orbs entangled to it could go to the Future uh because you know from what we saw what we looked at was susine earlier as well we saw that the the object goes into the Wormhole and then it appears

(3:15:20) when you pass the information over so it almost could be in super position that means it could show up in the future depending because time dilation is real the faster the further you go at the speed of light the more time dilation effect there will be from the from the person inside the plane you will not experience that time going by but if you are the person on the Observer side time could go by there could be a lot of time that goes by like let's say This Plane travels around the earth like a thousand times then theoretically yes you could

(3:15:48) have a situation where this plane shows up in the future and then the last option of course is that it just goes to like Diego Garcia or whatever else somewhere you want malds Maldives would make the most sense presumably um uh hold on let me find the thing well that didn't work what the hell is all this man edge browser uh I have an estimated flight path image somewhere I just don't know where it is man I was going to pull it up I I probably got to save I got to reorganize a lot of my stuff man just I have too much

(3:16:47) now it's been accumulating in this folder and it's just way too much stuff um here it is actually found it that actually didn't take very long to me this is the most logical teleportation path but it's not uh we can't know we simply cannot know so when we look at this here we can see that this plane is traveling south into the east in our video so presumably it's going some

kind of Direction up to the right here maybe even Slightly North and then the idea here would be that it's getting yanked backwards like the

(3:17:17) rubber band scenario right it's getting yanked backwards here and then it would fly down here and this is why you would have the MD sign in fact I would say it would fly on this other Arc here this why it gets seen over the Maldives coming from like the west down to the right wh wh well whatever you got guys get it uh I'm going to move this image here the videos folder okay good okay yeah it could be zaap to the Moon in theory could be zaap pretty much anywhere man that's the beauty of it could be Zapped pretty much

(3:18:05) anywhere okay uh I'm going to go through this one more time guys good questions though I'll answer questions after I've gone through the whole thing here during the course of the MH 370x investigation there's been no less than six distinct reports of knowing where the plane crashed as we approached the 10 year anniversary of the plane disappearing there seems to be renewed interest in the media except for of course our extensive research which has been ignored by all mainstream media first it was the Barnacles that

(3:18:30) supposedly could pinpoint where the plane went down by reconstructing the debris drift path based on the ocean temp data stored in the shells back in August then there was Richard Godfrey's whisper analysis that made the rounds at the end of August to early September where he claimed to know where the plane crashed despite counterarguments including whisper can't find MH370 by Victor ananello of the independent group I wonder if we can find a clip from this snippet from this um next was the claim the plane

(3:18:56) crashed in the Cambodian jungle based on a Google Image Google Earth image that post States the crash by nearly a decade has the plane crash in one piece and somehow not disturbing the jungle around it this is clearly just a plane flying over the jungle where the picture was taken this article even fooled orb expert Patrick Q Jackson recently there was a report spread worldwide in the news of the sole surviving fisherman who claims his net caught nearly a 100 foot long Wing 100t long wing of MH370 9 years ago and it

(3:19:39) was haunted him to this day he supposedly remembers the exactly where they play where it was and wants people to search let's say we can say MH370 X wish is all these search efforts the best of luck okay lastly there are multiple other investigators that all use the IMAF pings and Whisper report to come to their own conclusions on where the plane crashed despite us having already searched above and below water along the entire seventh Arc they also can't explain how a 777 crashes into the ocean without leaving a debris feel F Vis

(3:20:43) visible from space no black boxes no acoustic detections from three different systems no radar detections from four different countries in the morning hours along an active shipping route with no Witnesses let's just make sure we didn't miss anything oh sosus we got that oh with no elt beacons activating let's let's just double check the elt beacon stuff make sure that's right yep I think there's four redundant elt beacons not foolproof cuz people asked right designed to switch on

(3:21:51) automatically perfect I love it no black box noive attach okay I'm just going to reread this last sentence they also can't explain how a 777 crashes into the ocean without leaving a debris field visible visible from space let's just get rid of the visible from space part it doesn't just doesn't flow right no visible no black boxes no acoustic detections from three separate systems no radar detections from four different countries no none of the four redundant elt beacons activating in the morning

(3:22:46) hours comma along an active shipping route with no Witnesses spicy mh37 X wishes all of these search efforts the best of luck when none of them find the plane can we agree to consider the plane did not crash into the South Indian Ocean how does that sound obliterating is the annihilation scenario the annihilation scenario is is one in which the problem is that they would be more energetic than we see since  $e = mc^2$  otherwise you need antimatter which we don't know if it even exists hopefully that answers that

(3:23:25) question radar signal detections in the malds probably there's radar signal detections from India radar signal detections from Thailand as well as Indonesia and Australia all should have heard the plane so great question yeah isn't that funny that elt not foolproof thing is from two days after the plan went missing hilarious right zen zen zen got it give him some give him some laugh emotes in the chat yeah the autopilot was definitely disengaged there's no question about that we know that because the plane

(3:23:58) literally turns around and goes off autopilot so no question about that I think this is pretty good for our story board so the last bits that we need are just some images so let's take a look at physics blog see if we can pull an image off this I just want to pull some images yeah send it to print I may even record this tonight and uh upload it I'm probably going to take a break here how long have I been streaming I can't even tell how long I've been streaming oh 3 hours yeah not bad here we go this is what we take right

(3:24:47) here right we could honestly screenshot any of this maybe we just do we can just screenshot the conclusion I love when Victor helps us out even though he hates us cracks me up can I make this like fit better just screenshot

(3:25:55) this we'll give him a little bit of credit here actually we just do this whoops what the hell I wish this was easier to like [Music] draw okay let's save this save hopefully this storyboard won't be as difficult to uh manage let's see uh whisper cannot track track MH370

(3:27:02) okay although we could also take like this other stuff looks prettier but like this here I'm going take this one as well this guy actually developed the software okay well that's pretty good too maybe we just take this whole screenshot too seems like a pretty good quote here folks what do you guys

(3:28:04) think seems pretty good it's funny because everybody's got their stuff based on whisper whisper not useful airline tracking okay we got that okay let's close this blog out we don't need that blog anymore folks okay I don't think we need this this link anymore let's just

let's change this uh I'll leave this here for now so we'll put image one and two uh or maybe this is probably going to be two and three I imagine I want to get something from the Barnacle data probably I want to put a

(3:28:59) barnacle image in here so then we'll grab something from the Barnacles I just want one of these stupid pictures of the Barnacles it's just absurd where's the barnacles there we go some like this particles dude is there any better pictures than that we'll probably use one like this right Barnacles oh you know what that's not going to work it's a web P file I don't know what the hell that means

(3:30:03) [Music] man we need the actual image wait to click on the mirror sadly o okay okay accept your oh here we go maybe we use this one let's use this one it's fine let me pull this over here and save it it's still a webp file can I change this to something else you know what I'm just going to screenshot it it has this share thing in the top right oh there we go there we go I'm just going to screenshot it welcome to video editing guys I'm an expert I'm an expert as you guys can tell my expertise is uh so

(3:30:55) strong such strong expertise um new storyboard Barnacles the Barnacles one actually is the funniest one to me man that's the funniest one okay let's see what else we got we got the can't find whisper blah blah blah get rid of that let's get rid of this Barnacles image one so put that there this this helps me set the storyboard up I need some way to modify them into a video probably can use that editing software Cambodia jungle uh image four Soul surviving fisherman we can find that guy pretty easily

(3:31:55) right what is the m370x sub **reddit** well it's been banned several times you can go three orbs I'll give you the private one the other one was what 2014 abduction or something I don't remember the this public one I don't remember the public one off top of my head if somebody else remembers it you can post it in there null do I seem do I seem worried about Edward cin not being the guy do I seem worried about it go read the case about Edward cand and you tell me exactly what you think he did to betray the country

(3:32:41) [Music] they literally did not charge they did not find him guilty of Espionage so null if I were you I would be the one if I were you you should be the one who should be concerned about vilifying somebody who did not betray the country he was not convicted of Espionage there was actually no evidence he exchanged anything with anyone from **China** that's a fact not an opinion this is like it's like an equivalent of the uh you're hurting the family's argument here's a question for you if Edward C Linn is not the guy that **leaked**

(3:33:23) these videos why hasn't he reached out to me in the last two or three months honestly three months maybe at this point since we first invest found out that Edward cin was most likely the guy don't you think he would reach out to me and be like hey man you've been saying my name and I'm not the guy that **leaked** those videos don't what you think feel free to take a look at any one of I think I've done four independent pieces on Edward cinn where we've narrowed down the evidence including his appeal in his

(3:33:51) appeal he even argued the same argument that we independently came to that he has been charged with more um he's been charged unequally or or sentenced unequally to other people that were uh charged with Will for attention of classified information I think the four orbs got deleted Richard win the guy who started the four orbs subreddit uh got banned and so that subreddit's dead because there's no moderators and no way to change or add moderators the person emailed me and told me uh I don't recommend airliner

(3:34:24) Abduction 2014 it's uh run by debunkers and probably the feds as well most Reddit subreddits are controlled by the feds and this is evidenced by the Twitter files where the FBI was literally determining who to censor on Twitter they were paying Twitter \$3.5 million for the privilege of banning people on Twitter and telling Twitter who to ban that's messed up man the fact that that people just ignore that is disturbing goes to show you imagine how much control they have over social media the FBI had a direct line where they

(3:35:00) were paying Twitter for the privilege of telling Twitter who to ban that's literally just me that if you just think about that in other terms that's literally the FBI handing money to Twitter to say to ban these people here's a list of people you should ban that's that's bizarre man if you don't think that's happening on social media across on Reddit and what have you then you know you're in for a surprise ask yourself this who is against removing anonymity from the internet who is against

(3:35:35) it who is against removing anonymity from the internet if if you're somebody who stands by what you say who's not harassing anybody who's just giving your honest opinion are you afraid of anonymity on the internet they removing it yeah I would probably be still be investigating this even without the redditors in fact I took the investigation up and the investigation wouldn't even exist today without me that's not mean being egotistical but we wouldn't even be here today the investigation nobody would be looking

(3:36:08) into it if it wasn't for me that's the reality of the situation it would have gone cold back in August and nobody would be talking about it the only reason why I have 75,000 followers 73,000 followers whatever that is is because after the investigation went cold I took it up myself Reddit did not come up with the fire theory that didn't find out about Edward C Lyn the vast majority of this investigation has been done by me and MH 370x what people post on the internet is not uh you don't have some right to

(3:36:41) not have it get shared right that's the whole point same with the evidence that I put people can share it people do share it in fact my sharing has been blocked from from the subreddit The Airliner abduction subreddit you can't actually post any of my content there so you know I think the reality is that people don't want my content to get around now if people post if you post something on social media it's fair game right as long as I credit you with what you've done I'm not stealing your

(3:37:10) work I'm simply amplifying your work that's the whole point of posting on social media now if I start to profit from it like let's say I make a movie and I use your content in my movie

then you could argue that you owed some royalties for that right but that's a different situation so if I make a movie and I start using people's work in my movie and I don't you know if I like say hey here's somebody's work that they created and I don't you know give them some credit or whatever then you might have

(3:37:45) an argument you know I'm not a lawyer so I can't go into the nitty-gritty of it but I just want to address this idea that I've used stolen people's work I definitely have not done that um unequivocally I've stolen nobody's work and I've not only that I've made my evidence available for everybody and I've said that anybody can use the evidence to come up with whatever stories they want to come up with the story that we have put out there is a story of the fire scenario an advanced

(3:38:11) technology that is unknown to us technically I own the copyright to that if this is somehow fake then I'm the one who came up with that story then somehow I own that copyright You could argue that maybe some of the people in m370x have some minor ownership of it but the reality is I've I've come up with most of it by myself the investigation they they've certainly assisted in that for sure I would cannot deny that and that's part of the reason why I you know occasionally but without any obligation um try to give back to

(3:38:39) some of those people in the community who have put a lot of the work in in fact I plan on doing that later today as well I was trying to do it yesterday on Christmas but I got very sidetracked with family stuff and didn't get time around to it and by the time I got home I was wiped out and passed out null if anyone considers what I'm doing exploitive misinformation then you have mental problems there's no other way to put it you have actual mental issues if you think that what I'm doing is any way

(3:39:12) exploitative or misinformation that's actually nutty dude how am I exploiting anybody how is it misinformation what do you even Define as misinformation I've actually laid the evidence out there scientifically I want to actually address this in the chat right now I don't have to copyright anything I actually asked a lawyer anything that I post out there Story related is automatically my copyright if someone were to go try to make a movie about my scenario that I put forth and the the story I put forth about my story then I

(3:39:49) would be the one who' be able to sue them for that man a lot of people monetized stuff is is Florence dangi exploiting the story by making a book about it how about Jeff wise is he exploiting are the people that made the Netflix documentary exploiting the plane by trying to solve it right you you tell me I want to know the answer to that do you think that the people that made the Netflix documentary are exploiting the situation do you think the people that write books about Mysteries are exploiting the situation

(3:40:22) if I write a book about Alex murdaugh murders and the case am I exploiting that am I exploiting the people who were killed or am I just trying to get to the **truth** where do you draw the line exactly I just want to know I think it's funny uh I don't think that people hold themselves to their own levels of scrutiny right I don't see people harassing Florence to Changi about uh

writing a book about the investigation oh sincere investigation so mine's not sincere you don't think that what I'm doing is sincere I think

(3:40:59) that shows you have mental issues sir I think that shows you have mental if you think that this is not been a sincere effort then you have a strict mental disability that you need to address and it's a you problem not me problem that's a that's really messed up man so have we addressed all the concerns about this I've done 60 podcasts where I've gained no benefit from any of them where the only Point I've been is to try to get the evidence out there where I've made everything that I've done completely transparent

(3:41:30) I've actually made my opinions transparent as those have grown from early on in the investigation to where they are right now I've made essentially zero doar off this in fact I probably lost money because I've been **scam**med out of \$3,000 by nut job **debunkers** and criminals there's no Fantastical answer null we're watching two videos man it's like if you were to watch videos of people getting killed and then you were to say that the fact that we're using the videos that watch the people getting

(3:41:59) killed is uh is a Fantastical answer we're literally watching it on two ins perfectly insync videos man and whether not you want to think that the videos have been **debunked** they haven't been so if you don't if you are somebody out there who's watching this who you think this has been deun well move on man go do something else why are you still here there's no discrepancies on a single frame in either video they've been **debunked** by prosaic explanations that defy logic and reason the VFX objectively doesn't match

(3:42:38) that's not an opinion that's a fact it has not been addressed by anyone it's not me that can't answer the questions this effect right here is not the same as what we see in the background that's not an opinion that's a fact that has not been addressed by anyone no one can answer that question no one can answer the basic question of how many pixels match you can literally see the tail of the plane sticking out of the real thing that does not exist in this effect that we see here right so no

(3:43:05) this thermal has not been **debunked** by anyone people that have mental issues have decided that somehow they think that we're looking at the same thing here which is objectively false I don't know how else to describe it it's objectively false I've set the standard I said tell me how many pixels match no one will do it because they know they're wrong I told people okay well go ahead and make this effect here which we can see has all these colors in it and it's an exothermic event make it

(3:43:33) match the other event the background exactly Pixel Perfect without comparing them do it without comparing them try to modify this image you see this Pyromania try to modify just this one frame but you don't get a compare to the other one make sure you're live streaming it so we can watch nobody will do that either I've set the standard and they won't do that because they know it's not possible you're not going to be able to make this effect match the other one without try without comparing

(3:44:00) them so I just want to be cleared is that is that understood there's no compositing man I've I just set the standard for you so I just want you to understand how this is going to work no I think it's important because we have people that are watching right now that like they are their minds are getting broken by what I'm saying and then they're going to go well his argument doesn't make any sense no it makes perfect sense there's I'm using perfect logic and reason I'm setting the

(3:44:29) standard very clearly for what you have to do if you want to prove it right it's not complicated it's very clear that what we're seeing here is not in our video this is it superimposed it's not even close on any even anything but the one frame it's not even similar now if you think that the clouds match or whatever sure you know tell yourself whatever you have the problem whatever you need to the problem is since we have two perfectly in sync videos here you have you need a 3D render for this in order to get the

(3:45:02) angles correct this rules out using a 2d Cloud effect we can actually even we even proved that the clouds match in both videos they show in the same spots so if you think it's fake you're free to move on man just please stop making fake stuff up about exploiting the situation which nobody's doing stop making fake stuff up about um that we're hurting the families or something like no family members have reached out man it's it's obviously disingenuous and whatever like mental issues you're

(3:45:37) dealing with in terms of trying to accept the reality of these videos being real that's that's a you problem man that's not an us problem that's a you problem so hopefully that's been fully addressed and we don't have to keep going with that and oh just and lastly there's been no hoaxer has come forward no one's brought any of the video files forward you know theor you're telling us we've got images of clouds from 11 years ago that somebody saved on their hard drive but nobody's got the files they use to

(3:46:08) make these videos no one can prove beyond a shadow of doubt that they made them no one can even recreate them I think you've got a lot more questions that you need to answer before we have to answer anything that goes out to the **debunkers** out there now now that we've addressed that I'm going to grab the fisherman thing here and I'm going to so if you guys wanted to seek here's the subreddits MH370 abduction I'll just put them in the chat this is the public sub**reddit** feel free to add content to the public

(3:46:42) one if you want it will be overrun by **debunkers** especially because they're watching this but it's fine the private one any **debunkers** that we see in the private one will get banned what's this one what is v. iio oh who that's weird what is this what are we even looking at here man that's pretty bizarre I I just don't know what that is so I can't run with that yeah fisherman waited till the other crew members died then brought it up and there's also just coincidentally no images as well

(3:47:34) it's pretty bizarre guys the VFX artists are all just like CNN brain right I've had other VFX artists that aren't CNN brain I already say that the videos are too complicated to make and and

nobody's been able to make them so we don't need to talk to any VFX artists we don't need to talk to them we're actually talking to scientists who are explaining how they're real that's a lot better than talking to a VFX artist I don't want to try to convince people that don't want to

(3:48:14) believe I just don't care the reality is I understand that a vast percentage of people maybe not vast but let's say at least 50% of people are never going to believe the videos to be real no matter the strength of the evidence we've seen that we've seen that not just from the **debunkers** but people who are actual supposed investigators you know just go look at the unblock alypse there was several independent group investigators who've had us blocked from the very beginning they're not interested in reality

(3:48:44) they're interested in whatever their little pet theories are and trying and using cognitive uh U confirmation bias to confirm that they're real even though they've never solved anything in nine years right that's the reality so we're not going to we can't try to convince every we can't force people to believe you can't force people to look at the evidence we can't force people to wake the best thing we can do is just keep moving forward and reaching as many people that are already have their eyes

(3:49:12) open that's the reality of it where is the the this uh guy there he is this is the one this is the image I want that's the image God can't stand all these over these websites are just garbage man is this like the only way they can stay in business is like 50 advertisements everywhere so I just I hope the people that like you know believe strongly in the evidence just understand that that we can't reach everybody so also a lot of people tell me well I argue with my family and they don't believe you yeah

(3:49:57) be careful arguing with your family man the reality is that there's a lot of people that can't understand it either like I even was talking my physicist cousin who does actual proton therapy for cancer treatments for children I think he's a physicist PhD and you know I tell him like  $E = mc^2$  right and he he just like makes up some like Star Trek terms and I go that's not a real term like cuz he thinks he's going to catch me on it and I'm like no that's a fake term you just made up I'm not talking fake nonsense

(3:50:28) I'm talking like actual real science right it was like did I get the wedding ads that was showing up oh boy oh boy wonder what that means okay um guys I I don't want to permanently block null did we permanently block him I'm unhiding him from the channel null you can speak again if you want I am putting you in **timeout** though for 30 minutes he was asking legit questions I don't want to uh be blocking people unless they're just adamantly trolling he's actually asking legit questions it's fine if people are asking questions

(3:51:16) and they're just thick brained or whatever don't please don't block them permanently just um put them on **timeout** let's try to be better about it okay so let's see what else we got we got another image here so we add image five and then lastly we do images six and seven I think that'll work and images six and seven let me just double check I only have six images here what am I missing image one is the Barnacles here's the Barnacles then we have the radiant physics

blogs so we can pull up this one and this

(3:52:15) one I probably don't even need this one the conclusion one's not even good let's just use this one and then this is going to be whisper not useful okay then this one will be the Patrick Jackson one Cambodia jungle guy Jesus man okay and then this [Music] one B net okay and then the last two images wait how am I am I just Mis counting oh yeah there is seven here okay we do have them all okay never mind guys never mind guys okay then five and six so then the last two images are going to be this one showing all the

(3:53:15) search locations look at all these different search people that think they know where it is and then we just show the search area maybe we get a better search area one I think we get a better search area let's see if we can get a better search area one real quick this one might be good satellite images of possible debris they found nothing of course priority search area was down here what are all these dots over here what does this Mark here mean I think this is where they search as well let's just save this I think we'll

(3:54:16) use this one save image we'll call the search area Wikipedia should we just call okay there we go okay we got that now too so let's just check real quick can this software pull in images I'm going have to clip these later as well I'm going to take a break after this I've been going for four hours going to go get some food and uh yeah chill a little bit I might I'll probably stream again later actually I also want to try to record this uh this first one um let's see if this I wonder how

(3:55:08) this works can I import any media I want here I want to test something out here Dragon Dr media and effects I think I can barnacles is first one let's just test this out let's see if we can get become VFX experts guys oh I think we can oh look at this can you say how long you want it to go for oh wow 5 seconds is the default I wonder if you can change that 5 Seconds might be fine oh this looks pretty good guys I like this a lot Barnacle whisper out not useful oh this is going to be good wait yeah okay that's

(3:56:00) good we can probably speed it up or slow it down here as well maybe this one oh this is going to be great this is going to make this so much easier for me then Patrick Jackson oh God this is great guys I love this uh Patrick Jackson Boer that guy and then what I'll do is I'll adjust the speeds to my speech to make it close and match and then expert locations and then search area yeah oh this is going to be good guys this is going to be really good so I think we actually want the image these images are going to flip up

(3:56:48) before the each paragraph here and then when I get to this part it'll go back to me again it's going to be good okay now how do we do this I think we're going to need more than 5 seconds on this how does this work oh I see that's that zooms it in and out oh yeah you can okay okay interesting okay I see all you do here okay so we just let's move this stuff over here okay I see how this works Zoom this in a little bit five and then you can make this longer oh wow 10 seconds I'm going to have to probably

(3:57:45) time this as I go um I'm guessing this probably is going to be 10 seconds might be enough for this this one's going to probably be about 15 seconds something like that Zoom this out a little bit oh this is cool man this is definitely the way to do it the other way I was doing it before chat I'll look in the chat here see what's going on um yeah man if honestly if I could find the hoaxer I would have collected that 145,000 you don't think that would changed my life it's a lot of freaking

(3:58:36) money I would definitely found I would definitely search for that hoer just be real with you guys can I just like exactly time this um 45 seconds how do I drag this over here I'll adjust the times as necessary but this is probably going to be pretty close and the [Music] boater 15 seconds probably go up to about here then the experts so this is going to be the one where probably about 20 seconds

(3:59:46) I think this one's probably going to be about 10 seconds like that I'll time this out see how that goes and then what we do is we combine these uh actually not combine them yet we might have to switch them all to get around a little bit should we do one quick run through see how it plays out let's do one quick run through before we go I don't really need to stopwatch up what I'll do is I'll play it and then I'll I'll do the thing here and see if it's close it doesn't have to be perfect

(4:00:24) it just needs to be pretty close right okay so how do I move this around here let's make this a little bit smaller I wish I could get rid of the stuff on the side it's probably like toolbar of some sort wait maybe it is no project info I can't get it to go away okay apparently I can't make this smaller either yeah it doesn't any smaller okay um I'll move it over here problem is I just can't read the storyboard okay during the course of the MH 370x investigation blah blah blah I'm

(4:01:11) just going to do the part after that so I'll do my face while I'm reading this part here then I'll switch over to the Barnacles and we'll start I'll say first there was the Barnacles that supposedly could pinpoint where the plane went down by reconstructing the debris drift patterns based on the temperature data stored in the shells back in August then there was the Richard Godfrey whisper analysis that made the rounds at the end of August early September where he claimed to know where the plane crashed

(4:01:36) despite counterarguments including whisper can't find MH370 via Victor elano of the independent group so that one's a little bit too long shorten that a little bit shorten this one just a tiny bit like that then let's go back to Patrick Q Jackson this is how we can time it and make it work next was the the claim that the plane crashed in the Cambodian jungle based on the Google Earth image that post States the crash by nearly a decade has the plane in one piece and somehow does not disturb the jungle surrounding

(4:02:14) it this is clearly just a plane flying over the jungle where the picture was taken this article even fooled orb expert Patrick Q Jackson that one's a little too long as well for sure probably about to there I can speak a little bit slower to make it kind of fit okay then next

recently there was are reports that spread worldwide in the news of the sole surviving fisherman who claims his net caught a nearly 100 foot long wing of MH370 9 years ago and it haunted him to this day he supposedly remembers exactly

(4:02:50) where it went and wants people to search perfect that one's actually pretty good stop okay lastly there are multiple other investigators that all use the iMat ping whisper report data to come to their own conclusion iion on where the plane crashed despite us having already searched above and below water along the entire seventh Arc they also can't explain how a 777 crashes into the ocean without leaving a debris field no black boxes no acoustic detections from three separate systems no radar detections

(4:03:24) from four different countries none of the four redundant elt beacons activating in the early morning hours along an active shipping route with no Witnesses this needs to be extended I think that what we do here extend this few seconds like that this is pretty good okay I'll take care of this the rest and then I'll say MX MH 370x wishes all of these search efforts the best of luck when none of them find the plane can we agree to consider the plane did not crash into the South Indian Ocean I don't know I may rephrase that

(4:04:02) not really sure what do you guys think about all that pretty short and sweet right pretty good I think it's pretty solid record audio first and then align the images to the brakes that might be the way to do it I can record the audio and then I can actually put the video into here right that's probably the way to do it good call if I just record myself just reading it all out right and then I superimpose it over here and I edit it together to make it fit probably the way to do it we're learning how to edit guys cuz

(4:04:45) then what I can do is I can just pull it in here and put it down here the separate track and then I can line it up the way I want that's a good idea I could even put the intro in there as well good call man good call appreciate you that's that's the way to do it I think just record it right okay that's what I'll do after this I'm going to go get some food I'll come back I'll probably record this I'll probably edit it together and then we'll post out our news responses can you

(4:05:21) believe that there's how many of the different things five six different articles six different articles man in the just in the last four and a half months all claiming to like know where the plane crashed Wild Man totally wild okay guys let's play us out uh if you guys want we'll probably be back online later tonight uh I don't really have much else going on I'm probably just going to watch a movie or something and then eat some food relax a little bit just enjoy my day off and then we're

(4:05:50) going to probably come back and I later tonight uh there's plenty more stuff to do we might do another one of these if I get good at this then I'll be able to push these out a lot faster I want to do other story boards I want to do a story board for uh the Drone video that'll be awesome that's going to be into getting into the science a little bit and let's see what else we got just see what else is upcoming guys probably at the end of the year I might repost the space of myself Danny and Julian I might even edit it down but

(4:06:23) I don't really want to be like dunking on people but it is pretty damn funny so it's hard to say uh we could do the the foas tonight that's probably something we should do tonight is the foas in fact let me write down this other one so I can close that and then I'm going to also yeah do some stuff some personal stuff related to MH 370x um the Rolls-Royce stuff we could do oh we also need to work on the all evidence yeah we need to do the all evidence this is done why didn't crash in the South

(4:06:57) Indian Ocean I think that's pretty much going to be included into our news one right we kind of changed this I like it better that way and then we could do a drone video explainer there's more stuff we can do as well but looks pretty good to me looks pretty good to me okay guys have a good one have a good dinner uh potentially we'll see you guys later not 100% sure but we will uh yeah we we'll come back later I'm going to play us out here actually I'm not going to bother playing us out I'm just going to close

(4:07:29) the stream thanks everybody talk to you later

The Unblockayplse - Unblocking Everyone on X 12/24/23 - YouTube

Transcript:

(03:09) okay I couldn't find the thing guys here we are oh let's get wait let's do the intro hold on hold on guys this is very professional stream one second very professional uh where is it uh oh God guys it's getting awkward oh [REDACTED] I saved it now I don't know where it is feels bad feels bad I got too many Clips guys how's it going how's everybody doing tonight I might move the camera over here so that you see me when I'm looking at the screen Merry Christmas hope everybody's doing well Merry Christmas

(03:58) Amanda boy it's going to be this is going to be quite the stream we got going on here once I get that the intro going going to unblock people going to apologize to people I decided even though I don't really want to but I feel like we need to and then yeah we'll just see where it goes Pro probably also going to do some giveaways to some people that have been supporting for a while not guaranteed but we'll see um man I don't know if I'm to find it oh here it is here's a couple intros

(04:34) this is a different one actually how did I not find this one earlier switch to main screen is there some that's pretty much it that's cool wait let's compare this other one it's like a shorter one I was trying to find the long one but whatever let's just get at this boys boys and girls ladies gentlemen it's going well it's going well it's been a long uh long Christmas Day or Christmas Eve oh I don't know we're just going to apologize Christmas you know Christmas spirit Christmas

(05:28) spirit let see what we got we're going to unblock the trolls today it's going to be it's going to be fun we're going to try it out how do I get to the tools hold on I'm trying to I'm trying to find it where's the block list security no uh premium no year account how do I how I get to this I can't figure out where the block list is guys I'm looking on Twitter I'm going to start with the the Twitter shout out to **Rebecca** you got a what you call you got a white knight here say give us a y Queen Dan Islander

(06:20) give us a YZ Queen security no I guess everybody even YouTubers get groupies huh we've got our own groupies too by the way somebody sent me some messages they the people on the alien uh airliner abduction dis or **Reddit** have a Discord and they actually think that I found it they actually think that I'm in there they're like I'm I'm like living in their heads like all the time they're actually they record my messages as well they record all the videos in real time like just watching like hate

(07:01) watching like it's pretty it's pretty scary man okay I think we're good to go I think we're good to go here pretty weird man okay chat you gotta we might have some dramatic ones here so you can I think is there a way to tell which ones I they have if they have me blocked or not is there even a way to tell oh boy we might have to block everybody or unblock everybody is there even a way to tell is it a different color if they have you blocked there's no way to tell look how many Bots I have blocked

(07:47) look at all these Bots do we really unblock all the Bots guys o this is going to be this is going to be sketchy huh this some these are some risky unblocks guys yeah has **Mick** West in here I mean this there's a lot man hate big family there's a lot why is UFO nut block is that the same UFO nut but anyway the people in that Discord man they're mentally unwell dude they're like talking about trying to infiltrate people I think that they implicated themselves and they uh fell fraud as well man they need real help not even

(08:34) like the funny joking way like please get help guys yeah so you can't I can't tell if people have you blocked cuz oh man we're going to have to unblock everybody unblock **Mick** first how do I even find him dude he's probably near the bottom he's probably near the bottom man let's unblock **Mick** West First guys guys we need some epic music for this hold on this is oh I got the sound is going through the wrong thing no wonder hold on oh [Applause] God uhoh guys Nick West is going to be first guys

(09:32) where is he dude this this L is pretty long [Applause] here this is a pretty long list how's is it too [Music] loud look how many how many trolls we about to unleash the quest is going to be free soon guys once we get to the bottom of the list I think he's near the bottom guys this is like a scary movie look how many [Music] guys I don't think there's a search it's too late I can't go all the to the back to the top now wait is this the bottom oh God right away James wait it's not alphabetical

(10:36) there he is there he is there he is oh I don't know if I can do it guys I don't know if I can do [Music] it ah I tried to move my mouse over it but it get sucked away like a magnetic [Music]

field I don't know if I can do it can we do it guys can we do it I don't know if we can do [Music]  
this we're back oh I don't know guys that was unleash them un unleash them oh no we better  
not be back at the top again

(11:42) James welcome back James okay we have to save this one okay oh look oh the power I  
can feel their troll comments already I can feel them already guys ah the condescension I can  
already feel it oh man okay hold on guys we have to get serious for a second okay serious faces  
guys serious faces we'll bring we'll bring it back **Rebecca** Watson I am sorry for being mean to  
you being rude to you calling you rude names there's no excuse for that h is the reality is I can't  
take it back I can't take back what I've already said just

(12:32) want to let you know that I apologize I mean you no ill will and I'm sorry for saying  
heinous things that nobody should say about somebody else ever it's not the person I want to  
be uh it's not the person I want to be turned into and uh I should be better so sorry and have a  
good night Merry Christmas okay welcome back welcome back **Rebecca** welcome back okay  
serious faces guys way to do something way to do something serious there but now we go back  
to being silly again okay oh boy our old ex partner

(13:18) guys un blocker just a block her again Merry Christmas guys oh our ex partner let's get  
some easy ones out of the way Oh Martin did so much for us [Music] guys welcome back Martin  
welcome back you may troll me freely random guy goor who I don't know has lots of followers  
but nobody ever comments on his stuff welcome back welcome back go Graham Cipher  
attorney internet folk hero welcome back Dave you are Immortal you may live to troll one more  
day iore yes Bitcoin I'm so arrogant I'm playing God over

(14:13) here H let's just shoot out a few more here we've got a lot to get through guys it's going  
to be a long night if you have a blue check mark automatically unblocks automatically hi Nick oh  
a o wait is should we reblock the a o is this actually real a o how did they get blocked no this was  
a joke right have 1,000 followers it's definitely fake though okay live to troll again AO live to troll  
again blue check even you random bot name even you will get unblocked 30 Block followers in  
this account oh I'm on blocking everyone oh

(15:00) you block you that's you're asking too much sir oh our first our first investigative group  
our first one Mike exner had me blocked oh wait he hasn't had me blocked he's just a troll okay  
is he a witch is that what that says there does that say he's a witch I don't know what that  
means but unblocked Mike exner welcome back to the investigation welcome back Prine you  
turned against us you went into full **debunker** mode the bunker brain and joined the evil side  
but you still get unblocked still

(15:44) unblocked all these other people yes well this could take a while I better speed it up Jack  
sarati oh my goodness can we is it even possible is it even does it defy physics doesn't defy  
physics to unblock [Music] him I don't know guys not sure I'm not sure we can do this one this is  
a hard one guys left-handed witches too I don't know if we can un block but does wait is Jack  
Safar sarfati left-handed is he left-handed folks is it possible guys is it possible do the physics

allow it guys got epic music playing I'm not sure if

(16:35) physics allow it guys okay we're doing it we're doing it nobody's safe No One Is Safe tonight No One Is Safe Chuck Wagon big troll welcome back oh man Jake Anderson I don't know you should have a normal sounding name yes Craig go ahead troll me troll me Craig pcal expert oh boy Peter done been there done that you also been unblocked oh UFO okay you got UFO in your name everybody on the UFO Twitter is unblocked and UFO X you're all going to get unblocked tonight just leave one person blocked

(17:29) we've come too far uh-oh uh-oh Dr screen been on the block list twice already been on the block list twice already twice he's already been on the block list can he get there a third time can he get there a third time he's going for the record everybody he's going for the record unblock the oh my God we have John Greenwell at the top of the list okay uh somebody asked just seriously though I know why is uh why is he apologizing just for Christmas uh just because it's the right thing to do it's the right thing to do

(18:10) we're unblocking everybody anyway so just cuz it's the right thing to do that's why I'm apologizing man guys John Greenwalt got memed on and blocked me got meme on not a good memer but you know what filed 10,000 **foyer**s he didn't file any of his **foyer**s related to MH370 but he filed 10,000 **foyer**s guys wulu I don't know why you were blocked guys I don't know guess we're doing it we're doing it oh I blocked I apologize because I was mean to somebody and I really shouldn't have been it was it was pretty

(19:07) cruel it was cruel I don't want to be a cruel person oh maruo Mario Koli you got the the creepiest devil looking face in the world my man but you know what still unblocked still unblocked everybody's getting unblocked today Marsh Ray unblocked Steve Barnes James gamble you're unblocked some guy with crazy looking name is that really this guy's name Franken oh yeah he's like an adult that's got like a 8-year-old gamertag [Music] name okay oh Android we have an Android our first Android this he do he looks like be the

(20:08) Android too maybe maybe you know what maybe oh my God oh my God guys we just keep coming hitting bangers and bangers it's just Banger after Banger here guys Jeff wise the starter of the pilot suicide myth the man who was kicked out of the independent group because they were too off The Rocker for them incredible the group that solved nothing never solved anything related to the case basically he's the a guy who on the Netflix documentary was the biggest joke of the biggest documentary in the world and has

(20:47) 12,000 followers but nobody likes his posts you know what Jeff unblocked unblocked feel free to love West as much as you want and obsess over him it was really creepy when you did that but I wish you the best sir good luck in the investigation and finding that plane in **Russia** Craig uh these people I'm I'm you're unblocked too damn okay oh I like that he's got the one of the videos in the background yes Kat even you I'm blocked I don't know why you got blocked jop Jason Blake you have a blue

(21:34) check mark everyone the blue check mark gets free lot reviews oh never well I spoke too soon we spoke too soon we spoke too soon guys L reviews unblock everyone except for Danny Jones maybe I forgot he's on the list guys we have a lot of bangers on this list a lot of bangers guys The Lure viws the the folk hero video ographer UFO Twitter Legendary Legendary wow legendary and we're blocked and he blocked us first I don't ever even think about him but okay we're blocked I literally never said his name ever on Twitter never once

(22:15) never tagged him anything that's okay L reviews you're free to make content about me and leech off my content as much as you want L reviews welcome back welcome back Ruby Ruby you love Victor like feels like it's a little weird honestly like maybe you guys are dming on the side I don't know if he's married or not but anyway Ruby feel free to groupy on Victory of the independent group as much as you want unblocked Clara unblocked Billy mildly myth mythoptical that movie but got it unblocked CU music is music is awesome

(23:06) why am I unblocking them it's Mary unblocks Miss guys oh Kyle Kyle wait I got to reblock you Kyle this is KC IMC guys he deserves his own music we had to switch to the next song he deserves his own music a man who actually gave us some of the strongest Evans to date then went full **debunker** mode incredible it's incredible how one can twist their logic this like this where is it where's the one where we can see the clouds in the background um theum accurate illumination where is it accurate illumination

(23:44) uh is it this one no that's the clouds in syn damn it well I'm not going to drag it on but Kyle Even though you are a **debunker** you gave us some of the strongest EV Series today so you get to be unblocked sir welcome Merry Christmas Chris Hunter unblocked all these people unblocked man it's incredible how many free speech is not free you are correct unblocked please follow back probably not but unblocked did I even blocked the cordor crew I don't think I even did frisky Dingus great name easily unblocked oh no I misclicked misclick

(24:29) folks too much Boomer in me I'm misclicking I would be dying in League of Legends right now Gano yes even you will get unblocked make life better yes this baby has a a Waldo hat on easily unblocked yes you yes you too Teflon Don Trump okay even you get to be unblocked oh my goodness there's Richard gridge guys it's Richard grid sh literally only interacted with him one [Music] time interacted one time ever told him that blocking the MH370 hashtag was one of the worst mistakes he ever made I think it got to

(25:15) him I think it got to him folks I don't know what all these words mean here but awesome awesome sir keep up your OS I NT keep it up open source intelligence or whatever that means you missed out on the greatest videos ever but you know what all you had to do is look into these videos CU just seen everything you want to know about UFOs cuz see whatever you wanted to know I guess this doesn't count as open source intelligence guys just classified videos that have been **leaked** to the public no no discrepancies on a single

(25:59) frame but it's not up to Richard standards anyway Richard unblocked sir unblocked continue to obsess over me please okay uh-oh UAP Max was this the guy who said he could

make the videos and I offer him \$2,000 and he said and he didn't do it or was that a different guy I don't know but uip Max even though I'm 99.

(26:26) 99999% sure you're a redditor hater you're unblocked everyone's getting unblocked locked Richard's a devil Mysterio unblocked spaceship earth Commander uh okay sure unblocked yes unblocked let's let's get through these conspire [ ] sure anyone on conspiracy Jeffrey nappy I remember you trolling me several times but you know what you're still on blocks some of these people go months back on the blocks guys some of them go months back back oh my goodness Neo Morpheus Morpheus is here yes has set 5,000 followers wow that's impressive

(27:09) dedication to a character this is like Frank Underwood level Obsession wow host of the truth Seekers well we can't not unblock this guy we cannot not unblock this guy oh it's hard though it's hard not going to lie hard for some some of these are hard okay that one physically felt that one guys like an electric force okay unblocked anyway yes even if they have me blocked I can't figure out how to figure out if they have me blocked so we're just unblocking everyone it's the right thing to do anyway everybody's getting

(27:52) unblocked especially in the Mad scientists even if George is the one to use the orbs to end the world we've still unblocked him it's got a little weird when you have the picture camera in your picture but fine easy Mass Solutions even though this might be just an advertising agency also unblocked we're unblocking everyone oh man the unblocks are getting hard here guys I don't know if I have enough endurance for this this is definitely a troll definitely I can just tell but we're still unblocking it's incredible how many we

(28:31) have blocked I feel like we're not even like a fifth of the way through guys there's some big names still to come guys I know I should keep Jack Sur blocks you should just be like the only one maybe we'll vote on the one person that will stay blocked okay I'm not recognizing a lot here just low-level fodder trolls a physician up an MD disrespect okay you're welcome back welcome back woke bloke well this one's a tough one too guys they're missing the Z zims though in their uh in their

(29:22) bio I want to see their bio how do I see their bio that's a that's a lot of flags guys so a lot of flags okay still doing it even people who are just begging for attention I want to see the black triangle too yes Terry yes okay W Nicholas G yes that's that's easy block okay this looks like a normal handsome guy easy block easy unblock I mean easy [Music] unblocks guys there's still a lot to come Anonymous uh-oh guys oh not the real Anonymous well who knows though who knows oh my God an actual Android 0111 01 011 01

(30:12) 01 that was me just responding in binary to how 190001 saying welcome back free to troll me free to troll me oh my goodness an actual anti-science YouTube channel on ironic actual unironic anti-science YouTube channel muted and blocked guys muted and blocked wow the double whammy this is my epic music okay the double whammy unmutes and let's look unblocked also okay big election frauder okay where's the stuff where they talk about how science

isn't real let's check it [Music] out **debunking** quantum

(31:15) mechanics **debunking** quantum mechanics a thinking that AI is going to **debunk** Albert Einstein guys yikes man this is this is weird **debunking** special relativity modern physics **debunked** how how is this a real Channel folks how is this a real Channel relativity myth is this uh do they think believe in fat Earth or **debunking** quantum computers I bet do you think they have a electron theory is incorrect okay we're out there we're definitely out there huh I wonder how do they think aliens work it's like I'm it's like I'm supportive

(32:13) of advanced technology but I also believe all physics is fake okay you know what you're still unblocked it's BS welcome to the unblocks welcome that one's a tough one this one's probably harder than mck West like this is weird OMG there's UAP Mike a man who's been blocked twice in rare company very rare company up there with Dr screen been blocked multiple times extremely toxic individual bio is super weird brags about being part of the L crew but also being asset lless dented with whatever that means and droian

(32:58) scopan and also just for a good measure Necromancer not sure if he's talking about Diablo I or in real life or whatever up uip mic it's hard U mic dog smoking a cigarette dog people okay guys seems like a standard old school just retweeter huh okay unblocked one of the ultimate haters of all time unblocks welcome back uip Mike go for three go for three hey James in the chat how are you guys doing everybody who's watching enjoying the Epic stream the great unblocking Christmas Eve special oh this is is an epic troll this

(33:59) troll makes other trolls look like they're just on the just that like they have no skill whatsoever a man who's completely obsessed with me uses a Ghostbuster for his handle and his name completely obsessed he's M again muted and blocked muted and blocked unmuteing unmuteing this is uh pretty cringe what is this guy oh a follower of **MC West** what a surprise folks what a surprise maximum follower of **Mick** West wow retweeting **Mick** West posts yikes yikes man how does **Mick** West get retweeted on TV all this much and only has 38,000

(34:56) followers yikes guys even though he's epic troll one of the worst out there still I'm blocking you Pete bankman even you even you one of the worst Troll Boss character yeah this is the final boss of the trolls right there final boss Cliff fat Cliff you didn't even do that much to get blocked you're just a little too in the woo for me man a little too into the woo I can't appeal to both sides I got one side that wants me to admit that it's all fake I've got the other side that wants me to admit

(35:33) that it's all like Angels and Demons it's like man I cannot appeal to both sides it's too hard it's too hard be right back this I should turn on dark mode I have no idea how to do [Music] that guys you want dark mode oh crap should we figure out how to do dark mode jack surti legend legend in his own mind turn on dark mode Twitter okay guys here it comes I've got instructions go to your profile tap settings and privacy uh I don't see that settings and support settings and privacy there it is there it is display

(36:36) tab dark mode uh guys there's just too much Boomer in me sound tab tap [Music]  
display playay ooh background dim ooh dim or lights out guys guys dim or lights out oh you can  
change colors wow guys wow we've achieved a new power can this power be used for good can  
this power even be used for good what do we do lights out or dim we hold on we're going to  
have to do a pull okay poll's coming please vote vote guys dimmer lights out I need a I need to

(37:40) vote if you care this is going to make the difference guys this is going to change our  
reality okay please vote lights out or dim folks I'm going to show you guys you can change your  
vote guys this is forever I I didn't even know you could do this so I'll probably never change it  
ever again please vote guys your vote matters guys unlike in presidential elections your vote  
actually matters here this is more important than any election that's coming up in the near  
future this is the difference between how our

(38:35) streams will show P it's getting pretty close we're going to one more vote and we're  
going to end it guys 49 votes honestly the boat doesn't even matter okay there it is Lights Out  
it's lights out now what color blue yellow pink purple orange or green I want to see what you  
want in the chat folks this is a very very important decision guys extremely important I'm just  
going to probably pick whichever one you guys said the most of in chat whichever I see the most  
of orange green purple pink yellow or blue

(39:13) folks which color what would Elon Musk approve of folks guys which one won't get us  
**debunked** by the **debunkers** which color this matters folks this matters this matters a lot okay  
I'm going to go based on which ones I see the most and then we're going to do we'll break down  
between two I'm seeing a lot of purples seeing a lot of purples the next one I'm probably seeing  
red blue purple green seeing a lot of greens oh boy purple's up there guys purple's doing well oh  
boy purple's definitely purple's in

(39:58) there okay purple's in next next color what's going to be the next color it's going to be  
one of these two colors purple versus what what should be the other color we we battle against  
oh man what's going to be the second color I'm going to have you guys vote after we get to two  
colors I'm seeing a lot of Pinks here and a few Blues okay we're voting it's voting it's purple  
versus pink guys start a poll this is the permanent color for Ashton Forbes guys this this vote is  
important

(40:36) guys it could change the whole world purple or pink guys purple or pink guys don't  
forget to vote Vote or Die as P Diddy would say guys pink or purple oh man guys this is intense  
I'm scared I'm scared guys I need you to vote we need voting we need voting do we have a pink  
and black or purple and black not going to lie purple looks pretty damn nice the pink would be a  
slap in the face what do we choose what will it be it's like Survivor we'll come back after the  
break just kidding imagine if I did that I

(41:24) just walked away for like 10 minutes uh okay let's see what we've got here it's 54 votes  
and the winner is it's purple it's purple folks it's purple wow okay wow epic actually epic okay so  
wait this isn't going to refresh is this what if I oh boy if I refresh this we're going on the top of

the list okay it's fine we're at top of the list now watch my DMs just pop up just cuz they just do that we are a purple dark and purple oh nope not like this okay we're back we're back folks it's

(42:04) okay here we go let's get those let's get those unblocks going I'm I'm re-energized oh man it's so much easier now that it's black and purple makes a huge difference guys that vote oh here's here is a **Reddit** and YouTube troll the trifecta **Reddit** YouTube and Twitter troll two followers serious business serious business [Music] guys okay unblocked welcome back welcome back to the troll Club Freedom At Last freedom freedom for all everybody oh scop Queen literally a name that's named scop literally name this name say

(42:53) how yes even post stuff about me excellent excellent complete troll okay just trolls all the time wonderful I'm excited I'm excited even makes terrible trolls terrible memes that can only appeal to CNN brain people you're welcome back welcome back to the troll land person who has no life whatsoever you can troll me free once again you've been Unleashed oh I don't even know if we can do this one guys this is the worst troll on all of Twitter guys the worst troll guys I we might have to come back to

(43:41) that one we might have to come back to that one trajan's ghost new account okay unbanned unblocked God there's there's some people probably in that uh **debunker** Discord that are just sitting there going when's my turnour coming I mean wins my turn the precious the precious you took the precious and the Bots look at all these Bots guys Giana Elana Giana again Emory and Haley and Giana and Cory unblocked unblocked a lot of elas guys there's a lot of them there's going to be a lot of Elana Bots getting unblocked

(44:23) they're going to definitely be able to like my content again yes look at all these Bots a lot of em Emily emilies oh man so many Bots elas emor Elanor Elana elenas elenas again elas so many they made so many accounts guys have we block unblocked enough Bots God this whole list might be Bots look at all these Evelyn again Grace again Emory for the like 10th time Kora for the 10th time Amilia now we're into the dilas okay I think we I think we broke through I think we broke through the threshold of bots oh this is an endurance battle

(45:12) folks wait what was that one I saw no reason to block Guys somebody who's extremely meta extremely [Music] meta for some reason they have a picture of Think Tank no followers no following no reason Ashton no reason a literal count just to cry about being blocked damn we're unblocking accounts that are literally created just to cry about being blocked guys this is very meta guys this is very meta I don't know this might be too meta guys there is no unblock all I wish there was this would be a lot faster you

(45:55) can import blocks can import blocks H interesting trash Panda actual okay that's an interesting name doesn't make any sense but okay guys do we unblock king milk fart man this is the worst one out there permanent bans multiple times multiple times permanently banned still out here trying to farm followers trying to make a name for himself trying to make a name for himself guys that's all he's trying to do out here permanently banned from Twitter multiple times this account most likely will also get permanently banned

(46:31) for ban evasion he's not allowed to make new accounts but he keeps doing it anyway do we unblock him even makes artwork about Lando that is extremely cringe extreme cringe for some reason hates Neil deGrasse Tyson more than most people do oh there's the alien face and then for some reason he's he's posting pictures of alien interviews really really hates NR Tyson guys do we vote man do we vote on this no I think we just have to do it I think we just have to do it we just have to do it's hard guys it's like fighting

(47:23) the Ultimate Enemy you're not going to beat him on the first time permanently blocked multiple times do we let him back in do we let him back in we're going to do it we're doing it wow wow it's like a a million a million incels with no uh girlfriends All Cried Out at the same time Freedom okay here we go let's move on let's move on I can't wait for him to make videos from the back of his mom's car that that's pretty epic especially about me love you love you king milk fart keep up that fight keep up that

(48:10) fight against other people that disagree on an internet okay here we go let's let's go through some of these let's getting epic in here guys [Music] king milk fart harassment archive is in the chat hero actual hero not the hero we deserve but the hero we need the hero we need folks red panda I see you too red panda is like yin to the Yang of king milk fart like the exact opposite YouTube videos oh yeah Arnold's coming epic Arnold okay keep going we have a lot of bots unblock look at all these Bots guys half my list could be

(49:13) Bots it's a lot of bots guys click here for in BIO click the link in BIO folks are you looking for beauty and brains a partner to laugh in love with click on their bios obviously a real human being Emma 5217 5514 219 you've been unblocked definitely real people definitely real women guys definitely real okay see how many we can unblock here oh boy I want to I can't wait till see which next uh Twitter celebrity is next on the list here it's been pretty epic so far just as a recap guys **Mick** West got unblocked

(49:56) John Greenwalt unblocked and the worst troll of all King milart unblocked who knows what cringe will come upon us next what terrible memes we'll be S suffer to can you imagine how many times we'll be told to just let it go guys just let it go guys why are you doing stuff that you enjoy just let it go it's going to be it's going to be epic folks J W former EMT Kinesiology hiker lover you should never have been blocked to begin with u caucus whatever that [Music] is we're just out here like John Wick

(50:40) unblocking people just tagging them everyone's unblocked just let it go that should be the tagline just let it go don't you know that's been **debunked** my favorite Twitter my favorite Twitter or YouTube streamer told me it was **debunked** guys then they pinged their favorite Twitter streamer in or YouTube streamer in as if they're going to come and defend them unblocked all of these people easily unblocks oh tachon engineer how can we not unblock somebody with this type of name oh our thing reset [Music]

(51:43) okay Gravitron of course we'd have to unblock somebody like you disclosure now hate big family this is definitely a questionable account we're going to still unblock it still in still

unblocking everybody who has aliens in their in their picture yes unblocked Dave pnw wants to be blocked and unblocked sorry that's not how it works folks UFO nut unblocked skinny Bob also unblocked Halo R Moon yes easily unblocked Halo arm Moon look at your picture there yes mat long unblocked astrop politic yes everybody

(52:35) everybody who's into aliens and yet wants to hate on us all [Music] unblocked we'll see how long this last folks I'm going to hold out as long as possible it's like when you're in the you're in the movie you're just under attack from all sides just getting destroyed you just have to see how long can you hold out till you fire off the secret weapon blocked Martin I should I should block loed Martin then unblock them even though they're orbing people orbing planes and covering it

(53:09) up they still deserve Freedom as well everybody Emily Mackenzie what did Emily mckeney have to say folks it's blurring time yes we're going hard here guys o a **Reddit** moderator a **Reddit** moderator you might as well just tell everybody straight up do you live with your parents red and moderate no offense to the red and moderators in the chat block blocky Martin boy **Reddit** moderator folks it's a rare breed rare breed this like running into like a a white deer in the wild feels wrong to unblock you know feels

(54:00) wrong just feels wrong but Silo cyan 95 [Music] unblocked ghost wax unblocked Nick gold you hurt me you hurt me Nick it hurt when you blocked me it hurts so much I even donated to your to your declassify you still blocked me [Music] sir anyway still unblocked we have to be the bigger man we have to be bigger we have to be stronger even when they block us unblocked boom cop stalking easily unblocked noncredible UAP reports this definitely seems like a scop this definitely seems like a scop noncredible UAP reports the whole

(55:01) purpose of their tag is to what talk smack to people probably yes it looks like their whole thing is talking smack to other people yikes okay well this is a definite troll so we found a definite troll we've cornered one we've got one in the corner here guys we have to judge it judge it ah we're going to have to release this one we're going have to send it back out guys it's not big enough it's not big enough to haul in got to release this one no we haven't reached Julian Dory yet you just

(55:40) reminded me he's on the list somewhere he's on the list somewhere okay here we go guys we're still going there's a lot guys we've been going for like 45 minutes unblocking people and then we're not even done not even [Music] close there's a lot of trolls in this business collect a lot of trolls we even got people with Masters in nuclear engineering hating on us haters dude's even got Star Trek thing faster than light I'm blocked I'm blocked wow wow Eric Crimson with the weird

(56:29) spelling believes in Star Trek watching a plane literally teleporting video too hard to believe too hard to believe believes in the actual Star Trek though okay that's okay unblocked sir [Music] unblocked unblocking also sorry for however I hurt you sir I don't know I don't think remember ever interacting with you but however much I hurt you to make you block me I'm

sorry I'm sorry okay let's keep going guys we need to unblock the econo lodge next I actually want to block the econo lodge just that if econo Lodge showed up

(57:14) on my list here I'd actually just die of laughter Theo Lodge okay day Traer man day trader finance and UFOs quantum mechanics it's interesting how many people were interested in quantum mechanics can't believe in in warp speed okay okay oh here we go another epic troll fake account solely made to **debunk** me solely made just to troll me another personalized troll account I'm blocked the whole point of this account is to troll me and yet I'm blocked interesting very interesting how many pixels match indeed how many no one's

(58:13) answered the question yet today how many pixels match chat how many pixels match chat is this our effect is this effect in our in our videos here it's almost like that effects not in our videos but no guys guys on one one frame where we intentionally match it it's kind of close guys it's kind of close if you just ignore these extra lines ignore the middle part entirely ignore all the stuff sticking out ignore the fact that the plane sticking out of the real one if you ignore all that and this whole left side here

(58:55) then it's a perfect match guys it's a perfect match how could anyone deny that this VFX is clearly in our videos folks how could it be denied impossible just because it's an explosion and the real videos an an endothermic event that they're completely opposite how could you such easily deny this I don't know FJ you win you are too smart for us too smart we have to unblock you epic music boy this is getting uh getting pretty serious okay some of these are old school trolls some of these are old

(59:50) school man they've been blocked for a long time I'm not sure all of them are going to come back [Applause] back the blockathon Deep oh the forb oh we're here we're here we're at the darkest part of the journey folks the darkest part battles up to this point have been easy compared to this we have an actual stalker troll account and the Julian Dory podcast the only podcast I think that deleted their podcast cuz it was so embarrassing the only one he's so **arrogant** he's so **arrogant** you chose violence you chose

(1:00:37) violence his Vengeance account I don't know this is actually him of course I do not know it's a just a random Forbes tracker account literally just to troll and follow me built just for one purpose that one purpose is to delete all his posts so that no no one can find them and want Civil War wonderful wonderful well you know what welcome back Forbes tracker welcome back welcome back to the land of insane trolling just complete not jobbery let's do it bring it back deep State Vengeance Ash Forbes tracker this is

(1:01:27) like straight up Elon Musk following you on your plane level stalker but do it we'll come back to Julian Dory to think about it we chose violence after all we did choose violence it's true we did choose it we're going to try to get rid of some of this low hanging fruit it's like guys we have to oh we had to take out some of the fodder we had to take out some of this fodder before we get to the boss you know you can't just go straight to the the boss mind of moam Welcome train recck of thought

(1:02:00) you've got that uh what is that Saints Row Saints Row emblems the whatever New Orleans thing 911 Revisited okay 911 revisit you posting 911 conspiracy stuff in my replies telling people to go to 911 **truth** or stuff despite that despite that I was insistent that we would not mix conspiracies you still came into my replies still tried to use that against me however we'll let you go you're free you're free to post 911 **truth** or stuff in my replies now you're free no one can stop you no one can stop you until I

(1:02:42) block you again be free tell tell your **truth** to the world get shadowbanned by all of social media Forever Yours this is definitely a real person forever yours I know you're out there I know you're real unblocked that's a personal unblock just for you very very real person shilly shill [Music] shill shilly shill shill folks this is a tough one guys shilly shill shill no followers interesting some Donald Trump supporters love me other ones hate me it's the dichotomy of man welcome black shilly shill shill welcome

(1:03:44) back ronio I remember you from early on in the investigation ronio welcome back welcome back to the land of the trolling we've almost we've almost accumulated enough small fries here where we can move on to the boss UFO news not sure why you would hate me but we're unblocking you oh no no no reblock reblock o preemptive unblock o the great block unblock alypse here guys this is a journey not not many have undergone not many have undergone this journey Julian Dory podcast 1,000 followers we basically gave him an extra

(1:04:23) 500 followers just because that's how many people are out there that hate me they just hate me that much folks my guess his post get 200 comments I actually she has more comments than I thought or more reply or more uh engagement than I thought thousand impressive impressive even though you're never going to be next Joe **Rogan** not in this world in this reality but maybe you get orb'd to another reality and then maybe there they don't have a Joe **Rogan** and you know all the other podcasters that are out there maybe they all you

(1:05:03) know get hit by a meteor and then you you could be the next Joe **Rogan** the next Jersey Shore Joe **Rogan** Julian Dory welcome to the unblock Club welcome to the unblock Club sir even you every single person is being unblocked tonight every single one this was an epic part guys this is the epic part in the story when like one of our like best buds probably dies they die at this point and now we have to carry on carry on without them still so many more to be unblocked that boss took out took some from us took some from

(1:05:40) us we unblocked him okay rebuild ufology is anyone with this kind of picture it's it's a huge red flag not going to lie big red flag but despite that you've been unblocked Kent everyone named Kent is getting unblocked tonight there's a few of them everyone named Kent will get unblocked all of these people who I don't recognize all unblocked going to build up to some new bosses I'm not even sure who we out who we have out there man I don't even know what we're going to come across we might come

(1:06:17) across a boss we were not prepared for maybe we're not well equipped it's not easy unblocking all these trolls it's not easy ways on my conscious folks just how much damage am I

unleashing to the world how much damage yeah we do need a save we need a save point we definitely oh TJ TJ somebody who got extremely hurt by me blocking them even though they were talking smack about me it was very personal very personal felt like anyone who is friends with me they cannot be friends with this a you guys don't realize the

(1:06:55) personal cost in this ufology game everybody's feelings must be handled with delicacy it's all about how people make you feel TJ I'm going to make you feel good tonight I'm going to make you feel good you make me feel good TJ unblocked unblocked welcome back welcome back TJ you can be friends with all the friends all the people that I know you can be friends with them just be free TJ okay let's see who else we got foret publicly buzzed yes welcome back everyone the blue check mark all blue check marks automatically

(1:07:44) unblocked just just to troll other people it's a counter trolling everyone who supports Elon Musk our savior he he will take us to Mars Elon Musk will take us to Mars he will implant chips in our brains it's for our good it's for our common good easily unblocked T Powell yes William Foster even though I'm 99% sure you're the person who made up a FAL a false background check where you looked up somebody else who didn't have my middle name and claimed it was me even though you went the lowest of

(1:08:24) the low lied completely about a fake criminal background check about me even though you did all of that you have no redeeming qualities whatsoever we're still going to unblock you William Foster unblocked unblocked welcome back William Foster welcome back to the land of extreme angry hateful trolling Alexis Billy clerk unblocked dick shy okay dark humor unblocked easily unblocked guys this are this are some mini boss that was like a mini boss we had up here wherever that guy went was like man come of fake background checks that's that's next

(1:09:04) level trolling lot bizarre even you even you we'll get unblocked uh-oh if I ever go viral and you go through my tweets you'll see **sexism** towards female footballers but never racism or homophobia now back in the kitchen W that's offensive that's extremely offensive oh okay yeah so it's that's pretty offensive guys um H okay why are the **sexism** though is that just like a thing okay wait I thought he was going to be **sexist** towards female footballers I was sold a bag of uh bag of ill Goods here by that person I

(1:09:56) expected more trolling did we already unblock them are they already unblocked man already unblocked unblock that person too even that troll account got unblocked Kate Kate Arete easily unblocked yes you're probably muted and you Kate are unblocked let me double check Kate andan you are unblocked guys wait wait there's an Instagram page let's just double check somebody links their Instagram page you know I'm clicking on it oh okay wow okay easily unblocked Kate easily unblocked is that **sexist** okay Justin normalan unblocked Mario

(1:10:43) kids unblocked Gary peek unblock some names I can't pronounce Huka cot unblocked yakam plays I don't remember what you did did oh I think I think this was one of a troll accounts that was made maybe I don't know anyway unblocked Merry Christmas Eve and Merry Christmas Marcos keep it appropriate Marcos I'll have to get nightbot in here nightbot will make

short work of everybody in here oh this is some synth wve La Sunset style right now we're just cruising now just unblocking left and [Music]

(1:11:36) right even if just straight up fakeing accounts like this dec1 6251 31 d3c unblocked welcome back these are definitely real people thank God Twitter lets people just keep making fake accounts what else would this place be like if we didn't have all these trolls not a not a world I want to live in folks not a world I want to live in Nick the James Nick James the first he has two first names guys two first names can we trust someone with two first names it's a lot it's a lot of trust I'm being asked of

(1:12:21) here you know what we just going to do it let's not question it let's not question it two first names I said anyone with the blue check mark automatically unblocked Nick James although I don't think you're the first Nick James in the world probably not their first Nick Zachary Forbes has the same last name as me the Z Forbes damn has a better user tag name than me as well but only has 18 followers very sad very sad folks you know what we're going to have to unblock this easily unblocked okay let's keep it rolling

(1:13:06) this is this is starting to actually Tire me out I I really didn't think it would take this long I didn't think it would take this long I need an intermission okay this is what happens to be like 1400 people blocks oh good man definitely into that numerology not sure what's going on here but you know what all good man it's all good guys is getting a little uh into the woo for me getting a little into the woo for me here I don't know what these numerology stuff means that is uh okay we're going to

(1:13:45) unlock this person just because um it's not the kind of person I want to have blocked let's say that it's not the person I want to be on their bad side Brian William Hughes unblocked easy unblock Jazz deep oh yes definitely un blocking you and it just keeps going the list never ends folks not a bot not a bot [Music] huh guys we will not leave any trolls behind not even one they will all be unblocked this this is not a game it's not a joke it's 100% serious Merry Christmas to all the trolls guys Merry Christmas to all the

(1:14:32) trolls we're getting unblocked right now they will be able to run free telling us to move on move on stop talking about things I don't like and we have to sit there and we'll have to take it cuz we're strong we're strong Warren for president I don't think in this reality that's going to happen Graham H but you know what you live your best life live your best life politically homeless me too Frank Underwood for president by the way folks Frank Underwood for president only only if Kevin spy stays in character all four

(1:15:13) years straight all four years straight can you imagine that would just be epic Kevin spy if you're listening 4 years stay in character treat it like it's a long movie if you can stay in character the whole time Frank Underwood for president boom make it happen everybody make it go [Music] viral oh here's another troll this oh man you got angel wings in your picture thanks [Music] man I I don't even get [Music] this I really don't even get [Applause] this is this a [Music] meme ah man people are just into the

(1:16:08) Palestine uh Israel stuff just feels like people are just like using it for clicks using it to farm content anyway unblocked anyway yeah we got the chill music now we made it past the hard part we got past some of our harshest bosses guys that UFO chick yes you are UFO chick this is real this is reality Court science even you unblocked even though you have us blocked for some reason however we offended you Court science however we hurt you you're free now you're free you're free to not have to deal with advanced technology and planes

(1:16:51) that are being teleported no it's hard hard it's hard to deal with okay here we go next Tommy Tucker unblocked okay yes I'm just not even going to go there unblocked yes John here's all of you D droopy Louie welcome to unblocked wow one day guys the list will end one day it's like when you're trying to go up a set of stairs in your dreams and it just never never ends it just keeps on going could never have imagined we'd have blocked this many people Ian yes even you Ian I remember you trolling me

(1:17:28) Ian I remember you you know what unblocked Ian this is uh non-copyright music on YouTube so we don't get copyright strike during our epic unblock Aon unblocked I think I hear MC West coming in behind me [Music] guys just got to check behind you for MC West every once in a while guys he's everywhere he's everywhere he's like Bloody Mary you say his name three times and he [Music] appears UAP Observer even you UAP Observer I don't know where we went wrong we're making amends right now unblocked making

(1:18:28) amends unblocking every troll who's harassed me every troll who's condescended every troll that's told us just move on just move on you're so arrogant oh God here we go an orb expert guys this is one of the final this is one of the like the bosses before the final boss this is one of the bosses before the final boss a man who is an expert at orbs how is he an expert at orbs your guess is as good as mine I guess self-title guys self-title orb expert wrote a book completely incoherent book doesn't really explain how you're

(1:19:08) an orb expert wrote a book though has 8,000 followers wow maybe if I make my picture dark and gritty like this maybe if I make my picture dark and gritty I can be as cool as the orb expert oh let's let's do a little bit of read left video of Spears in action recently filmed right screenshot of my paper that was given to a US senator uh I think the word paper is doing a lot of heavy lifting here it's doing a lot of heavy lifting uh random screeds on a sheet on some uh toilet paper don't really count

(1:19:39) as a paper I mean technically it is almost a year before the Spheres were even made public ooh spheres made public type two spheres Delta Data relays based on what oh some arrows based on some arrows these link the type 3 Network to the type one sphere in the cluster v formation this is based on extensive research folks extensive research the type three and the V formations type three spheres allow low to the ground or operate low to the ground to create an underlying data link for the type ones using building to Shield the

(1:20:19) electronic signatures and Emissions this is definitely very serious and very real very sciency in here very science this network spans across countries in lines and clusters that is very

similar to our own Long Hall microwave based networks and we're basing them it looks like on size is our criteria microwave link okay I'm not sure that's consistent with science but Patrick Jackson even you the orb expert the author multi-talented Paranormal Investigator Ghost Hunter yes sir even you are being unblocked tonight takes a lot of effort

(1:21:03) takes a lot of willpower to unblock somebody somebody of this level huis who thinks that they can explain technology that they have no idea how it works whatsoever welcome back welcome back Patrick Jackson you can do more go ahead do more polls Patrick Jackson telling us what we should think about the videos very scientific we appreciate that please keep doing those keep telling us it's in the Cambodian jungle or wherever you find on Google Maps let you do your science dck Vision thank you very much for the the donation man we're just

(1:21:39) trolling around a little bit while we unblock the trolls you know it's uh it's one of those nights one of those nights Gus keot Ebe all you Twitter followers all of you blues or whatever they call this thing check mark verified people all of you support for freedom for the American way and also just you know freedom for people in other countries as well even you Britain even you Britain I see you UK followers up at 2: in the morning 2:45 in the morning sitting up there watching this just wondering what the hell is

(1:22:14) going on right now I see you UK followers you're probably a little drunk maybe a little high I'm not judging you I'm not judging welcome to the unblock Aon unblock a lipse Kent Reynolds a mini boss guys a mini boss does not have blue does not have subscribed to YouTube but feels very entitled to telling everybody else what they what they should think Kent you got a good-looking picture Kent I would never have guessed this is what you would look like in a million bazillion years never ever I don't know what's going on with

(1:22:51) your background picture I dig it though I dig the beetle you know what K we're not even going to we're not even going to think about that long we're going to go ahead and just unblock this is yes this is the true fractyl toroidal moment the universe may collapse in on itself after we've unblocked everybody it's very very possible Danny Rodriguez welcome back to the unblocks welcome back team red easy unblock Lee UAP Lee how could I not unblock somebody it's got an AI face going on and definitely one of the

(1:23:24) creepier banners I've seen in a while I don't know what's going on here this is some kind of Attack on Titan thing with like creepy people looking in or this is like an ant farm with people miniature people in it but it's pretty creepy anyway Lee we're going to unblock you okay all these people also unblocked ooh best life this is another troll account science reason and Sanity when you see stuff like this in people's profile it's a bad sign folks red flags red flags anyone that's got to announced

(1:24:00) that they're into science and reason Insanity usually isn't into any of those things cadonna in the chat Merry Christmas kadana hope it's going well this is the unblock alypse everyone's being unblocked every troll every troll folks I haven't even gone to look at my notifications on this yet there's probably 50 troll messages by tomorrow morning I imagine of

people just trying to dunk on us troll us everything you could think of it's going to be sketchy  
okay best life welcome welcome uh oh boy

(1:24:43) guys I don't want to be racist don't know how to say this name and I don't want to be  
offensive uh we're just going to go ahead and say you're unblocked sir you're an electrical  
engineer sir in Marat mistake hello inmat mistake this is an intriguing intriguing profile folks  
electrical engineer and investigator who found the hidden site fuselage in a volcano I don't think  
the fused into volcano sir but I do like that you don't like ersat I also wish I could pronounce your  
name there's just too many

(1:25:29) consonants too many syllables for me we're going to we're going to do the world of  
favor and I'm not even going to butcher it although guys let's look let's look at this towards  
north he's got helpful Graphics helpful in this one looks like it's from the '80s he's using every  
color in the rainbow on this graphic every single color what does he think where does he think  
this went he went he thinks it went into Indonesia into the volcanoes of [Music] Indonesia okay  
well we're doing it as

(1:26:11) D dear canthon dear canthon you've been unblocked sir welcome back just relay those  
MH370 theories onto the world you can put them in my replies you can tell people that the  
plane went to a volcano that's okay as long as we all admit the US government was filming it I  
don't really care everyone can think what they want about the videos Everyone's a free person  
with free ideas and they're now all free to troll me Ryan is that a Clark Kent thing no that's a  
Native American okay Cindy welcome welcome back

(1:26:44) oh I'm already thinking of some other people that are blocked oh this is going to get  
[Music] sketchy oh who's is who Punjabi Batman guys rest in peace for punjabi Batman let's  
pour a little out for punjabi whoops we p a little out for punjabi I mean technically it was water  
just imagine like that was liquor okay imagine like that was liquor Punjabi Batman banned from  
**Reddit** too soon gone from this world gone from this world too soon people thought I was  
Punjabi Batman not sure why but just let people

(1:27:30) do whatever they want Okay Tyler unblocked Leland unblocked Punjabi we love you  
they love you in the chat Punjabi Lisa Bowden welcome back welcome back Lisa I don't even  
think you necessarily even deserved it I don't know but you're back Schrodinger's cat definitely  
unblocked definitely neck beard Prime now this just sounds like a boss this just straight up  
sounds like a boss battle neck beard Prime got the the beefed up paye in their profile okay let's  
just we got to check the tweets [Music]

(1:28:11) out retweeting his own replies classy classy okay neck beard Prime unblocked zorg  
from The Fifth Element unblocked ashabi Foresman that would be a good Indian name from me  
your Native American name these are all Ashton troll accounts anyway I think that every  
account is me every account supports me is me guys everyone even the ones I don't get agree  
on Emily too far Emily Emily McKenzie too far we love Punjabi too but Punjabi you might have  
some some tough questions to answer for Emily oh Carlos dangerously epic epic

(1:29:08) spaces troll epic spaces troll really just hates everything everything about the world suffer potentially Pink Floyd oh I'm blocked oh oh they blocked me first okay well I like aliums Bo yeah okay this is uh definitely somebody who really wants to be uh accepted by their peers really really wants to be accepted by oh look who's next folks sorry Carlos next is lur Lodge wow wow guys so some of our strongest haters some of our strongest haters got extremely offended when I poo poed on the idea that the plane did not get shot

(1:30:00) down extremely offended felt the need to try to just take exact **debunks** that already existed that have already been explained already been **debunked** and press on them anyway and then got offended about that as well and offended by the fact that we didn't want to talk to them anymore decided to make little reaction crap videos mini boss don't worry lur Lodge soon Cindy Henry will be on this list I know she's on here she'll be on the list lur Lodge you guys can follow Cindy Henry she will lead you to the promised

(1:30:41) [Music] land she will lead you to the promised land she will be up soon you can see we're not going to block her yet L Lodge she will lead you there follow Cindy Hendry get her on your show guys look it's obvious a fuselage here and obviously these pieces are in the ocean obviously I andan yes the scale doesn't match yes she superimposed pictures over them that clearly do not match and clearly are not going to be that same size but you guys find her find the plane just find the plane even though you're ignoring all

(1:31:23) the evidence all of it it clearly didn't last crash into the uh South Tennessee completely impossible but L Lodge I Believe In You L Lodge you will find the **truth** you will find the **truth** unblock is super effective it's super effective welcome back L Lodge feel free to leech off more content off me if you want I give you my permission pirate Road films YouTube Creator python Pro programmer well maybe you're not oh wait maybe this ran out of letters yes they did WOW 6,000 followers or 7,000 followers guys

(1:32:08) wow Jack sarati on Coast to Coast that's is that really what's on their videos that is that's a real one of their videos Jack Sur fatti on Coast to Coast wow wow this is a tough one this is a tough un block guys wow let take skill let take skill got it I got it we got it we're moving on moving on lots more unblocks to do guys God actually we might be close to the bottom here does this mean we're almost done we only going it's only been 2 hours 2 hours of unblocking people nope never mind mind the scroll bar goes back

(1:32:53) up to the top we're not even [Music] close Jade Bernard UAP please forgive me doesn't have anything to do with the fact that your picture is attractive no no I'm not no I'm not judgmental like that it's because you're French and I want every French person on my side wait let me make sure what she says here first I don't know what this means I don't know what this means but Jade Bernard forgive me forgive me James Phillips somebody else with two first names somebody else with two first

(1:33:33) names you know what easy unblock emerging physicist he [Music] him quick tip for people take it or leave it don't put your pronouns in your bio or on your resume just quick quick

tip if we want to know your what **sex** you are we'll just we'll ask it's not it's not relevant we don't we don't need to know especially if your pronouns are just normal pronouns what what exactly are you telling people here anyway okay unblocked welcome welcome [Music] back welcome [Music] back okay laugh and watch okay sure I

(1:34:24) don't recognize any of these just get some unblocks let's do a quick streak of unblocks here UAP James there's another hater are we blocked yep of course we're blocked boy you would think a lot of people for how many people cry about me blocking them we're blocked by quite a lot of people I have never interacted with him or never tweeted to uip James never talked about uip James before but somehow we're blocked somewh blocked by him he's got a cool picture like he's on the cover of an album he's

(1:34:58) got a self-titled album coming out aliens are sad by UAP James guys don't miss it it'll be on sale 1999 you get all the all the hits all the hits okay even UAP James featured featured in a bunch of magazines apparently that's hard to believe you get featured in all that and you only have like how many followers okay Vice huh yikes yikes man real daily wire oh okay uip James unblocked people block me The Audacity Of It All how many times have I complained about being blocked by people like never not one time

(1:35:53) it's called just moving on moving on with life you can do it uip James you can do it oh grant grant was one of those people that comes into my replies and starts tell and starts like demanding that I give him a full explanation for everything he wants to know when he comes in with ill intent with he you know in his mind he's already got it **debunked** and he already figures out so if I don't acquiesce to his weirdo demands then he decided to make a whole post about it because I said hey I I want to litigate this with you decided to make a

(1:36:24) whole Pro post about it has to make it all about themselves later on did I find out oh he's a uip researcher yeah of course he is they all are they're all uip researchers okay unblocked Grant welcome back Grant you're free to make weird posts about me you know personal posts that cuz you got slighted cuz you didn't want to do any work and read my tweets by yourself okay next yes getting everybody blocked in there everybody's getting unblocked tonight folks it's a merry Christmas for all Merry Christmas for all Michael oh

(1:37:08) that was that was a preemptive unblock Mich Michael Michael I did you dirty Michael this was back in the day where people were beli in VFX **debunks** Michael went so far and this is not a joke to actually make a post explaining the long detailed list of things that be required to make the videos fake and then even after that go ahead and say he thought that they were fake incredible incredible double think with Michael incredible double think Michael I'm proud to have you unblocked I'm proud feel free to you

(1:37:42) know come up with weird explanations for why you think the videos are fake after you bring the huge list of reasons why they aren't let's just bring that up real quick Michael helped create the first version of this [Music] list fake video requirements except for the best one of course that we would never find a plane not even 9 and 12 years later in fact it's time to

upgrade this pretty soon this is going to say 10 years later the faker knew we would never find a plane even 10 years later it's

(1:38:16) incredible psychic they were psychic better than Banksy better than thany [Music] folks Ashton Saved Christmas we're saving Christmas for all the haters skeptical believer this is definitely a redditor as well definite redditor probably a moderator if I had to guess oh and we're blocked and we are also blocked amazing all the people complaining about being blocked blocked also have me blocked incredible incredible double think that happens just dizzy dizzying intellects on these people very dizzying despite that

(1:39:01) despite that it's Christmas folks all my UK followers out there Merry Christmas Merry Christmas to everybody who's 3 hours or more uh that's been having Christmas happen for the last 3 hours merry merry Christmas scopal believer Merry Christmas welcome Ashton Claus came early today this year gues porter gues porter I would say your last name is your first name is a last name welcome welcome gu Porter you're the only one that I'll Trust I'll never trust another person with two first names except for GU Porter

(1:39:43) folks Merry Christmas to Kim and Paul it's the UN blockathon [Music] everyone's getting unblocked tonight we've been at it for almost 2 hours xgirl even you xgirl you were trolling me but you know what still letting you go we're going hard going hard here xgirl welcome welcome to the unblocked Troy McClure also unblocked even though you were definitely just a troll account still unblocked sco scroy MC booger balls that's a that's an easy unblock that's an easy unblock that's a definite

(1:40:28) Troll and easy easy unblock it's going to be boy guys I'm actually scared to look at the thread about the video about this live stream I'm actually afraid folks I'm afraid how bad and toxic is it going to be how toxic will it be it's Christmas will the trolls still be toxic on Christmas I think that's a definite yes that's a definite yes 100% okay is anybody in the chat blocked on Twitter right now and looking forward to them being unblocked do we have any actual people in the chat who are blocked on Twitter

(1:41:08) cuz that would be very meta we can make content about that we can make content any Reddit trolls in the in the chat right now guys the suspense are there any are there any trolls who are blocked in our in our Twitter or our YouTube chat are they watching we can have a personalized unblocking folks everybody's getting unblocked we're we're having a personalized we could have a personalized unblocking right now guys I want to unblock somebody who's in the chat he's so arrogant he's unblocking

(1:41:49) everyone he's so arrogant I can hear them already I can hear it already [Music] folks how dare he unblock everybody on Christmas how dare he how dare he apologize to people he wronged this is not the Reddit way this is not how we do things at Reddit you must hold it hold the hatred in yeah this is more than I actually could have thought I would have ever blocked this is actually just exhausting me now this might be the whole stream just un blocking people for 2 [Music] hours I actually got to go to sleep tonight it's Christmas I got going to be

(1:42:27) busy day tomorrow but you know what everybody's getting unblocked not until every single one's been unblocked not until every single one every single troll none of them have revealed themselves none of them king milk fart was one of the hardest ones that was one of the hardest ones I think the other some of the other big hitters we had people that blocked more than once like like UAP mic people that have been muted and blocked muted and blocked like Pete venman wow muted and then blocked even after being muted that's how toxic and

(1:43:03) then of course special guests like **Mick** west of course John **Green Street** had some some big names big names getting unblocked Nick Gold Jeff wise got unblocked today guys this was a this is an epic night epic night trolls got one of the best Christmas presents ever this is getting it's getting hard yeah my my it was oh man my replies were so nice guys now they're all going to go to crap they're all going to go to crap guys Eric eer Eric eer I remember you trolling me but that's okay you're unblocked

(1:43:48) unblocked Eric stand for.org yikes hypocritical name folks hypocritical name folks yikes imagine having this follower with 85,000 followers and you're trolling people wow stand for better this is definitely a gim**mick** account folks let's unblock him unblocks everybody's getting unblock tonight uplifting tweets oh yeah yikes so this guy is definitely grifter Central huh huge grifter trying to abuse uh trying to be e famous so a lot of these people have got me blocked just because they are they're like jealous but they

(1:44:33) weren't never able to get any followers cuz they're just trying to grift Twitter wow okay well yeah this is one of the worst troll accounts out there it's okay even though you're just grifting Twitter with your fake name and fake account and being part of the weirdos out there definitely a **redd**itor as well guaranteed unblocked fetuccini split welcome back welcome back get your grift on uplifting tweets I hope I mean I'm sure that's supposed to be ironic but wow if not host of the lore Lodge Aiden

(1:45:14) Mattis also two first names although maybe mad isn't a first name I don't know tweet librarian stuff and history stuff okay guys you know what let's see what Jonah 49 says I don't recognize Jonah 49 it's not one that gets thrown out there a lot okay here we go but God said to Jonah do you want to be angry for the plants and he said yes I do well to be angry angry enough to die well that's that's pretty damn dark folks that is very dark what am I supposed to mean what am I supposed to take from

(1:46:01) this so he going to fight for the plants fight for other people okay Aiden I'm with you amen Aiden amen welcome to being unblocked Aiden L LOD you are completely unblocked welcome back to the land of trolling me welcome back okay Andre easy unblock easy unblocks for these people after going through the bosses like the lore Lodge like the whole king milk fart people that's an easy unblock ooh Nature Boy dick Hammer oo ISR cyber vet damn he's a veteran of the Cyber Wars folks he's a veteran of the Cyber

(1:46:45) Wars ooh o we got badass keep pounding UFO Twitter AF I Sr you know we're Googling that you know what that [Music] means is this guy why do I get a feeling this guy is not

a veteran oh he might actually be a veteran okay if you are a veteran then I do apologize I respect our our military I respect our veterans if you if this is stolen Valor then you're a terrible person but I'm hoping that you're I'm going to go ahead on a limb and we're just going to assume that you're a good person even though I've been getting

(1:47:28) stung a lot recently by people pretending o Ren wait is this the one that is the husband of the K clous guy oh my God we have oh this is guys we have an epic lineup here for you tonight we have an epic lineup Dawn easily unblocked compared to these others easily unblocks Alex you're even an EAS easy unblock you could have been a mini boss if you didn't come after some of these other ones but instead simple unblocks simple simple unblocks let's build up a streak here I want to fight like three oh Garrett

(1:48:03) Garrett another one of the uh spaces veterans oh and I'm blocked and I'm blocked wow okay three in a row guys can we do it wow look at these pretty sure this is the wife of tiny klouse got extremely offended that I used her husband's first name on social media even though he's been posting about me naming me defaming me making up fake stuff about my mental health even though he's been doing all of that she felt offended that I used his first name wow this is a tough one also you can cash app her if you want to tip her

(1:48:52) you know even though but you know release the Krakens here we go Garrett even though you blocked me and I have no idea who you are going to go ahead and unblock you boom Julian Dory host editor and producer basically he has his own podcast Julian Dory podcast folks he's got two accounts too very impressive stuff very impressive great guy Trend to finder yeah really good guy all around nothing never had anything wrong with him Julian Dory unblocked unblocked feel free to make more Awkward videos feed into the psychosis of UFO

(1:49:44) Twitter feed off of them go for it okay let's get through some more guys let's get through some more that was three in a row that was like yeah that was an endurance battle that was endurance right there arack no puppet go ahead and unblock you easy guys it's getting easy to unblock people now I barely even feel it I barely even feel it I can't believe we're still going unblocking people cot even though you are some ready who's been in a bunch of spaces I'm going to go ahead and unblock

(1:50:25) you anyway all these people unblocked Kyle Bitcoin love it Politically Incorrect I love you you're all unblocked Merry Christmas Darren Reed UAP nut I's looking at this guys unblocked this guy I feel like was definitely trolling us hard name looks familiar unblocked easily see how easily I unblocked that person Dan zrom also unblocked guys the amount of self-righteousness is going to be in our replies it's going to be off the charts off the charts how dare you keep looking into this still guys are you going to

(1:51:07) apologize to the families for seeking the **truth** guys are you going to apologize when we finally find that plane it's going to happen we're going to find that plane guys it's going to be tough folks [Music] woke AF no troll will get unblocked not even Wok AF not even Wok AF ooh we definitely just ran into a mini boss this is the guy who just keeps trying to claim that he flies

drones but doesn't recognize an mq1 C greaty Eagle and never has any experience with mq1 C Great Eagle but still admits he's an

(1:51:51) expert completely self-absorbed person doesn't even get where's his posts I'm actually surprised that his post even got that many views most of them are like these they have like 200 views nobody looks at him this guy literally told me that people care what I have to say literally said in reply people care what I have to say I went and checked his profile no one cares what he has to say in many cases literally no one cares what he has to say say wow David FAL you are unblocked you can feel free to whatever pretend in my

(1:52:29) replies as much as you want David FAL keep pretending like you flew drones that were mq1 Toc great Eagles go nuts go nuts I release you David I release you Dave oh hi Meridian I'm pretty sure this person was posting numerology all in my posts it just got to be too much I could be wrong could be wrong anyway easy unblock you're a subscriber to Twitter easy unblock ooh what does the Beast guy stand for when I when I see Beast guy it's almost like when I see like uh pronouns in people's profiles it's like it feels like they

(1:53:16) were like trying to go to some new website but it just didn't pick up so they're still on Twitter anyway Vincent we'll forgive you we'll forgive you for being a beast guy whatever that is we'll forgive you we're using the force here guys we're into extra Indians here right now this is [Music] overtime guys I'm starting to wonder if some of them have just been getting reblocked cuz I can't I can't actually believe we have this many Linda Thompson the official Karen of ufology as people have told me the

(1:53:54) official Karen has to put herself into everybody else's business puts herself in everyone else's business out there the the OG the OG mom of ufology 16,000 [Music] followers tells us about Christmas dinner from Cracker Barrel okay well Karen I mean well sorry Linda well Linda you know what unblocked Karen I mean I feel bad I thought I blocked her cuz she blocked me but looks like maybe she unblocked me I I'm not trying to call her Karen I keep forgetting her name's Linda Linda Thompson I apologize

(1:54:41) I did not mean to call you Karen that was not my intent there Linda you are unblocked combo break unblocked bow let's keep going that should have been an easy one folks we struggled with that boss we struggled sterley [REDACTED] unblocked we're using the four orb Force it's a lot of unblocks here I don't even I don't even recognize some of these now these are old frog unblocks these people were trolling us back in the day oh Ed Anderson 7:30 location guy that thinks he knows where MH370 crashed even though we already looked

(1:55:25) everywhere oh pinpointed directly along the seventh Arc even though we already looked stress test lamp lamp kulski thank you very much 10 donations you're awesome awesome man appreciate you should we unblock Ed Anderson not that's a trick question we're unblocking him damn zero likes from his post from October 30th looks like it was trying to Bunk us on October 30th and no one was reading it wow only transmits by a microwave link first of all this guy definitely doesn't know that he definitely doesn't know that

(1:56:08) that's classified information probably so I seriously doubt that he's aware of how uh this sig system works wh why was this guy trying to **debunk** the videos oh this is the guy as well that didn't realize that the weather matched as well wow this guy needs help man this guy needs a lot of help wow Ed Anderson buddy I hope you find the **truth** you're looking for Ed Anderson I hope you find the **truth** you're looking for let's keep going Ed Anderson he he knows the true location folks it was one of the

(1:56:42) locations we already searched but we didn't search it hard enough for not for Ed Anderson L reviews again how do L reviews get get back how are they back guys is this is he a witch I feel like we already unblocked him is Lou review is a witch guys I'm scared how's he back again how's wait a minute this is a different one he has two accounts what why he has two identical accounts wow lure views was blocked on two different accounts folks I'm not sure why he has two accounts but he does guys wow wow that was tough man that was like

(1:57:26) a fake out gold first P report another troll another troll unblocked easy unblocks hog groomer another troll we live in capitalism okay unblocked let's keep flying through these I don't know if I ever blocked Danny Jones I don't think I did I really don't block everybody they really have to like antagonize me Danny Jones was smart enough to not dig too much into the the Drama Oh epic boss guys this is like the second final boss tiny K clouse somebody whose name I've never spoken I've never tweeted at

(1:58:09) this person ever and they became instantly obsessed with me a 100% **Reddit** 100% **Reddit** brain has full redit brain never Go full Red Brand folks Ellis 430 thank you for the seven maybe Australian dollars I don't know thank you very much oh yes pausing guys pausing the music pausing the music it's about to get epic this this right here all the tallest buildings in the world wait maybe it's not the tallest ones just 33 buildings are in the world so what do we have Sears Tower Sears Tower Space Needle in Seattle wait maybe

(1:58:53) maybe I'm not sure that's the CN Tower in Canada the petronis towers over here qual andur or wait no petronis Tower maybe that's not the right one oh that is ponos Towers yeah patronos Towers in KL uh famous for the movie Entrapment with uh what's her face kather Z Jones and Sean connory I think uh this one over here I think is like a **China** One or something this one's pretty cool anyway just a lot of cool buildings down here we've got Kobe Bryant folks Kobe Bryant the Michael the Michael

(1:59:43) Jordan of the 2000s Michael Jordan of the 2000s everything is amazing about Kobe Bryant EX except for that **sexual** assault allegation he beat that allegation though folks he beat that allegation Kobe Bryant could speak five languages how many basketball players you think that can speak five languages he was a man who had a lot of haters similar to us we had a lot of haters too my I can't compare myself to Kobe Bryant but uh died tragically Kobe Bryant dying hurt me like one of my family members dying hurt not going to lie died way too soon

(2:00:19) horrible airplane or um helicopter accident I remember very vividly I was living in uh San Diego and I remember how foggy it was that day and I was thinking man it' be weird if

people were flying like you know in this and that's how he went rest in peace Kobe never forgotten back to the [Music] music we're going to come back to clouse we have to build up to fight clous guys Scott Brando unblocked Quicks smoke unblocked MH370 an account unblocked easy unblocked textures.

(2:00:57) com wow textures.com guys wow oh Dave Bey whoa we've got an epic lineup for you tonight folks epic lineup of Boss Battles I forgot there could be this many left I forgot we this is not even we might not even be close to done they just keep coming folks the hits just keep on coming guys okay I hope you guys are ready for this I think we built up enough to to fight them I don't know if we're going to be able to do it ooh Tom skbo that's another troll another troll I've seen for some reason looking at a coin sure

(2:01:40) okay got to stretch out for this one wow tiny klous husband of Ren don't worry tiny clous I won't say your real name even though it rhyme it's like pretty much just your your avatar it's not really that hard to figure out I don't know who Luke Caverns is but yes apparently okay wow tiny K clous trying to make his life off this pter podcast insight into speculation of paranormal and UFOs not sure why somebody like this would hate me literally never said their name before today had me blocked for reasons we don't know let's

(2:02:24) go ahead and unblock him uh textures.com all we wanted were answers why were the why were the database files modified on December 4th 2023 textures.com instead of answering decided to make an announcement of an announcement in the announcement of the announcement they instead of giving us the answers just trolled people with a fake looking UFO V picture and video very professional tex.

(2:02:55) com thank you for destroying the cloud **debunk** with your lack of seriousness all we wanted to know was why those file those uh data elements have been modified it was a very simple question we also wanted to know why why could you not tell us how many times those pictures were purchased between March 8th 2014 and May 19th 2014 for some reason you had records of everything else but you didn't have that incredible incredible text.

(2:03:25) com keep up the good work trolling text.com you really added to your credibility random website people Dave Bey Dave Bey classic you don't even know who I am type probably uh TJ allard's uh long lost brother most likely most likely almost certainly did a bunch of stuff that I've never heard of in my whole life prod producer for things I've never heard of my whole life undeserved sense of confidence undeserved ego Dave Bey said I threatened him when I told him he was lying when he claimed that he had the Pyromania of

(2:04:04) bfx threatened him by telling the **truth** it's tough life for people like Dave Bey lying all the time also purveyor of you're hurting the families you're hurting the families by seeking The **Truth** full on CNN brain unblocked unblock Dave Bey we did it we did it chat we unblocked him we made it Merry Christmas Dave Bey happy holidays TJ is probably already unblocked I don't think I ever blocked TJ why would I block TJ guys come on TJ is the best content we've ever had yeah you farm TJ you don't you don't block TJ

(2:04:47) you farm him like a crop like it's ripe every every few months you have to farm it you have to make sure you get all the good fruit TJ is a very special like a a fine wine that you enjoy you enjoy it Alex easy unblocks Alex Joe's hindle sure 1124 is INS Inside Job folks 1124 Inside Job okay let's see if we can get through some more of these this is it's a lot of unblocks we're unblocking everybody we've unblocked **mcwest** tonight guys just we should be retrospective on the type of night that it's been yes I'm even

(2:05:29) getting tired two and a half hours of unblocking people straight Don Thompson guys another independent group member I'm blocked independent group very serious about getting the **truth** guys very serious very serious people very serious Don Thompson unblocked easy independent group a group of experts who've never solved anything related to MH370 in their lives they've got me blocked look another one oh we're guys we are in the final we're in the final rounds here wow this is getting epic o fell classic hater loves

(2:06:04) VFX Works in VFX all the time unblocked easy Roger unblocked a literal bot account run by some guy named Scott Brando a literal bot account that posts bot content trying to **debunk** videos astonish let's check out their YouTube guys wow there's actual subscribers to their YouTube channel too literally just fact checks videos can't nothing is allowed to be real the definition of a gatekeeper look loves **MC West** loves **Mick** West this is **Mick** West yikes guys yikes folks you know what you're unblocked as

(2:06:45) well even though you're a bot Scott Brando you're also unblocked easy unblocks guys it's going to get harder Cindy Henry calls the plane she personifies the plane even though 238 people died still talks about it like it's a woman told me once upon a time true story true story told me I don't have any credibility cuz I don't work for the government told me that unironically she didn't know I actually was a government contractor that worked for the government she did not know I really really really wanted

(2:07:24) to tell her but I didn't I hadn't revealed my point myself at that point so I did not definitely thinks that the plane was shot down and that she saw debris in some satellite pictures uh from a group that didn't find anything somehow it made it all about her made it all about her not sure how despite the fact that there was thousands if not tens of thousands of people using that satellite stuff looking for debris nobody found any she found a way way to paste pictures of the plane over uh white caps in the ocean to make herself

(2:07:53) get onto a Netflix documentary despite the fact she was on a Netflix documentary she only has 3,000 followers impressive impressive level trolling Cindy Henry welcome back you can let people know that you found that uh debris crash in the ocean where we already searched and didn't find it let them know Victor we're going to have to come back to you oh we made it till the end folks we made it to the end Sherlock mcgyver Free Speech absolutist easy unblock Victor you're the last one Victor how proud are you Victor how

(2:08:30) proud the last one folks wow well Amanda good good news cuz everybody got on blocked tonight guys this has been a journey it's been a spiritual journey that we've been

ongoing here the amount of toxicity that we've Unleashed May may break the fabric of reality it may actually break the fabric of reality the amount of hubris and overconfidence that we've Unleashed upon in the world into our replies I'm not sure we're going to survive it I'm really not sure this has been a test a scientific

(2:09:06) experiment it really has we're going to see if Twitter can even withstand all of this self-righteousness that we're about to unleash guys we're going to be told a lot that the videos are fake we're going to be told a lot that we we got to move on we got to move on everybody Victor we're going to unblock you too Victor even though you've been irrationally obsessed with trying to **debunk** me ever since we Prov that you didn't do the satellite coordinates correctly true story true story

(2:09:37) here these satellite coordinates were done by Martin somebody else who got unblocked tonight Victor self-righteously told us we did the quot we did the satellite information wrong and I showed him corroboration of somebody that said that already corrected it and proved the satellites were correct on the trajectory he went back and deleted his post came back and said yes you were right with the satellite corns but then decided that no it's moving too fast it can't possibly be in our video and then and then that wasn't enough this is all

(2:10:08) real story Global persist INF Sur Global persistent infrared surveillance thanks thanks to Victor it's only with Victor's help that we were able to determine the reason why the satellite is not moving is cuz it's not act satellite we're scanning the Earth all the time building a computer program like Google Earth video playback without Victor we would not have been able to solve this I mean he didn't help in a positive way but he helped in a way that forced us to find the real answer guys I want

(2:10:35) you to remember something we never forget who we're working for locky Martin hail Hydra folks hail Hydra Victor you're unblocked welcome back feel free to make reply post about my tweets and try to farm my engagement do whatever you want to do my man we've unblocked so many experts tonight folks so many experts got unblocked that have never solved anything related to MH370 uh I don't know if this is going to lead to the discovery of the plane I sure hope it does so this was a great unblocking spree that we did here tonight folks

(2:11:13) absolutely amazing do we dare check do we dare check I'm afraid guys only 16 replies maybe we're spared maybe we've been spared folks let's see oh guys this is wow this was been a really great unblocking oh there it is there it is folks there it is there it is there's a grifter we we've got it we've got our first grifter comment we've got it there this is a lot better than I expected a lot better than I expected oh there we go there we go self-righteousness concern trolling folks this really how you expect to gain

(2:12:04) credibility though yes that's what we're doing gaining credibility you you caught me trying to get that credibility yes we we need the trolls we're going to feed off them guys guys we are going to farm arm engagement off these guys so the secret here is we we ask them questions right we be like how would you do it right get them to engage we need to farm them

for engagement Farm the trolls yes here here we go guys yes here we go where's uh the Grinch we need Grinch memes guys we need Grinch memes yes

(2:12:50) the audacity the [Music] audacity yes no we're not starting the blocks right away we're going to farm these trolls for engagement we're going to get those likes get those get those views m m delicious delicious I want to farm my own my farm my own hatred here okay folks that was good this was a great little pre- Christmas this adventure that we did we were able to set our color purple one with lights out this was an epic Moment In The Stream completely epic completely change the way that we view Twitter from now until forever I

(2:13:32) didn't even know you could change colors guys I have too much Boomer in me too much Boomer okay what's next do we do more apologies oh I think we already apologized everybody we need to apologize to everybody else can deal with it I want to go ahead I want to wish all the followers Merry Christmas I hope that this helped out your Christmas made your Christmas a little bit brighter I want to thank everybody in MH370 X who's been fighting for these last four plus months four and a half months fighting for the **truth**

(2:14:19) we've been fighting to get the **truth** of these videos revealed get the government to admit that these videos are real cuz let's just be honest we know they're real and we've been fighting the trolls the trolls that we just Unleashed we unleashed them look at this look at this video Let's just count it we got Shake here from the turbulence and the Wake keep in mind this would have been very stable so just to have any Shake here means there must be some turbulence happening we got an accurate Heat signature where the the

(2:14:49) brain of this drone is located where the heat is coming out of this this is an mq1 see greaty eagle with an extra Electro IR camera on the wing and when it zooms in here the shake increases consistent with the amount that it's zoomed in look how much it's shaking now it increases naturally boy this hoaxer really went to a lot of lengths guys they forgot to keep the C the plane the center of the view all the time and then they zoom in again and when they zoom in again they actually were able to make the shake even more

(2:15:25) accurate they were able to make the orbs accurate they were able to come up with these forward- facing gravity engines incredible they were able to make the plane look perfectly realistic in two 3D video models incredible look at that Shake Natural shake from the turbulence and the and the camera being zoomed in incredible detail that they added folks and then the end of course they they knew they knew how what wormholes should look like they had an advanced understanding of quantum mechanics and unification of macro and Quantum

(2:15:55) incredible you can actually see the lines here I just want to point this out you can see the lines here in front of the orbs I don't know Ken seems to think that this line is the plane but you can literally just see the line so interesting incredible stuff [Music] guys that mq1 C greaty Eagle folks [Music] Kaboom epic fake job here guys this person needs to come out so they can get a job in any Studio they want they made the real looking fake video in the world incredible that's only one of them they were like that wasn't even enough they

(2:16:39) were like okay while we're working on this one they were like we're going to make a second one too to make two Perfect videos I'm going to show it in high quality instead of side by side they're like nah you know what one video is not enough we're going to make a six frames per second second video folks 6 frames per second second video the first one was not enough they were like you know what and make another one we're going make it six frames per second consistent with a large Google video

(2:17:11) Earth playback that they knew would existed not even the world knew not even we knew until a few weeks ago they made perfectly in sync with the first video of course they decided to add a citric session over the top cuz why not hoaxers do that all the time why not just add a citric session over the top hey you know what even make the mouse change color even make the mouse change color because someone's actually using it that's being used to track objects so they were smart enough to even add that tiny detail smart enough

(2:17:37) to have the orbs distort the plane right here or distort when it goes through this Cloud distorts the cloud accurate Cloud shift amazing faked every detail not a single discrepancy on a single frame in this footage the second CL the second orb comes up through the water Geniuses they even knew how to make 120° Sino cidal patterns incredible folks incredible where's the plane indeed where is the plane they even knew that this would be like mapping the plane preparing it for what we're about to see here which is some Ty macroscopic phase

(2:18:11) conjugation they're literally breaking through the fabric of reality in SpaceTime here to create a gravitational wave if not more than one Gra gra itational wave to causes plane to just snap quantum entanglement poof plane moves so fast we don't even see it incredible level of detail on the hoax when I when I even scroll you can see the clouds move you see the move here incredible really best hoax ever folks anyway welcome to MH370 X folks was that the same pixel T them the bun folks okay guys I'm going to take it

(2:18:53) off after this um I appreciate everybody uh everybody who was watching tonight that was a fun stream we did that was a meme stream uh but those apologies were real for those apologies that I went out to um cuz yeah the reality is that I don't want to be like all the trolls I don't want to go to that level and the reality is that when you're on the internet too much it can turn you into somebody that you're not and that's not what I want to be as well so I want to just wish everybody a Merry

(2:19:22) Christmas Happy New Year uh probably won't be uh streaming T tomorrow we'll see if so it's going to be late um but yeah thank you guys and I I hope everybody had a great Christmas I hope everybody gets joy in their world uh at least for tomorrow and in the days to come as well so thanks a lot guys and we will stay on this case of course you know make sure you guys are checking out um the content that's out there we are going to be coming out with more video or uh more uh evidence more science as

(2:19:55) well a lot more science to be honest with you I've been watching a lot of science videos recently and I'm going to spend the next few days watching a lot as well if you need to

email me it's MH370 xpron domme if you need a Discord invite you can hit me up on there just give me a reason why you want to join please don't be some kind of weirdo **debunker** agent who thinks you're infiltrating us we don't we just don't really want that but everybody else is welcome to come so have a great night guys I'm going to

(2:20:23) go take it easy I'm going to get some rest for Christmas for tomorrow and I hope you guys have a wonderful day

Transcript:

(00:07) there it goes holy crap the [REDACTED] man wow so annoying man what the heck whole stream just crashed even though I didn't go offline ridiculous wow I don't know what's up with that man that was weird that was really

(01:29) weird that's that was really weird right have you guys ever like they just Zapped My Stream we had like 200 people and now all sudden just wiped poof oh well that's really whack um I'm going to post

(02:35) the find my Twitter that's I wonder if I should even make this post on

(03:37) here because if I add more tweets to it then it becomes harder for people to see I think we'll go we'll post anyway okay see yeah see it doesn't post all the tweets when you do it like this so people end up missing the ones in the middle how do we do this the right way okay guys make sure you check this out this is one of the the best

(04:44) scientific papers I've read before just help it I don't like when things are overly preachy and when they try to make it sound too confusing I mean obviously there has to be some level of complexity involved when you're dealing with scientific uh aspects like this in terminology um this is the one really I think that's one of the spiciest ones it's basically just describe an aquaberry Drive flat SpaceTime warp SpaceTime create the wave Just Surf along this would be our understanding of like if you imagine the Matrix right The

(05:26) Matrix has got to be made up of right angles yeah my stream got hosed did it did it get hosed again no it's so it's going now yeah my stream got hosed I don't know what the hell jackar fatty won't be posted on this because he's blocked and he's blocked me so it's double double block um yeah so make sure you guys take a look at this spread it let people know uh I need to tweet it I need to send it to Dave real quick let him know that I posted it wants me to play Pokemon go my phone's beeping at me it's like you're

(06:13) not playing Pokemon go you haven't played in a long time you should be playing n we got other stuff to do H I wish there's a way to do this where you can see everything at once I probably shouldn't have put this last post on here cuz the last post hides the other ones I hate this about Twitter like you only see the first post the second to last and then the last post so now it hides the ones in the middle yeah I dropped cuz they they messed up my stream or something yeah it's a little weird that's a little weird that that

(07:14) happened okay let's see what trolls we got in the replies is this a bot this is a bot right oh no might be a real person I don't know if that's a bot or not whoa that was weird what the heck is that something floating right there it's cool just a floating object or a volcano whoa is there a bird you guys oh you guys are hearing the

(08:24) sounds yikes not going to block him cuz we are going to uh unblock everybody anyway okay okay I think that was a pretty good uh summary for Dave Rossy actually it's getting more views than I thought this this is pretty good it's already I got 6,000 views and if you add all these up together then it's well over 10,000 right so that's pretty good it'll probably it might push up near 100,000 views which is pretty spicy that volcano thing is weird huh oh you like the Hat awesome okay so is it uh Lulu time I think it's Lulu

(09:24) time guys quick Dodge break so to speak uh let me check my messages wait maybe Jeremy posted it on his YouTube dude how does how do I Google alien scientists in YouTube and you don't even find Jeremy's page what the hell how how come I I don't find it when I Google YouTube and do alien scientists how come Jeremy thing doesn't even show up he's actually live right now watching ape he's literally actually live watching ape and his stuff doesn't even show up um Lulu is my dog we're going to show

(10:20) her in a second here uh does he did he post it oh he did he the disclosure song he did post it okay I'm going to steal the song and I'm going to post this song on uh Twitter we're going to post a disclosure song okay give me a second folks let's let's see if we can make this happen if you hear loud noises you know it's not going well Lulu come here boo boos come here yes head got the ree heads it's okay no Vitos noos it's okay Daddy pick you up it's okay it's

(11:25) okay come on I know come on come on come here come get treos come on come here we got to we got to try to bribe her what's this Lulu come on oh treos okay if you're good you can have treos come on good girl good girl good girl good girl it's okay it's okay oh there we go we got her we got her oh Santa and his reindeer Santa and his reindeer oh oh she loves it guys she loves it she's super happy she's super happy obviously she loves this yes you got the reindeers let me see if we what the video is

(12:26) going okay oh yes we got rain Dogg us reindeer doggus yay super happy [Music] booze okay okay yeah she was loving it okay here you go you can take your tree to well that was only for a few seconds but we got it no she's uh when she's on the when she's on the bed or on the couch you can't move move she does not like to be moved she always sleeps directly on my spot on the bed as well so every time I try to move her it's like it's like the worst thing in the world

she just gets so pissed oh I should have done it full

(13:17) screen oh man I should have done full screen not going to change in the views okay oh man um it sucks that like half the people got dropped because of the the stream dropping but whatever okay guys let's do the next thing what was this oh this was the thing I was working on guys I'm an editor now I know how to edit Clips look at this I edited three things together I edited three things together yes yesterday let's see here's the wave thing okay here's our drone location thing right okay hey slam dunk Mo what up welcome

(14:19) back uh what's a Flur I don't I don't know oh sorry I can move this over so you guys can read I don't even know what flurps are guys the more I look at this I'm like people think that I could do this huh like why would even why would even someone think to even have this heat signature in the orb that's spinning around like this doesn't doesn't make sense these videos will go down as being probably some of the craziest UFO videos ever okay so there's our drone info I thought her name was Luna

(15:10) actually did I get scratched I got scratched a little bit I thought her name was Luna when I met her at first from the people that I rescued her from or let's not say rescued her from but adopted her from Flur is flat earther no I'm not a flat earther because the world needs to be round for any of this to work the whole point is curvature man curvature is everything Mass uh displays the SpaceTime and creates curvature so I don't know got my my Santa hat here there we go there we go there we go oh Teach You video editing I don't

(16:01) know dude I just learned like I was able to somehow get the clips to clip together after I edited it and removed some stuff oh that's awesome ulak yeah uh Bob is definitely I like people who are doing actual experiments we got the Rolls-Royce stuff where oh here we go C nicobar this is proof of mq1 C I don't know if it's actually this is going to actually be proof of mq1 C let's see what is

(17:27) this oh this is this weird MK crisis thing I think this is I don't know if this is really a thing yeah it depends on the color of the heat of the palette is used uh work isn't really thankfully not really addressing much of this which I'm I'm glad for especially with all the drama that's been going on I used to have a lab pit mix he was he was the best boy I miss [Music] him passed away a few years ago just see if there's any more info

(18:51) here okay who's dve voice I don't even know who that is this is actually got the right thing right there too oh wow this is good I wonder if this coincides with the

(19:58) c camera information from huh this is really good we might have to do two separate ones uh what was the camera info that I was sent Antonia on Twitter close close this Twitter messages Antonio I want to see if this camera model matches I've got a

(21:09) link if this is the same camera we just hit yatsi common sensor payload what what's the date on this it is wait wait two similar rathon Dash two sensors under the wings huh I think we

[Music] do it's not Gorgon stair that we're looking at I don't think the Gorgon stair is too heavy I'm pretty sure we are looking at mq1 C pretty sure we are looking at the mq1 C guys I canceled all the rest of the podcast till the beginning of the year

(22:12) um there's other requests I'll probably reply to them later tonight I I need to take a little bit of a break from podcast guys I've done so so many man I've just done too many it's it's been wiping me out I've it's literally been wiping me out I've been so tired um where's the one with the podcast look how look how many we have here just look at how many this is I'm pretty sure and this I don't even think it's all of them I'm pretty sure it's pushing like almost 5060

(22:47) podcasts so I've got to take like at least a week off where I just chill relax I do investigative stuff without just doing podcasts um it's just it's it's been a lot I'm going to hang out for the holidays I'll still do some streams and what have you but uh I just need a little bit of a break and then I'll I'll I'll do more podcasts after that there's a lot of people that want to do follow-ups other stuff as well uh I want to make sure that the Tim pool thing didn't get

(23:16) canceled in fact I probably need to email them the nut job **debunkers** and uh and **redditors** are like still signing me up for fake stuff that's how upset these people are they're super upset I haven't heard back from them I'm a little worried about Tim pool things I haven't heard back but even if it doesn't work out it does whatever it doesn't matter it would definitely be cool to talk to Tim pool about this though cuz he was already talking about faster and light communication so um and this is

(23:58) definitely one of the biggest conspiracy if not biggest conspiracy of all time so would be nice to get on a large platform we already did the phone call thing we mentioned the mouse changing colors in one of our others can you **debunk** the viral video what Netflix got wrong probably probably could I mean all those things are terrible like I don't know if you guys knew but Jeff wise is the person who supposedly pushed the Fake Pilot suicide narrative I think that just the amount of negative attention that the case has

(24:47) been getting is turning people off from it it's just the amount of people whose brains have been broken by these videos is astonishing nothing even comes close maybe 911 conspiracies are the next thing next thing is closest okay let's let's start putting together our our next post here oh yeah I'm just showing my emails wonderful wonderful cool it's all good I'm already being signed up for crap anyway we have to get a new email account yeah okay

(26:00) why do I believe in the globe without any evidence can't tell if that's a serious question oh thank you very much GT I appreciate it I don't know what currency that is but I appreciate it man who first brought attention to the videos uh good question man uh I don't know I mean it they was on **Reddit** they had been on **Reddit** before in January of last year that was the most recent times and then I guess I'm one of the first people to like bring major attention to them that's why I've been you know going viral so to speak

(26:38) about the situation in the case um Punjabi Batman told me about two months ago

maybe a little bit longer that he was on 2v oh I'm just showing my Jesus man just showing my DMs here my God man it's nothing important um and uh God I can't stand it does that though why does it do that is there a way to make this messages thing go away anyway told me that he was being tracked or that somebody sent him his coordinates even though he was on Two vps And so that freaked him out and that's why he went dark for a

(27:27) while God I can't Twitter is just Why is this platform so garbage man can't they just fix it make it better okay um where do we start with this um let me take this one here let's put the pictures up first I think we just do it all in one I think we do the Drone and where it was deployed from oops what the

(28:44) hell huh the the mq1 is larger can stay aive for more than 27 hours e oh the ER the one that we're talking about the that one can stay along for uh stay in the air for 40 hours thank you for the donations people in the chat from this one and the last one by the way appreciate it fact sheet okay I don't care about the fact sheet aerial surveillance missions there it is there it is

(30:26) for for this is this is a really interesting quote

(31:56) V using a b directional one system remote terminal video yeah the for for these things to fly the Earth can't be flat doesn't doesn't make sense but you're free to believe whatever you want for

(33:56) for now let's go to evidence maybe this should be separate posts maybe we should not do the the Drone location one here I think we're going to separate them I'm going to not do the Drone location one for so these are on the inner Wing hard

(35:26) points just looking for anything else that's really important I think it has to be an mq1 C only one sensor can be used at a

(36:56) time anyone else you guys **I want you** guys to look at this find find me while I'm doing this tell me if you find anything else this is pretty interesting no no no response from Lex Freedman anything else yeah info wars with Alex Jones is the biggest so far we don't know what their account was banned for guys we don't even know if it was banned we just know it was deleted I'm also going to upload a couple things to my YouTube while we're doing this probably sorry I'm just quickly skimming this

(38:02) there's a lot here see if there's anything else that will link it directly to the case they were using Afghanistan which is interesting because the General in question was General for Afghanistan and International Security Forces if you want to know who that General is it's Joseph F **Dunford** mq1 RQ series The RQ series I think looks different oh maybe they aren't different interesting rq1 Predator they all have the same kind of look huh interesting okay I don't think there's

(39:19) anything else we need to get out of this it's a good one though no I don't have any keyword blockers in the chat let's look at this real quick as well h

(40:35) not sure if I'm ready to rule out the mq9 but pretty close hm it's all classified that's interesting this is all classified so again for people to even know this stuff like you would had to have been looking at these random blogs back in 2014 oh m stands for multi-roll got it so it's definitely an m and not an R the multi-roll is going to be for intelligence for

(42:25) interesting could be even an improved one nothing else I'm seeing that we need a post with here okay

(43:59) new room temperature superc conductor articles I think I posted them maybe already if so I want to look at those though yeah that Predator pretty interesting I think that we're not looking at the Gorgon stair though the Gorgon stair is going to be looking down right so that's those huge things they have this is something that's Airborne purpose uh Airborne intelligence that's why I think it's the M q1c okay I think I'm pretty confident here okay I wonder if OS VRT maybe we can

(45:10) find something about OS VRT OS VRT Plus was it PA Poseidon how about Aries E3 E3 it's all all going to be uh classified for

(46:50) I'm going to post uh images from the from the video as well so let's see they've already we've already got the one there it's side by side um how do people on their Twitter things have like multiple videos playing at once how do they do that going to get one of all three orbs let's see which clip do we want do something like this and then we'll do we'll get one of the zap

(47:57) how do I get it to like how do I get this to go away how do I get the menu bar to go away at the bottom not sure how oops there we go okay that seems good yeah no resistance essentially doesn't

(49:07) heat up cold fusion theoretically doesn't even have to happen at zero temperatures what we've or at uh zero Kelvin we've come to determine for this feels like it might even be getting used for the targeting part here makes me think they're using this to track to lock the orbs onto the target

(50:35) maybe Target the plane is a better way for read this R part search and seizure operations um what's the word I'm

(51:45) looking for here um not spooky but not mysterious ominous for it's pretty good right yeah it's painting the target feels like right just like when you are like playing a video game and you are like one person's targeting on to the thing where your weapons will then home home in on hone in on it same

(52:54) idea should I tag Ron there a lot of rathon options here I'm going tag Ron defense it's kind of a weird tag huh maybe I won't tag rathon look at this part is wild dude sensor payload information real time I'm just going to read this aloud on stream the primary mission of the eoir which is the electro Optical IR sensor payload is to provide enhanced visual imagery to augment existing electronic sensors

(53:58) and will allow enhance low visibility in night navigation interception and observation and surveillance insertion and extraction operations combat search and rescue identification real-time situation awareness and threat warning reconnaissance and surveillance as well as visit board search and seizure operations what the hell GT stop asking the same questions over and over again man I already addressed it not sure what you guys are trolling wild okay I think this is good for the Drone update I think we're just

(54:35) going to post this did we add this to my I already add that to my highlights okay guys there's the that I got to go to the bathroom Okay uh 5 minute break I'll be right back I'll be right back I'm going to grab a extra drink and go to the bathroom real quick I'll mute my mic so you guys can't hear anything inappropriate the answer is I I can't know things I don't know man like why would I know why reg side and non deleted is YouTube come on man sorry about that chat took a little

(1:01:38) longer than I expected okay let's see what we got going on here cheers everybody cheers uh we haven't had any yatsi moments today I guess I'm going to be a memer for this yatsi thing thing huh is there an orb I think that's just Kobe Bryant back there guys that's just Kobe Bryant I got a new hologram I got the Kobe Bryant hologram I love everything about Kobe except for those uh those uh sexual assault allegations which they were never proven in court they were never proven so you know can just pretend like that never

(1:02:22) happened everything else about the gu is great work ethic I like how he doesn't care if people think he's a a [REDACTED] or whatever you know he just he was a fighter rest in peace Kobe rest in peace okay I've got more caffeine what are we looking at friends would walk up to I don't know if I can wear these with my Santa hat on wait maybe we can do both at the same time you guys can hear me right yeah okay I don't think this works it kind of does Work O rathon cameras folks the patent at work in

(1:03:20) Ron's multispectral targeting system the US its allies a oneof a let of system I'm going to hook one of these up to my car dude raon has delivered nearly targeting systems and integrated 20 unique platforms including the mq1 C gry Eagle the mq9 reaper the mh6 Blackhawk the mq1 predator and the C130 Hercules oh yeah look at this it's elector technology captures images across the spectrum of light that can reveal targets at night and even detect if a parked car has its engine running yeah I mean that's pretty good we might

(1:04:10) have to steal this video rathon Ron we're going to steal your video going to steal the hell out of your video oh wait wait whoa whoa too much too much too loud too much stealing your video from rathon dude I don't want to check my DMs I keep revealing my DMs over and over and over and over again it's too much it's too much folks let me see let me see color palette infrared can we can we show this I I'll copy and paste it we need another one of these okay we're going to do one more post for

(1:05:10) tonight and then I'm probably going to take off early I want to go get dinner and maybe hang out with my parents or something or maybe just chill do something other than

investigate none of these look like the rainbow palette but pretty interesting how like there's a lot of customization obviously capable of this right a lot of customization there is one called rainbow though uh no offense of the people watching but I'm not really interested in hearing everybody's personal theories man I get it but you know you guys can you can

(1:06:09) post your own stuff if you want if you guys have your own theories about MH370 or whatever you think is going on right just um I appreciate that everybody's digging into it but I just don't have time is a reality I don't have time for everybody's I get a lot of emails people telling me what they they know happened to the plane and what have you right reality is we're all just trying to get to the **truth** so as long as we're pushing for the **truth** doesn't doesn't really matter I also I don't want people trying

(1:06:37) to tell me what to think either so early on in the investigation I had to block a lot of people cuz people were coming to my DMs trying to tell me that well they know really what happened to the plane I have to go with their thing like I just can't I can't manage all these competing uh beliefs right that's just the reality situation okay tax dollars start my lab I'm I just want to go to alien scientist lab and watch there want to go hang out with them I'm not going to block people for

(1:07:41) now cuz I'm going to unblock people but uh I'm just going to make a post like probably tomorrow when I unblock everybody I'll do it live on stream tomorrow and what I'll say is everybody gets one more chance but anyone who trolls will just be reblocked again so basically just going to give everybody a chance probably what I'll do is I'll write something up like I did like I I posted to or like I mentioned in the Stream today which is like you want you're either somebody who's building

(1:08:04) people up or you're somebody who's tearing people down you got to choose what kind of person you want to be in life right how's my hat look with this oh yeah okay looks pretty stupid but well we'll just take this off yeah that on video is definitely paid for by tax dollars so shouldn't feel bad about it I suppose it's Merry Christmas me get my hat Santa hat Santa have my beard this next part's going to be a little bit tougher the deployment what was this did we miss

(1:09:14) one did we miss one guys let's figure out what we got going on here we might have missed one it's fine probably I need the joint India base what's this one oh yeah okay there we go that's what we need okay let's let's start the next post I'm going to call it drone location now drone deployment Dr deployment is probably good what the qu is

(1:10:53) capitalize let's go ahead and grab this okay then I think we can go ahead and close this Sure Save drone location let's close this okay surveillance for animent see we need to find evidence where the Coco Islands

(1:12:17) H where are the Coco Islands oh yeah Coco Island's right here let's just post this here classified Fireballs hitting the Earth that sounds pretty wild

(1:13:52) for yuck I hate the way they spell defense gross British British people no offense to my British followers but you guys the way you spell it's insulting okay well this is a good one what's the date on this article there we go we'll take that I'm actually going to remove this part

(1:15:22) redundant yeah geodesics is just gravity it's a gravitational wave propagated forward right so if you want to know geodesics all you have to do is look at this video right here you're looking at the geodesic so a Crea a gravity wave forward that they're just pulling themselves forward on that's geodesics the same way is how gravity makes the Earth or how the gravitational force of the geodesic of the earth while it's warping SpaceTime so um can I let me just make sure okay so so let's say this is the Earth right

(1:16:15) the reason why Things fall to the Earth let's say this is not obviously not going to be or hold on let me find a ball so I will show you gravity okay in a simplistic form so let's take this dirty dog ball here this is the earth now okay so the Earth is moving through time and moving through space forward right and now this is a satellite so what's happening is because there's curvature of SpaceTime from from the mass of the Earth what's going to happen here as time moves forward and both of these objects are

(1:16:59) moving forward what's going to happen is they're going to converge right they're converging this is how gravity works it's not that it's falling it's that both objects are moving forward and they're converging towards the gravitational effect gravitational effect is a byproduct of the mass um the mass of the object this warping SpaceTime around it right so if we can replicate that or create some type of equivalent Force then we can create our own geodesic like this in fact we can also negate the force of it by creating

(1:17:34) a bubble around it so if you were to create a bubble around this object it's no longer going to follow the curvature of the mass of this object and then what happens is they both just move parallel to one another right so what we're what we're seeing here with the orbs is they're moving parallel like this as opposed to converging like we would expect as objects move hopefully that explained it for you guys get my balls out okay what else do we

(1:18:52) have we can throw this in here too if we want to add to it okay close that that one what else we got is that what I

(1:20:22) posted there's just one more I don't I think I don't know if we already got this one yeah we already did this one okay then where's the card nicobar that's hey happy holidays MC

(1:21:46) Grifford yeah I think a lot of people are probably at the mall doing Mall stuff I was at the mall earlier too sorry that the the stream messed up that probably lost lots of our viewers but it is what it is huh Punjabi Batman's post shows up on this from a week ago e

(1:23:21) for for for for

(1:25:02) we'll move this one to the back think we're going to move this to the back down here italicize this okay for for

(1:26:24) I think this is pretty good what do you guys think it's kind of a lot of post pretty quickly maybe I sit on this for a minute Christmas music get the tunes on yeah my background's in healthcare it guys I just care about this cuz I want to get the answers for the families I've also never seen videos that were this compelling to my life I've never seen any videos that were this compelling in my whole life this is way too detailed man you can tell a fake right away I mean we've looked at people who try to

(1:27:09) make the fake versions of this and it's embarrassing right and it just the crazy part is it tells the story of what happened to the plane actually tells the story of what happened to the plane this manual tracking too is very weird for a hoax video right it actually looks like someone's really tracking the plane like they're manually trying to get it in frame which is not easy because you're zoomed in right if you try to take a picture and you zoom in and then you try to follow it it's hard I remember seeing this video back

(1:27:47) in 2014 and just ignoring it thinking I didn't know what I was looking at at all that's that's the thing that really warps my mind I saw the video in 2014 and ignored it for nine years I had no idea what I was looking at and then I saw this one technically I saw the stereoscopic one doesn't really matter whether or not it's stereoscopic we have two satellites staring down if it is stereoscopic 3D it would make sense for it to be 3D because they would want to be able to uh be able to track the plane in

(1:28:20) three-dimensional space and I was like wait there's two videos they're perfectly in sync you can see when it turns like this that you can see it's darker on the bottom as well than it is on the top which tells us that what we're looking at here is MH370 I mean at least it's supposed to be MH370 it's Malaysian Airlines yeah I think it's definitely real 100% I have no doubt I have no doubt whatsoever this is real all the stuff's too specific too detailed tells this real story of what

(1:28:59) happened to the plane consistent with 19 Witnesses makes a lot more sense than the official narratives of this plane just like the narratives they're not even official narratives the official narratives we don't know what happened to the plane guys you ready like let's just look just going to Google official story MH370 let's not use let's use britannica I don't know what britannica is all about let's look at this they say the plane crashed but we didn't find any debris three pieces have been identified

(1:30:06) to be connected to MH370 three pieces of debris well this is interesting if it wasn't a control descent then the plane should have blown up into bazillion pieces oh they couldn't even explain how the debris drifted to Africa wow I didn't know about that they couldn't explain how the debris drifted to Africa wow that makes sense huh yeah they called off to search

(1:31:21) cuz investigators could not determine why the plane disappeared guys they could not determine it how is fire not listed on here how about the fire of the lithium batteries destroyed the equipment center the main equipment center the electronics Bay how is that not the most logical possible Thing by far it's the most logical Solution by far this idea of it being suicide is the dumbest thing ever this is also a [REDACTED] as well so is it is this is this the one from Jeff wise New

York Magazine Jeff wise yes it

(1:32:26) is Jeff wise is the person Jeff wise is responsible for the most disinformation around MH370 of any human being on the face of the Earth NY mag yeah holy crap he's actually responsible holy crap this he we had to end up retracting this cuz it turned out it was actually mh150 to jeda guys that's how dumb Jeff wise is I have no nice words for Jeff wise it was actually just mh150 to jeda he was practicing one day before the route in February 4th is when he was scheduled to fly you guys want to see it on the

(1:33:19) map Jeff wise is literally responsible look at this this is how they tried to match it guys look at cuz they it's like it's not even that that same of the route it just goes up this way and this is where they said oh well then he diverted it down this way like this is the the route they try to match up they're trying to match up this route to jedha up here he was just practicing his actual flight to jedha it's not a suicide route and this doesn't even incorporate going from the South China

(1:33:47) Sea back across the continent of or the peninsula of Malaysia either this is how bad disinformation misinformation is Jeff wise you are a terrible person buddy you are a terrible person unbelievable man I didn't learn about this the fact that Jeff wise was the one responsible for this until like last week no evidence of shrapnel or missile but there was evidence of a fire how I just don't get it man how have they not speculated the fire do people not realize that you can fake electronic signals and you can fake

(1:34:31) electronic data like easily yeah they lied about the lithium ion batteries too the CEO of Malaysian Airlines lied about it I'm probably going to push you guys over to uh Alien scientist uh stream since they are I think is he currently going right now yeah they're live with APEC right now there's only 100 people watching probably more should be watching asymmetrical something or other warp drives and torsion physics wow well that's pretty spicy yeah I really think it warp drives are possible man I think that's what

(1:35:32) we're talking about here we're talking about warp drives guys I don't know if the orbs are lithium based I doubt it I doubt it okay do I need to add any more screenshots here I think this is just good right oh my God I hate when I press f11 accidentally man let's say the the Drone must have intercepted the plane okay let's post this people might say Port Blair is too

(1:36:37) far so it's fine 5,000 views on that okay there you go okay that's the Drone location deployment this only a 7,000 views it's oh no it's got 10,000 okay I mean the fact that us government's directly implicated is the bigger thing US government has stands lose like 1 billion dollar from this especially now that they've been lying about it like just look at the Alex Jones case guys \$1 billion settlement imagine how much the case would be for MH370 for the government line about what happened to

(1:37:37) the plane just think about it okay so what's coming next um the things I'm going to work on probably tomorrow are going to be the more meta things like the um the explainer

videos probably wipe this stuff out right I think we can get this rid of this now took care of that hm proof the videos were discussed eight years ago and get this we did the reddit post talked about the density change in the contrails might do a new piece on motive because I think a lot of people are

(1:38:42) missing out on that uh we need a **Foya** people so tomorrow probably I'll work on on the **foas** as well as um where the explainer video stuff oh hear that explainer video is down here do want to talk to Richard Dolan I may try to reach out to him and I want to do the all works we need a new all works version and we need a new all evidence version those are the things I'm primarily wanting to be focusing on as well as the explainer videos a lot of people want to know about the motive stuff as well in terms of what's the point

(1:39:50) right if this drone was deployed from over here I imagine this drone must have already been in the sky this is pretty far for it to go although I think it could it could reach and it could intercept it almost makes me wonder if they hear right here they know that something happens right they get the communication right around here seems reasonable this drone could get here in time I mean this maybe this is the rendezu point maybe that's when the Drone gets there right maybe the drones required or the drones refueling at car

(1:40:30) nicobar yeah Merry Christmas BBC and everybody else who's on here uh motive is not really that important it's not important that's I mean I can't uh read minds right we can't tell what the motive is of the United States government the important part is that we prove as much about the videos to be true as we can prove that's the important part I'm going to upload some YouTube videos uh actually hold on paste this if you guys want to go check out the alien scientist stream after I jump off here in a minute I

(1:41:05) think they've got about 100 people watching reading science uh similar to what we posted with Dave Rossy earlier these will probably be the only posts I make today tomorrow um I may po post a picture of Lulu with her with their ears on cuz she's cute and then I'm going to post oh yeah tomorrow as well let's see where's my all works I going to do these and then unblock stream tomorrow I'm going to unblock everybody who doesn't have me blocked if people have me blocked they will not get unblocked but everybody

(1:41:44) else will get unblocked it's going to be interesting yeah I mean we don't know what the motive is only the government can say what the motive is right so they'll be the ones who have to tell us why they did this I mean it seems like the answer is the engineers and scientists on board the plane um I also think that the US government's relationship with **China** broke down around the same time I want to look into that real quick before we come before we close let's go from 121 2013 to let's say 121

(1:42:50) 2014 look at the date on this one date on this one is like a month after the plane went missing h for

(1:44:32) H what I'm trying to figure out is **China** knows about what happened to the plane what

is their move what's their play right I don't know if we'll ever get an admission from the government I mean maybe if time goes by problem is there's a lot of legal liability I play here yeah that was Mike Harris sch Mike Harris Mike Harris is the one who said that um I'll pull it up please do stay tuned in that way um we got a lot going on can I give you my best see theot Wild guest okay sure somehow somebody opened up an

(1:45:16) interdimensional portal in that plane went through it and and we don't know where it is where it's going to come out at but somehow it's lost for the time being it will be found again fell in a hole the part where he says fell in a hole man the fell in the hole line is just man ominous as hell all right well that would that he's just smiling like he knows please do stay tuned in that way um we got a lot going on can I give you my best and he got silenced afterwards I told him to stop talking

(1:45:45) about it somehow somebody opened up an interdimensional portal in that plane went through it and and where it is or where it's going to come out at but okay well I think I'm going to watch the Barbie movie you know change of pace little MH370 little Advanced science a little Barbie movie you know makes sense right tomorrow we **Foya** some people we do the unblock stream and we work on all works and all evidence for Christmas Eve we'll see how much we can do on Christmas Eve I'm supposed to go make

(1:46:21) cookies tomorrow should be interesting he didn't work for free scale he was a contractor for Motorola when free scale broke off of Motorola in 20 2004 For You BBC verify he was a contractor for Motorola when freescale broke off from Motorola in 2004 and he I think he knows about how the like the interview talks about how he uh um knew that they had this advanced technology and that's why they broke off yeah he was a contractor for them similar to how I'm a contractor for the US government but I'm not I'm not the cool

(1:47:04) kind of contractor like locked Martin contractor I'm the boring kind although locked Martin if you're looking for a contractor who can Reveal Your Secrets to the world I'm out here out here doing stuff I just do things folks we did the evidence review stream we did software P science these are all old record of the trial oh this was the record of the um Edward L we were looking for that I don't know if we could find it yeah okay guys I think that's it that was a few hour stream appreciate it uh

(1:47:46) thanks for hanging out make sure you check out the content for today we'll go back over it check out Dave Rosy science quad quadruple Mass oscillations basically what we're dealing with here is aquaberry Drive situation fundamental reality of nature itself breaking through what we see to get to that fundamental lay is what will lead to what we see in the videos so how do we produce this effect here how do we produce this is that we just completely break through the fabric of SpaceTime and when you break through it

(1:48:21) locally like this to get to the the underlying Matrix that's where we see this cold event happen the universe is absorbing energy to fill in the void I guess was a way to think about it I think it really is like taking magnets that have the same polarity and trying to jam them together

electricity and magnetism are uh are are irreparably linked together irreparably no inevitably I don't know whatever word you guys get it it's wild man imagine if these are the First videos of proof of teleportation hey

(1:49:02) thanks Kimberly appreciate it how's the Hat looking is it looking good yeah imagine if these are the First videos that are proof of teleportation how Wild would that be at least publicly right first public videos proof of teleportation and it's of MH370 from 9 years ago invariably yeah invariably is the word I was looking for thank you yeah Electro Electro magnetism it's why they're they're invariably linked electricity and magnetism how you came back yeah thanks Jess appreciate you irrefutably in invariably was the

(1:49:51) word we were looking for and look at this man do I think these videos are real yes I 100% think these videos are real I think that the government would do literally anything to keep these videos secret if they're real as well literally anything including potentially kill people there is too much at stake here just look at what we're looking at here this 238 people on board this plane that they lied about the implications alone are staggering not to mention the implications to the whole world if this is true right just the legal

(1:50:26) implications alone people will lose everything everything so yes uh and just for the record we're not going to believe anything that comes from **Reddit** doesn't matter anymore they've lost their opportunity to be taken seriously the moment they committed felony fraud against us um and stole money from me that that's when everything on **Reddit** it was uh and they banned Punjabi Batman so the only person that we even respected on **Reddit** got permanently banned for no reason whatsoever so nothing that comes

(1:50:57) from **Reddit** can be uh taken seriously especially not from the **debunkers** um and if they are upset about that well then you shouldn't have committed felony fraud so sorry um the case will proceed and we will keep going until we get an answer so thanks guys I hope you have a great night uh this has been good I hope everybody has a merry Christmas tomorrow just quick quickly tomorrow we will I will do a stream tomorrow I'm going to do an unblock stream at the minimum might even do a space along with it I

(1:51:26) don't know maybe maybe not and then I'm going to work a little bit on all works and all evidence so that I can get these pushed out early next week probably on like Tuesday or Wednesday I want to do all evidence first and then I'll probably do all works after that because I want to get the all evidence out there for people to share with people cool guys uh no there's no videos I mean this stuff's classified man all these videos are classified right this is classified stuff so there's nothing to compare to

(1:51:59) right not like this so thank you guys have a great night and head over to the alien scientists podcast or the alien scientist stream if you guys want to watch more Apec and advanced propulsion mechanisms that is in the PIN to the top right now otherwise Merry Christmas and we'll talk tomorrow peace

MH370x - Advanced Science, Drone Deployment, Raytheon Cameras 12/23/23 - YouTube

Transcript:

(01:02) there we go hey let's do full face what's up everybody hey W my shirt looks really Orange it's actually red but it looks orange wow that's weird what's up everyone Ash catch him I might actually play some Pokemon later today I haven't played that in a long time just try to chill out a little bit with the holidays happy holidays everybody who is hanging out oh where's my holiday stuff hold on hold on one sec and yes we've changed a Kobe Bryant okay we're good good we're

(02:01) holidaying and up oh better take that tag off keeping it real folks and we're we're very diverse we have African-American Santa here you know Santa Santa can be any any race might be uh this could even be a middle eastern Santa I don't know keep it real yeah we got the Merry Christmas not sure if Ashton has legs yeah you got it maybe I'll go down a little bit more why isn't this not there we go can't see my little ball hat this feels lame whatever I'm really tall that's the problem guys I'm over 6 feet tall so

(03:03) yeah okay I also have him shaving so you know looking pretty Scruff but it's uh holidays so I'm chilling okay um I'm about to post the first Dave Rossy science piece here so I think I mentioned hey lamp what's up man thanks a lot tip is the wrong word but yeah let's call it like you know when you pay \$1 to get a it's like the equivalent of a lap dance but for science a scientific lap dance is what you're going to get here lamp welcome we're going to drop this paper uh you can't see it because on the other

(03:51) side of my screen yo quirky yo PJ Mike UK UK rainbow dancer slam dunk Mo Karen uh M or uh mark Mar Chrome station Jason welcome everybody Welcome everybody yeah uh Bob is pretty sweet I think that uh hey William hey Jack trading merry Festivus for the rest of us yeah this hat looks ridiculous this hat looks ridiculous but I love it also I got a thing for my dog as well we're gonna hold on we might have to show her as well Lulu come here you know what Lulu come on be a good girl they want to see you lulu where's

(04:42) my scissors my freaking scissors man I don't know where my scissors is at but I got this thing for my dog so you guys can check her out too honestly I probably have to I might post a picture or a video of her with this thing on if she can wear if she wears it I mean this could go this could go horribly wrong guys this could go horribly wrong we're going to find out watch out Jesus there we go Lulu come here come here oh no she knows she knows something's not right I got some ears for her to wear I think she's uh she knows that there's

(05:33) something wrong she ran away when I tried to grab her uh yeah so also quick announcement I've decided this may be a bad idea but I am going to end up unblocking everybody on Twitter who hasn't blocked me so everybody who's got me blocked they will not get unblocked but every single person who I've blocked blocked that doesn't have me blocked on Christmas I'm going to unblock them maybe even Christmas Eve I don't know how it's going to go guys could be could be sketchy could be a deluge of trolls now

(06:14) doesn't mean we won't reblock them but oh we're just going to see what happens we're just going to see what happens I have I I looked the other day cuz someone was showing me how to check how many people you have blocked I have like 1,400 people blocked so we're going to unblock like a thousand people it's going to be interesting it's going to be interesting do it on stream yeah that's actually not a bad idea promise it's going to take like a while man that's a lot of people to

(06:37) unblock like individually even if I'm clicking it's going to take like 20 minutes just to unclick unclick them all okay I think maybe we will do it live uh good recommendations honestly good recommendations Okay so we've got some science this is going to take like um good 30 minutes or an hour just to to finish this science here guys like this scientific paper is pretty long uh it's not technically a scientific paper this is technically a research paper okay I'm going to put the link in the

(07:08) chat you guys can read along with if you want so Dave Rossi wrote this this is a research paper the reason why it's a research paper is because it's more of like something you would do if you were like in school right it's not like a scientific paper for publishing in that sense but it does uh quote several other research papers within it in fact I think mentioned one of these on alien scientist stream yesterday it's like puky to say you don't belong at there shov back in yeah I think we've reached the point

(07:42) where we can unblock everybody like here's the reality guys you know I tell you guys everything honestly and openly I always have so part of the reason why we were blocking people early on is because a lot of it was about narrative control right and people wanted to um you know people were trying to control the narrative and trying to make sure that like people weren't following the case but now we've reached a critical mass where it doesn't matter anymore right so even if people are trolls it's not really that big a deal

(08:08) we can just Farm them for engagement honestly we just be a casual farmer out here farming trolls for engagement uh what's the meme oh yeah like something like this I'm about a simple farmer what is it here we go we got we're going to do some memes as well guys we'll make even a Meme here oh yeah this is it wait probably even use the Pepe one I like the Pepe one probably do something like this tending to our trolls man we're going to be tending to our trolls just farming them for engagement and then they'll be like you're a

(09:02) grifter and I'll be like yeah but you're the one helping me grift because you're giving me a free engagement it's not quadruple it's quadruple quadruple so if you guys want to understand

this before I post it I'll explain I've already read the entire research paper and uh did my best to understand it so it turns out the science is actually way easier than I thought way easier than I thought so what we're talking about when we're talking about how do you go faster than the speed of light it really has to do

(09:33) with gravitational waves and really like Star Trek um uh warp speed right and here's what you want to think of is just think of the construct that we live in right think of it like a video game literally like a video game and that our 3D reality is being projected onto this space just like the Matrix where they like build in the stuff on the Matrix what we want to try to do is we need to break through what we physically see to get to that underlying Matrix that is the construct that is housing our reality and when we do that then what we

(10:06) have happen is what we see in our videos where you see this endothermic event happen because we've broken into the fabric of the underlying uh you know vacuum state if you want to call it that some people call it the ether honestly it doesn't matter what you call it but that's what causes the temperature drop and so when we're talking about creating super luminal speeds really what we're talking about creating is a barrier around the object right so let's use something that uh something that won't dox me

(10:37) um let's just pretend like this power cord this power plug here is our plane and it's flying right what we want to do is we need to make a bubble around the plane and it can be a really thin bubble it can be just completely around the plane itself but what we want to do that we want to bend SpaceTime in front of the plane pulling it Forward just like the aquaberry drive just like that and then the idea there is that that your uh local frame of reference is not going to be impacted by inertia because what's

(11:05) happening is we're just bending the space time in front we rip the SpaceTime open in front of it then we can cause the propulsion that we want to have happen turns out that's really all it comes down to so that's what this paper will build on and um you know the Simplicity of is what surprised me the most when I read through this paper I was like wait we're just talking about Star Trek warp speed and we're just talking about aquaberry Drive I mean this has all been out there forever like

(11:32) how is this hidden and this paper basically talks about that is that it's all out there right this is all consistent with uh Newtonian physics uh general relativity we just have to piece it together we just have to cheat a little bit it's like Dave Rosy says this a new look on Old physics right so yeah reading through this it's it's pretty wild and then I think what we already learned from electrical engineering is huge because what what we learned in electrical engineering guys think back to what we learned the right hand rule

(12:03) right so what this means is there's two wave functions that are happening when we have current I think I'm saying this right if not the pointing Vector right the pointing Vector means that there's one wave kind of coming at the camera like this and then there's another wave perpendicular to it now what if we do this what if we create an exact opposite wave coming

back the other direction here so we have our wave is going this way right hand rule what if we make a left hand rule wave that's in perfect

(12:33) synchronization coherence that is potentially how we can break the fabric of SpaceTime and if we can break that fabric of space time now we can create propulsion um and here's the other thing that we learned yesterday is we don't need to cancel out the other propulsion that's not even necessary although we can do that too is that we can just create our own gravitational force as well now looking at the videos I think both are happening so when we look at the drone video specifically which is much more

(13:02) incredible than the satellite one right I mean the satellite one's great but the Drone one really shows us what's going on here right and the beauty of this is that we see that the orb is doing two things some people like to argue in my replies that no it's just the gravitational force that's keeping it up but it's not we can tell it's not just the gravitational force keeping it up here we don't see the line like shooting upward negating gravity right the line is shooting forward so this orb should

(13:29) be falling but it's not because it has no mass and we see that because of the non-Radiant Barrier around it which is a field and despite what Bob Greener said I do not think this is a plasma ball the reason why this is not a plasma ball is because we can see the line in front of it meaning there's something coming out of this it's shooting a laser beam out that's creating a gravitational wave in front of it so there's actually two things happening here it's completely ignoring gravity itself by being displaced from

(13:58) the local SpaceTime and it's pulling itself forward two different forces here it's ignoring that you could also say it's pinned to the plane but you can't it's not pinned to the plane most likely because when we look at the high quality satellite video we can see that it initially it doesn't stick to the plane it goes right past it so it's ignoring gravity even when it comes flying in here and then when it IT Ricochet back it's still ignoring gravity here so this is why it's not

(14:26) just that it's sticking to the plane although one thing I was watching yesterday is really interesting when the second orb shows up it like pretty quickly equal like gets into formation the part about where it gets into a formation is really wild like watch this so you could see it start coming up here when it first comes up it's right next to the other orb like they're close to one another but watch how fast it gets into formation it doesn't go into the opposite side doesn't become a 180° situation it actually goes into

(14:57) right where like it's expecting the third orb to show up so you see that and it moves right away into the location where now it's going to create an equilateral triangle actually I'm wrong it does kind of almost make a 180° pattern here but now you see right away it's actually already moving into a location where it's expecting the third orb to show up so to me this has got to already be preset the pattern's already been preset before the third orb even shows up here really interesting and then the third board

(15:29) shows up and goes directly into the formation like it knows right where it's supposed to go so it can't just be that they're attracting and repelling there has to be something else going on here I almost brought this up yesterday but Bob's very verbose uh and yeah so didn't have a lot of time to to stick it in there but oh wait that's probably not how I should phrase it um didn't have a lot of time to jump in and then it it gets locked into formation and we see it get locked into formation right after

(15:59) the third orb yeah it does feel like magnets like I feel like my magnet analogy is dead on like when the when these are converging that's definitely what's causing the singularity where it's causing the the snap if you want to think of it and people that I've had people that are electrical engineers come and say yes this all is like makes sense even though it should seem like magic right okay so they're creating a gravitational wave right and then they're just it's basically the aquaberry

(16:33) drive and now the plane just snaps now one thing I think I would disagree with Bob with and I just be perfectly honest I respect the hell out of Bob he's amazing the fact he's doing all the science is incredible I think that there does have to be a fourth orb you have to be able to control this more than just turn the electrons on and turn it off there's got to be some type of counteraction or entanglement effect going on here in my mind um and that's the thing where I think that he doesn't adequately explain

(17:06) because if you just stop shooting the electrons into the system it feels like the system's going to break down and you're going to it's like driving your car without a steering wheel right yeah nobody's **debunk** the cloud moving I mean you can see like you can see the clouds moving like throughout the video you can see the water in the background this is why even Chris Leto is like wait what are people talking about with static clouds like we can see we can see the ocean moving in the background too they're like oh it's just

(17:31) a displacement effect like what are you talking about man this is why no one's going to be able to recreate the videos no one will ever be able to recreate the videos it's just not possible it's like it's like if I were to give you a video of real life and said go ahead and recreate that right you're not going to be able to you can make a crude approximation but it's obv going to look fake when we watch these videos it doesn't look fake right that's the thing and that's because there's no

(17:57) discrepancies on a single frame okay so I told Dave we' get this stuff posted out so I want to start posting I kind of want to make the tweets ahead of time but there's not a good way to do it so this is going to have to be kind of a slow process unfortunately we're going to have to farm farm our trolls as well so yeah I I strongly believe there's two different anti-gravitational effects going on here one is that the orbs are freely floating I think they're also acting attracting and repelling

(18:30) when they get into formation but then you also see the forward facing gravity engine as well right here right we see this now this if this was just a ball of plasma you're not going to see

this forward- facing gravity engine to me this means there's something mechanical inside of here inside of this field so it's a field and the fact it can make it this small blows my mind this is Tiny how are they getting a particle accelerator and this toroidal electromagnetic field that's like three toids deep at least

(19:04) based on what Bob Greener says how are they getting that such in a small space like this Dave's manuscript is a research paper I think I just put the link in the chat uh let me pin it to the top you guys can download it if you want you guys if you want to follow along you can take a look yourself what I will do is what I normally do which is I'm going to summarize it like I've done here this is the actually the actual summary that he posted and then I'm going to put some tweets some tweet replies and I'm going to take

(19:38) screenshots as well I'm looking at on my other screen here right now I'm trying to avoid having to retype it all out because some of this stuff screenshots is going to be me struggle yeah there has to be something to receive the matter wave that's so oh uh langi I I don't know if that's if I'm saying your right your name right but yeah you think of it like there needs to be a catcher mitt right there needs to be a catcher mitt somewhere I mean this plane is going super luminal speeds from a gravitational wave how do

(20:22) you stop think of it like if you are on a surfboard You could argue that maybe the gravitational wave slows down right and like so if you're on a wave on a surfboard you know you're you can coast along it it really is like surfing it really is also there three entangled orbs back at the base there could also be more than one entangled orb back at the base but I don't think you need three more orbs but there could be it could be maybe you do need three or additional ones the cloud movement stuff would be way

(21:04) too hard to fake you'd have to go pixel by pixel that's the problem on it like if people try to apply an effect it's going to apply that effect and it's going to look super fake it's just going to look super fake that's reality I don't really want to address more **debunks** I think I'm going to post this and get started do I need to put like page numbers on this how many pages is this going to be just estimating the amount of pages I'm thinking it's going to be like four tweets how come I can't copy anything

(21:42) from this is that a picture this must be a picture problem is I can't prepare my tweets ahead of time I want to post them rapidly but this is going to take a minute to do okay I think I'm going to just go ahead and post it anyway here we go we're just going to have to do it one page we're going to have to do it one tweet at a time it's not my my thing's not going to be 13 tweets cuz I'm just summarizing it I've already posted the link right here I am going to post it to you to UFO

(22:28) Twitter and ufox and to the science thing I'm not going to post it to MH370 tag cuz it's not technically directly related to MH370 yeah I can screen capture stuff and that's what I'm going to do I'm going to actually take pictures of the pictures which is going to be kind of suspicious kind of sketch but we'll see okay here we go I think we're good Christmas hats Dave

Rossy science okay okay let's post the paper by Eric W Davis picture of

(23:46) this maybe we do it like this uh I don't know how to do the page numbers just yet for that'll work oops crap closed it and he's even got subed for Pas in here pretty spicy I like it okay so this

(24:51) is his second tweet sorry guys I may not be able to answer questions while I'm working on this doesn't like anti-g gravitic huh hopefully I'm not get anything wrong here uh I want to put page numbers but

(25:55) it's too hard I don't know how many pages it's going to be electromagnetic phenomenal oh God sorry I have to put this into a notepad so that it formats correctly I'm also making some edits to his content summarizing it a little bit

(27:10) okay okay let's just read this real quick um this paper summarizes how electrodynamics and gravitation are coupled in uh H hamiltonian formula formulation followed by appropriate quantization scheme from an analysis of the coupled field interactions hamiltonian and one can dve a completely classical scattering cross-section for the decay of photons into gravitons and photons and thus describe a simple physical mechanism for the generation of gravitons in lab experiments it is shown that astronomical detection of a

(27:46) galactic EF VHF gravitons near Earth is presently feasible an alternative graviton protection scem scheme involves low energy laser Photon and high energy Electron Beam scattering in a linear collider is described and compared to the photon scattering Decay scheme an evaluation of a scheme to generate uh gravitons in the lab using a pulse power system and ultra high intensity lasers shows that this technology is several years away from realizing the energy and sizing requirements for generating a significant number of gravitons

(28:21) speculation on future space propulsion system is described whereby an intense High highly uh col cated beam of high gravity uh frequency gravitons is produced and emitted from the propulsion system Einstein's general relativity Theory allows for beam of gravitational radiation to be used as propellant because gravitational waves are ripples on the curvature of SpaceTime such that we can use this propellant to attain acceleration simply by ejecting one hard vacuum into another let me see what else we got here sorry I'm just taking a look at it

(29:23) right now okay what am I going to say here I'm probably going to let this speak for itself um oops I'm going to copy and paste some of that um what's the spiciest part

(30:56) for I mean he just lays it out right here we're looking at uh a gravitational wave in front of the orbs that's being produced by a pulse laser they're actually able to produce an actual wave gravitational wave it seems like that's what the geodesic is it's just simple actually it seems complicated but it's not for I'm going to use his last

(32:22) name I better like copy paste this or something copy this okay there we go okay let me just make sure what's next on this paper I I'll look at some comments in here a second okay yeah

this is good this is actually a good note so go to the next post oops I didn't really review that I think that's fine okay how do I add another tweet or so whatever you have to do for this there add another post okay okay let me see what we got in the comments hey James hey everybody

(33:28) uh better grammar I mean what I only wrote like two sentences probably could get rid of this comma here whatever it's fine I was trying to help uh Dave with his Grammar but or not his General formatting but it is what it is folks scientists aren't exactly known for their uh proper grammar in english- speaking hail Santa yo you ask for one Bitcoin it's nice man I hope you get that Bitcoin from Kim people were to asking Kim to support MH370 crack me up um what was I going to say I've already lost my train of

(34:18) thought oh yeah Santa is definitely just probably teleporting around huh delivering presents to everybody thanks Luke appreciate you man we're doing we're going hard on the science right now if you want to follow along you can take a look at the scientific paper I'm on uh a particular historical pattern right now one thing that the author would like to point out to the reader is that regardless of the source of such Publications there's a constant never-ending return to the conceptual understanding of the curving

(34:43) of SpaceTime by means of an electromagnetic gradients giving rise to higher second order effects not unlike that of building steps to make a set of stairs if we consider that there's electric permittivity and magnetic uh permeability of the quantum vacuum or ether represents the masculine and feminine metaphysical characteristics of life then we must ask could there be a metaphysical characteristics that give birth to the physical characteristics could it be possible that such processes for induced inside phenomenon in the

(35:14) laboratory have been staring at us right time um the question then becomes how can one curl the pointing Vector to be on topologically stable and potentially dare one postulate yeah like there's a couple things in here I would I'm going to change just cuz just got to you got to really make it easier for people make it easier for us normies you know what I'm saying you guys know what I'm saying don't want it to sound too pompous delete the Dare one postulate stuff okay let's put this in here put

(36:18) this in here pointing Vector okay let's see what else we're going to take out here okay take this as well one sec sorry I have to reformat it all guys okay probably me a lot of haters but it is what it is

(37:26) okay Prine huh Prien uh salv Pi referenc prene quite quite a bit okay see can't take the image of this huh I think I'm going to or um he needs a better header for this part what do we call this one I'm going to I'm going to take this part here we're going to put this here oh I got to

(38:34) type it out there should be single quote as well not double quote ohh man my dad was an English major or whatever so when I was younger I used to have to rewrite all my papers like 50 million times this also I think we should just remove the single quote entirely doesn't need any of that how do we do it for the one uh we'll just do all caps on this although we could we

turn this into italics here okay good okay that's good I like

(39:40) this I think we screenshot this add that yeah okay think we probably have a couple more posts this one's going to be longer I'm probably just going to directly summarize him on this okay I'm going to probably edit this here one sec okay I'll post it in a second for you guys to read I mean if you're you're reading you can follow along and see so this is interesting too because

(40:49) when you think about this you think about this system and this Matrix let's say that we're in right and you realize that everything is based on right angles so there even in a system that's organized like this there must be a way to break the system okay this is It's kind of long huh I'm going to delete this part now he's talking about I think uh toroids

(42:07) I this is maybe this is the right way I want to shorten this as much as possible that Merry Christmas everybodyy welcome to the new people who jumped on thanks Stefan how's it going thanks everybody who's watching

(43:12) along oh Bernie's here hey Bernie hey man we're doing a little science action I'm trying to do this Justice which is hard because I'm not a PhD uh I'm going to get rid of this part with salvator Pius nullifying local endothermic Rea exothermic reactions I mean there it is man this is what these guys are talking about man

(44:55) for oops I space too many times for is that about right

(46:12) guys ask grock to summarize it the crazy part about this is like if you rip through the fabric of SpaceTime then you may cause an endo reaction of absorption where like the Fabric's trying to suck back in on itself right like this is why everybody's reaching out to us cuz we're seeing it we're seeing what they would expect to see in video like I think we're actually looking at a rip in SpaceTime now that's a crude way of putting it but wow is this is this good enough I'm scared to even

(46:51) like type a lot of this yeah does it look orange though the shirt looks orange oh well it all just kind of looks orange let me see the next part is possible that such resonance under the conceptual basis of quantum mechanics effects denoting the observation that all particles are constantly always oscillating and never stop in its place I think this is probably good I think I think we I think we go with this right yeah faster than light seems very plausible with this right I kind of want to add some more

(47:56) pictures I'm I'm going to look for a curling of the poting vector W there's nothing there's nothing when oh here we go there's literally nothing on curling the point in vector I'm going put this picture in here think this is the best one here you can see the curling oh here we go this is what we need this is what I

(49:22) want here we go this is what I want what anything else I missed I think it's probably fine I don't have to be perfect right I don't have to be perfect okay I think I need to copy this man we're getting scientific up in this business getting scientific okay this is this is more scientific

than I've ever gotten in my whole life right now okay we need another header

(50:27) okay you know what we'll use this one here G thankfully Dave's got a a marketing major friend who can help out with uh cleaning up some of his format in here use of quotes versus use a single quote we do like this right here we go this is what we want oh hello come on God Twitter is just sucks for long form content okay I'm just going to copy all this and then let's do atmospheric

(51:31) circuit we're almost at the end I think there's probably just two more posts so I don't know however many this was six and close my window it's too noisy uh oops atph okay add some room pictures actually this one should probably be redefining understanding of static I know let's just type some of our stuff out here and see let's copy this okay so things are always oscillating that's important we need to make sure that's in here it could be a higher order effects

(52:35) yeah okay so this is actually what we want we going to keep it like this okay okay let's post this getting Christmasy up in this snitch after we're done with the scientific paper I will will make Lulu wear these uh reindeer things and uh show her on stream and try not to get her pissed off at me so that should be entertaining I have a feeling she's not going to enjoy it so that will be entertaining for the viewers okay um one thing I I don't like is when you don't want to ask questions right I

(53:24) would say you just say such resonance right and this should actually be after the effect part here all parts are constantly always a this is important right this is also a little bit redundant I think we're going to get rid of this part people who are smart smarts are already going to know that they were already always doing that and this is not a

(54:47) question like I don't like asking questions in my papers either so you you guys can read the fully unedited one I'm I'm uh I'm I'm uh kind of modifying this down uh editing it down for Simplicity on Twitter since Twitter's pretty Limited I mean basically what we're talking about here is we're taking a tuning fork and you're putting it against a glass

(55:51) and the glass shatters right same concept we just need to have the um entire entire reality shatter right uh langle I mean normies and **debunkers** are never going to believe this stuff to be real we're we're not trying to reach those people we just don't care thanks Cody appreciate you um yeah it's it's kind of comes down to harmonics and weight Wes right sound waves everything's a wave I think I might I don't think I'm going to use all this it's just too long I'm going to get rid of

(56:51) this people can read the whole thing if they want I just don't want to I don't want to overwhelm people when they're reading oh he talks about wireless energy transmission I love it I've always wondered why we couldn't transmit energy wirelessly feels like we should be able to he's got the quote on the wrong part here what the hell what am I what the hell how do you do this

(57:56) how's this quote not exist oh there it is okay okay yeah so then the next one's going to be about SpaceTime so what do we say here uh um

(59:35) is that true everything can be described as a wave my science smart smarts can everything be described as a wave I feel like it probably can right let me Google it yeah everything's actually made up of waves nice sweet for

(1:01:10) probably probably just go that this is good I think that's good uh let's do capacitor images capacitor definition see if we can find an image for capacitor I'm G take this right here I don't like that one let's put

(1:02:16) that in there uh I think that's good uh I'm going to go ahead and post this here you guys can if you want to follow along in real time okay sweet or on a shelf one two three okay so we're on post five already yikes okay

(1:03:38) okay let's go this this might be the last post I'm probably going to abbreviate the rest of it here I mean there's an aquaberry drive right there okay and here's the last one hey red panda hey man thanks a lot buddy appreciate you red panda definitely happy to have met you as well man you're

(1:04:41) one of the nicest people I've ever run across my life uh you can uh the link is in the top of the uh at the top guys click on the the pinned message for the link link to the whole paper I've posted most of it in here though lord of the orbs don't be a douchebag man I'm not sure what's wrong with people like why idiots like Lord of the orbs have to like gatekeep and try to feel smarter right like Lord of the orbs I guarantee that you are not nearly as intelligent as half the people in the chat so just stop pretending man just

(1:05:26) stop pretending and be better man in the future like people like this are like the worst man like why do you have to be a terrible human being have you ever just thought like not be so negative to people all the time like this is the kind of people that I just I can't stand you know you're like there's only two kinds of people in the world man there's only two kinds of people uh and I'm going to say this again because is I haven't uh I think I deleted the stream where I mentioned it you're either somebody who

(1:06:01) is trying to build things and solve things or you're somebody that's trying to put up barriers and tear people down choose what kind of person in the world you want to be if you're somebody who's trying to build things people are going to respect you and look up to you if you're somebody who's trying to tear stuff down you're going to be a terrible human being that nobody wants to be around right so honestly just look internally Lord orbs I'm speaking to you directly right now **I want you** to look internally

(1:06:27) in the kind of person you are and decide what kind of person do you want to be do you want to be somebody that builds things up and produces stuff or do you want to be a piece of crap who tries to tear stuff down right this is what's wrong with people like on **Reddit** and this is

why **Reddit** in general like becomes this toxic location where everybody's just trying to tear stuff down right and it happens because of brainwashing and gatekeeping and all the terrible behaviors that um social media and anonymity uh you know promote um

(1:07:03) types of uh Mass brainwashing uh the fact that nobody can think for themselves because they're too afraid to be attacked by other people right so if we got rid of anonymity on the internet most of this stuff will go away instantly people don't act like this when they have skin in the game right the moment all of a sudden like we tie your real name to like Lord of the orbs the moment we figure out who L of the orbs really is and it turns out he's like some guy who does construction or something like that right then you know

(1:07:33) that's the end of him talking crap right he never talks crap ever again right Ellie hey Ellie what's up so you know I think that you guys need to start to really look internally especially the trolls on social media like look internally man decide what kind of person you want to be it's never too late to change man never too late to change never too late to change man be a better person in the future you know you'll find that your life will become better when you become a better person as well

(1:08:23) anyway and just as a reminder for the people who who think that they're going to **debunk** us or make us stop there's literally nothing that you can do to make us stop looking into this case nothing at all there's just nothing so don't even bother don't even try you're just wasting your time time the best thing you could do is try to help us explain the science so that we can prove it real and that we can get the answers to the victims of MH370 I literally don't care what's causing what

(1:09:05) happens in the videos all I want to do is get the answers MH370 I want the US government to admit we were filming the plane and that those videos are of MH370 which if you look at them they clearly are man this is clearly MH370 in these videos right the reason why we didn't find any debris field reason why we didn't find any black boxes it's all explained by these videos the reason why it's a fire is explained by the videos the reason why someone went to prison uh over the events related to one month

(1:09:33) within the time frame of the plane disappearing I know it's hard to believe man it's hard to believe that we've got weird crazy orbs that can disappear a plane right but seems to be the best explanation to date by far and the reason why no one can recreate the videos is it's like if you're trying to recreate real life you can never re recreate real life it's always going to look fake right because you're recreating it it's like too many small details that are required like I know this seems crazy

(1:10:02) but the reality is science says this is possible actual Newtonian physics it's just we just have to rethink how we look at it it's not that we are we're not breaking the ruler we're bending it we're bending the rules but there still still works right okay let's finish this up guys lord of the orbs I don't like if you followed me man I don't care if it's non-human intelligence or not man like I've been 100% clear about that you're welcome to believe whatever you want

(1:10:36) about it man if you think this has to be aliens for whatever reason then come up with a theory for why it has to be aliens right I'm being clear I do not believe it's aliens that doesn't mean that I'm telling you that you have to believe it's not aliens I'm just saying everything can be explained by science the motivation can be explained by human motivations um you know that's just that's the evidence as to what people want to believe if you think this is too advanced right then sure man all but I

(1:11:05) would just I would warn you you see how people you see how people react to me I don't even say it's aliens and people persistently are in my replies going you think aliens zap the plane to another dimension even though I literally don't say that like I I get it on both sides I get the people saying that I think it's alien that zaps the plane to another dimension what I'm saying is humans that are teleporting the plane somewhere else on Earth and then I have the other people on the other side going you don't

(1:11:31) believe it's aliens why don't you believe it's aliens it's like I can't win you can't please everybody man you can't please everyone I'm just telling you my opinions okay anyway I want to finish this up I don't want to get too sidetracked with the questions here I'm going to close my door here real quick to Jes people love to drive their cars real fast the good news is this guys even if this is our technology it pretty much confirms a reverse engineering program man I'm pretty sure we didn't figure out

(1:12:15) quantum mechanics and and unification Theory all on our own man I'm pretty sure we didn't figure this out all on our own to me the only question is okay did we dig up some craft that were here before us or are there really being visiting us the good news is if you can teleport something faster than the speed of light then beans can actually visit us like now traveling from Zully or whatever else is plausible I've been clear I don't care if they're visiting us or not that's just not important to

(1:12:44) me you know I have the same view as my parents have on that which is what does it matter how does it change my my life right uh sorry I missed I missed canceling the ad um I ski the ad break okay wait I want I want to get this done guys hold on need to focus might be Martini time later too I don't know I haven't drank since I had my uh since that one day where I had too much it's been over a week um how do we reconcile the differences between linear and nonlinear forms of static space-time metrics superposition

(1:13:31) how do we interpret such how do we reconcile I think we can skip this part okay here we go I think we just pull this quote who's he who's he quoting who's he quoting in this actually don't know he's quoting in this is it from the paper do you guys know where this quote comes from oh hold on I might have to dig up with this quote it's quoted but I'm not sure if he's actually quoting somebody or if he's quoting himself here he doesn't have a doesn't say who he's quoting for the record I I love Dave

(1:14:17) he's probably one of my my closest friends even though I've only known him for a very short period of time um and I'd like to help him out because I think he's going to end up being

one of the most influential scientists of the younger generation it's only 25 years old it's incredible I still can you guys believe that Dave Ross's 25 years old man maybe it's the beard that makes him look older I actually can't believe it if somebody told me that Dave Rossy figured out anti-aging technology I would actually

(1:14:50) be like okay there's maybe maybe it's true it's hard to believe man he is he messaging me right now that would be really funny if you messag me right now I'm talking about him like that uh but this is these papers in here especially that Eric W Davis one pretty spicy pretty spicy guys uh okay I'm going to just put all the stuff here and then we'll edit it down we're not going to use all this come on as you can see science takes a long time man science takes a while this is even just editing it this is takes a

(1:15:51) while now there any other questions we have to address in the chat let me I'll take a look but I kind of want to wait till after this then we can CH talk a little bit and I want to do more stuff we're going to be really productive today I want to get the Drone stuff out there before I forget I think we might even figure out what camera was used think we me and then I think maybe I'll stream tomorrow and unblock everybody do a little Christmas stream just unblocking people probably going to take the whole

(1:16:19) stream just unblock everybody I have so many people blocked maybe we'll have chat decide for some of them if they get blocked or unblocked or not might be fun they didn't seem to like when I did my unblocking uh space no one no one they thought that was too pretentious which is fair maybe it was too too pretentious okay this is just kind of long okay yeah it definitely feels like we're getting better at the the science definitely feels like we're getting better at the science guys like even just reading this paper I

(1:17:01) was reading this yesterday and then I was talking to Dave afterwards and I was like man it's starting to scare me how I'm starting to understand this uh Punjabi Batman I think was a genuine person even though I did not agree with like half the stuff he posted which is why we didn't uh ever align like Punjabi Batman's not in my Discord he was never in my Discord um I'm worried about what happened to him I mean he got permanently banned from [Reddit](#) it's pretty bizarre and then people were like laring as Punjabi

(1:17:30) Batman which is also really weird man and just for the record if I I am not I don't have any other accounts on [Reddit](#) I'm banned from the [debunker](#) sub[reddit](#) so if anyone's pretending to be me on there they're not me I'm also obviously not Punjabi Batman I don't know why that has to be said but Punjabi Batman is not an American the thing that happened to me yesterday is I realized it's it's a lot simpler than I thought I mean it's still difficult because now we have to figure

(1:17:57) out how do we create an exact opposite force that can either negate two things coming together or can cause um you know cause the phase conjugation that we need we need the waves to come to come in form I mean I I don't know if they have to be like I would you would think that they need to be exactly the same maybe that's what causes the breakdown of

SpaceTime but we're speculating honestly it wouldn't surprise me if Punjabi Batman got a visit by the feds man so I'm going to tell a story about Punjabi Batman

(1:18:28) because he's banned so Punjabi Batman has been messaging me for a while and I've had reason to believe that he is like talking to somebody now I think that he takes what like he gets bits and pieces right and then I think he just kind of runs with it which is why some of his stuff doesn't seem to be that grounded but one of the things that he told me when he went dark the first time back in October was is that he told me he got sent a message that was his actual coordinates of his location and the

(1:19:00) reason why this was scary is because he was on multiple vpns so we had multiple vpns and they were able to find him and give and send him his coordinates basically saying like we know where you are how how sketchy and then he went dark for like two months after that and then he showed up just recently like what was it like two weeks ago or something like that we started posting again like I definitely think that there was somebody telling him stuff like hey this stuff's real and then you know that's how they do it like

(1:19:29) they say hey this is real like somebody if you have a friend or something right that's in the know and then you start digging around and uh that's what I think he's been doing right I don't know where he is I I imagine he's either Indian or Pakistani just because Punjabi Punjabi Batman right I mean there's a billion people in India so but yeah how Wild is that he told me that and that freaked me out out that's why when I was dealing with the scammer when I thought the scammer was real I was sitting there

(1:19:59) telling them you're not safe they're like oh I'm behind three vpns I'm like you're You're Not Safe behind three vpns man I'm like Punjabi Batman was being tracked behind two vpns they sent him his his coordinates man like that's uh means you ain't safe my man that's why I tell people too is that there's no encryption that's going to protect you either man encryption will also not protect you that's why everything has to be in the open this is why I stream everything yeah the VPN coordinates

(1:20:30) story is weird the only reason why I'm even telling it now is because he's been banned and who knows what's happened to [Music] him and it might be relevant I mean might help him I don't know he hasn't reached out to me I I haven't got an email from anybody claiming to pun be Punjabi Batman but I actually wouldn't be able to believe it anyway right because I've been getting scammed so much like I can't believe anybody what anybody says which is unfortunate but it's probably for the best for the

(1:20:56) investigation and I've I've also only wanted whatever you know um I've only only wanted the truth anyway so it doesn't matter okay let's let's finish this up we're almost done here guys we'll I told you this paper would take about an hour I think that's where we're at right with this just science is slow my man science is slow oh I forgot to put the hashtags on them oh man I knew I was going to forget to push the hashtags on them uh I'll put the hashtags on this one what were those

(1:21:36) hashtags what the heck was that I want the feds to come visit me man there's somebody on **Reddit** who was messaging me going I don't know if you're a plant or not I'm like who's planting me man the CIA is planting me for what to reveal the videos I mean maybe you could argue that I'm like this is why I stream everything so that people can realize like I'm not hiding anything I told him like if the C if the government visited me I would record it because he was like the person was saying like I'm surprised they wouldn't

(1:22:09) make you sign an NDA I'm like how are they going to make me sign an NDA everything I'm revealing is public information if they were to show up at my door I would video it and put it on the internet and then they would be proof that the stuff's real yeah Lulu would actually just bite the crap on anybody she's she doesn't mess around you guys heard her the other day she does not mess around she doesn't likes you then you got to back off okay um do we have four pictures already we already have four

(1:22:50) pictures crap I'm gonna I'm going to redo this picture I want to capture both aspects of this there we go like that there we go okay okay okay there we go Dave rosi Just Whipped this up like how long did this take him to make this a 13 page research paper that he just randomly whipped up okay let's finish this off guys what do we think here yes hey everybody I definitely think I I want to talk to Michael Peron as well that dude's smart I very smart I can tell I can tell he's also very skeptical but

(1:23:43) the crazy part was he was he was going hard at at uh at Bob and Bob was able to answer pretty much everything to to Michael peron's uh satisfaction I also want to visit I I was afraid to ask I was going to ask in the Stream where those guys are located cuz if they cook up El lk99 or something again I I want to actually go visit and watch and I want to record it and I'll do like a I'll do a real reporting on it real time N I wasn't in a band I was never into music I mean I like music but I never played in the instruments or

(1:24:15) anything what I'll say is in college I did singing class in my senior year cuz I just needed credits and it didn't matter what the credits were so I was like okay I'm going to take like the easiest thing there is which was singing plus I wanted to learn more about music and I didn't couldn't play any instruments and no I'm not necessarily a good singer in any respect whatsoever I learned like singing classically which is not it's not like enjoyable I mean it was it was fine um okay

(1:25:09) um this must be a quote from something right who's actually quoted on this we're going to delete this part here he didn't he didn't answer this a question for

(1:26:36) for

Transcript:

(00:00) coil of a coil of a coil of a coil right so he thought that that must be some sort of electric signal that goes through there that you could be interactive with electrodynamically and because he was doing this kind of research he was brought in to see this toroid which was made of coils of coils of coils or coils of coils of coils of coils and when you energize these things with the 30 HZ AC it produces uh a a electr sorry a magnetic AC waveform which they observed with a fluxgate magnetometer and this persisted um even when they turned off

(00:34) the power and even when they moved the device and it persisted for two days and so he didn't believe what he saw but he he went to a guy called neski who is the chief physicist and and mathematician for the Russ **Russian** Academy of Sciences and asked him to do like do a treatment find out what this does and basically what it is if you have a current going in a line the pointing Vector comes off and dissipates if you have a current going through a coil the pointing Vector comes off and dissipates if you have a

(01:00) coil wrapped into a coil the the pointing Vector comes off and dissipates but if you have a coil of a coil of a coil the pointing Vector closes in on itself and you can charge that and charge that and charge that and if you have a coil of a coil of a coil of a coil you have two pointing vectors that go 90 degrees to each other and if one collapses it energizes the other so you can create what's called a vacuum current which is self-stable and it's an exotic vacuum object in that it does not need any ordinary matter to exist and it

(01:26) persists for a long period of time and this is one of the basis for these these structured now what he said in that paper they used standard Maxwell equations from the 1800s to prove this was a real thing and is a real thing that they could do right so you don't need any fancy Mass you don't need any fancy particles you don't need any other dimensions to prove this from standard ma Max equations the physical observation okay now what he found was and he said in this paper is that the fractal toroid is the only fractal that

(01:57) can fill all of space time and leave no branches or gas there's one option in the universe and so my intuition that this had to be the structure of the physical Universe was supported in a review of classified Soviet energetics research published in 1995 and provable from Maxwell equations so I started with only physical observation of John Hutchinson's material then physical observations of the product of ball lightning inside the vager experiments leading me to a model that was verified by the second aspect

(02:29) and then it went back to classified energetics research and then you see it in that AC Hal paper from 1979 as being the basis for changing the SpaceTime metrics so everything kind of lines up into a package now why is this important this is when it comes for the whole nature of the universe a pidal moment is not an electric field or a magnetic field a pidal moment has these moments it can go up and down with amplitude and and and and frequency it has A A

precession angle which can go in and out uh with amplitude and frequency and

(03:07) it also has an angular velocity per fractal level from the the upper scale all the way down at Le either two to 48 divisions all the way down to twice the Plank's distance so the ways you can encode information in this is phenomenal and and it's one and the basis for this in my understanding is neutrinos which are persistent across the entire universe it doesn't matter whether you believe they came from The Big Bang or they're synthesized from Supernova either way they exist and they are extra low energy and they are about

(03:44) either 1.76 Kelvin or between 1.76 or 2.76 but they're one coherent matter through the entire universe and they have their own tidal moment which means anything with a total moment can interact with them and they can be condensed because they have actual mass into ordinary matter so they are means of gravity they are means of propulsion and they are means of conscious question go on go on I just wanted to ask something about so is it three or four toids that is the the secret sauce because three it seems like you reach a

(04:16) singularity but it doesn't like produce extra because then you said a four now you're producing an opposite can you just elaborate on that for moment emerges actually on when you just have a a Taurus of current Loops mhm right but okay to make a anapole which was uh discovered in 1957 by uh uh Yakov elovich right you um you need oscillating currents on on the like poloidal currents oscillating on the toroid and then an electric field oscillating out of phase and that will create a phase conjugation at a mean

(04:54) Square radius which cancels the electromagnetic waves and that point and the only the scalar and Vector potential propagate out from that now you have to control that quite complex in a complex way and this is the basis for the communication patent that was uh submitted in 1993 nine months after Hal POF transferred the psychic spy program to science applications international corporation right so he was working out how brain could do um remote viewing and stuff and then he does this patent and and basically on June the 15th this year

(05:29) it Sydney uh Technical University the town I'm in right now um they discovered using nuclear magnetic resonance on the brain a functional nuclear magnetic resonance that there when someone is doing conscious uh cognitive tasks they produce a Vortex and an antivortex in in in their brain so they are producing total moment they can interact with to the total moment fluid so what you the answer to your question is specifically you actually need the next level of Taurus up and you start you need to have a fractal level for it not to need control

(06:04) over the electric fields this non-radiating boundary and that is specified in the conclusion of K sher's 1987 book EV Taylor Discovery he says these are the perfect monopole oscillators they can only be interacted with with the scalar of vector potential they they emit the scalar and Vector potential and because they are closed electrodynamic structures you can charge them using scalar waves up to a point where David friberg's work from slack he says you you uh exceed the ability of Barons to attach themselves to the ader

(06:37) SE and and barians fall apart so it causes the complete collapse of matter so the specific answer is yes you need at least I think a four or maybe a three tourist yeah if I could add very quickly the fine structure constant which also gives rise to fineman's path integrals uh supports everything Bob is saying perfectly and not only that but to support what Bob is saying saying as well we know that uh Hur and viser show it one out of 137 exactly we we know hurg and viser showed out of Los Alamos that all one needs to understand with

(07:09) regards to a traversable wormhole or just a wormhole in general is to understand just very simply the zero point or the tip of the throat because from there everything becomes fractal and scalable so yeah so full disclosure I just want to break down SpaceTime I mean that's really just what I'm trying to do so you guys are giving me how secret how just a little ambition well welcome to the club though I'm pretty sure that's been Jeremiah's mission who sadly has helping a friend move and couldn't join us tonight but we'll be I

(07:38) know I'll him people have told me his name we're coming for you Jeremiah is coming Jeremiah on one of my streams at the end of one of my streams from a way back he he he actually showed off a coil that he built where levitating he painstakingly did all the the windings of the wraps so like he took the coils wound the wound the Taurus and then wound all those wires with another winding and then if you go another level Jeremiah actually made a machine to wind The Bagel coil the coil within the coil within the coil that Bob

(08:12) talks about this I actually made 10 years ago uh with my own hands intuitively the coil within the coil within the coil and I've never actually fired energy into it because I'm like understanding what will actually happen and it needs to be in control of circum ances and uh input and stuff like live dude we should definitely do that so how do we make it a then go ahead the in in the more recent peer- reviewed mainstream Journal published papers on what they call either hyperal or superal in **Russia** and hyperal in in in uh

(08:49) outside of **Russia** and they say that for these to work you have to have each Taurus winding in the limit of the winding uh and if you don't it will not work it also helps although it's not necessary from the physical evidence to to have mirrored like at least even numbers um but it's it's not necessary because we three we see o odd numbers as well they just need to be perfectly placed if they're odd right in fact they always need to be perfectly placed the thing is about the winding is nature

(09:21) produces these things perfectly instantaneously whereas we are producing a very bad analog by having a single piece of wire but it's the only choice we have and then also because of each level produces this phase Singularity and produces coherent matter you get a superconducting condensate and so when the currents are set up they don't stop and they are constantly flowing at each fractal level in perfect toids of toids of toids of toids and this just happens and literally Ken shoulders exactly spelled it out you just need charge

(09:54) separation and then the most powerful thing he ever did was pass an EVO through a capillar now there's Soviet research that was done in the 70s which was released as a result of

someone called sadan St stankovich who showed something in 2019 that showed the same thing they they create a PL it's called a plasmatron and they have a microwave reactor producing plasma and then they have a spark discharge which causes an explosion in there and it passes through a polycarbonate capillary and outcomes these coherent matter traveling waves

(10:26) and they studied it and it's on it's on uh the MF M P's YouTube channel but these are the same things that we observe in vager experiments these are the same so like it's a very quick and dirty way to create the coherent matter traveling waves and so yeah so it's it's a bit we're getting to a point where it's very repeatable Jeremiah we have your next experiment in challenge I know I see his eyes light up when he gets to this basically that all that's doing is that capillary both in the uh most

(10:57) energetic process ever observed by Ken shers and these classic energetics research of the Soviet period is you've got charge separation in the plasma and then the explosion and the same with Slobodan stankovich when he was passing HHO through a graphite capillary tube you having sheer and because you can never almost never go perfectly through a tube right you're always going at slightly an angle you get multi-axis hydrodynamic shear and this creates Taurus of T Toro that then lead to the coherent of matter that then lead to the

(11:31) structure that is you have a ton of really great slides and visuals I don't know if you have access to all those because I know you're on I don't I can tell you what I do have this is Matt zoto's book sadly he died earlier this year yes right and I think one of the most important experiments he did which was effectively a replication of what um both pwns and Flashman did in 1989 because this is actually submitted to American nuclear society's Journal of Fusion technology on September the 21st

(12:01) 1990 so this is pretty quickly after Pon and Flashman in March uh 1989 he put a piece of P padium electrodes in um heavy water with an electrolyte and produced uh heat or whatever but when he cut the electrodes open he found that along the crystal grain boundaries um he found that it was eaten away and it starts off being eaten away as little spherical areas that regularly space distance es uh as you can see in these diagrams on the crystal grain boundaries and It ultimately eats the crystal grain array so matter

(12:37) literally disappears from inside the Palladium electrode and around this boundary you get new element synthesis which tend to be the elements in the Earth's crust right so some matter is completely lost and this is what in's experiments in 1979 and also in my experiments that I have to send you samples of on all hold up the cover again exactly that oh yeah yeah here so steps to the discovery of electron nuclear collapse and what you've got here is a lead ball and Lead is 204 206 207 208 uh uh nucleons it's a

(13:16) sphere because it's inside uh this um ball lightning structure but out of the single pole the topological monopole you have a plume of carbon and because carbon's only mostly 12 and it won't produce carbon 14 because it's radioactive it doesn't produce radioactive material

except for tritium um it obviously you can get a lot of 12 nuclei out of the inside of a sphere of piece of lead okay and this is a simple experiment and this is currently being replicated by some some people that work

(13:48) at Los Alamos um okay they the the book is making a difference now he he published two of his own hundred of his own copies handed it around at conferences and only the Russians paid attention attention and it's the arrogance of the West 10 bucks you can't beat that 10 bucks we we I I I can tell you we make I think 35 cents on that it used to be two cents but the cost of printing's just come down again but it was almost at a point that H I would have to have raised raised the price but it's it's worth

(14:18) every penny because it literally walks you through the process he nearly got everything right actually guys another good book is I I I read this one fire from Ice with Eugene malov um the history of cold fusion mow was an MIT physicist who was on the team um working on this and uh basically said that MIT fudged the replications that debunked cold fusion and have been used by the P they actually changed the data because he saw the data with the EXs heat and they removed it and he got a new copy and he they literally removed the

(14:51) data two days later and then that's what they then had a party plan to say the end of Cold Fusion I've seen that yeah I I warned Jeremiah about helping his friend move like um that's exactly how Eugene Malo died he was helping one of his friends move in the hood of Baltimore uh Maryland and uh they apparently got mugged on the street and malov was the kind of guy who was just not going to give it up or just didn't want you know and end up getting stabbed by the robber they never caught the guys but uh well to be fair it is

(15:23) boltimo yeah I know I know but it's Seth rich yes yeah you know B I can't believe you're only making 35 cents on each one of those this is the problem with science guys you're not greedy enough you know this is why we can't get enough Advance have to open source it otherwise you'll either it's worse than that we also make it free uh as a PDF download from from remote view.

(15:47) ICU so I didn't even have to pay that \$10 just now oh man okay another I have a question for you guys as well for Bob probably specifically this locki matter wave uh do you think this these coherent matter waves can create gravity then or gravit he's not even here oh there he is do you think that the locki matter waves are creating a gravitational force or what do you think their goal is what do you think they're going to do with that uh I'll use a phrase from I'll use a phrase from the 2010 interview fil by filmed by

(16:13) Nancy lazarian with John Hutcherson and Ken shers he says gravity don't I don't care about gravity give me propulsion any day propulsion works at any point in space uh gravity you know they will produce propulsion I suggest to you that they are also producing either gravity or anti-gravity waves depending on the structure but it's not important they will wonderfully produce propulsion there's several opt options for doing that you can do Mass rectification because when you package material up

(16:44) into these structures they can drop their Mass to the mass of one electron you can then accelerate them in even 240 volts like a domestic socket here in Europe to one<sup>10</sup> the speed of light and then you get them to hit a Target and as the uh containment breaks away way you actually get one/ tenth of the speed of light of the previously mass and inertia shielded material Hit the Target and it gives you a pulse and you rinse and repeat so this is one of the propulsion methods suggested by uh uh Ken shoulders and just the mass rectification process

(17:16) so like propulsion is far far more uh valuable uh because it works when you don't have a gravity gravitational body to uh act against I jump in very quickly to the yeah um to the matterwave uh patent there um I'm these are these are just my personal interpretations so I'm not claiming that this is correct or anything like that but when I looked at the patent that you sent over Ashton um it made me personally think of especially when I was reading the description of it it made me think of the the ainov bom effect and when I

(17:47) think of the aronov bom effect when you look for example you notice that there's a phase shift that occurs now if one can induce various phase shifts and then perhaps find a way as gerenstein proposed OS to turn a spin one Photon into a spin two graviton um it makes me think that there may in fact be something there now I know gerenstein uh this proposal was very controversial I believe it was running uh an an externally pulsed um RF and Photon field through a static B field I think it was now that's also an oversimplification I

(18:18) believe of The gerenstein Proposal but the idea is particularly if you look at the image on the far left this idea that you have the sort of uh pulse width modulated sort of oscillations that could in fact be Amplified using the AER and of bom effect on a very very minuscule level perhaps even with superconductors I think there's certainly something that could induce Dave it specifically relies on the iron Hoff bomb effect to create super conducting fluid condensates out of even firion like electrons right and there's

(18:50) two key aspects to this uh paper in terms of propulsion which was your question it literally says the coherent matter wave can be used as a means of propulsion so that's one right so uh that is one of the applications and as I say forget about anti-gravity it's IR relevant when you've got propulsion right because it works everywhere it's much more important to have propulsion over anti-gravity um and then SE secondly look at the structure in figure three that is the structure of the kind of structure you get for instance on the

(19:21) inside of the thunderstorm generator these hexagonal and pentagonal structures so if you look at the ball-like structure of a unit of the coherent matter okay so if you go Jeremy if you can wind wind on to I think it's figure three the figure figure that's the front figure uh yes that one no figure three the one that's labeled figure three not the third figure in the pattern this one with this formation this doesn't have the name right one labeled figure three that one yes so that is the coherent

(19:53) matter structure and that is you get these balls and they are obviously bu lucky ball like structures and in fact what what what was defined by Solin in his 1992 pattern bearing in mind

this coherent nuclear reactor is in 1992 and they didn't make a Bose Einstein condensate until 1996 or 1997 right officially anywhere on planet Earth he was literally calling a coherent nuclear reactor he says that it produces spheres and tubes and if you can imagine a tube is effectively just a carbon nanotube and a sphere is a carbon Nan a

(20:30) Tic Tac is like a carbon nanit tube with two halves of a bucky ball this is exactly what it is and it in those those structures it has a maxwellian like 1864 uh um Vortex an anti Vortex structure that's built on those structures and on the uh Hank uran Vega Valley we literally see on the boundary exactly the structure that that was predicted by Maxwell in I think 1864 being both both in terms of spin polarization on the copper oxide where you shine normal light on it and you have these hexagons which are either

(21:06) green or red in in a blotch pattern um or in physical cones that have uh the Golden Triangle ratio um pointing into the center of these vortices on the boundary of the tubes which are a m superconducting magnetic fluid of electrons and and that's what Ken shers said that these things produce which is fluidized electrons and for fluidized electrons to exist they absolutely must be coherent because that you have to overcome the PO Exclusion Principle for them to occupy the same space time and and to become a fluid and so yeah this

(21:39) is consistent and in fact they do not give credit to shers which I think is a little bit rude because the way they produce the initial emission of electron solons uh is exactly the method that is described by uh Ken shers but to give to to give them their like ability to do this I would argue that Ken shers never gave credit to the 1930 something uh uh proposal by um Tesla for his electrical particles of matter generator where he had either a Tungsten filament or a Mercury which would produce a tailor cone in the electric field produc faton

(22:20) of electrons and that goes through an open-ended vacuum tube they use dry steam to produce a vacuum and then what you have is the uh electron Solon traveling through the water is exactly what Ken shers found was the the best way to create the most powerful exotic vacuum objects and so like this has a long history so Ken shoulders did not g and neither did Bostic Bostic was clearly replicating what some things that Tesla did and never gave him credit so like you know it's fair what comes around goes around Ken shers and Bostic

(22:52) never gave credit to Tesla so then then maybe they're Justified locked Martin but they want to have a patent here and they don't want to R feel that this was already known in the 1930s right yeah I think Ken shoulders at lacky Martin you're doing Ken shoulders dirty here I mean everybody steals everybody else's work but not everybody's a multi-billion dollar uh thirdparty contractor to the Department of Defense so come on they can get they can throw one more credit in there for Ken shoulders let's be

(23:14) real quite another question side note on that so let's say okay we can make propulsion we've we I'm 100% Allin on coherent matter wave beam uh allowing to create propulsion I love the idea that you don't try to negate Mass you just or force or grab you just make your own right and that way you don't have to even worry about trying to negate it but how do you control it

right like we go to the rubber band example like do you use quantum entanglement to control where you end up going because it feels

(23:38) like this is kind of like getting on a surfboard but you don't know how to surf right so there's a whole group of Russians and I did this Atomic uh transmutations on no what is it on nuclear matter threads or Atomic transmutation anyway it's a whole group of Russians that come together to and they actually I think worked on the same group worked on some of the understanding of matoto but they showed that um somehow these structures interact with neutrinos and it produces what they called a neutrino rocket and

(24:09) what they're saying is the the nuclear reaction that is initiated by the the background neutrinos or Relic neutrinos causes a nuclear transmutation and the spin is imparted onto the neutrinos which do have a non-zero mass and they are ejected out of the back and I need to do a whole video on this to show in our vager experiments how you have this spin wave that travels in front but I believe that that is the tral moment sucking in a flux of uh um Reliant nut tro causing other um similar non-radiating structures to interact

(24:41) with this effectively The High Frequency gravity wave which then causes it to orbit around the for in the forward Direction now why is this important because the faster you go the faster you can go with this technology because the feed stock is a little bit of nuclear matter that transmutes at a very very low rate but most of the yield and most of the propulsion comes from the pulling in and then acceleration transfer of uh directional and spin out of the back of of this fractal toroidal structure so um as you go f forward you are getting a

(25:20) higher density flux of the material that does the work so you can go faster forward and because it changes epsilon0 in the front it actually lowers the resistance to it moving forward into the medium whatever the medium is regardless of what you think it is it doesn't actually matter it lowers the ability of charge to represent itself and repel and and you know if you look at the interview between Eric Weinstein and uh uh uh Hal put off from February last year Eric wienstein goes to a lot of trouble to use the Penrose diagram which

(25:53) I've been using in my presentations before that to show the phase Singularity and that this is how you create the Aronoff bomb effect which automatically occurs from fractal toroidal structures and he says that this is the only thing in physics from 1954 that allows you to get round uh the restrictions on the speed of light because it changes uh Epsilon zero and that is when Hal put off gets a little bit nervous and he tries to divert the question he says and yes you could we can go even further than that there are

(26:24) all types of complex steroidal geometries that that of which I've got to pattern on and I'm setting up a company for communications and that's when I found his 1993 patent on on uh uh creating a pidal moment uh structure for for non dissipative instantaneous transmutate uh communication which can be encoded in so many ways follow question real quick on that too so then how do you uh have how are you limited directionally on where you would go with something like that how do you stop in that kind of system it's extremely

(26:56) directional you would break you would break the stimulation of the confinement so and you would break it down so uh what what what these structures need to operate is electrons they love electrons they live on electrons and I'm quoting Ken shers here they they need electrons if you don't give them enough electrons they will cohere the electrons they do have down into this coherent matter State and they will fall off into a black state where they do not express any charge and therefore they can't they

(27:25) because they're not expressing charge and they're not going around in this superconducting Loops at a fractal thidal level they can't express the thidal moment in which case they can't um uh they can't interact with the tral moment of The Relic nutrin condensate so you get to a scenario where it either shuts down because you don't feed it electrons right or you can excite it and then maybe destabilize it I wouldn't recommend that I think actually what you you need to do this in a pulsed

(27:54) fashion you need to do this in a puled fashion because if you over overdrive it you might end up with the the fractal toal structure its non-radiating boundary exceeds the boundary of The Craft but that actual non- radi radiating boundary has a Zone where it literally destroys all matter that's what's eating the Spheres out of here as it as it that that you don't want to be on that boundary like if you have the Corvette and like you know you you don't just step on the gas and go to 100 miles

(28:21) an hour right away you got to pulse it a little bit feel it out a little bit right see how much propulsion you're going to get yeah but also like like if you wanted to travel through water or you wanted to travel through a star or whatever you would want the bay boundary to be fully spun up because any any matter interacting with that instantaneously collaps and and its energy becomes part of the Bor right here you got to think of it like this when you have a superconducting material like if you have one electron and you

(28:47) feed it a packet of uh uh any bonic energy let's say a sound wave or or a photon or or even a bonic nuclear or whatever um it will impart some of its energy to that electron and depending on the dyamics it can be increase its kinetic energy vastly if you have a Bor of of trillions and trillions and trillions like Google plexes like absurd numbers of electrons all acting as one wave function when the energy comes in it has to dissipate through that entire structure instantaneously so it's literally a Star

(29:24) Trek Shield but it's also a shield that will literally consume anything instantaneously also down if you if you were to hit something though right like isn't your should your like call it your wave that you're riding isn't going to kind of break down and collapse pull you out of whatever propulsion you're doing or how how so the the the way that the so like Tesla found that he could interact with the the neutral version of these clusters uh partially because of material in your body there there is

(29:58) partially interacts um but when not when it's in this spun up state that it can destroy all forms of matter and then he had this zinc sorry silver activated zinc sulfide uh phosphor like on a

Crooks tube and he could do these live x-rays on it even through a brick wall right and we're actually in the process of replicating this in Canada at the moment but we're so scared because the GE counters we have they literally go completely off scale even when we're outside the building we don't know what

(30:28) type of radiation it is but we do know that these structures they go into cination photo sites and they emit a lot of electrons and so it could be a fake signal but at the moment it's topping out even at two the the detector goes up to three Mega electron volts and we've just literally got a spike at three Mega electron volts and the whole thing is flooded like you're saying this is outside the building right not just yeah like well he's going long distance away he's going behind different types of

(30:55) Shield so we're actually trying to build these **Russian** deriv shields for shielding against this type of radiation so that what what silver is is the beauty of silver is it's its solid state and it has the highest conductivity which means it has the highest sea of electrons on its surface which means the black State evos when they hit it it feeds them electrons and they go into the white State then they get trapped in the photo sites and they dissipate their energy over a period of time so does that answer your question

(31:21) or not I don't know maybe I we lost there just so many things you've described I've produced in my electrolysis experiment so uh I'm just going to back out for a few minutes and set up a bunch of uh example specimens of what I've produced we can uh do a little show and tell and then anything that interests you at the end of the show we can finally package them up and send them away and shout out to Joshua Bertrand I showed some of the aluminum stuff that I guess turns out to be this aluminum Arrow gel that I've produced

(31:56) and I'll try to show some of the zinc and as well as silver well aluminium goes to aluminium hydroxide often but if you have it in electrolysis it'll also go to Silicon yeah I've got like eight or nine different forms of each metal that it turns into so and then the electrodes that you might be even more interested in and dissecting and taking looks at and uh I've seen a lot of what looks almost identical effects of the metal of like some of theut and reactions on my own anodes and then on the cathode side

(32:32) it's the layers the Nano Coatings that it builds of the different crystal lattice um layers that uh quite fascinating stuff will get well of course on you know you've got the the particles can be moved one one side to the other side depending on the charge yeah you see this structure here which I've been sent a number of times this uo material artifacts this would we we've seen literally EX exactly this type of structure coming out of a spherical hole that was eaten inside a lion uh um reactor so the lion was a he he lived in

(33:11) Kenya and stuff and he spoke Latin and Swahili and stuff so he called Everything lion but anyway that's the why he called it lion but this guy called NE Neil kryon gold who died earlier this year but in one of his react as we observed in the diamond in the core a spherical section cut out and in the pole of of where the the monopole goes in we have a structure that looks

exactly like the thing that you just showed there right and I think what it was there was this thing in the sky and something fell out the sky and it was

(33:37) this uo UFO metal artifact someone sent it to me before but it's exactly this type of shape this a 19 52 Denmark case so there's a big there's a big wave in 52 and another like and there was a big wave in 47 and another big wave in 52 and this one was actually dropped a glowing heart Ingot of this metal which was then recovered by baby personnel and I I would suggest that this was probably uh iron or Titanium or nickel or one of these kind of elements in there probably so you think you guys describe this I

(34:10) can't help but wonder if this is also sounding identical to what Walter Bosley describes that he witnessed Fallout of the UAP UFO that he witnessed in his whole encounter I believe from the '90s or early 2000 it is I'll have to bring that up the next time but he talks about something seeing something like this molten liquid thing come out of it and then fall to the ground and then like solidify as it like went down or something so yeah do you guys think that's like the byproduct of this type

(34:45) of propulsion or do you think that that is um something that's required in order to achieve like you know a macroscopic phase conjugation state where like the outside is impacted but the inside isn't so so there's two things here the first example I believe is is from the topological monopole that it gets spat out and it could be that it's just that may not have been a uh a technologically produced device it might have just been produced by nature and it's a ball lightning and out of the bottom of this

(35:17) large ball lightning that that conical type synthesized structure has fallen okay the the other one with the the Magnesium bismuth alloy obvious bismo is the most diamagnetic material that exists okay um is a natural element in its natural form and so um one could imagine that if you had an an extremely intense magnetic field on either side of that it's going to push or pull against it so it's the Natural Choice for you to try and make a skin of a flying vehicle that was based on this Bas technology

(35:51) okay now magnesium itself um and I think there's a difference in the isotope here which might be because like for instance one of the key things that you get synthesized are Fusion of two carbon is magnesium 24 okay um I don't know I think there was some uh discussion about the difference in elements in in there but magnesium was one of the three elements of Choice by Tesla to create uh etheric matter Rays okay he he it was either burum magnesium or aluminium those were the three options uh for producing clean etheric matter raisings

(36:26) it's much easier with hydrogen but for a lot of you know uh it wasn't easy to work with hydrogen in a way that you could F fire a um unidirectional uh high frequency uh high power discharge into a metal sample it's you can't really see the action when you're firing into a gas quite so easily so um it might be that the layers are synthesized or um they are produced as a matter of the flying process because bisou is actually the end actually it's technically unstable actually um uh but because it's an alpha

(37:03) decay I think uh it's not affected by this technology so when you do learn gen nuclear reactions so if you take the work of SV Adamenko in almost every experiment you produce lead why do you produce lead well because the the technology does not like to produce radioactive materials and if it does it almost instantly causes them to Decay back to the the most stable element that is non- radioactivity which is lead the the question about bismuth is it's just a proton on from lead so it might be that as a process of running this

(37:34) experiment depending on whether you're spun up to flight levels or you're spun up to um just like normal uh uh gravity reduction levels you may have layers produced of different elements and so the carbon gets synthesized by a proton and oxygen forming oxygen 17 and two oxygen 17s fused to making carbon and uh um uh how do you put it neon 22 and then when you uh spin it up again you you get the carbon like basically the car two carbons coming together makes magnesium 24 so it could be as you spin up and

(38:13) down the Craft's operation you end up with these alternate layers of the heaviest element that is not a beta isotope that that is uh um synthesized from this stupidly spun up can go and do funky what looks like anti-gravity work and when it's spun down it actually leaves a thin deposit o of magnesium or whatever else is in there are you saying these are like bugs splatter into the windshield just like you know no it's like it's like if you go to a thermal Spa let's say in Japan and you see these layers of mineral deposits and

(38:48) it depends on the temperature of the time of year the volcanic activity and so on and what you're doing is you're going through a process of switching on a device switching it off switching on a device switching it off and in those processes he's like I don't know that's interesting it's actually a it's it's a it's not made like that by human hands it's made by that by the process that creates the uh so-called anti-gravity but I would prefer to use propulsion itself teolog yeah it's just it's just

(39:16) it's a Nature Made natural process Nature Made product and it probably isn't important like the the inner skin might be a different material and it just it doesn't matter that these bits fall off periodically yeah it's kind of like sloughing on a bottom of a container ship you have to clean off the rubbish and it flies a little bit better but it will still fly with it on there and periodically bits fall off so it's basically just waste product right and it's just like okay well maybe they shed

(39:42) your material as a result of the process that allows for the funky business interesting I wonder if that's like if you know you go through a certain medium if that builds up or if that is it would be through air and water particularly water because in water you've got the the proton and the hydrogen so this work that I'm currently we've done the final revision and it's for nature scientific reports with the the the the taipe energy Department of the top university in Taipei we found that the using water

(40:18) cavitation it produces oxygen 17 and that's been proven by three different methods using the top uh gas analyzers for the Taiwan semiconductor industry right and that is anti

neutrino electron proton and Oxygen 16 fuses to make oxygen 17 and then the secondary product is oxygen 17 is highly paramagnetic it goes into the the fractal tral cluster which is produced by cavitation uh vortices and that then fuses two oxygen 17 to produce the carbon and produce the the neon 22 the neon 22 is diamagnetic so it leaves the carbon is diamagnetic

(40:56) but it can still be charged and go through the center of the face Singularity and at that point you can then get Fusion to produce the magnesium and stuff so I I just when I look at that um thing it's not a mystery it's just a byproduct of the process for the propulsion technology that's pretty cool I wonder if you could uh if computers are strong enough where you could like map an object and determine exactly the size of the field you'd have to create in order to create a barrier like that absolutely

(41:23) these are quantized I shared a paper I think from 19 92 I think or or whatever where they were looking at plasmoids and the quantize level for for producing the superconducting sphere I think I shared that with you actually Ashton and it actually produced these uh in their very crummy diagram they showed the the spin vortices that produced on the super condu and condensate on the on the non-radiating boundary and these these look like they're a real thing from our experiments they're how they interact

(41:51) with actual matter um and so uh but they have specific sizes I've got this bug bear in my head that the the the um the uh Frank PFA Windex device we we've we're trying to replicate the moment we we tried to make a miniaturized version but the problem is if we don't have it exactly the right quantization level it will never work it'll be it'll have everything that you think's going to make it work but it's like we we are a manifestation of this technology in this gravity and Flux Of Relic neutrino in

(42:29) this part of the universe right so like our gravity defines our expression of the program that runs the universe and it will only work in several quantization levels at a particular part point in the universe but it will be the same program and and there just be a different metric that you put in to Define what it is under certain gravitational scenarios what's the name of the wind wind heex guy that I I Frank Frank how do you spell the last name p o l i f k a Bob have you seen these AO gels that have' been uh getting I met a guy from

(43:04) Serbia who runs like a a a hardware store around the side from me and he fled from Serbia they the US government were dropping AA gels all over uh um Serbia and stuff and the kids were picking them up what the hell is this right what were they using it for what was the point I have no idea knows why so there might be something there I actually want to do a video of him going over the experience they literally no one knew it was all over the press and whatever it was never in the international media but they were

(43:38) dropping these incredibly light but they don't know what it was coming from I mean it wasn't directly killing anyone they seem like they're basically meta materials right I mean you're messing around with the structures and substructures of uh things I mean we were watching them how they make them is incredible I was watching a video one earlier today one just

floating when light gets uh shined on it strong photons yeah yeah yeah yes it's it's a metamaterial in the sense that it it

(44:04) gets its properties of high heat uh resistance and also really lightweight from its structure yeah struct I the interesting thing you've got there is porous  $\text{SiO}_2$  there on the Westwood aerogel there and of course  $\text{SiO}_2$  if it's in its proper Crystal form is pzo electric and and so it can produce a lot of interesting effects so maybe it's involved I don't know whether it needs to be involved I mean it so there's things like perov sky and pery naturally has pidal moments in it right so there are and they're looking at that for to

(44:40) for pidal moment meta material so if you look at some of the more recent uh um peer review literature on on um uh toal moments they are looking at perovskiy as one One path to doing uh certain applications for things like communication and data storage technology okay natural proton conductors as well well there's that yeah so like you've got two things going on which are good for this whole sort of U uh process they're also they were looked at for actually by so bingen hang who I'm co-authoring this paper with he

(45:13) actually invented the first high-powered LED right uh and they've been running for 17 years and these all these buildings in Taiwan and 60% of them apparently are still running right these are the very first high-powered LEDs right um and he says they I actually went to a solar technology uh sort of dinner after a conference that they had there and they were saying that they used looking at perovskiy because it has um a much greater ability to to change uh uh frequencies and and capture more much more light from photonic radiation

(45:46) from the Sun and you get a much much higher yield the problem is when you produce thin films of Prov skite material it's so incredibly um prohibitive for um use in solar panels but that wouldn't stop if it has a use in the uh Aerospace and Military field the the cost wouldn't be an issue the kind of cost that you're trying to get to for a consumer to run their energy that's not an issue for the the the world of uh you know the military industrial complex yeah I think yeah it's interesting for me is

(46:21) just the material science aspect of it right this is like a pretty Advanced Material Science requirement and when we go back to that other met material we looking at before of the Magnesium bismuth zinc composite right it makes me think like that's being produced almost at like the atomic layer of shin thin sheets of the different metals on top of one another that's what really impresses me because I think that in order to achieve what we're trying to achieve from scientific perspective you know

(46:43) breaking the fabric of SpaceTime you really have to have really extremely efficient Material Science in my opinion um I don't know I don't I don't necessarily agree with that and the reason is is because ball lightning just gets formed in natural and we we we are able to produce it at will incredibly easily and we're just using hyen and electric Fields you got any can you show some videos that of the ball Lightnings yeah so like if you go to my iccf 25 presentation um there is one of one of the late slides in that um we have a

(47:17) copper tube and we have the toroidal thing with the emical cord coming out now the reason you can see the toid is that the Sony Alpha that I'm using to look at that with actually not that's actually with a actually a normal uh a normal iPhone like high-end iPhone but it's it's changing its exposure so you can see through the uh um sphere o of the non-radiating boundary you can actually see the condensing electrons tooed inside okay so if you sorry it's a bit crazy I had to summarize 11 years

(47:48) of research in 20 minutes going seen aot I've seen you go over a lot of no towards the end towards the end towards the end towards the end so real one thing about it I would say is that it's the production problem I have no issue with but the issue I would have is like you know you need control in addition to production right producing the gravitational wave is great but I don't want to end up inside the structure of it when I come out the other side right like I want to the north part of the Visa

(48:16) Pisces you are safe I think it's like still quiet calm area and if you look so I I worked out that it's 48 from the 48 divisions on the Hutcherson sample okay you're looking for a tube with a little plasma toid coming out of it with a little umbilical cord feeding it it's a little bit further on than that because I'm talking about how it works and then I'm talking about the Practical applications afterwards so bit further bit further a bit further guys I'm so sorry I I got to take off because I

(48:45) travel tomorrow but I just want to say very quickly because I think this is the first time that I've conversed with uh with Bob in particular Bob this has been absolutely fantastic and I want to thank you so much for uh for for taking the time to to come on because what you've been presenting so far is absolutely incredible and I want to thank uh as well Jeremy brother for inviting me and of course uh great Ashton to see you here and uh Bernie as well pleasure day so early man the part's just getting

(49:12) started so um I know I got I got to get up early to catch a long flight tomorrow else I'd stay Dave always comes in early like makes uh solid solid points puts it out and uh thank you for and we'll see you when you can come again and see 100% the other thing too I don't mean to put you on the spot Jeremy but I'd love to have a at some point uh an open discussion back and forth with um uh Mr desiato if you'd be interested with regards to the uh matterwave phase shifts that we were talking about

(49:43) earlier and Bob if you like to jump in I I want I was trying to lead up to a particular interpretation of the phase shift of the Potentials in in the system there but it's right there on the slide that Jeremy's showing aan is7 and du Vic discovered in his thesis in 1965 published in 1967 the tral moment and he's talking this is at Joint Institute for nuclear research and this was some remarkable charge current configurations I recommend everyone reads that but the the the image that I've chosen there for

(50:11) that figure 13 is literally showing that these complex thidal electrodynamic structures produce the iron Hoff bomb effect in the center it's already all the mass has been done I think

this was from 1992 as well all all of it's been done it was all done by the Soviet energetics research and the Americans probably found the same thing but it it was named differently but they they didn't have a proper understanding of it right Dave Dave it's it's not over man this is just beginning this we're we're

(50:38) we're Trailblazers in this field you and uh right it's great to have an ally like you um in this fight so so oh thank you no it's great to have allies like you guys I I hope you guys go for at least another couple hours because I'll definitely will to get to flight exactly even if you guys have to go uh we'll we'll keep the discussion going and um thank you so much thank you so much D we'll have interact with you as well today thank you Dave and Bob together on another apack very soon so we'll have to

(51:12) contact Tim and get that going because right get a full roster up also have S on there and a couple more right so y be getting finally Jeremiah all right thanks guys Cheers Cheers later um Bob I gota I don't know if we can we can switch gears now that that Dave's out of out of the equation want to go just back a little you can show the structure you're almost at the right place just go back a little no there that that's it so if you go and download the presentation when you when you don't have it underexposed you see the small

(51:51) the full sphere uh ball from the edge of that tube but with this massively underexposed you see the internal Taurus and the the tube that feeds it the electrons from the copper oxide in the inside from photoelectric effect okay and every period every so often you see a little Flash in that video and that is it Le launching and going into the anode and leaving these toid of toid impact marks on the anode sheath so we know what the internal structure is from the impact marks we know it is this Taurus of Taurus structure we know that

(52:25) it has this radiating boundary but it's not fully spun up and what I think it is it gets to a point where it gets so spun up that it cannot it literally chops its own umbilical umbilical cord and launches into the anode and it's just amazing Direction you have this here yes in a 197 I mean 1979 NASA paper talking about UFO re and stuff it how it's just amazing how long they've known a lot of this stuff for it's criminal yeah we've been for years Davis 2003 published ball lightning study when he was commissioned by the US

(53:06) Air Force in October 2001 to find out anyone in the world that knew anything about ball lightning or related technology he comes back with two principal things one the work that was borne out of the study of John Hutcherson's material uh the Ken shers exotic vacuum objects as one way forward to understand ball lining and the other one is the US Air Force classified under the Clause of space and Aerospace uh a ball lightning uh study sorry that to understand B lightning the space and Aerospace classified work that

(53:36) was done by the US AER force in the 1950s and 1960s which they still don't mention anything about in that ball lightning study by Eric W Davis of War Drive metric you can go and look at it it's on The Black Vault warp drive metric uh sorry um Eric Davis ball lightning study I think is Jeremy Frozen no I'm just deep I'm deep in thought about all and I wish that you had like

link more links to this stuff because I'm watching oh you can find it to lightning study Eric W Davis I'm watching a like a

(54:10) video of a projector you know I want to find the original video and watch this and and you can you can download the presentation off remote view. ICU you can physically get the actual PPT with the video embedded man here the slides here yes slides downloaded from there boom awesome you're you're this is what I was looking for this is great okay download presentation let's get the presentation taus you want to look at it in PowerPoint rather than in Google awesome Michael Peron will be joining us in about a half hour

(54:48) awesome um download anyway I guess yeah it's not I haven't put any bugs in there I don't do that I'm not playing games with people it is what I presented my computer mining crypto it's all an evil plan to get a few extra cryptocurrency oh I got to go to an app store hold up it's opening this application hold up it's it's doing it well it's it's it's PowerPoint so side not who do you guys think could produce an engine strong enough to power like an accelerator you think Boeing or roll Roy

(55:25) might do that we have we have to talk to study and you can see it you can find it on using plasmoids which are these things and firing them about out of the back of a plasmoid generator for propulsion for uh space use all right um I have to find this I like nassa though man no we're not gonna do want make my own particle accelerator and shoot it at Bernie's uh multiple layer deep dimensional toroid or however you refer to it scientifically yeah there he is there he is scientifically it is the bagel coil Bagel coil I want

(56:05) to shoot a particle accelerator at bagel bagel coil and see if we can break the fabric of SpaceTime I'm starting to believe or we you know contact Bob Lazar that supposedly has a particle accelerator in his yard that he made and then use that to uh do it and there you go there's the perfect ratio one there's your your fractal Phantom toroid and so when when we're talking about the um 48 divisions go to the first slide here's a a piece of metal from Hutcherson yeah so there's four quantization levels there and I'm

(56:41) only referring to three and each one is the substructure of the level above and go to the top Slide the very F the opening Slide the first slide first slide slide that one okay yeah well I gave a presentation in 2016 in uh as uh in conani diasty in Italy to the condensed matter nuclear science group and I used a different part of this structure at this Stell rather it 2,800 years old or something right and it was the mulse cross that was around the neck of the Syrian God why did I use that is because that was in the center

(57:21) of the shield of the order of electrical engineers from the 1880s in the UK and I thought why did they choose that and I went and found out that the males cross is is the symbol of God controlled power and I thought that was appropriate to put on the cover side that's the first non-scientific physical evidence that I'd used in any presentation now when I discovered this structure on the John hutchon sample from 200 uh 17 I I if you go down I realized it was 48 divisions and in the back of my head I thought oh my God that kind of

(57:52) discy thing that's at the top of that Stell also had something that looked visually about that it has 23 and there's one broken off but if you did a full circle it would be 48 okay and then I thought well what the hell is this structure then so I went onto the British Museum's website to find out what it was because it's in the British Museum and I I went there to take this beautiful picture and at the time it's been slightly changed since that it described this disc here as the flying disc of the sky

(58:22) Gods oh then I thought hold on a minute it looks about the right kind of Divisions as the alien reproduction vehicle so-called it has 48 capacitor arrays and I what I didn't know until we started modeling these in 3D is that you can't really you can maybe fit up to 51 but to have the fields with their double there not interact 48 is the maximum and it produces the maximum stability the gravity waves are trapped inside um according to the the concepts of uh um the the other guy that I let I talk I have a video of him in this presentation

(59:00) talking later called John archal Wheeler so and basically where you look where the the teroid of the torid fits on the angle rake angle of the AG arv the safe Zone where the people will sit is within the safe zone of the Visa kisis and it's the only place you could have a biological entity and it is you also can't have the biological entity in the center because that is where the flux of uh uh uh neutrino W waves go through and that would cause uh decay of your carbon 14 in your body to to nitrogen 14 it

(59:35) would smash up your DNA and it's a very sweet spot if you move slightly out of that safe Zone in the arv basically your matter would just go you just go and so there was some guy at a Tesla conference after I said this some time ago and he says they were brought he was brought in because he was a Tesla uh coil wind generator expert and he said they were brought in because some of the field generators that they used on the IVs um uh were failing and they would end up with the passengers turned to Mush because the field the central point

(1:00:09) that goes through is is is not balanced and the way you operate it is very very simple and it it matches exactly the control method that's described on each of the 48 capacitor Banks I think you've got eight individual capacit plates and by changing the phase angle on those you shift the pidal moment so you Vector in different directions it's incredibly simple it completely lines up with what the ancient called the flying disc of the sky Gods so it's like a it's like a steering wheel then is that what you're saying we

(1:00:42) can figure you you've got a phase relationship and that changes your your your your phase Singularity and the and the flux of the gravity wave through the core of the center as described by John archal Wheeler in the phrase that I I the section I have in this presentation of him talking can you leave that back go back on Jeremy to that uh yeah so where's the safe Zone it's not in the middle you said no the safe zone is like where you've got the arrow on the basic paper from jais in paper it's it's kind

(1:01:12) of roundabout where the the the two Loops meet on the top and the arrow comes out that's basically the safe Zone and the the AR arv has its rake angle such that it's able to influence

the phase relationship on the substructures the 48 substructures it's really rather trivial I I I I said to a particular person who knows John Hutcherson very well recently I think we know how to build a replica of the arv and and and so you know and and and and anyone following the work will know implicitly that this is just

(1:01:47) fairly trivial and because it creates this separate SpaceTime bubble you can go in multim mediums it doesn't matter whether you're underwater in the air or in space it will F travel essentially just as fast um because the in in local space time you have basically the same flux of Relic neutrinos and and so and the the on on the on this boundary it doesn't matter what you're interacting with um it just it just goes through it it's not important and so you don't you you kind of need to if you look at

(1:02:21) the arv it basically has a diving bell with Standard air seals and so all you need is oxygen but you don't need anything to go through the atmosphere because the the spun up structure when when these structures will spin up they will go through like you won't see it then it'll go low frequency red and then it will go through greens and yellows and blues and then it go to UV and then it'll disappear like so that's how these things will appear as they're spinning up the the non-radiating

(1:02:47) boundary interesting yeah so I mean it seems like it's really chairs are according into the sacred geometry it's not approximate it's exactly there and that is the only option in this structure now you will have some problems possibly with experiencing time and Consciousness and so the way you get around that is to generate your own Relic neutrino so you have a local Consciousness it's like having an offline hard drive storing your data you're not affected you're not connected to the whole conscious field um but it

(1:03:20) could very well be for you in that space time once you've used up um The Ether in that local space time you start to lose conscious and you also lose you literally not only lose perception of time everything freezes so when when you see in your so-called disappearing plane thing let's assume that happened um okay what it does is because what is time it's the relative change of things what causes a chemical reaction well it's an interaction between electrons between something being oxidized and not not yet

(1:03:50) oxidized well if you change the way an electron can behave you stop the chemical reaction instantly right and that's exactly what happens inside this structure so when you put this structure as it's getting to it's changing that Epsilon zero the ability of the electrons to do a chemical reaction stop and that goes for a signal going in your brain producing tral moments in your brain and a signal that's causing your heart to move but you don't die time just freezes yeah I think I think Einstein

(1:04:22) would argue that we just have a different frame of reference at that point right unless those system the time is progressing very very slowly and to you perceptively it's not moving at all at all so basically it doesn't actually matter with this technology whether it takes you 10 trillion years to get to the other side of the universe or or you get there in in five milliseconds

because for you you have one blink of an eye and it's effectively you've teleported the rest of the you know Soul might have gone into a Supernova by then

(1:04:48) or a red giant doesn't matter for you you've literally done a blink of an eye so it doesn't matter whether you're going fast or slow the time will stop for you yeah the scary part though is there's still be a time dilation effect on the outside though right so you're can normal time travels relative to the local time based on the gravitational Flux Of The Relic neutrino condensate through the matter so you you you you basically like let's say if you were using this technology on Earth you could go into

(1:05:17) this device and sit in there for 20 years and come out and you wouldn't be any older yeah yeah but everybody you knew 20 years older that's the downside everyone knew would have aged they would have progressed through with time 20 years so this is weird because it reminds me of the whole Nazi Bell and what they it was called originally project Kronos I believe which is T oh well I didn't know that but of course that's why in there they could live forever effectively they're not they'd have the

(1:05:45) same normal life time so Hitler could be inside of he's still alive somewhere yeah something I don't know is that verified or not I don't know geez not like we had DNA testing back then or maybe we did but it's it's crazy you mention the pro the provs SK it says that one of the provs skites was baram titanate which we we know is uh was written on the board in the 1950s by the bonson labs experiments with Tom Thomas Townson Brown I didn't know that but I rest my case so they were into this stuff back

(1:06:21) then uh a number of people visited that lab that archival footage including uh Bryce and Cecil doitt who were um they were the team that uh ran the secret Chapel Hill anti-gravity conference for the the government where uh Richard fan attended under the pseudonym Mr Smith sorry hold it stop there Magneto hydrodynamics Vortex antivortex under the center with a flux going through the center that's exactly the structure I've derived from physical experiment literally on that image that you see there I've not seen before what is that

(1:06:54) image um that is we need to Google that what is that from I think that's actually from uh Brown actually Thomas towns and Browns I Thomas Town Brown I don't need to see anymore so B's ready to go deliberate he's the jury's ready yeah the real we've decided Dean Rickles did a great history and he also interview uh did did an awesome interview with um Lewis Whitten who worked on he was part of another U gravity uh group that was trying to research all that was researching all this amazing stuff that it goes into the

(1:07:35) whole history he's of course the father of Ed Whitten who's one of the founders of string theory and a a a giant and considered a God by uh feared by many like including Eric Weinstein said this one of the few people in physics that I fear and that's that's Ed Whitten um so yeah Lewis Whitten check out the the so this guy is the guy that did what you just showed on the other presentation or whatever it was you just had up yeah yeah this is um this is the guy that de Dean Rickles he was there behind the

(1:08:06) scenes and wrote this whole paper about the history of this conference which was you know basically classified not well talked about to me we we we're chewing the fat over something that's obviously implicitly true right and it should be obvious to anyone I've just seen that image for the first time and it's literally saying Magneto hydrodynamics and he's literally got exactly the vortex anex Vortex with the flux Loop thing going through the center there you go there done done yeah it's try that's exactly what

(1:08:33) you I show multiple times in my presentation electrode ballistic electrode incandescent code uh the circulator pump that circulates this ion plasma around this toroid you know what that is it's charge separation with hydrodynamic Shear or Magneto hydrodynamic Shear I specifically say Magneto hydr Dynamics year right and there you go everything was on that page who made that presentation is that you or what I put this presentation together um this is I've shared this a lot on Twitter and other places this is uh my summary of B

(1:09:07) basically I put everything in here that I find that I link I link stuff together I'm gonna actually try to butcher your presentation if you don't mind oh well it's free to use with credit of course great yeah I'm going I'm going to uh yeah definitely I'm link back to the source I always I'm very careful and good about that because it's It's always important you just show people yeah I got this from legitimate scientists working on legitimate experiments there you go that's hold on go up to the slide

(1:09:34) above the one that you just had that one Magneto hydrodynamic Vortex there that is it that's what they've got their space sh based on right it's the it's these geometries which um you know there's only one solution in the universe and it's literally in your face yeah yeah is like if you want the answer to how to do anti-gravity or I would call it propulsion it's in your face everyone has a perfect manifestation of this in their face yeah okay so D this um this was great Lewis Whitten oral

(1:10:08) history he was interviewed by Dean Rickles and Donald Salsbury um this is great uh uh he reveals that Whitten reveals Lewis Whitten says that he was recruited by lockie Martin Come This is this was Glenn L Martin company this was back in the original day was lock Martin huh in 1949 uh Whitten was hired by them to to work on remote control drones in 194 like 4749 so like like when when Roswell was happening this guy was working for Glenn Martin company on Nia Tesla himself had made remote control like boats submarines all sorts

(1:10:52) of stuff he also said 19 he also said in his 1911 interview in the New York uh Sun newspaper using the application of this principle we will create a flying machine the world has never hitherto seen before which will have no screw propellers or control surfaces but will be able to carry any weight and fly in any weather at Fantastic speeds that's in Sun New York 1911 damn guys if you just tuned in uh we're here with Bob Greener he's from The Martin fleschman Memorial project on YouTube I'm of course the alien

(1:11:26) scientist here on YouTube we're here with Bernie the crypto Alchemist and of course Ashton Forbes uh so if you just tuned in this is the panel uh we had Mike Rossy on Dave Rossy

on here earlier with uh a number of other um um people that couldn't join unfortunately we we're we're um we're trying to get John we're trying to get John Hutchinson on here but I I don't know if I just emailed him again so we'll see and I saw he just post posted a couple videos on his own channel so I commented there I

(1:11:57) was like hey Bob check your email so or Bob yeah John thank you Bob being here um and I'm just gonna run upstairs get some boiling water to put some salt in and then I'm actually gonna hook one of those triple coils into just a 5vt electrolysis reaction uh so we see and that's what will be between Bert and Ernie there um but well just only five volts I think think we'll be fine that way we won't uh destroy the world or open a chain reaction of yeah we don't we don't want to open any V vortexes to

(1:12:34) the interdimensional you know portals before Christmas I like in our future just as we're about to meet our maker and we know what happened right you can tell your kids that this is how Santa gets around to all those houses in a single night oh that's the plan must be teleporting that's it I just want to open the portal to do the nether Dimension and have the demons come out and then play out the movie The Mist in real life except for the end scene I don't know if you guys seen that movie it's dark but that you

(1:13:06) bring that up though there's always the rumors of like the demons in the red in this infrared and then like the aura and like in the ultraviolet sort of thing but then it's like the human uh visible light spectrum is literally infrared from infrared to ultraviolet and then you have like 97% of the rest of the EM wave out there light wave out there uh and then Jack surot talking of the red blue shift Bob can I get and him saying that had to do with warp and stuff do you have an opinion on the red blue and

(1:13:45) what the red blue shift is in regards to any of this Barber so what I can say is if you go to the 2018 Sai uh presentation uh by the guy that leads the cold nuclear transmutation and ball lightning uh weekly meetings and and at semiannual conferences uh zat leppin he talks on on um on the physics of rotational bodies or something it's it's on the mfm's website so if you type in rotational bodies and uh zalin um it shows that in both natural ball lightning and artificially synthesized ball lightning it's spinning so fast you

(1:14:27) get a red shift on one side and a blue shift on the other right saw in Ashton's videos there right and it was forming yingying I think okay no well I mean the the so the the structure that I see in is is the same thing is the alto Finland University uh um spin orientation in the synthesis of a topological monopole right and so the the difference you change it's actually like a mushroom cap and that is when the spin inversion occurs after the the monopole in in the center of the overall topological monopole and if you did a

(1:15:08) slice through that it would be the finish ukara the Thor's hammer and that's the bit that does the the changing in my view of epon zero the space time dialectric metric okay so that does the magic and that's what you would always have at the front of the structure and there's a gravitational beam that goes all the way through because the Relic neutrinos they can

be interacted with by gravity and they according to Bob Al melrath of CERN Theory group in 2010 they are the model of gravity that is supported by the

(1:15:38) standard model right so the Relic neutrinos go through um but because uh uh they can be pulled through and anti- pulled through depending on the spin um they uh can go through whereas the ordinary matter and the bionic matter and the the electrons get trapped at the face Singularity okay so that is where the the core magnetic core of the monopole is and so this gravitational beam that goes through on which they are traveling but also propelling themselves when when you're doing that making the plane disappear you you you it doesn't

(1:16:11) matter which orientation they're in okay if you listen very carefully to exactly what is said by in this presentation by John archal Wheeler it's only when you link the gravitational waves that they then pull together and what that does when you get the three orbs and you need three because only three defines a plane right if you have two you only Define a line and because you need the azoth of the three to go precisely and perpendicularly through the center of the three you have to have three because

(1:16:43) then you can you can control for to do the volume to I don't know about the forth it's not necessary you create a macro cluster and you use the same technology that you used to move the individual ones to move the collective fractal that's on the level above that you've just synthesized so you what you would do is you would have phase conjugation beam which is just 180 degrees out of phase uh electromagnetic waves as per Tom beon which I sh in I actually have that also in the presentation Tom Bearden talking about

(1:17:11) that so it's 180 degrees out of feast you can look at his Oblivion book or his third Lance book he describes it very clearly and then when you when you have the phase conjugation beams let's say from your satellite or from your groundbase stations uh you then cross those beams and that causes Scala wave interferometry and at the interferometry you basically have a node that you can move around as fast as you can move around the two beams by orienting them from the satellite or ground base stations and because they

(1:17:38) are Scala waves they can interact with the orbs because only scale and Vector potentials can penetrate the outside right and interact with it they can energize it and cause it to be on a node between the the uh um the the uh interferometry Crossing Point Point okay and it's all clearly described in Tom B's book it's just it's like it's so un it to me it took like five or six years to understand what Tom bden was going on about right and he'd been writing this since the 1980s right but I only got the

(1:18:08) book I think when did I first get a Tom bden book it was in mid 2017 someone said this sort of stuff looks a bit like what Tom bid's talking about go who's Tom bid so yeah so um that's what you need and then if you listen to what John archal Wheeler says is you need to get those to when when you've got the asouth going through the center of the the body of the plane and it's directly perpendicular to the plane that's described by the three tours you then need to arrange the tours so the

(1:18:34) gravitational waves link up and that will create a new gravitational Vector through the center of the plane that will pull the TS in which will increase the gravitational Vector which will pull the TS in further and it's literally like that when you when you link those up it's it's an inevitable level and it will go to the next fral level and at the same point point it will it will switch off the chemical reactions it'll switch off everything because you're changing the way the electrons be behave

(1:19:00) and electrons are everything that causes oxidation right just real quick on that so the direction of travel I mean how are we it feels like are it being pulled backwards in this like it almost looks like when you look at it it's being pulled backwards so you're creating that plane right you would need to track the relative positions per frame of the video that's taking this now I don't know so for instance so I think some people criticized it because they they they said oh it looks like the outside

(1:19:30) of the plane has been cut and paste in a few frames but that's because they're not looking at P&B frames which is ways of encoding uh video information from your eye frames right your key frames if this was pure iframe you wouldn't see that but when you what an P&B frame is that they they look at either the the previous frame and do look at things that change and and only change the things that change right and the the the I think the P frames do a predictive between the two and look forward to the

(1:20:01) next if frame and and estimate where it needs to change so you need to understand video encoding to deal with some of the more um how should we put this less informed understanding of encoding I'm not really concerned about the **debunkers** because they don't uh they don't not not going to believe no matter editing and video encoding and trying the science part is the part I'm interested in though because so like what you just describ there I have a quick side question before you move on to the next part right is so first of

(1:20:31) all I want to know are do you think the orbs are then attracted to one another because it seems like the first or and the other ones are like just sucking right onto it listen what happened listen exactly what is said by John yes it's a perfect 120 degree triangle too of course it will be because that's how you uh if you look at some of the if you look at some of the structures that we physically see in our experiments they equidistant space themselves up there is a triangular hole in the amasa cavitation structure with a

(1:21:02) sphere in each of the center where the corners are like this is a vortex structure but it's actually got a triangular hole cut into the steel right and we also have a triangular structure and a four four structure and a and a two structure and a five structure and a six structure and an eight structure and they always equidistant because these structures they repel each other and attract each other right so there automatically self-organizing so when you get one in there it doesn't really know where to go

(1:21:30) because it has to be complexly controlled so the satellite will be tracking the plane which is easy to do this this was invented a very long time ago you know exactly its Vector of

travel and then you bring in your structure and you're basically seeking to get within the operating distance of the the traveling device right and then what you need to do is bring in the next one and when the next one comes in they will start to influence each other other so you've got a little bit more complexity to work out when you get the

(1:21:56) third they basically snap into position right based on their their field of Attraction and you can see this in our experiments when when you see these things traveling through the plasma chamber they don't influence each other at all in fact there's there's one beautiful experiments we've got if you go and look at um extreme interactions we have a discharge going through the chamber and one structure comes out it then goes anti the the magnetic field hits the um the cathode which is the metal on the

(1:22:26) bottom it then comes around the opposite direction and as it's orbiting around the electric discharge another one comes out and it then starts orbiting around the original one and then another one comes out and you have three of them orbiting around their Center of mass exactly what you see here we've physically done an experiment before I ever saw this video right and these are these structures okay it's not in not in this presentation uh Jeremy it's in in it's extreme interactions you can go and

(1:22:51) find it on my blog but anyway um the sorry you've muted yourself Jeremy H sorry in the presentation though you I mean you show 48 and this one has is more simplified with like two or or or four two is the minimum because you can't link a gravitational wave if you don't don't have one pointing in the other direction so the first ability that you can make the next fractal up is to have two right so if you go to the previous slide you can see the top left example is one of these structures manifesting and when you have two or

(1:23:21) three it produces a Paisley which is a a particular um Vortex ratio spiral that goes into the center we see these on Hutcherson samples as well you see the three order structure there still actually has a Paisley okay uh it has this Vortex like like quote Mark right hole in the middle go go back to go to back to the four order one the four order one down there right now on the left you see the non-radiating boundary the spherical structure in which there is no electromagnetic waves propagated now imagine that and I've actually got

(1:23:54) this I've actually got it on my laptop right now and it's going to be my next presentation but if you can imagine that that overall structure is the same as each of the four structures in the structure you see on the right they would have their own non-radiating boundary and what happens is when you go if you go back to the previous slide go back to the previous slide when you have three the non-radiating boundary does not interact with each other so you still get the Paisley but when you get for the swas

(1:24:23) sticker or the Salva sticker depending on it whether it's making or destroying right the the the destruction Zone on the fractal overall top level interacts inside goes inside the non-radiating boundary of um the subtour and so you end up with a freaking square hole and that is the first one that you don't end up with this Vortex structure going in it's still got a Vortex but

it's contained it because one feeds the next one but you do not need that level to implement this technology you only need three and

(1:24:57) you need three because it's you can't work out a the the normal of a plane from two two structures you need three it's the minimum to be able to to effectively deploy this technology right so deploying the technology and those orbs are those orbs physical craft or objects or are they satellite no they're not they're just the same as ball lightning they're like ball lightning yeah and they have a gravitational wave that travels through the center and you look at project are those can can you

(1:25:29) project those from U yes like remotely you can generate them you project them and then you control them exactly as I've described in my opinion which is you produce Scala waves from phase conjugation of 180 degrees out of phase electromagnetic waves and that can be a traveling of his waves so you can push and pull it forward and back but because it might want to skip off that beam line you then have two or more crossing the beams and the crossing of the beams allows you to have interferometry and that allows you to

(1:26:01) precisely locate the the core and because it's Scala waves it can penetrate into the the um uh the total moment structure that would tell me that are being released like pretty quickly that they're not stuff that's floating around and then they're locking and later on like this no you make it almost instantaneously so if you look at one of the methods for injecting PL into um into thermonuclear Fusion reactors it's called a plasmac and a plasmac is in fact actually a similar structure to this it's just not over

(1:26:32) energized to the point at which it reaches the non-radiating boundary structure it's just it has a tidal moment and they they inject the tidal plasma in and it's a way of putting the the plasma in and adding plasma to a toac for instance okay so all these things were developed in the 50s I mean it's like and not worked out how to do it since I mean they would have to be idiots with a big budget and not able to do anything competently after they made the first laser the and they made the second laser

(1:27:04) the first thing they did is cross the beams see what happened well of course and you know what happens you produce terahertz uh radiation in the beat frequency and that was used in the cold fusion experiment that I saw in University of Missouri 20 in nf8 by Dennis lets and Dennis Cravens because there's no real easy way to create terahertz waves because they are the the wave that is the phoneon distance between um you know matter so if you want to get a de brua wave that that actually allows scalar interaction

(1:27:37) with a nuclei you need waves at this frequency but they did it by having two slightly off frequency lasers to create a beat frequency between it and it was actually proposed by a guy called Low in 1973 that you could use lasers to create coherent matter and fusion so it's not a new idea so I have to get that you have you have some of the new icfs that's the International Conference on yeah I'm I'm referring to Isis year uh uh 18 and Dennis Cravens Ed the beat frequency between two lasers to to

(1:28:11) stimulate Fusion so people uh can go to cold fusion now.org um and there's an archive on on that site that has uh doesn't have iccf 21 or uh 22 but um I'll try to get those I'll you can go to Lena dca.org and you can probably go there now Lenard dca.org it's run by Jed Rothwell caner c anr c NR n forelli not cabba in forelli Nelly the elephant went to town yeah no I did that all right oh this is cool so right so if you go into the enhanced by Google up the top right there of the page and you type in Isis

(1:29:00) cf18 you might get the the full I can't hear you right now sorry I'm live and um sorry uh you want to jump on you can I was trying to sorry I didn't catch any of that because two people were talking at once so okay go to the top right enhanced by Google and type in there iccf 18 on the page L to the right of Len canana type in iccf 18-8 well that might work as well they tend to put it no iccf I know I did exclamation point uh and hopefully you'll find so you have everything on your website huh uh this is not our

(1:29:38) website this is J Jed rothwell's oh sorry um but we actually have we have scraped this whole database as well so it's it's in our Lena database as well awesome yeah this is amazing stuff and I'm glad that these conferences took place and they kept going I went in uh 2014 to the one that they had at MIT and I covered that one I don't know if you've seen any of those lectures but um those are still up I was able Larry fley there he is yeah he's the US Navy spay War guy that did yeah he he's the guy that's forcing

(1:30:13) everyone to con consider this as condensed sorry H what do they call what they're trying to get everyone to think of it as um Itis confined Fusion this is so that LR right no they current to call it Itis confined Fusion because they in my view this is my stated View and I'm going to State it right here it's difficult to discover that this is blt lightning and then you don't get to all of the magic Technologies it's all about the terminology huh whatever you call it right I feel like a lot of scientists

(1:30:42) and academics care so much about the terminology well how they compartmentalize it and use the algorithms to control it right these day and age yeah I think you have to know how the system works as well just to even get information out oh they call they they'll I'm sure they'll call all this pseudo science you know and I think there's a lot of pseudo science that's mixed in with this too um to well there's something like 70 different theories and probably at least 69 of them are wrong yeah all fun games do you teleport

(1:31:13) a cook bottle to the Next Room get real serious I mean I like Al we're not advertising Coke are we coke coke coke no I mean equal opportunity Pepsi you get a little shout out too and don't forget no name brand RC Cola you got so who came up with that that hydron model of the um I think it was Edmund storms came up with that that if you you take that what happened I I was talking about particular presentation about Ken shers evos and ball lightning and the day after or two days after Melvin miles uh uh asked the mfmfp and I give

(1:32:04) permission to access the archive in one ZIP of of Ken scher's works and within eight hours Edmund storms had also respect uh requested for the archive of Ken sher's work and then

about N9 months transpar the US Navy representative started publishing disinformation about evos are nothing more than columbic explosions or they're nothing more than shape charges in iccf 22 and 23 and I asked the the US Navy to retract those uh and then I would write a section of a book on Cold Fusion for the person that's writing the

(1:32:42) book on Cold Fusion if he got his former colleagues to retract those two disinformation pieces which they have not retracted um but Edmund storms right here who worked for Los Alamos National Laboratory uh came out on on Lena Forum to say that he actually probably does believe now that that exotic vacuum objects are what is going on in in um cold fusion right and and I have full respect because actually in 2010 when Ken shers had that interview with John Hudson filmed by Nancy lazeri and his wife um that he said that the only

(1:33:17) person in Cold Fusion he respected was Edmund storms because at least he was a real scientist and he's come round after all these years to accepting but he said specifically the group at sparare have published that they're seeing neutrons but they're not seeing neutrons right it's not real neutrons these are fake neutrons the the **Russians** call them what do they call them I think they actually call them fake neutrons or or pseudo neutrons but they are these clusters that can act a bit like neutrons and

(1:33:43) they can produce uh triple tracks in cr39 detectors and they can fall a boron 10 detector but you know what they do not use Indian M gold activation in the NASA work and they do not use bubble detectors and these are the only types of detections for neutrons that are reliable and can't be fold Electro uh electrodynamically by these clusters which was identified in 1995 by matoto and told to the cold fusion community and I've directly confronted uh um uh um The Spar War group on this even even to their face in one conference they don't

(1:34:19) want to hear it because kener says they they published along a line and because they all their historical publishing is saying we saw neutrons they have to keep going and they've got patents and they have to keep going in this line because if they suddenly admit like um Edmund storms has come out with the courage to say it probably is a natural phenomena like bull lightning which is exotic back Dres and they they have to basically rubbish all of their patents and I know sadly pam mosia boss who worked with

(1:34:47) Larry forsley they fought for years to get the patent through on the the US patent office years and years I sat down with her actually in iccf 18 in that room there for years and not that room a different room no this a different room this is that's 14 is it you weren't there anyway for years and I sat down with her and she W walked through all of the struggles he have you got the triple tracks there actually I see there on that above there you go that's the triple tracks there cold fusion evidence

(1:35:13) that's that's in um you basically have Neutron coming in it hits a carbon atom and produces three alpha particles but the point is these clusters are chunks of alpha particles anyway so like and this was shown by SV Adam enko he produced these structures which had something like 455 AMU right which is like not any element in our near Universe okay and when

these things blow up they throw out a load of packets of alpha particles so like it's it's a bit weird it's like they and they've already

(1:35:43) verified the svam enco work they brought it in 2015 to to um America 4 million P dollars of appeared out of nowhere they set up this thing called proton scientific it was verified between 2015 and 2017 and then it became a part of the national nuclear fusion program um and they took down the proton scientific website after moving the entire lab supicious on the old isotopic factory outside of Kev in Ukraine and verifying it yeah and this experiment it was using the old Soviet method from the 1950s uh of nuclear synthesis artificial

(1:36:22) nuclear synthesis and he set up yeah he set up the um the lab and he started experimenting 2001 it worked the first time and he had 10,000 experiments sequentially in the line that worked 100% of the time and he had all of the samples from the the the impacts and he challenged anyone in the world to come and check and the the the US did question for you um on the same lines Bob so a lot of people in ufology I've learned you know are saying that a lot of the orb the stuff they're seeing orbs whatever are human-made do you think

(1:36:56) that would account for the more and more sightings we've seen over the years as well thank you Ben so okay so at this time of year you should see more of these type of phenomenons I'm just specifically talking about between December the 10th and December the 14th when there is a like a lens alignment between Beetle Juice the earth and the uh black hole so-called thing at the center of our universe and this increases the Relic flux and in fact we had our first success experiment on December the 12th and it wasn't until I

(1:37:24) looked at Joe pars work from the 1980s or something '90s that he identified this time in the year when there was the celestial and and black hole and Alignment that allowed for this increased Flux Of reant tros although he didn't attribute to Rel TR but that's what happens um and so yeah sorry what was the question again so yeah so the it's really about just like the frequency of these sightings of these uh what happens some of them more go ahead yeah so Relic neutrinos do not ordinarily leave the sun okay

(1:37:56) because they haven't got the escape Velocity they don't travel fast enough to re escape the sun's velocity but when you have certain things like a a big Sunspot or whatever or a coronal mass rejection they can have an increased flux that comes out and at those points you get interact interactions with the atmosphere likely that would lead to an an increased level of sighting so um it's it's like partly based on Space weather it's based on this auspicious yes yes it's the phase of the moon and

(1:38:24) yes it's it's the alignment of the stars and the asteroids and whatever these things really do matter in this space and I used to I never ever mocked these kind of beliefs that ancient people had but I was I wasn't actively thinking they had any value and now I've had to learn to eat a lot of Humble Pie about things like crystals about things like meditation and the Lotus position and the humming and the everything all of these things I thought was a little bit woo woo and really I'm just a scientist

(1:38:51) and I'm I'm looking at things under the microscope and that's true and I know that that's true but these things that these ancient people said and these symbols they used I've had to eat a lot of Humble Pie really because they knew their stuff and so it is about circumstance so if there are a lot more sightings and they're natural so for instance in in Haaland in Norway that was one of the areas in the world that produced the most uh Long Live luminous objects in the sky and they they could

(1:39:18) be from a couple of tens of centimeters across to the size of a house and there was a whole period I think in the 70s and '80s and '90s where you would have uh very very regular every summer and I've identified that during the summer in Norway is when you have the peak humidity in so the carrying capacity of water vapor in the air is that Peak when you see most of these structures in the air now what they've identified is it's a mining area they produce like copper and zinc or or and and and um lead and I

(1:39:50) don't know there's a whole range of elements I might have got those wrong but essentially there is a sulfurous stream that runs down and so the whole valley is basically like a freaking big battery with electrostatic potential okay you have that with the humidity in the air and you have also quartz in the ground and you have thermal shifting between the summer and the winter and you get all of the environments for creating this natural effect however as the mining has changed and the the sulfur nature of the river has changed

(1:40:18) you then start to maybe get a lot loss in these uh ball lightning structures and so there are natural processes that produce these now when you're looking at somewhere like Area 51 or somewhere like this and you see a lot of these glowing balls running around in the sky or remote distant areas where you might have a base that would be a right place to do these things okay they might be man-made and so like I think the majority of luminous objects that are seen in the sky are natural phenomena right but what if if we're to believe MH

(1:40:49) uh sorry you've gone silent you muted sorry Ashton you're muted sorry I just uh I hit your microphone I was muted yeah so just even if they're natural right like the issue is like that doesn't explain why you'd see more over time so I guess my question is like from what I've learned even just today but you know going back to that we might have unlocked this stuff 30 40 50 years ago even before that like do you think it makes sense that we would see more and more over the last 80 years because

(1:41:17) countries are figuring it out they're building their drones that are using technology do you think we're having a bad year in fires in in the California ah I moved away from California so I couldn't say okay but the reality is I think if I'm right in saying this the lowest number of fires in California in a long period of time yeah but you have a factor of there being a lot more people on the planet so if you if you go back to let's say let's say when I was born 1972 what was there in the planet two

(1:41:47) three billion there's now 8 billion I don't know but like see to catch up right so first you got more people then who could afford a camera there's almost no one that could afford a

camera then who could afford to disseminate their experience almost no one there wasn't a means for dissemination of experience and then who are keenly aggregating ridicule just ridicule and and and who who is aggregating this information and giving it amplifying it now there are people that spend their life scraping every

(1:42:19) single section of the internet personal and whatever for anything that even closely looks like this so it's not necessarily that the incidence has increased it's that the ability of them to be packaged into units of information and spread widely has increased yeah it's interesting because I mean just earlier today I was doing what you just mentioned was just scraping the internet found this LAX video of these like it looks like three percept distinct orbs that not like the MH370 videos cuz it doesn't it looks like a

(1:42:48) actual physical structure not necessarily like a non-radiating barrier but uh still really interesting because it makes me wonder like okay is this you know I'm just going to speak freely here are these like China's orbs and they're spying on Air Force One are these R orbs that we're using to defend the plane or is this just really a balloon like you have to ask the questions with the Foo Fighters because the Foo Fighters never did anything they just followed planes they just followed planes were they an

(1:43:13) intimidation tactic of a technology that no one really knew how to use during the second world war right yeah well I don't think they were alien I think they were early implementations of this technology and I think after the second world war could be these things were started to look at as practical defense Technologies and that is what I think my father showed me in 1979 when I was 7 years old how because you scary old go ahead you need to cross two laser beams to sort of create no you don't need to

(1:43:41) cross two laser beams you need to cross two electromagnetic waves which in them have phase conjugation of 280 degrees out of phase electromagnetic waves so you don't need to see these things they can be microwaves they could be gigahertz they could be on was invented in 37 is a trigger for a nuclear weapon so if you had yeah but it was also used to detect submarines too okay we need Material Science though to pull it off right I mean know getting two matter waves or any waves in the sink that's the difficult part right

(1:44:15) what what what they Hades these structures I'm just trying to think back to 1940s technology and what they had to be able to produce Foo Fighters if you know that's hardest you mean in 1940s well yeah okay so in 1930 what was it 19302 you have the electrical particles of matter uh drawings if you go to our um uh Facebook you'll be able to find the drawings from Tesla if you don't know where else to get it um so that was 1932 um you have his claim that he could do this basically what would describe as an anti-gravity craft in

(1:44:59) 1911 you you don't think that these people were not were not researching this if you look at the 1903 designed Supreme Court of the United Kingdom it literally has phase conjugation waves above the top W mirror with a toroid in the center where the crossing of the beams are right and below that it has a yin-yang making a yinyang making a yinyang a wheel

within a wheel within a wheel with the golden ratio uh um sacred geometry structure defining the windows of the Supreme Court that was designed in 1903 so the idea that this wasn't

(1:45:33) known and and in t when in Tesla's 1935 press photo for the New York Times when he was promoting the weapon to end all wars and he says it comes the energy for this comes from a surprising Source right it in it creates an invisible chai knees wall I as in lost him hey where'd he go government took him down said Peace oh my god dude too much close to the **truth** D yeah too close a little close too close to the Sun on that one every time disconnect Bob hopefully you're still there what do how do you what's your guys about this

(1:46:15) whole Vortex tub kind of stuff um I wanted to ask him about um the the thunderstorm generator Malcolm bendall I want to show my friends patents and and and sort of give that away I I don't know if he's ready do you think they can deploy this from a submarine or do you think like a satellite or a plane he was mentioning satellites and dishes and essentially right if you have the satellite above the microwave or tenant array from an island or from uh a base what about on a ship yeah ship definitely that's what they

(1:46:50) have with their a GS uh their Shield right this missile Shield potentially could be that's how you point it about the thing you wanted to go to maybe interesting the laser based weapons [Music] experiment this is the guy I wanted to show man the L work of Luigi Giovanni Valero Rota in 1886 to 1951 is when he died he built fraking electric planes man and back in like 19 early 1900s and um really some interesting uh work yeah it really feels like this has been suppressed for a long time potentially I mean that's the part that

(1:47:30) scares me the most especially when we talking to Bob about technology and he's talking about might have this in the 40s I'm like so that was 90 years ago so we've been hiding this kind of technology for 90 years like L lots of Technology man if you if you notice one thing about the UFO narrative everything they've put in front of Congress everything they've put out in the mainstream all of it's been completely absent of the real science and the technology and the people in the channels that are talking about it few

(1:48:00) and far between we have trolls in the chat saying this is all **[redacted]** and these people don't know what they're talking about conly and you and you also have um no coverage of it whatsoever we're the most like we're Shadow band to all hell I I my channel has 115,000 subscribers and we barely like crack the the viewership that I I there's Channels with less than 10,000 subscribers new channels that that are getting way like more views than that and the channel just it doesn't Reach people complain that hey I've ring the

(1:48:33) bell I've subscribed to your channel I don't get notifications I don't know when you're going live um I have to go and search my subscriptions to find your videos like these the YouTube algorithms running operations behind the scenes Twitter was caught doing the same kind of thing when it was under under its old ownership now that it's under the new ownership we've got some freedom of speech on on that platform uh YouTube is not the best with it and it's it it unfortunately so Facebook literally made

(1:49:04) me or deleted on its own over a hundred of my first videos that I ever posted because I had www. alens scientist.com in the descriptions it was goes against Community guidelines yeah I got out of the game I deleted my Facebook pre it's interesting that what did get in front of Congress at these Congressional hearings on UFOs was the you know stuff from a guy who's promoted hoaxer as a scientist and and and been out in the mainstream promoting nothing but hoaxes and then they get put all that stuff in front of Congress

(1:49:43) **debunk** it all and and then say like oh this is all nonsense it's like a it's people don't see the dog and pony show and that's been played for them in front of the public I've been screaming this for years now that like this this is not like this is a fake everything you see down there in that City uh Washington DC is fake fake fake it's it's Faker than any science like any pseudo scientist on the internet right now Jeremy I'll give you a very specific example and sorry my my battery he probably gave you a

(1:50:15) breather from my I want to get yeah I want to get into I have more questions too specific example on the censorship on I think March the 20th 2020 I produced a video on using egcg in green tea to prevent colds and flu the reason being that a University of Florida study in 2017 had shown that if you just drink green tea you have a 30% reduction in respiratory conditions right just green tea right then then if you have zinc they've done studies I think in 2000s or early 210s where if you have zinc and you have a ion for that you can in

(1:50:59) decrease massively the viable replication in cells in vitro and in in Vivo okay and so I published this with the references okay almost no views then about a year and a half later this suddenly became it's suddenly gone through that mean knowledge where everyone started thinking that you can you can have a zincon for and and and and zinc and it would reduce your P your path of the de progression of a um a respiratory condition and um what happened is it went from like one or two views every other day maybe to a week to

(1:51:38) it literally went up vertically in two days it went up vertically and it had like 4,000 views like in one and a half days and it the line when you look at it it was just straight up it's like someone had drawn the line wrong on the YouTube chart and then immediately I Got YouTube saying you've broken YouTube's Community guidelines and and we are suspending this video and I'm thinking it's been up for a year and a half and now I've broken the guidelines and you know what happened I wrote to them and

(1:52:04) said this is based on pre Uh current operation um uh uh science that's published in peer- rreview journals there is no justification for bringing this down and you know what they reinstated it yeah barely had a view in the year and a half since yeah you mess with the farm companies man that's what happens you know I'm gonna get baned this this video just got banned and flagged and censored just for mentioning that uh but by the way we're not giving anyone Health advice there's no Health advice being given I didn't give any

(1:52:35) health advice and I didn't refer to any remedies for a particular he has to say that legally so he doesn't get context uh real quick alien scientist are Jeremy um I think the thing too

I want to just Echo what you mentioned earlier is that we have these Congressional hearings right and what's it what's all the headlines oh alien bodies or whatever like where're the headlines on the science the fabric of reality breaking science that's being hidden from us right like they don't ever talk about

(1:52:59) the technology side of it it's all just craps scraps to sate the masses yeah exactly the hilarious point about it it scraps us already in the public record from 1979 it's like it's just a freaking joke yeah that's crazy that it's this is a 1979 NASA document and it's it's right there read it it literally says everything they've been revealing in these Congressional testimonies they've not revealed anything yet um Jake Jake Matt thanks for the \$5 Super Chat the tr3b those those lights

(1:53:34) according to Ed those were actually thrusters or rocket engines that the the in he said the inside accelerator ring uh only reduced 85% of the ship's weight and the rest had to be pushed around with these these rocket engines so those lights I believe were actually well they they could be a fractal toroidal structure inside those spheres as a controlled plasma and you can Vector them in the same way that the the orbs are being uh in in in in Ashton's videos right and my videos huh the world's videos well done you're excellent CG

(1:54:07) artist well done as some people think that though some people think I made them okay the the videos that Ashton had found from 2014 that he's given the air time to um the the the the point is is that you can Vector those individual orbs but it's the same reason you have three on the MH370 why because that defines a vector of travel through the three points it's the minimum if you only have two it's like if I point in a different direction I always end up spinning that's why I think it's getting

(1:54:40) pulled back because like you said it's it's defining a vector it's creating plane in in two-dimensional space right yeah so then it makes me wonder like okay is the direction of travel going to be you know perpendicular to that reverse of that and in the video especially the uh drone video you can see like the tail the plane sticking out from the center of the singularity and it makes me wonder it looks like it's getting yanked backwards a little bit and that's why I like Dave's idea of

(1:55:05) there being a fourth orb where it's getting pulled back I don't know if it's required based on what You' said but that's why I've been asking you coily about you know how you would control some type of propulsion like this would you just turn off the electron the way you witness the smaller Quant being controlled in when they were being brought towards the plane it's not complicated it's like I I got a a car which and then I I bolt three cars together and I'm moving the whole lot

(1:55:33) together but I'm only using the same kind of internal combustion engine it's you're using the same mechanism to move them around as you did the the Quant below yeah no that's pretty cool complicated so you I mean because your way of thinking would have me think okay you can move it anywhere you want right you have full control over it just like that have the

orbs like the way Dave and Sal talked about it makes me think more of like the rubber band where it's like you got to have something ready to go

(1:55:56) and then you just let it go and that's where it's going to show up that's what I've trying the fourth potentially could also be six right three and three yeah definitely I actually think that's more likely of the two but it's totally unnecessary yeah so yeah okay hey Bob it's Joel there speaking of unnecessary I was going to ask you the the three vectors that are surrounding It Could you actually like would it be possible to have 12 you can have up to 48 but it's pointless like if you want to make your

(1:56:26) job harder and control 12 rather than three two will not do the job three will do the job you do not need four but wouldn't 12 give you more of a finer control uh no no okay fair enough no because you've statistically got a lot more problems with having 12 when it comes to the alien reproduction vehicle and the flying disc of the sky Gods right 48 is optimal as you don't get any bleed out of the gravitational waves locally you still get the gravitational Vector through the center but you you don't have with 48 then non-radiating

(1:57:03) boundaries push and pull against each other so that they don't try and collapse the object that's inside you know what I mean it's already a stable toid I have to bring up Ed lead scallan's flywheel is actually that 48 24 and 24 right 20 North 24 South and so yeah 48 okay well that would make sense but like okay well there you go but now if you have your like your surrounding vectors there's say 12 around your your toroid it's going in One Direction as the center of your toid is going in the

(1:57:43) absolute opposite direction so wouldn't that give you like more of a control than it would no so you need to think about when you make the fractal torid at the fractal level above you have to rotate the sub toids at 90 degrees it's just how electrodynamics works okay they have to be at 90 degrees the curl and stuff so I got sorry what yeah no I understood that I meant I'm sorry go ahead yeah so it's only when you link those gravitational waves together do you get the gravitational Vector through the center and that will

(1:58:17) pull those in and it's exactly what you see on the video and you know it's it's what you and they will pull in to the point at which their fields are attracting and repelling they're like like likes they likes like like likes like the same as Fineman used to describe it's a self-organizing principle where things they like to attract each other to the distance at which another Force that's embedded in them causes them to repel and they will know that creating those particular structures at a certain quantization

(1:58:44) scale when they put it in there it will create a safe bubble in I would argue that it's in the VIS a Pisces okay in that structure that then is safe to move because the charge and uh and nurer is and masses is negated inside the overall SPH spherical structure and then you can move that structure in exactly the same way in any Vector you like and I look at this from the point of view of something that I saw when I was seven years old I saw it in the sky I can see what they can do they can instantaneously change

(1:59:13) direction so I don't have the mental problem that people can't move these things around and it's just like if you've got a laser pointer and it's not a laser but let's say you've got a laser pointer I'm able to move that around like and make the cat Chase it around instantaneously and the further the thing is away from me the faster I can move it over a distance with a set of SOS on my controller right so if I'm up in space and I'm at a few hundred kilometers up I can move my Servo just a

(1:59:41) fraction of a micron and it's already moved 1,000 miles on Earth you know what I mean and once you've locked the center of the the the topological monopole structure with with the phase conjugated uh um uh scal of waves and their interferometry and you just move those two vectors around it's literally instantaneous so teleportation perceptually teleportation um and it's as fast as you can move those servos to control the controlling cross beams with teleportation would you not need uh no it's not teleportation it

(2:00:19) would appear to the people inside that it's teleportation and effectively to anyone that's experiencing something instantaneously appear the field structure breaking down it just go on the ground right it looks like it teleported there but it's actually being moved in a relative time space like like it's it's moved 2,000 miles in one millisecond so from your point of view you've you've literally gone one through one frame in your eye and it wasn't there and now it is right so for you

(2:00:46) perceptually it's teleported for the people on the plane it's teleported no one felt any inertia and it's gone from point A to point B in all real senses it's teleported in practical sense so from I'm sorry well from somebody's point of reference on the outside of your teleportation would it not seem like you just disappeared of course it would yeah you un you unapp from one point in space and you reappear from another point in Space the only point that you see the transition is where

(2:01:14) you're going through the the formation of of the super tour the the fral torid above and that's exactly what you see on the video I had no choice but to engage with this topic I had literally it was a former director Matthew vat of the of the Martin FL Memorial project said have you seen this and I I looked at it go oh I know what that is it was I was very matter of fact about it because it's it shows everything that's necessary and all I had to do to describe it was to use five five slides or something from this

(2:01:46) presentation that i' had already given before this became public through the good of Aston yeah and I think that the thing about it that I've learned is it's somewhat simple I mean yes it's complex if you think about if you don't have any background for it but when you just think about it in terms of breaking down the empty vacuum state of SpaceTime you know like our reality is some type of a projection and I think the double slit experiment proves that straight up um because we know that there is some

(2:02:12) capability of non-locality and now all we're trying to do is figure out you know how do we cause it and in this case you can think of what's Happening Here is like riding a wave right

the plane's riding this wave and it's doing so on another if you want to think of it as Dimension I so so to speak but it's able to do so where it can from their perspective move faster than the speed of light um and yeah it would just then look like it's disappearing right and G to reappear somewhere else the the other thing is that along

(2:02:39) those lines is is is the concept of Honey I Shrunk the Kids because the size of an atom is Rel relative to the charges that can express themselves in ordinary charge levels that we observe so if you imagine a neutron star it's like a teaspoon of the neutron star like may may weigh as much as our sun right and all that's happened is the electrons have come from being outside of a so-called nucleus and inside a thing making all the protons into neutrons that weren't already neutrons right and and so if you have something that

(2:03:11) changes the dielectric constant of the physical vacuum in the nucleus then the electrons and everything can shrink down you still have an at but it's in its own space time it's not it's still within our universe reality but inside that space time you have a bubble where electric charges are represented differently because you've changed Epsilon zero and so you can literally shrink that Spain now if plane if you take the Earth and you put it into a black hole and the Schwarz trial radius it's 8.7 millimeters across so how big

(2:03:42) is that plane going to be not very big the problem with that though is then like you know you got people on W this plane right and I'm going goad talking about this I want to you have to you have to think about the people and the plane as information and the information is represented in a stable state in space time which we perceive in our Epsilon zero our dielectric constant of the vacuum now inside this bubble you're changing that relationship they're still the same atoms they're still in the same

(2:04:14) exact orientation but you've shrunk them this is Alice down the the rabbit hole right this is literally going down a rabbit hole Yeah so what you're saying is their frame of reference wouldn't even change from their point of view no they would just see themselves exactly the same they'd be on their iPads or whatever it was back in 2014 they'd be talking to each other going what's that smell of bromine oh God the you know whatever it is they wouldn't experience but what they would do is once they're fully in

(2:04:44) that state they might have a stop of time now from their point of view they don't ever perceive the stop of time they just at one point they're over the andam and sea and at the next moment they're wherever they ended up whether that be another planet far far away or somewhere else you might like to mention chos [Music] Island interesting and it would happen so quick for them the brain wouldn't even be able to comprehend the speed you would not perceive time yeah so this basically an arry drive right go and

(2:05:19) look at the study of TL car the TL car was I think he he knew the Dorman of Tesla and they ended up creating this supposed anti-gravity craft and there was this guy who visited them called um what's his name t car no is T car but there was a guy who's got like fluffy hair and he met him and he put his hand what Ralph so Ralph ring said that they went in this device and

they said look you know we're going to go down range and they went down range and they told everyone to get some rocks and put them

(2:05:50) in their pocket and they went back up range and they had no concept that they had actually traveled they just they the guy said can you now look in your pockets and there's there's the rocks that are not here they're only available down range and so they had no perception of time change and they might have been that they got out of this bubble and they were sorry they were still in the sphere of influence of the non-radiating boundary so their time was still stopped there so they're like almost in a you

(2:06:16) know they're almost like tripping they have no long-term memory because they can't lay down their long-term memory because in my view long-term memory is dumped by The trojan Moments in the vortex and the antivortex in your brain that produces the trojan moment it dumps it into the uh basically the real Cloud before they came up with this fake rubbish that they call the cloud which is the coherent condensed Rel chinos through the entire universe so they don't a they have no ability to dump long-term memories okay and so when they

(2:06:42) come back and they find rocks in the pocket that are not available in the local environment they must have traveled down range and they even say that the device is controlled by Consciousness and that's you literally become part of this other conscious entity which is the craft that you're controlling like being in a dream state essentially yeah it's like being in a dream and you can't for damn remember what the dream was so why is the orb have this uh heat signature on it is it self-sufficient then at that point if

(2:07:09) you think it's there's no Mass inside because I to me when I look at I feel like there's got to be some Mass inside this non-r go to my presentation jry Reese there's there's a point where you've got like um uh single bar thermal extraction okay so uh it's on the Shak parinov uh mobia strip a bit higher than that bit higher than that in the presentation it's higher higher high higher higher higher no higher it's much higher up in the presentation it's like one of the early slides describing the principles

(2:07:40) there The Shack pack no no no no down down is the slide 11 there no up 11 that you've got the on the out one side and it's extracting energy in a sphere at a distance the yin is less bright in the center of the face Singularity why because it's fusing matter okay and if you get two neutrons Infuse them together you get 25 million electron Falls the Yang is destroying matter it's always brighter because it's unraveling the energy it's not the energy gain from a lower Distortion of SpaceTime that is what you get out of

(2:08:11) fusion you're literally unraveling all of the energy the Trap light that's in those bionic and electron matter okay and it produces a Flash and intense flash of light but it also projects out so you get a luminous object at a distance so this is one way that you could create these particular objects but it's not really a very controlled way you want to create them from a Solon but what I'm showing you there is that these structures can actually thermally extract energy from a distance now it

(2:08:35) might be that that flash you see is actually the projected effect from this self organization of those three tours into a super tour above a fractal tour above and the Flash is actually slightly behind that of the dark area where it's thermally extracting energy um and what is this what is this um Bernie is this like looks like magnesium burning or something what is what is going on here in the picture what is what are we looking at and what was done in this shakaar generator experiment here like how do because it was this and

(2:09:11) what the photography was it done with like a high-speed camera making sure like just exploding bits that that like jump a real long distance and a short so on the Luminous object you'll see that it has subfractals on it can you see those you can see in that where next to the word luminous you actually have these hemisphere structures on the overall sphere right and they note this and that is to do with the spherical organization because they form a crystal type Itis structure which you can see in the uh um patent by Lo Martin okay but

(2:09:48) if you go to the next slide slide 12 you can see the exact same penr staircase diagram which is a demonstration of what the face Singularity is and on the right you see a mobia strip which has the same thing face Singularity depends which way you go around whether it's a Yin or a Yang and so what the Sha paroff research did is they created a pseudo monopole by first treating these uh single electrode because it's a it's a mobia strip um with RF so they treated the environment to excite the environment and then they

(2:10:21) hit it with two two contacts either side of the single wire because it's a single wire because it goes twice right around and the reason it as it goes round um if you go to the slide above you can see the Nvidia Tesla um simulation of from no no down down down down down down down there right that is the copper strip and what you're seeing in the blown up section there is a simulation uh computer simulation of the propagation of the charge separation of the the positive charge and the negative charge

(2:10:51) on the copper as it's propagating around the the uh structure and what you're seeing there is positive space charge uh uh Vortex and antivortex and and negative space charge Vortex and antivortex and that sets up this the space-time charge uh um uh space charge system that when when you hit it and it's in the process of doing it at that point you you hit it it produces this phase Singularity and that produces the topological monopole so what I'm saying is your I I I'm I'm suggesting to you is

(2:11:25) happening when you see that black flash that is thermal energy that is captured from the single bar thermal extraction as described in the Lockheed Martin patent okay it says one of the applications is single bar thermal extraction and it's extracting that energy and it's going to be behind the direction of travel of the new fractal tour that's just been produced okay and so that produces a a shock wave o of cold and it's sucking the energy out of that environment and that is part of the way that's allowing it to propel itself

(2:11:59) right so if if you go in my presentation further up um Jeremy you think it's cold because it's sucking the energy out of no actually go go to to slide eight that's quite a good one

these structures so that's your image there Jeremy of of a laser green laser cutting through a uh um an smoke Solon you can see that in these cases it sucks things in from behind yeah right you can see on the the two solons making a a fractal Solon structure it's sucking at that in what you're seeing in that right hand 2017

(2:12:38) water nanobubbles is two solons on top of each other the bubble the white areas are where gas that's dissolved in the liquid becomes nanobubbles and the light is reflecting off the interface between the water and the gas okay how is it possible that you have that heart-shaped or that that kind of leaf shaped structure where everything has got bubbles that's because you have matter going into two Singularity points on the yin and the yang right and and it's and it's literally a flat structure that

(2:13:07) it's not actually like a mushroom that it's actually two solons overlaid at the golden ratio on the um the sacred geometry structure that produces a torsion uh beam which has a lower pressure that fires out behind it and it sucks also energy in and that's what you're seeing in that little flash of stuff behind so even though it's going forward down to the bottom left and even though your one Jeremy is going to the top left right it actually is stretching and and and and changing the SpaceTime in front of it

(2:13:39) meaning it has effectively a lower pressure in front and behind it's kind of sucking things in which it's feeding itself is weird because it's feeding stuff from behind that's Propelling it forward it's really weird to think about it but that's think moving forward in that situation but even though it looks like it's going backward because of that's where like no no no I think the the propagation of the cold wave yeah is going backwards because you have an intense coldness and so what we find

(2:14:08) is in our experiment like in in the lion experiment the original lion experiment the temperature was about 850 degrees he turned it off and he attached a uh uh 30 watt yeah 30 watt 20 watt light bulb and it lit for 30 minutes and immediately heard this crackling sound and air was being sucked in to the tube and when you look at the temperature it went from 850 degrees to nearly minus 273 degrees centigrade in 2 seconds and that's because these clusters which we identified and you can see the marks of them on

(2:14:42) slide uh where is it slide 15 if you go down to slide 15 Jeremy that is the accretion disc in the butterfly wings and in the center you've got a black hole that is where the matter has collapsed and you've got the torsion beam coming out down the bottom okay and that is where the energy is sucked in and spun in behind it in the one on the right that's HHO Gas from RMAA on tungsten for about two or three seconds and it produces that magnet both of those are Magneto hydrodynamic structures you see and the one on the right you can see

(2:15:16) where the sphere is and when you go to the last slide I love this slide go go to the last slide Jeremy and and make it full screen the last slide in the presentation uh not the last Slide the third to last slide 42 of course the answer's on 42 it would be right go go full screen can you go and just play that because I want to say show you playing the animation um how do I do play

in the top top middle kind of to the left there that one right that was Canna play it oh you've got it in a different View mode

(2:15:49) it's going to be showing on a different screen for you okay sharing yeah no no you have to quit out go go to the ex I'll be right back I'm gonna get a drink guys yeah no worries I need to yeah you another presentation on this okay can you click click on the your image the alien scientist image on the bottom there can you click it and try and get it to play the video that's embedded click it up there go on the white area and click press play right now that's your image was it going to play it yes okay that's the sacred no

(2:16:24) just let it play it's got about 3 second delay between that's a sacred geometry on your slightly distorted structure that is a golden ratio that is literally the Tesla logo in exactly incorrectly the right place on the 1914 pattern now look at this where we are ripping tungsten apart that circle with the carbon film coming off and this is also a topological monopole that exact circle of what is synthesized strontium from the Tung with the carbon film coming off wait for it wait for it it'll go round

(2:16:52) in a second wait for it that is exactly where the secondary takeoff of Tesla's patent is and now in two days before I gave that presentation I thought that has to be significant that is the point of destruction of matter or synthesis of matter or projection of energy uh I looked at his 1914 patent you could bring it up if you choose but it says something along the lines and I'm paraphrasing here if you move that secondary takeoff a few fractions of an inch down it will create a ball of plasma which was fantastic destruction

(2:17:28) capability and it destroy the the apparatus I'm not a town traveler I did not go back in time and tell Tesla to put that in his 1914 awarded patent for the Tesla Warden Cliff Tower and if you draw on the non-radiating boundary it's above head height and in fact it's above the second floor windows in the Tesla Tower so there would have been no interactions with humans with this uh weird area that would have caused problems for biological entities and Tesla's logo is more accurate than the realon vasara from

(2:18:00) which is Thor's hammer Thor being the thund god of ball lightning and thunder and lightning right like you literally could not make this up all history supports this standard Magneto hydrodynamic understanding all of history all of the classified P patterns from the Soviet Union all the classified patents and work from the US it is what it is and every time anyone comes to the conclusion that it's ball lightning like this guy did in 1993 they CH changed the rules of the nucle American nuclear Society to

(2:18:33) prevent him from publishing when Ken Shers realized it was ball lightning a person from Los Alamos National Laboratory demanded that the curator Jed Rothwell of Len Canada. org remove his papers from the database and I never heard of this person or Ken Shers until I started understanding this was Bull lightning in 2017 never heard of it interesting I wonder what um my I have Michael here just joined he's our material scientist hi Michael how you doing we were trying to um we had a I mean we haven't had uh

(2:19:10) any direct experience trying to replicate any of the Hutcherson effect stuff or any of these Evo experiments or even cold fusion uh stuff in our lab just yet uh but if we were to try to do that um you know like where would where do you where would you suggest we start I mean okay so I would Rec have a question as well I missed uh sorry I was working with a vacuum furnace uh so I just got in here what was this thing about a lock Martin patent for environmental like energy extraction what so it's called it's called systems

(2:19:46) and methods for generating coherent matter W it uses without credit the method of generating uh electron solons of Ken shoulders and then it employs the Aronoff bomb effect that was used effectively by the person that informed on trying to understand Ken scher's work uh sorry John Hutcherson's work uh and that was the work of Winston bosk who from 1948 worked on Project Sherwood which was T Los Alamos and Princeton University and one other location with conver ing the hydrogen bomb into domestic fusion and so um they there say

(2:20:23) they say one of the applications of the coherent matter wave which can be produced at any temperature even using fermion using this technology uh and this approach uh one of the applications is single bar thermal extraction which means you have everything at the same temperature and from that volume of exactly the same temperature you can actually extract thermal photons right and bring them to a new location and that is the zone that you see in the shack paroff work I'm I lost the page with the patent on that I'm trying to bring it back up

(2:20:55) I've got a link within my presentation just so if I'm understanding correctly it's using the aronov bom effect to it's at the phase Singularity is using the Aronoff bomb effect to get things in phase and and appropriate portion the energy distribution between them so how does the space difference allow you to push the energy around exactly okay so what's what's a CER what's that what's a CER it's it's a sound laser it's what they use in these active denial effects

(2:21:27) which actually produces these terrible things which actually because the pzo nature of your tendons and your teeth that's a heat pump that's not negentropic or anything wait wait what's a laser a laser is the same Photon energy so it's got the same wavelength and it's in Phase right okay what a merer is is a microwave Photon in phase okay and same energy what a coherent matter wave is let's say we take the the preferred element of after many years of research of um Nicola Tesla for producing his etheric matter uh streams

(2:22:04) he chose aluminium aluminium has one isotope 27 so already you're on to a winner now if you give that the same energy I every single aluminium atom is exactly the same energy its de broi wavelength description means the wavelength is exactly same for the matter wave and then what you have to do to make a coherent matter wave is you need to get those same energy de Broly wavelengths descriptions of the matter into phase and the way you can only do that is the iron Hoff bomb effect and at the center of fractal tal

(2:22:42) structure you get it for free so what is the aronov B effect doing to get these it's it's allowing these things to become get into phase without you know messing around with their energy level in a negative way it's very well described in it's not directly affecting the the

hamiltonians of them of the particles it's just shifting phes I see okay that's interesting all this is the pattern and it's all well described in there and what from this pattern I learned the one most important thing you

(2:23:20) do not need to cool matter down to nearly absolute zero to create coherent matter the reason they did that is because that is the easiest way you have a substrate and you take the CM 133 atoms or you take your your sodium 23 atoms or whatever that single matter wave function but they're all at different temperatures so they cannot cohere you then lower that down and lower that down to absolute zero and they're on a substrate so that their energy levels are almost exactly the same which means their wave function the

(2:23:49) Broly wave function description is almost exactly the same and it's just like pendulums on a a suspended support if they're all out of phase after a while they always end in Phase yeah okay that's how you create your normal Bose Einstein condensate that they did in 1995 six or seven or whenever it was it was first made after being predicted for so long by bosen Einstein the difference is with this is you can take fironic matter you can create bosons from that by creating for instance like Cooper

(2:24:17) pair out of electrons or or diers where your nuclei is not um already fermionic nuclei bosonic nuclei and then once you do that you can then um uh get them all at the same temperature and what they're doing here in this they're using this 10 Micron with many coupled micro cavities to allow the bouncing around so they get at the same energy level and then they use the the magnetic uh field to uh to act the The Aronoff bomb effect and and that allows for these things that are at the same exact same energy to become in

(2:24:54) Phase so you get coherent matter wave and that comes out as a beam um and that actually has far more punch than any laser will ever have right so I think a lot of these weapons the Next Generation weapons that they're putting on aircraft carriers and and and planes they're actually they call them lasers but they're not they're matter wave how big do you think this device would have to be prce small we produce matter wave in our vager experiments and it's it's caused by a little crack in in the brass

(2:25:26) plate so tiny is answer we produce it probably out of a structure where the core of the structure is maybe 40 microns across look at look at the scale of their device for creating a coherent matter wave the actual length of the longest length of the body is 10 microns do you think the number of cavities matters on that device right there what do you think the number of cavities is has to be specific like we see here in this uh image well you can look at our actual sems and the answer is already in the sems because Nature has already given

(2:25:59) the perfect environment for it to be generating the these coherent matter ways you can literally look at our SCS and you can see the spacing so what is it it's uh in our particular device I think a a spin wave and a an anti- spin wave is over 400 is over 400 microns or is it over 40 mic anyway you can go and see ANM the answer's already there from nature literally writing on a piece of brass what the answer is now there could be quantizations above or quantizations

below but you don't have any there's no

(2:26:33) necessity for math there's no necessity for other uh theories it doesn't matter what's going on Nature's giving you the answer because we see the coherent matter waves and you can see what produce them that's it the answer is already there physically so how is so this the coherent matter waves are not the same thing as evos though right well arguably the Evo itself is a coherent structure and if it's traveling it's a Solon which is a trapped wave and it's coherent matter and traveling in a wave so it can

(2:27:06) become a coherent matter wave but actually the coh matter it's not like it's not like any of the uh standard atoms though also these are um the mathematical description comes out of the lineer equations for these I believe you know what I swore to my readers and my viewers I would never use an equation I broke that when the **Russia**ns sent me the verbist paper for having thrown in the towel right I I said look I need to understand this without a single equation so every person on Earth can understand this implicitly and then I

(2:27:39) realized it's in your face so it's like it's literally the design of your face the answer is always in the mirror well I mean this is a somewhat more tech people can do the math later you can you can ascribe all kinds of mathematical equations that fit this and there might be 20 different mathematical equations that give you the answer but you need you were referring to space charge though so I figure yes I am yes yes and that is but yeah so about the geometry in this can this be related to any fundamental constants or anything like

(2:28:13) that in nature Jeremy before we do that I'd like to get a get this nailed down here so um so yeah so the the big uh the people who mainly like looked at space charge were I believe uh Evans vigar uh and uh and lert and uh they they had they had a lot of interesting Concepts I don't know if they're all correct but um I mean if you generate space charges those are the guys to look at I imagine um but so so the coherent matter waves are one thing the evos are s can also be coherent matter waves but actually what

(2:28:55) you get if you look go go to slide 23 okay so you get a coherent matter wave that can come out of a collapsing structure like a re-entrant jet from a normal uh cavitation bow as it collapses it forces the coherent matter wave through the center and it comes out as normally two structures right but it depends because you can have coent matter waves that come out of the the the substructures so you and typically it's almost always two so look on the left that's two so when the matter way the overall matter structure collapses and

(2:29:30) you actually get a flash you get two orbiting around each other okay sometimes you can have three sometimes you can have four but the likelihood of it being more tend it comes down to how stable it was on the resonant phenomena that generated the structure Okay so so what it it kind of does it can package the information into a certain Quant and it can keep loading information in there and what you sorry energy in there and you get more substructures of substructures forming up until you get 48 and it has to either blow up or it

(2:30:01) has to uh become the next fractal up and so it scales and grows like like that but depending on the substructures depends on like when if you go and look at our the videos on the coherent matter wave beams that we have we sometimes have weirdly just just a tube which I would see is just a traveling wave there's only one or two examples of that most of the examples are two that orbit around their Center of mass right and often they have a white zone and then they have something that is orbiting it is orbiting around

(2:30:36) but you only see it when it's coming into the um uh ions or or electrons in the plasma chamber and what I mean by that is one is one is a positive structure and one is a negative structure or they are spin or alternate spin structures and when one interacts directly to produce the glowing plasma and the other one doesn't but it pushes a bow wave in front of it uh so you only see it when it's coming towards the camera but not when it's going away it's a little bit weird you can see that on

(2:31:06) our vid videos okay um we've seen some collapse wave functions of these things and we end up with like a little bullet as it's dumping the matter that was in trained in it and you have these orbiting things going around it and sometimes you see it actually interacting with the material and making these multiple spiral um changes in the spin of the atoms of the material which allows you to see them when you put um polarized light on a on a microscope you don't see anything and you put polarized light and you suddenly the these tracks

(2:31:38) appear because it's affected the spin of the nuclei in the matter it's not it's just reorganized their spin not the actual matter that's a bit weird but see because of the intense localized magnetic field and it just travels through um and and affects the matter as it travels through yeah interesting so um so again how does this relate to uh taking thermal energy from the environment and so so how do you use only phase to create a temperature difference in an otherwise so okay so what what what is thermal

(2:32:21) energy well it's it's phonons vibration in matter typically at terahertz frequency if it's in IR range now you've obviously got different frequencies which are not thermal in fact most of vibrations in the universe are not in the thermal IR range right so if you can have a system that can either change the the basically it appears to have if you go down to go down to no go back to the model go back to the model the the the 3D model okay uh can you see okay so can you see the little spot that's on the

(2:32:57) soic ratio cone that comes out the bottom so youve got the the two order on the left okay that that's the spot there that is the spot where it seems to do freaking magic and that is where you get on the overall structure you get like the focus of the beams that intera with dark matter and the dark matter has two things it can interact with gravity and electrons and electrons are the means by which any thermal energy can be moved around if you know what I mean like you can only have vibration when one particle's moving here and it's charged

(2:33:32) is repelling This and like then it bounces back so like it's because of the electrons that you have transfer of energy kinetic energy between anything in any frequency okay with within

ordinary matter and so so my understanding is that that that little spot there is able to extract um not so much the um the actual thermal energy from the device it extracts the chi and the chi is the structure that keeps the balance between the flux of the chi that goes through the atom and keeps the electrons where they ordinarily are and

(2:34:11) stops them from being OV excited and you can go and see this on where is the atom battery I think it's a paper by um a Dubner research scientist called Alexander shishkin who actually works with unfortunately duic who's nearly completely lost his mind through dementia um but anyway uh they say that the atom keeps its electrons particular because of this dark matter fractal toroidal structure that's in there ordinarily and this is the etheric matter that was released by Tesla in the 1800s and Beyond when he did the

(2:34:41) unidirectional discharges the map into Target and this is the what the Soviets call and the **Russians** call the hidden energy within matter and so what you're you're you're not and when Tesla says in 1935 the energy comes from a surprising Source I don't know how much he knew about this but he does call The Invisible boundary which is impenetrable that this creates an a an invisible Chinese wall that's literally what he says and nothing about what he said is not deliberate so if you go back to my

(2:35:13) uh third to last slide Jeremy okay can you see the photo with Tesla that's the 1935 photo from his weapon to end all wars and look at the sacred geometry it exactly has the Visa capis is in exactly the correct place now in our Wormhole uh model on the right if you click on that one Jeremy and play it can no on the white the the brassy colored one the brassy clovered one yeah you see the sacred geometry overlaid on that um one you can see that the white ring with the black ring slightly outside of that that is the only area

(2:35:53) that this Magneta hydrodynamic structure effects it has a wormhole that the matter goes into there is literally no hole in the center of that Dome a load material has been captured into this Wormhole it goes through to the other side of the Visa capes and gets punched through and it literally punches a hole through and it leaves the material and if you look go and play on the iron which is the substrate below that brass plate at an angle Jeremy below where it says Duran greenia uran Greeno Vega pyramid no to the right to the right to

(2:36:20) the right to the right that one look at the sacred geometry how it's deposited the brass exactly where the sacred geometry is exactly right now look at his Visa Pisces Flower of Life pot that he has to over his right shoulder Tesla from his 1935 weapon to end all wars press photo the area that is affected only is where he's cut off the top of the flower pot right he he has the vortex and the antivortex correctly one behind the other as I showed you in the white banana bubbles in the ultrasonic tank of suhas ralar earlier on in the

(2:36:56) presentation and it's always slightly offset one above the other he precisely showed in that picture that he precisely knows how nature works and his own Warden Cliff Tower is based on that his anti-gravity device is based on that his weapon to end all wars is based on that and he specifically says in the Press text this in creates an invisible Chinese wall extracts Chi the

hidden energy within matter and it creates an impenetrable boundary out of this well I saw a slide about cold electricity as well I think IED yeah go

(2:37:31) go for that yeah it's all very trivial once you understand it's all very trivial and so that this guy here Matoto in 1995 thought he discovered a new form of electric current and he said it was ball lightning it travels along the wire and when it blows up it leaves a carbon deposit and he says but there's no resistance so if you go down to cold electricity um bit further down there there there there so no up that was one so essentially through the center of the fractal tural structure firstly um Ken Scher said you

(2:38:08) can have trillions and trillions of electrons in there right we know that they end up in coherent matter and we know they end up superconducting because that's how structure keeps itself self organized and together without the P Exclusion Principle making it Blow apart right but through the center it has this if it's arranged so that it has a kind of an electric field it's not necessarily electric field but it can be guided along the wire now when Tom Beon sent a team over to 1992 to Moscow to visit people on the periphery of the um

(2:38:39) Soviet energetics research work they showed him two technologies cold deformation of metals where they use some kind of electromagnetic system to convert metal into a jelly which they could push in a mold and then they grounded it and they were able to cold mold metal the other one was uh many kilowatts over uh very fine wires and I have a I could I wanted to put it into this presentation but I couldn't find it in my archives there's a early 2000s presentation where there was a uh a TV news program in **Russia** where they showed

(2:39:12) this team using a Tesla coil creating these structures and they had they had an 8 Micron thin copper bare wire dangling in the air like eight microns and they were able to light 25 kilowatts of tungsten light bulbs from that okay and that's because the wire just acts as a guide for the charge cluster and the charge cluster as it goes through the the void of toroids which is the actual um filament of a Tungsten filament light bulb the magnetic field induced causes them to to break up from their coherent State and

(2:39:47) that interacts as normal electrons lighting the light bulb it's quite trivial actually when you understand it and this is Mari Bing's diagram and what Mari Bing has inadvertently drawn there without realizing it is a fractal total structure carrying the current I wish it was easy these are these are effectively uh Tesla's DC pulses I guess so you have like a AC signal with a DC offset these These are Tesla's electrical particles of matter from his 1932 beam weapon um okay umll work there's a lot of um stuff

(2:40:28) about this and it just generally uses uh DC pulses so you'll have a rise and a fall but so a DC pulse is a unidirectional pulse that is exactly what Tesla used why because if you have an AC pulse you don't have all the flow going in the One Direction you you L that's why you have say a magnetically quenched air gap uh those kind of devices so that you only get the pulses going in One Direction so that's actually so key to like my own electrolysis experiments and that I have to start doing them uh side by side AC

(2:41:06) verse DC just to show the difference of how much it really does affect so my question B is are you saying that the excess energy okay so for example the system that I'm using I've now gotten to a point where I'm putting in 27 volts uh 1.3 amps and I'm heating a 900 watt electric element 110 volts uh for at 185 degrees Fahrenheit in five minutes for 35 watt I could give you some potential explanations the first one is you are going to get a one one more more part to that before you explain that the coil uh that runs the

(2:41:50) system gets colder when it's heating up the element of course it it probably would do because the the the um coil if you've got it configured correctly it will do single bar thermal extraction okay um on sub sublevels okay if you've got the the curl on the electrodynamics correctly done I do yeah okay believe anyway okay so then if you get a flux of Relic nutr through the center and it goes through the face Singularity and if they are unwrapped and then rewrap somehow dep I don't know what the nature of your coil is then in

(2:42:27) theory you can take that 025 of an EV that's been something like that that's been established by uh Parov and you can unwrap that into basically a photon that has that energy and then you can rewrap that into let's say an electron and we know that an electron effectively if you take a positron electron you Collide them they they unravel one unravels the other and you get two photons of 51 K coming out in opposite 180 degrees out and this is the basis of positron emission to tomography so we know that

(2:42:59) the electron and the positron are essentially photons wrapped in opposite spin directions right um and so this is the same of a neutrino and an anti-neutrino okay but there's charged leptons and and uh uncharged leptons and the question is how how do you get the between the two but other way it doesn't matter you've got energy you convert the energy into a photon and you rewrap packets of those energy and they come out as electrons so that's one way that you can do that now the other way is if

(2:43:28) you have bionic matter going through the center of your coil and that could just be environmental Barons like that are in air or nitrogen or whatever if they dial angle according to David fryberger is exceeded at the center of of the structure or at Center of any of the fractal toroidal structures this can unwrap the matter and you get 930 something million electron volts of energy un released and does that collapse down into other electrons you could have a scenario where you're converting a good proportion I would be concerned in those

(2:44:02) environments if you're genuinely doing that um that maybe there's some form of radiation coming off you know that I I would like to understand more about that because I have multiple meters I don't have a Geer counter yet but uh I have a trifold meter and I have I have a sound meter quite a few different things put into play I would suggest getting some silver foil and putting it over your various detectors to try and excite any potential clusters that are coming off and putting them into the white mode so

(2:44:33) that it can be detected either that or some potassium containing mic um and some some GE counters pancake ones have a potassium containing mic window and you know a

Ed storms detected these things but anyway the point is is that I I would suggest doing that um there there's a guy called um Russ George and he found from cavitation experiments that he saw no radiation and then he like put different Metals in front of his guide counter and he suddenly started seeing radiation counts but he he worried and he went he didn't know

(2:45:07) what they were and he found that silver was the thing that produced the most peak of radiation and then he he went to Edward Teller and said you know what's going on here and Edward Teller said well these are what we call mush machinig gons which is some uh Jewish or Yiddish name for something that we don't really know what it is but it that brings me to another Point uh after doing multiple tests with my coil system with a neodymium magnet the uh nickel on the outside has been eaten off and I took a look at well uh the nickel on

(2:45:40) those neodymium magnets depending on the humidity I mean the reason the nickel's on there is because the surround IC uh regularly falls apart in moist air and so love to send it to you okay all right yeah I looked at it through a microscope it has some very interesting features we'll just say okay well let's have a look at it yeah I mean you I'll send you an email and we'll we'll see if we can hook that up I definitely want to put that in your thank you so I have another question maybe

(2:46:15) Michael can answer this too uh if you're there Michael um there you mentioned something to me the other day about a way to stabilize you know uh super heavy elements using G externally applied gamma fields and that uh you know maybe maybe just maybe I mean Bob Bob described Bob Lazar describes a a stable isotope of this element 115 that he had in a triangle that he could carry around with him so it wasn't something that he had to keep in this um machine that that that kept it stable but uh you said that there

(2:46:53) might be ways to stabilize these super heavy elements and keep them stable by injecting gamma rays into them that's incorrect it wasn't in a machine that kept it stable it was stable when you hit certain uh Isotopes uh like tantalum 180 for example with gamma rays they they absorb those gamma rays and well the right frequency of gamma rays they absorb the gamma rays and due to the high nuclear spin uh it's like a top it uh it actually it prolongs decay yeah look at that t8m is stable U even though it's

(2:47:31) technically metastable and then tantalum 180 itself decays in eight hours so you synthesize tantalum 180 you hit it with gamma rays and you can stabilize it the same thing with super heavy elements there's this island of stability and none of the standard Isotopes are stable um but the some of the nuclear isomers are and you generate these nuclear isomers by making these uh the the radioactive isotopes and then hitting them with gamma rays um and then they're stable you don't have to stabilize them with an external machine

(2:48:06) I don't know if that's part of Bob Lazar story or something I I haven't been paying attention to that at all um but yeah it's there's these are these are also unre as far as I know unrelated to evos um I I think you're right it's not related to evos what what you have with an isomer being unstable and that this is the principle of indium activation by neutrons uh to detect

the production of neutrons the an isomer is where you have the same bionic matter but it's arranged in different Arrangement so and

(2:48:41) sometimes it's called an excited state but actually the reality is it's it's just a reorganization of where the position of the the nuclei are in the well no no no it's um so so it's a reorganization of the nuclear shell model it's a reorganization of the nucleons and that does take energy just like reorganization of the electron so if you have some uh imagine it's like a phosphor you know so you you have visible light and you sh you have this you shine some light on this thing and

(2:49:15) you take it out of the light and it glows for a couple hours afterwards it's like a f yeah but that's one that's decays because you're giving it energy what you're describing as a system where you've reorganized the nucleons to a point where they're actually more stable than they were in the unexcited state right which can happen due to the high and the description is normally you call it an excited state but what you're actually doing is you're you're moving it into a new Arrangement where it's

(2:49:40) less likely to fall apart well no it has real it has real additional energy in there no not saying it's not additional energy it's like it's the same so I mean you technically you could just you can make an uh any radio isotope stable by removing or adding the right components uh but yeah it's an excited state but it is more stable than the the unexcited state which yeah that's exactly what I'm saying so what how would I describe this is you've got like a nucleon that's teetering on the edge

(2:50:12) of a step right and you're giving extra energy you're moving it forward in the overall Vector up the energy ladder so that you're moving it further onto the the stable platform so that it doesn't matter how much vibration you get it's not going to actually fall off that step and become de excited so that that's kind of like how I would visually describe it yeah can oh I wanted to just mention one thing um I I gotta go work on some stuff here in a minute but I just wanted to mention something

(2:50:40) interesting about these evos that I just realized I'm sure other people have realized this before um um as well so EOS they're sort of quantized but you can generate them at whatever size you want uh with various amounts of energy so there's there's a Continuum to them of A Sort and what's interesting is um when we when we developed the model of the neutrino um we saw that beta decay had a black body Spectrum to it when we pre we would have expected that beta Decay had uh specific um energies that the electron

(2:51:27) would have during beta Decay quantize States but uh because there's a Continuum that means that the electron is interacting with something else so it's interesting to think about maybe the neutrino can be explained by something more like these evos so so I I recommend you read Park of space Earth human he originally did the psychic spy program uh for the Soviet Union and that's chapter four in the book and he learned the technology to learn about what was called n radiation and there was a guy called

(2:52:06) uh IL oh God damn it I had a conversation with him the other day about it he proposed um because normally when you have neutrino uh uh coming out of a reaction they only have they don't preserve parity and uh people kind of overlook this problem in nuclear physics anyway he solved this I think in 1996 in a paper um sorry yeah you said Ilia so is that uh hold on I can actually go to my my email with Parov and find out the precise name and then I I it's it's not it's published in Russi and I've done a

(2:52:42) rush translation but I'm going to do a proper translation in this in the coming weeks on my um on my blog but give me a second um and also in **Russia** they were able so you you mentioned they were able to jellify metal so they must have figured out how effect oh oh yes yes fascinating um and it's not the same like Ral ring observed the gelification of aluminium and aluminium is the easiest thing to do it with um hold on let me so is that like a coherent matter effect then yes got you well it's actually so the way I look at it the

(2:53:13) coherent matter is causing a flux rela neutrinos and The Relic neutrinos interact with the weak Force but they affect the way electrons can form bonds it's all in my presentation from icf2 um and so they affect it in all levels of ability of matter to use electric fields to form stable structures so um okay so let me find the name of the guy is dimitrievski IM and its possibility of maintaining parity and weak interactions Consciousness and physical reality from 1996 so he used that work to uh build these telescopes

(2:53:49) and over 20 years he did this research which collected some and focus some radiation onto Cobalt 60 and strum 90 itum 90 samples which are far better than tritium particularly Cobalt 60 because it's got like what is it 3.6 year halflife whereas tritium is like 10 or 11 years and obviously it's a solid so the target is much more dense in terms of the beta isotope and of course because he has this relationship with a nuclear Pro atom he could get these samples and he showed that he was focusing some type of what he originally

(2:54:19) called n radiation onto the samples and forcing the B to Decay and he knew it was inverse be to Decay either some neutrino structure coming in because he shielded for all of the other uh energies from the spread spectrum of energies that you would normally get out of natural beta Decay and screened for only the maximum energy and it was only the maximum energy that is likely to come from inverse bet to Decay so he showed and and now he's shown that you can technologically produce these things so yeah cool so you can induce you can

(2:54:49) induce the beta Decay then that's good yes absolutely that's that'll be extremely useful for for getting rid of uh radioactive waste yes and and this is one proposal that I gave at the on December the 31st 2021 to 9 Sigma the valuating agency of fukushima's clean up of their one now 1.

(2:55:12) 45 million tons of tritiated laced water um because we were going to burn onto calcium carbonate using the Limelight effect from the 1820s or 1830s to produce this plasma globe that then produces the Magneto hydrodynamic structures from the h of a Mara gas and this was going to take calcium 40 and make potassium 39 and helium from the tritium okay and

it's the most likely outcome with the process and so we proposed this but uh they don't want a solution in fact they changed the rule so that we couldn't provide a solution

(2:55:43) to them and because they I one want to concatenate I mean in Japan they're they're very much sticklers for standard science so they probably didn't believe it well the good thing is that because of the complaints of China and because of the complaints of um South Korea nine Sigma have been removed from the evaluation agency and it's now been replaced by Mitsubishi industrial and the guy that heads the Lena research at MIT industrial I know very well I've got a good relationship with him and he was my

(2:56:14) compare in my iccf 25 presentation that you see coming up and saying right you got one minute you got two minutes or whatever that's that guy professor iwamura and he's actually met Ro nam marra in the past so we're gonna reapply um because now you know we've got International pressure um we would like the the problem is is that if we find a practical solution for dealing with tritium from nuclear reactors the international energy Authority will have to roll it out across the world because there will be no excuse they can't say

(2:56:42) we can't get rid of it so we have to dilute it and dump it into everyone's waterways and seas because they will have a real solution to it right and also the problem also for them is that it shows that you can do low nuclear reactions and it also shows that y Brown was right in 1992 when he showed in almost instantaneous remediation of beta Isotopes and even Alpha Isotopes uh in the flash that gets created from the coherent matter that's produced by HHO and so like they've got all kinds of answer questions to answer if they allow

(2:57:11) this technology to go forward so right now we've actually got people potentially in Germany that will allow us to do it and we demonstrate it we're just going to have to we might have to just go to the Chinese and South Koreans say look they won't allow us to do this but this is what it can do and it can fix the problem what are we gonna do about it yeah it's really what well I hope it works for you guys well you can only try like there's I think the there's more effort gone in over the last 130 years to obfuscating

(2:57:44) the simplicity of this science then it takes to learn how simple it is it's ridiculously easy and almost all of the Technologies are HHO and it's because hydrogen has been identified as by the Russians is two to 4,000 times easier to create the etheric matter streams this hidden met energy within matter than any element Beyond lithium hydrogen you say yes water is the perfect fuel to initiate this process it's just that sorry sorry that just happens to be what these bubbles are that uh a bagel coil is

(2:58:23) making right there on this is our end of the world device right here we're getting there slowly but surely a little salt water and a little electricity and copper and you can make as much hydrogen as you need so um let's see I want to ask Michael a question if real quick I don't want to change the subject too much but hi I'm glad to be talking to you first time face to face nice to meet you sir um what can we do with like those heavy metals that you're talking about you know I've heard about

(2:58:53) Element 115 from the bobazar thing but can that actually drive an engine and if so how does that hat work scientifically use you need to have some of it in your hands but we're working on it well tell me hypothetically how you think it could theoretically work you know I don't even know the exact proof I'm just curious to try to understand the science well Lazar mentioned gravity A and B waves there are some papers from the P about that I think um these days there's a more there's a better understanding of it um

(2:59:22) in the proper circles I assume uh I'm operating completely in the open source non-classified side of things for the time being so uh I yeah I mean I can only I can speculate my speculations tend to be pretty good but um let's see so I mean if you got a very high nuclear spin uh well I honestly so um one of the interesting things we working with bismuth which is a lower down than uh Element 115 for example yeah um bismuth exhibits a highly nonlinear Zan effect uh especially when you distribute it into nanop particles but in general it

(3:00:11) has a nonlinear Zan effect um and that may be useful for gravitational wave detection and if you can detect something you're interacting with it so um if you have Element 115 uh I I imagined that same effect would be Amplified um Element 115 was synthesized at dubno where both shishkin and and dub it work H and it obviously wasn't that stable yeah say is that where they brought it up and it was like only for like milliseconds that it that's what I'm saying I recommend that they try it again with a strong flux yeah I

(3:00:54) understand you're saying hit it with gamma rays at the same time so you probably need to use Moss effect and create a gamma ray laser from from using a nuclear you literally need a nuclear explosion to create a Gamay laser you can have an electron beam that hits yeah you can get the right energies yeah yeah yeah you get be that hits ailum Target same as in an x-ray machine you just electron voltage B bogdanovich uses that actually to produce the monopoles at uh Moscow Nuclear Physics Institute they use a cyron beam line and they fire

(3:01:31) it into a conversion Target to produce the gamma beam interesting and they're producing neutrinos or something instead no well so they pass it through a magnet but what they see is either side of the magnet they get these uh mushrooms which are the signature of of these topological monopoles these clusters on either side of when you have a Gamay your conversion between magnetism and this other particle is much more efficient than you actually produce the structures or they argue potentially they're being knocked off the face of

(3:02:04) the magnets they're already aggregated there's North some on the south and south on the North and they the gamma rays actually knock these off interesting so effect sorry Michael go ahead oh thank you um so let's see um I'm gonna well I'll I'll ask a so regarding the uh creating a heat difference in a thermal bath with phase uh perhaps uh if you could send Jeremy some articles about that later I'll read up on it uh as for teleportation um my big question is how do you define so so say you're creating some coherent

(3:02:46) matter or something actually I I guess I missed the part about teleportation so if very simple there's a couple of ways that I envisage it is done now we've seen things move from

inside of M reactor to the outside of the reactor like through several different materials and then they they've coming through the fused quartz and actually half of a sphere appears inside the fused quartz replacing the fused quartz in time and another half and then it D dumps three more two more magnetic spheres that are linked on the

(3:03:15) pole of the original one that's half in the fused quartz like it kind of it's a bit like that thing from Terminator where the Terminator appears and it's literally a spherical section that's cut out of um uh uh the truck and and and stuff it's literally exactly like that it replaces the thing in space time inside the bubble when it reemerges so um and this is what John hutchon now these structures can Ken shoulders described they can in mesh an object and then they can the whole object is then

(3:03:47) weightless and massless and then that can move into something else and reappear and I imagine that this is how you get for instance like a piece of wood inside a block of aluminium which is not something you can easily cast I actually have half of the sample of the steel knife that's inside the aluminium block which is a very famous Hutcheson sample and it's under analysis at the moment um and I imagine again that the the Clusters their magnetic nature cover the the iron and it went inside so you get these kind of

(3:04:17) reports from the Philadelphia Experiment where people were half in and half out of pieces of metal on the on the you know the overall thing so that is teleportation and ending up in the wrong place there is there's this guy that I think he's actually from Australia this neck of the woods and they find these crabs that are suspended in sand and then inside a sealed bubble well under the ground and they can't understand how these fossilized crabs are in this sand and then the bubble on the outside and

(3:04:48) but if you can imagine that it was one of these structures that happened to grab the crab on the sand or whatever and then it teleported under the ground effectively and you ended up somewhere this is my worry with Ashton is like if they didn't have proper control of that plane they might have teleported to the inside of the earth and it's like well you're never going to find that are you that's why I kept asking you about it because it's like I'm the biggest thing I'm worried about is not just producing

(3:05:14) this effect but like how do you control where you go right I think it's relatively easy to control as I've described so so in terms of the teleportation isn't it's actually Transportation but it can be so quick that it's in the blink of an eye so perceptually from the viewer that sees it disappear and for the viewer that sees it appear and for the people on the craft they all of them no perceive do have no perception of time from disappearance to appearance to I've trans transported myself so effectively

(3:05:39) it's teleportation but it's not like the teleportation that you might imagine from Star Trek where it's taking quantum mechanical version of you copying you transporting that information to another location and deleting the previous one and that's actually one method that Ken shers describes for teleportation using evos he says you can possibly clone things

where the Evo will actually take a quantum mechanical copy of the object you want to replicate and this would be your Star Trek replicator you're like

(3:06:08) you have a quantum mechanical description of a beef roast with grav right and you dial that up on your machine and it just creates out of raw energy everything at the right temperature in the right place and every time you produce a version of that you get another literally copy with the gravy dripping off the potato in exactly the same place when when the way function collapses so there are these kind of Concepts that you can come out of this but I like to go with what I can see and what we've been able to

(3:06:37) demonstrate and how these interact I can't really talk about things that it may do which people have said in the past it should be able to do logically when you understand it I need to work with what I can see and repeat scientifically and we can see these things moving self-organizing producing these various quantization levels which tend to be on these very particular scales and and Ken shoulders was right and the 1992 papers that and so on that I made where was made aware of recently they they show the same

(3:07:08) structure So Hot Tub Time Machine well I'm already excited so uh so Bob uh your hypothesis then is that these uh unidentified objects surrounded this plane and effectively enveloped it in an EVO okay you did miss that part of the description yes it created a fractal Taurus at the a level above so the individual fractal T rotated just before the point of um The Disappearance of the plane they produ they link their gravitational waves between the three of them you need three to produce a plane to so that you know the normal

(3:07:49) perpendicular to the plane right and the normal needs to go through the azth between the three orbs through the length of the plane right and then when those link together they produce a gravitational beam through the center literally as is exactly described by John archal Wheeler in my iccf 25 presentation who invented the term Wormhole and and black hole right and they as they link their gravitational waves they produce a new gravitational wave orthogonally through the center of the plane they that causes them to pinch

(3:08:22) in which increases the gravitational Vector which causes them to pinch in even more until they get to their stable fractal uh self-organization cluster level above which you can see in our experiments if you go to experiments you can see that they when you have three structures they have a specific scale right and they're not getting smaller they're not getting bigger but they make the in the middle disappear so you're additionally saying that these evos are producing a gravitational wave or is this some gravitational I'm absolutely

(3:08:49) saying that yes I'm absolutely saying that yeah quick question then real quick if I can just jump in because so why because we see these orbs right let's just assume these videos are real for a second the second half of them I think you just described is that they form a ring formation and then I don't know if they're getting into phase sync whatever is happening there but what are they doing before that it looks like they're scanning the plane do you think they're trying to determine how big of like a

(3:09:11) protective shell has no no I think what it's doing you've got the the the operational vehicle that's tracking the plane and it needs to know where the front of the plane is and the back of the plane and the wings and from that it can actually work out what the orientation of the plane is and simultaneously you have the phase conjugated Scala waves that are interacting uh uh with with the um uh interferometry to position each of those and to position each of those exactly in the plane that is uh perpendicular to to

(3:09:50) the azoth through the center so that it's in the correct location for the vector of the Visa capac's bubble that's going to capture that and so they need to move around they're like trying and they mustn't join their beams until the right moment yeah to figure out that it can be in the safe zone right for when they devel create the the bubble right exactly the right length down the the plane it to capture the it might be that when that thing's collapses it's only the core of the plane and you might lose

(3:10:24) the tail fin and you might lose the wings you literally only capture the passengers and what ends up at the end destination on Alpha centurio or wherever it goes boom and it leaves leaves all the passenger cabin and the and the uh I prefer Z arly but fine we'll go with Al centur for you kid yeah and basically as it as it's creating the bubble it might be slicing up and fragmenting the the rest of the plane you only want to capture the passenger part now I'm worried about the tail because we can see the tail sticking out

(3:10:55) from the singularity in the first frame so now you've got me worried that maybe well I mean the plus side maybe they just transported the people in just the Hall of the plane directly to a specific location that's on the ground what I need to do is I need to look at this this those spheres and work out the likely minimum distance where the capes is and map that over a standard I was actually one on one of these exact planes flying here literally um I took pictures out the window to look at the flaperons and stuff careful you got to

(3:11:25) fly one of those planes back we don't and I should be going to the airport surely so I need to put an end to this quickly but not in a bad way in a good way um May the orbs be with you or not with you on your flight I don't know which one we want to wish you but the Angels keep your flight safe Bob well thank you very much yeah that green bit you see is the spin inv version above the the uh topological monopole and you can go and look at the alto University in fact it's in my presentation actually I think it's in my

(3:11:58) presentation icf2 right it's not if it's not there it's in quite a few other presentations yeah so I I I think the like you know there's a reasonable likelihood that the Flesh and Blood ended up somewhere useful right yeah could whether that flesh and blood was still breathing when it arrived because it wasn't breathing before I don't know because then the conspiracy goes on that uh they actually uh used the MH370 as the one or the 17 MH that got shot down over Ukraine as that supposed false flag and there was

(3:12:35) reports at the time that lots of the bodies were smelling like rotten flesh and decomposed already that the authorities had picked up of um the the remains of the people

that were riding this MH 17 yeah I haven't heard this story this is new yeah and Jim Stone at the time I watched this investigator well who knows but like I don't if if you say like it went wrong and like the bodies came out as mesh and they're like how how do we destroy the evidence it it could have been and that the conspiracy goes deeper the Jim Stone

(3:13:16) uh did a bunch of investigating at the time that seemed to show matching all of the MH370 P like um flight or serial numbers onto images that were taken of the m17 plane or something but I don't know that that's just a far well I'll give you another conspiracy here right this is this is a good one maybe I'll close out with this in the 4th Century anod domini there is a Coptic Christian Stell and it's in the Coptic Christian Museum in uh Cairo and it is a perfect scientific document of how this wheel within a

(3:14:02) wheel within a wheel works right it's old gravestone okay and it combines what Jesus decoded and the ancient Egyptian knowledge to show precisely how this technology works it has the Alpha and Omega on there it has the two Vortex substructures slightly one above the other absolutely perfect and scarily enough the 1775 design of the front door of number 10 is almost exact copy of this fourth Century representation of this technology right the door of number 10 Downing Street now number 10 Downing Street is not number 10 it's number one

(3:14:41) o and the o is at 37° now why well they say it's from the old Ro some old Roman Cal calendar this they have no idea why they didn't use a zero and they have an O at 37 degrees you can go and look at this up on Wikipedia now I need to get my fact straight here so I'm going to just go and look at a reference document I have here basically 37 degrees uh uh where is it oh now I'm not going to be able to get this am I 37 basically I think according to the um Acadian culture I think it's the Cadian

(3:15:22) culture I don't want to get this wrong because I uh basically 37 is an incredibly special number you can go and look this up there's quite a few reasons for this but it's it's meant to be like it translates the 37 Dees o it translates to the one true power or the one one the word of the living Christ the one word of living Christ and the 37 is the the power known to the ancient semetic uh um knowledge it's the it's the P most powerful thing about 37 degrees I want to get the exact phrases

(3:15:58) that it's attributed to and so when you have 370 for me that's literally it's a joke to me when I saw that and I and I thought MH370 well they would actually literally call the plane that they wanted to do the test on 70 that was the the name you would give it so there's there's a conspiracy theory for I'm trying I'm going to try and find this 37 degrees you can look up 37 degrees the importance of 37 degrees um does that deal with the like Hogan's um what's it what does he call it the

(3:16:35) some sort of higher dimensional geometric physics torsion physics torsion physics um I don't don't know but it's it's it's something to do um with its ancient knowledge I suspect that is the number sorry you suspect what that that is the number that Hogan used I think it was like 37 and maybe 18 or something I'm going to have there all kinds of mathematical relationships that

37 is unique for as well and it might be because it is this unique number that it um I wish I could find it now I'm just

(3:17:18) curious why it's special I mean I've heard of like Brewster's angle and some of these other angles I don't think it's that 57 or 50 there's uh Prime quadruplets those are very special sets of numbers let me see if I can find it here myself and well um you know what we're we're almost to the 4our Mark I haven't eaten dinner yet so yeah absolutely I'm going to be swimming on Bondi Beach and and I'm talking to you guys like and I need to get on a plane two hours well we're honed every minute

(3:17:49) of it Bob that was amazing man I won't take up any more of your time you're on you're on okay there's a there's a site called Angel 37 it says the number Sun 37 meaning in numerology the sign again later yeah let's do this again later for sure after this was an awesome collaboration I'm glad we got we got a number of eggh heads together in this room so this is great look at that that's cool bunny pure snc anodes and showing that uh in the electrolysis water how they seem to be in the

(3:18:25) circular um corrosion uh pattern was that from just now that or no these have I've run in the past uh usually it takes uh about six hours to do that does everybody here have their own lab is that Michael are you in your own lab right now yep awesome man then I just also quickly wanted to State uh this right here is uh I hooked up the pure copper uh triple Bagel coil just one of them and it's just to a cathode uh negative 5vt AC but uh and then I've got just a uh three solenoid wire um copper anode that's corroding away at

(3:19:12) the top and that this is all white monoatomic copper that has formed and it's proceeding down uh H where it's starting to condense at the very bottom there and that there's still a about 2 to3 inch exclusion Zone at the very base between where the monatomic are uh precipitating and where uh they're in the water uh coming down between that exclusion Zone and that uh the biggest issue with creating this stuff is that uh more often than not it won't be white it will be blue which is then oxidized

(3:19:55) which then completely ruins the Met material part uh purpose of it and then in fact actually makes it toxic for uh anyone that uh wants to like play with their lives in danger and usually you see these blue people from trying to take uh you know the monoatomic silver but it really it's diatomic and they've can accumulated vast amounts of heavy metal poisoning toxins of taking in this oxidized pure metal that is blue and uh that's the difference between making the monoatomic and the oxidized diatomic particles so they they

(3:20:36) went full Smurf is what you're saying exactly yeah so Smurf and the Alien cuz the demigods right they supposedly had these monatomic Golds and they were all blue and flying and whatnot who knows but they were they had the oxidized I don't know maybe it means you eat it you die then you fly away with your spirit who knows that guy that turned blue from eating the colloidal silver supplements and stuff pretty crazy he like Papa Smurf that guy he had gray hair or bluish gray he looked like Papa Smurf he

(3:21:09) really did I'm sorry he really did guys I'm gonna have to say thank you Bernie uh thanks for inviting me on Jeremy thanks for coordinating this Bernie I should probably know more about alchemy given the fact I work in Lena but uh Ashton Michael fantastic Shane dve not here Gerald really appreciate you always uh I need go check the Martin fman Memorial project on YouTube uh that's Bob greener's Channel I'll post a link to it in the description below if uh and and thank you everyone who uh

(3:21:42) participated and have a have a great rest of your holiday there and we'll talk to you Merry Christmas everybody mer Christmas everybody travel chras Merry Christmas everyone happy New Year bye guys awesome thank you a great one everybody yeah Jeremy get us in Aston yeah I will definitely get you guys in touch and Ashton was asking about uh our labs and stuff I want to give you guys a little yeah sorry sorry I was so busy I missed the whole thing practically uh still working in the lab you know keep up the hard work man

(3:22:19) Jeremy cool yeah gonna ba out guys see you later bye safe travels Bob merry a Merry Christmas and a Happy New Year to everybody uh watching this now watching this you know in the future in 2024 and take this knowledge this development in this science and disclosure uh in 202 24 real disclosure but let's actually start opening portals Let's uh get into trans media um technology the anti-gravity the free energy uh Jeremy you're muted if you're trying to speak brother no us the lab absolutely lab if we crack the hole open

(3:23:05) who's the first to jump through is it gonna be Jeremy well so there's who's that Michael guy that oh man there's the story it's on wi files he called what's that yeah I was just watching the time is it gonna be Michael Jeremy I mean what on we'll draw short straws for it first we put the couch then then there's the couch with the cat and uh then uh um yeah we got to find that guy and interview him if he's still alive and see what he's got to say whatever Frick I can't remember the

(3:23:53) name we have a whole another floor with a maker space like a a whole um machine shop and and and like other stuff I don't know if you guys want to see all that but wow yes we do if if the FBI wanted to take special interest why wouldn't we yeah yeah well they didn't they haven't visited this uh this one yet so okay but we know we we have had a few interesting you're with show up and ask questions and start you know hey what are you guys doing here once we build our I think his uh his thing froze sometimes when you move around

(3:24:36) here you lose connection uh but yeah there was one guy who came through who was a Roth's child that was pretty nuts all right I'm switching sorry I had to switch it switches Wi-Fi because there's a different Wi-Fi on this floor you had Roy creeping you guys have the whole building or young or old so yeah I'm with yeah do you guys have the whole building no I rent it's a shared space you know what I mean right so there's a lot of a lot of people that make uh there's a fabric shop here with screen

(3:25:09) printers and nlon Cutters V vinyl cutters and stuff that's amazing and epic that's what I'm about to start setting back up myself from January is there a 3D printer there somewhere

yeah we had I just showed the 3D printer Labs downstairs there there's other ones up here too um this is the metal M shop this is our vacuum furnace where we we I'm make making the I<sub>k99</sub> samples and other stuff yeah and also uh some antimony aluminum bouth semiconductor uh it's a direct band Gap semiconductor PL not nrow gel though

(3:25:50) right like it's more like a transistor no you can use it uh you can use this one for terahertz photonics and and uh yeah you can use it for all sort the direct band Gap semiconductors well actually you don't always you don't always want to direct band Gap there certain applications where you but yeah usually for photonics you want a direct B Gap although for terz for for terahertz you actually want the vibrational coupling because then you get the coup inch your phone on and that gives you high nonlinearities which

(3:26:25) allows you to do computation more easily like the transistor is a highly nonlinear device that's why it works so you want High non Optical nonlinearity for a device for computation that's a cool space you guys have there so you can just come in and out whenever you wanted you have to like one there yeah I rent it we rent it so we uh we can come in here there a little Community table a bunch of tools people can use and stuff wow you know that is literally like my dream shop right there oh no check this out you don't even know

(3:27:01) Bernie look look what we can do over here man they love to have a meet up glass blowing my no down there is that a bu what is you can make anything that's a little mushroom that somebody made we want it Hollow but with some of this ormis or uh noble gases in there and then put it in the center of the coils and take it to the Walter Russell next level of transmutation I should send you my design for a glass battery I'm working on that's interesting so I just talked to the the directors of this this floor

(3:27:40) and stuff and we're going to set their computer area is like you is like criminally underutilized it's terrible oh wow and uh they have actually the oldest Linux Meetup Group in the Country meets here really and that's they're like the only ones that use this space but uh so I've been talking to them about setting it up for a podcasting lab yeah and they're like yeah in it that's as OG as you can get and I'm going to run the classes here on it to teach people how to do it and set

(3:28:11) it up so and you got silk screening there as well like I'm going to have to come spend some time there this<sup>4</sup> you come check it out so that's not everything so there's the here's a whole bunch of like random electronic parts and supplies you can just rip you can use any of this this stuff is like up for grabs um they got two electronic table benches you know some power supplies multimeters other test equipment you know soldering irons all that kind of stuff we got immersion 3D printer Labb and also you know Extrusion 3D

(3:28:51) printers build there wow oh and you haven't seen the laser lab yeah show us the goods man show us the goods so check this stuff out you can you can all this stuff was made with the laser CNC cutter and uh oh yeah you know you can do up meta materials you can um you know to say what what you want for the the burn um this is a computer where you program

it all and you can kind of like set it up so if you want it to burn all the way through the power and the exposure rate that is epic that you want to do intervals passes those that's the laser

(3:29:31) table right there guys yeah so we got some stuff can people make cool stuff here D so yeah this place is uh this place is pretty capable um we also got the you know another wood shop in here with a CNC um router table and some laths and stuff and and a and a glove box for sand blasting sanding stuff too so um yeah and then the uh kitchen area too and um but yeah this this is to tons of cool stuff that you can do here so I'm glad I gave you guys a tour that was sweet tour man hear me just that's as epic as the song that

(3:30:20) you started the last episode out with brother yeah that song great I I got to practice it and make it come out it could come out much better oh yeah we're gonna ReRe we're gonna freaking re record that in studio and you know get some doubles triples get like some chicks singing there a chorus or something you know like get it mixed mastered at the very least do it professional I will do it while I'm down there you know or we we'll get it done it's happening all right sure man we got the lab here man

(3:30:56) we get the the the the cooperation of the whole community and and everybody online uh this this community is only growing don't forget to smash that like And subscribe button and send me an email if you if you want to link up or anything man we're all I'm open here to uh exposing the **truth** and uh digging in and and just forcing the government have new investigations of all this stuff this stuff should have should have had investigations long long ago it needs to all be reopened and reinvestigated as far as I'm concerned

(3:31:26) because I sure as heck Don't Believe in Magic Bullets or that the Pentagon just lost \$2.3 trillion the day before 911 um so there's a lot a lot of things that that that just never been answered man and I would love to you know get answers to so keep up the good fight and uh we we are destroying the official narrative on so many different levels guys just keep just keep sharing and keep uh and put put posting information out there and uh that's all we all we can do is is and keep the science up you know learn

(3:31:56) the more you learn science the more you educate yourself and equip yourself with um an understanding of logical fallacies how to how to dissect arguments how to be able to what falsifiability is and you know being skeptical uh it's going to help arm all of us in the fight uh for **truth** and and the fight against these these lies you know so mistakes are always made everyone's human here and uh you know crush crush stream man that's absolutely right thank you all for being here you guys rock and uh you

(3:32:28) know we are the government let's take it back exactly and we're more competent than any anything that I've seen from the government in their discussions of UFOs has just got nothing on the people that I talk to every day and bring on this Channel and that's going to continue and just get better so thank you for staying with us and uh you guys rock more so thanks lot Jeremy this was awesome everybody make sure you like this stream make sure you follow Jeremy make sure you're following and everybody follow everybody here

(3:32:58) because we're live on uh Ashton Forbes channel on alien scientist channel on crypto Alchemist channel uh and uh maybe maybe more I'm not sure jery plug the we have AP tomorrow too so eBay store is up online too uh so check us out on eBay I'll we got we got that we got super for shirts yes Super Force shirts you gotta show yes we we got to get um what do you call it um we have the Magnesium bismuth composites we're making uh we'll put that up there why not you're selling them sure why not I mean it's easy to make

(3:33:40) yeah everyone says this is so difficult to make I'm going to prove him wrong heck yeah Michael makes anything I'm just like he's like yeah we can make that I'm buy some too Michael is the material man it's send me a link to that I'll post it on my Twitter you ever see that uh sketch from uh Portlandia we could pickle that that's great pickle it I love it all right should we play the disclosure song to close her out one last time I guess so man I wish I could do a better this is as a first copy like just

(3:34:15) playing your heart out like not rehearsing it like it's epic don't worry about it like round two when we actually record it properly like oh it's gonna be it's gonna be a hit by the time it's done this is all headed y'all this is headed towards the Stars man and Beyond where where Tom dong promised to bring you but never followed through and tired of those people so um we're we're showing you how it's really done and and Tom you better be paying attention and taking notes cuz you

(3:34:45) know Tom dong was wrong came along with that Crown in the strongest crown that you ever heard of in a song do any of them ever pick it up and actually play it who wants to hear me play a Christmas song I know I do all right meta materials can these things work miracles perfectly spherical like original trick seral the disappear so reject all things etherical trust in the empirical and listen to my lyrical well gonna do a WAP about UFOs to try to expose things to government won't disclose because nobody knows where all that money goes with no

(3:35:31) bit contracts and cash stacked and Rose and Rose knows that Frozen hoes couldn't flow as slow as the drip drop disclosure from these government schmoes I'm one of the pros in case you didn't know I read all the physics papers and get Intel on the low so well the pentagon's acting like a bunch of bozos the alien scientist Channel grows and grows until they look like the emperor wearing no clothes who can't smell that coffee that's right under his nose with the military industrial complex it's

(3:35:57) nonsense well somebody must be getting a paycheck it's obvious oblivious Insidious these idiots they obate at least we all agree on this from AOC to Matthew Gates who sto the debate and set aside their hate and for alien technology come on and Pass the Plate and maybe we won't devolve into a Planet of the Apes because there's always something bigger than these dreams we try to chase like when Tom D long came along with this bong and the strongest crw you ever heard of in a song called ttsa but they played us all play the

(3:36:24) pawn promis us the spaceship and played us right along and Luis alzado please correct me if I'm wrong except he won't go on your podcast unless you stroke his ego but he's a

military hero and these noobs who all know zero like to think he's their Amigo and they flock to him like seagull and they say yes B like smeagle he gets Snoopy like a beagle when he ran the Adams project and took away some objects from a public that was honest and just wanted to make progress and now they get in front of Congress

(3:36:48) and say where is all the proof well alzado took it all and he gave it to our troops they got an army crat and the rest of us got poop just like Roswell and the Nazi Bell the evidence went poof and now I podcast with the scientists like Dr Kevin new and I can show you who's the man and those who didn't take the stand and I would love to go on Joe Rogan Fox News and Russell Brand because I'm Jeremy riss I'm not Corbell I don't have [ ] to sell I talk about real scientist and contractor in tell so just

(3:37:13) call her out my name and I'll come and spit some game because I care about the truth I don't care about the fame after 80 years of Lies people shouldn't be surprised that NASA and the CIA have deep State Nazi ties meta materials can these things work miracles perfectly spherical unlike a pool ball in a billiard hall they're disappear so reject all things etheric trust in the EMP and listen to my ly 47 the OSS became the CIA with a brand new face expanded powers and a brand new base and this was only days

(3:37:53) after weather balloon caused a terrible Haze lots of people claim that was aliens in a ship from space and the US Air Force hates to answer questions about that place or the tunnels beneath right state or any questions about those planes the super cavitation and Hightech war games and they sit here and they tried to shame pilots who thought things they couldn't explain but it's obvious to anyone with half a brain that we're probably not alone what we're not insane what are you Sean Kirk Patrick offended by a claim like when

(3:38:24) Jesse Marcel of the army Intel came out of his shell and said that Roswell was probably not a weather balloon from project mogile but if you use your focal and speak with all the locals you started paint a picture that sounds a little Loco but maybe you're on drugs or only filming bugs try to talk to scientists but all I got was shrugs as I trample through disclosure in my brand new pair of ugs watching clowns on television getting mainstream plugs and so I switch over to a skeptic who thinks he dug and found the septic well his

(3:38:53) newest explanation makes Corbell fans epileptic but their minds don't travel far they're still hung up on Lazar driving through Los Alamos in a Honda rocket car but little do they know they just found the motherload because here on alien scientists we make Skeptics heads explode we got a team of scientists who come to crack the code because the way we're going we won't need to use the roads meta materials can these things work miracles are you spiritual like a flying candy vehicle are you Spirit believe in things

(3:39:29) etherical well listen here it's called breaking out of these old walls into the future we all got to go but some go slow like a bonide grows completely different from my lyrical flows but a Jedi knows that gravity control is just one of his foes as the ions flow on the brown nose cone of your supersonic drone so just hold my phone as I go into the zone and I fly off the handles

exposing all your scandals we out here making light bulbs you're Reinventing candles still wearing Jesus sandals caught up in the

(3:40:06) past the future of our species is at Great risk let me keep it going just there we go all right what was up with the ad man I can't halfway through all right halfway through you gonna finish off the second half first or should I ky play it yeah I probably could do it better no man don't want to have I don't have my on the that was popping that was only half all right we're finishing the the other half either way let's hit dou it better ways to get the space and ride and rock BL so let's step

(3:40:49) outside our cages and listen to some patience take a book and try to look and read some different pages well I've got the papers here and if the science isn't clear well then please come take the mic and make this madness disappear because we all want to get to space and progress the human race and if you think these UFOs are silly dreams we shouldn't Chase then maybe you should put down your phone and crawl in the cave and put down your physic instruments and just become a slave and go to work from 9: to 5 and

(3:41:14) get all your bills paid and do this on repeat until you reach an early grave or you could step outside of that and help the children grow by not trusting the experts who don't know what they don't know when they can lie and suit and tie and straight put on a show I tell you if I worked with them i' pull an Edward Snow oh is that your Ro if so I'm calling Ground Control we've got a suicidal mole about to crash into a Poland although this hurts my soul when all this killing takes its toll well

(3:41:38) that's a plumish job you got to find and fix the holes from the grassy n to the New York Post with st **Green Street** will we ever know moing bird in control we're coming up now on the final verse and I want to scream more curse words than I can curse because it looks like disclosure is going to leave us in our hearse and if you thought that it was bad well it's about to get worse enter haime masan the Mexican with from Beyond and if you feel it's real you must be Legally Blond so throw away that DNA Because the skeleton flaw

(3:42:20) and while it's clear and we may appear the only fish in the pond because this silly Drake Equation says well what are the odds you should weaponize yourself with a magic wand when you find these whistleblowers and you try to bring them on except the folks in the know with somehow rather obcon because they kind of want their pension and their government job because everybody should know about these government slobs who sit there eating pork like it was corn on the cob and they sit and lie to us while our pockets they rob and send

(3:42:47) disinformation yeah we've listened to Bob and even though these pseudo scientists are technically flawed and I've thoroughly exposed them as complete total frauds they will never stand corrected or pack up and move on because Corbell will never ever once admit he was wrong and if it wasn't AIC then way I see on TV it's separation mocken bird it's easy to see they put the scriptor out there to make people believe and then send them up a river and the Crush all their dreams and while I try to tell

(3:43:12) them they come screaming at me like I'm the [redacted] liar on a disinfo spree and if I'm proven wrong I'll gladly fall to one knee and Sayo but until disclosure happens I will sit on that fence and continue to call out things that never made sense because it's still a war department will they call it defense in these stove piped operations information is dense and we need to get that out for all the world to share and showb to those who aren't fully aware when you can be ter ify with proof you think that someone would care

(3:43:42) except it's only corporate [redacted] they allow on the air but I'm changing my ways and there's days that I pray that we will finally see Justice for the CIA and all those people that they murdered just like R and JFK over [redacted] that happened way back 1948 but if you're still unsure and you think all of it's baloney well why won't you look into scientists who died like at Marone you'll follow Bob Lazar or Corbell that total phony while he's out there to distract you all you think your

(3:44:10) homie will get me get you in the ring with him I'll show you the fighter I'm exposing corporations like Rand Batel and miter but you maybe you don't care or maybe you have to stare at [redacted] BCA triangles that turn out to be flares will really teach you nothing about what's going on out there because these people are distractions and real coverage

Transcript:

(01:56) what's up chat I just noticed I already got a bunch of people in the chat here I was just getting ready I was trying to eat some food was it ASMR we might be doing ASMR stream uh I was actually going to post I think I'm going to post the stream here what did I just do stream URL copied okay there we go me see if that worked okay it did work okay oh boy hair day we got to get

(03:02) our haircut man what's up everybody no masticating on the mic thank you for not eating on stream well it's GNA get awkward it's GNA get awkward actually I don't think I don't have anything to listen to at the moment so I don't need to put the huge headphones on um let's make this a little small switch this over to full screen mode what is up everybody yeah so first announcement I am going to be taking a break from the investigation for uh at least a few days during the holidays I may retweet stuff I may still

(03:51) post but I'm not going to be going as hard as this I might even change gears and stream just some light-hearted stuff like maybe I'll play play some video games I haven't played in a while um like the beard there's a I don't know if there's a beard just haven't shaving in a day or

two got the orb cut it's been a long day folks we did uh like six hours of filming today I'm I'm I'm wiped out man um Melo demon was here for the last few days we've been he's been helping out a

(04:28) lot with uh whatever we're working on to try to get the information out there I don't know exactly what it's going to be but we did a bunch of filming of stuff to kind of I mean at this point I'm very well-versed in filming uh and recording information related to the case right so uh probably tonight it's going to be a little bit more laid-back I want to work on the all evidence answer questions you guys have um kind of figure out as well for what's uh you know what what does come next with this

(05:01) right I mean we still got a lot to do with m370x but you know what is this movement what does it mean what do we work on um one of the things that we're going to be looking at tomorrow is uh another situation about a 1970 case where a guy seems to have I don't know if teleported is the right word but gone further than he should have been able to and we're also going to review some research uh related to uh Dave Rossy that he's worked on it's kind of a research paper that looks like it it talks about and T tackles the idea of

(05:34) the aquaberry drive and some of the stuff that we've been looking into so tomorrow should be a really good one a fun one yeah well let's look into that the PB on [Reddit](#) it looks like Punjabi Batman was permanently banned looks like Punjabi Batman was permanently banned uh so let's let's do a little recap of some stuff yeah the orb Material Science so if you guys see this lk9 I I recommend you guys check this out I'll put the link in the chat if you guys haven't I'm I'm guessing you guys

(06:09) all did but this lk99 thing here is coming back now six different Chinese universities have found some evidence of superc conductivity near room temperature for lk99 which is huge any room temperature any any super conductivity near room temperature would be Nobel prize winning based on what we already found out from the PBS documentary so this is pretty huge and this article here mentions the US Navy getting involved in it which I think they've already figured out frankly it's probably be old news to them so and then of course you've got

(06:51) people in the comments who lk99 is [\[redacted\]](#) I mean this is like as anti-science as you get right what is what so many people like being ignorant and then like claiming stupid stuff like dude did you study it no you didn't so why would people be making claims like this uh let's take a look at Punjabi Batman um so what exactly happened to Punjabi Batman also look at this Recreation look at this Recreation this took 5 hours so I think we can conclusively state that this videos cannot be easily recreated cuz this isn't even remotely

(07:42) close it's not even remotely close not sure what this is supposed to be here and I I don't want to dismiss the work that this person put in but they didn't get anything right like they could put in another 10 hours and still not going to be remotely close right and I don't know what that was supposed to be is that was supposed to be the zap is this the Pyromania VFX here is this the Pyromania VFX yeah perfect Recreation what is this a shadow appears um so I actually reached

out to this person I dm' them and asked them if

(08:24) they would stream for another 5 hours and show us how much more they could do because reality is first I don't think that they did this in just five hours I guarantee it took them longer than five hours and the second part is the easiest part is to do this part right the reason why people don't proceed is that getting all the details right it gets progressively more difficult right it gets harder and harder and harder and that's why we know the videos aren't fake because all the small details

(08:54) there's no discrepancies anywhere I look at this and we could come up with a hundred things that are wrong with this right and this is somebody who's copying an existing work the person that would have made our videos would have been doing it completely from scratch they wouldn't have had the benefit of staring at the real video this isn't even a 777 but that's aside the point um but the big thing is that you can tell how fake the plane looks while it's flying this is the hardest part to fake our in our real

(09:21) video here like ours doesn't look like just a random model flying through the air it looks like an actual there looks like just a silhouette of a fake plane right the shake the camera shake the pixelation from it being nighttime and night vision like it's significantly different right as well is that they wouldn't have any idea what it should even look like that's the other part of it the idea that it goes off the screen and comes back like all these small details not to mention the orbs with their heat signatures that are

(09:57) spinning on their axis the more the actual uh Heat Signature in the belly that's moving accurately like this is a real video of a real plane guys this is just some CGI crap right it's not even it's not even remotely close not even remotely close and this is using 2023 software and computers so like yeah I appreciate this work and time they went into it because it pretty much proves that our videos are ex difficult to create at a minimum at a bare minimum it's going to take a studio to make this to make no mistakes

(10:36) anywhere so Props to this person and they they turn down my request to stream for another five hours um because there's there's no way I mean if they stream for another five hours they're not going to get anything done right they're not going to it's not going to get any better there's too many small details this is again copying something you're already looking at the details are what take time right frame by frame editing doing a first pass of just something that's not even remotely close is the

(11:09) the easiest part right that's the easiest part and of course when you read the comments we won't go through all the comments but that's pretty much what all the comments are alluding to the hilarious part about the comments though is how offended the debunkers are because people are just laughing at how bad it is right and the and they're so offended somebody spent their time on this you should be respecting them it's so disrespectful I'm just like holy crap these are the people that crap on me

(11:37) this is like can you get any more hypocritical **Reddit** can you get any more hypocritical somebody does a hilariously bad remake that isn't even close and they demand that everybody gives it a bunch of respect I actually do a real investigation and then they're just poo pooing and they're laughing about you know getting tricked by a felony it's like these people are the worst scum on the face of the Earth these people are the worst scum on the face of the Earth um I think so that's why the

(12:07) corridor crew didn't do it right we know why the corridor crew didn't attempt it right cuz they would have just looked like jackasses coming up with something super fake looking that's why they only spent five minutes they probably realized early on that any Recreation they did would look hilariously bad right and that it when they did that then we would just dunk on them that's why the cordor crew didn't even bother to recreate it cuz they knew that they were garbage and they wouldn't be able

(12:30) to come with anything that was good it's pretty obvious now when we see that that effort obviously the corridor crew cannot recreate these videos doesn't matter if they have one hour five hours or five weeks they're not going to recreate the videos because it's a real video right it's a real video anything they do is going to look fake for sure because that's what fake things look like so no that's what I told them I told him to keep working on it I said work on it for another 5 hours and stream it so we can

(12:57) watch and of course he turned down the offer cuz these people aren't like you know honest I guarantee it spent more more than 5 hours on that as well yeah okay now the the best part is they think that that video somehow proves it would be easy to make that like they're so delusional that they think that doing a crappy remake proves that it would somehow be easy it's like but wait you completely failed and you spent 5 hours on it that doesn't prove that it would be easy if anything that proves it would be

(13:30) hard like the the confirmation bias is insane like that's not how logic Works guys if any **redd**itors are watching you can't completely fail and then claim that you won that's that's just you pading yourself on the back for not for not doing well that's like participation trophy level stuff um you know if if that guy was honest he would have come out and said yes I I failed it's a lot harder than I thought and it's not going to be able to be done in a few hours instead it's like I'm not even

(13:58) that good of a VFX artist well okay that's you saying it not me so uh Punjabi Batman got banned off of **Reddit** permanently banned this was a joke by the way this was a joke I actually asked him about this guys and he told me he was joking when he said something about the videos being fake this is literally qan on this is your brain on CNN folks this is your brain on CNN right here this is literally qinon I can't **Reddit** people are just so so stupid so stupid **reddit**'s the biggest source of brainwashing on the planet there

(15:00) literally is no such thing as qanon okay it's not a real thing people like but but people said that they follow qan that doesn't mean it's a thing man Jesus has has PB ever posted while

AF was on stream are people really still trying to connect me to Punjabi Batman a guy who's not even an American is is ever like actually uh people really trying to connect me to this guy he's literally not even an American guys I can't believe **reddit**ors are just like this dimwitted it's like they're the ones who

(15:47) are rag on other people for beli in conspiracy theories but they want to say that Punjabi Batman is David grush that I'm Punjabi Batman Punjabi Batman's ebo scientist it's just like doesn't that make you the weird conspiracy theorist like you're coming up with nonsense doesn't even make sense oh nice oh wait what what tomorrow with Dave Rossy and Bob Greener oh man you guys I'm going to be with people who are like way smarter than me man God damn it I'm gonna have to like I'm going have to prepare wow

(16:25) yeah Bernie that's going to be sweet guys if you read Bernie's message here Jeremy Bernie Me Maybe Dave Rossy and maybe Dave Greener or Bob Greener that's a spicy that's a spicy uh that's a spicy meeting **Reddit** used to be good but then yes it did get captured askh Joby Foresman yeah guys I'm secretly pujabi Batman you guys think I would do like all the weird uh video stuff I can't like I can't even edit a video I have no idea how to color change channel a video I literally just oh sorry I'm

(17:10) going to be eating on the stream for a second I'm starving what can I say I had to post punjabi's videos because I don't even know how to do the stuff that he does but yeah **Reddit** used to be good guys back in the day I think it's 7:00 p.m. tomorrow for this stream **Reddit** used to be good back in the day used to be a place where back in the days of like 2008 the first Obama election you could actually like get the election results of uh a presidential election on **Reddit** before you'd see it on

(17:51) CNN sometime between like 2008 and 2016 it just went they like the feds got control of it and it just became total garbage sad okay well so he's been banned um how do we check users how does that work om OMG rip permanently banned I'm pretty sure even if you're temporarily suspended this doesn't show up yeah thanks thanks Bernie I appreciate it unfortunately it's not going to be undeniable that the videos are real I think that even there's going to be people that even if the government were

(18:41) to come out and say that the videos are real people would just say the government's lying they really would that's how broken people's minds are that's really how broken people's minds are even if the government comes out and admits it people are just going to say the government's lying even though there like it makes sense and nothing else about the story works looks like let's pour one out from Punjabi Batman guys pour one out for him rest in peace my man rest in peace feels bad what do they ban this

(19:13) guy for nothing huh I mean as far as I know he didn't do anything there's nothing he could have done that got him banned my the most likely answer is that they reported him that the people from this sub**reddit** reported him cuz they were making up fake stuff about him right they were trying to get him banned they literally would talk about getting him banned people

would repeatedly talk about having to get Punjabi Batman banned repeatedly the answer is they probably got him banned and if you don't think they can

(19:48) get banned I guarantee you they can they got me banned several times like the that's how you know the moderators are in bed with the admins as well especially the moderators of this Discord or this uh this subreddit who's totally obsessed with me I mean that anybody who's trying to solve the case they they won't allow it right um I think let me see here what's the name of the other one there's a new subreddit there's two new subreddits guys okay one of the subreddits is three orbs this is a private subreddit I think so

(20:42) if you guys want it in the private subreddit let me check I'm a moderator but I don't do anything on this subreddit I'm only a moderator in case this guy the moderator gets banned um but if you want to join three orbs this is the private subreddit you can ask although if you do anything on the sub you'll get banned right away no no no questions so if you're a debunker don't don't even ask I know who the debunkers are if I see them get approved I'll just ban them um and then what was the other one

(21:15) called there's there's an actual open subreddit where I told the person that was from the previous subreddit that got banned that I would promote their thing what's it called me find it what is it it's not that one MH370 abduction here you guys go this is the new one okay so if you want the public one here's the public one this is where all the trolls will be joining if we have it the stock Subs are actually pulling weight in the market yeah probably

(22:19) wouldn't surprise me okay sweet so I'll leave this up probably somewhere either three orbs or MH370 abduction you guys want to join that tomorrow sounds like we're going to have a pretty sick spa or sick uh stream with uh Jeremy I want to know what Jeremy's thoughts are on this and Bernie's as well I hope they they read there's several papers that came out as well they're bringing Ik99 back into the spotlight which means the disinformation will be pouring out pretty soon most likely yeah Rumble I'll probably switch

(22:58) over to Rumble at some point for sure see here yeah so I I hung out with diamond tonight as well Diamond's like one of my favorite people terms of being a conspiracy theorist he's one of my favorite conspiracy theorist this is the flight thing that we're going to be looking into as well probably tomorrow although with the stream tomorrow it'll be it'll be interesting to see how much we get done but this was a flight in 1970 where they actually have the math this is what I think is interesting

(23:40) about it so this plane ends up going like way faster than it should have been able to go and it almost makes me wonder if there's some specific conditions that can occur because voltage gets higher the further up you are in sky in the sky because the Earth is just a ball of electrons so it makes me actually wonder if it's possible under the right conditions that you could have SpaceTime itself warp not very much but to a little bit doesn't have to warp a lot interesting hey Ellie what's up yeah I mean we're never going to be able

(24:35) to figure out where the passengers in the plane are I think tomorrow is 8:00 Eastern that's what we have it booked for at least I'll post on my Twitter if you guys follow um yeah the fisherman thing the fisherman thing is let's talk about the fisherman thing this thing is this thing it goes to show you that um all news is all traditional news is just dead right let me set up right so I don't look like a weirdo can't I can't believe this is news I literally can't believe this is news it's just like the dumbest crap in

(25:16) the history of the world like just so so silly Fox News is running with it MSN Times of India which one should we choose guys who do I want to give a click to let's give a click to Times of India I don't want to click for MSN or Fox News hey man hey Amanda what's up we got the homies are all in the chat tonight we probably won't be going too late either tonight because man I've been tired it was a long day so we are filming all day today uh kind mostly filming just doing the same stuff that I

(25:50) do anyway talking about the evidence talking about the case trying to put put together a pitch maybe we'll make a little YouTube short I really don't know I don't know know um a seasoned fisherman has recently come for with a claim he didn't he believes he discovered a part from Milian Airlines n years ago he recounts in September of October of 2014 this is 6 months after the plane went missing it's not just months this is 6 months after the plane went missing he's convinced it was a wing of

(26:27) a commercial airlin guys have you seen how big a wing of a commercial airliner is yeah if you need an invite to the Discord did I not fulfill all the invites I might not have fulfilled them all oh boy oh my God you guys okay well you guys sent me like another 20 Discord invites so yeah if you already sent me an email I'll shoot Discord invites out before I go to sleep tonight huh uh it's like yeah he what just remembered this nine years later this is super weird also he's the last surviving member of his this boat trip like how

(27:30) old were these people on this boat trip that everybody's dead it's not like it's been 50 years it's only nine years ago what does he mean like I've looked for a way out of this like what what do you mean man you literally didn't have to say anything it was a Jets Wing how big does he think the wings of a 777 are man should we go ahead and and look at chat 64 M long okay let's just cut it in half because that's the wingspan it's 100 feet long do you see the size of this guy's

(28:14) boat this guy's size of this by's boat's not even 100 feet long they dis missed it and said it was a shipping container but for some reason this is making the news I mean what how did the someone even find this guy how does this story even appear he's at a bar and he's talking about and Fox News is like oh yeah let's run with this what the hell I'm sitting here on social media blasting at to thousands tens of thousands of viewer uh Subs listeners 100,000 listeners a day and they don't

(29:03) even mention my stuff but they're going to talk about some random guy who's in retirement who thinks he drug up part of a wing that's 100 feet long N9 years ago this by the

way this website is trash this website let's try uh boy do I have to click on one of these other ones there's no evidence there's no there's no info in this it's a deep sea tler like if this is his boat like this boat cannot pull up a wing he dismisses that the object was a wing of a small plane guys it's 100 feet long he's not pulling

(30:02) up a 100 foot long Wing they already dismissed as a shipping container I'm actually would want them to go search cuz when they don't find it I I want them to come talk to me so you're not going to find a plane down there man we would have found a debris field if a plane crashed into the ocean Wing might have even floated it stretched the net and ripped it was too big to get up on the deck so they actually didn't even get it onto the deck but he's sure it was a wing even though they didn't even get it onto

(30:35) the deck it was obviously a wing from a commercial jet it was white and obviously not from a military or light plane took us all day to get rid of it I don't know how you would know it's from MH370 no they're definitely not going to go search there's zero% chance they're going to go search I want to read the part [Music] about how he was the last surviving person of the boat trip so there was four people on the boat and they're all dead except for this guy why would they why would he be conspiracy

(31:30) theorists this makes no sense what what conspiracy is he pedaling the official narrative so we learned that Jeff wise is actually the person who originated the sto the fake Story vilifying the pilots yesterday can you believe that Jeff wise is the person who ified the pilots originally this guy is the biggest source of misinformation about MH370 on the planet he's tried to vilify the pilot he tried to uh claim that the the the computer the simulation data match the flight path this is the guy responsible for it Jeff

(32:16) wises he's also responsible uh for vilifying Blaine Gibson the guy who found the debris Jeff wise is probably one of the biggest CN he might CNN brain he might actually Define CNN brain his theory is the **Russians** stole the plane it's so ludicrous I I don't even know what to say about this guy I tried to present the fire scenario to him with 19 Witnesses but nope he's too locked in on completely nonsensical theories that make no sense there's shipping containers everywhere but no it couldn't be that it must be a

(33:12) wing okay he remembers nine years ago where it was too this is just bizarre man what a weird story he actually got a call back oh this was back then I mean I feel like he should get looked into though if ocean Infinity is going to search around under the ocean they might as well go search on over there they're not going to find it but I hope they do I hope they do I literally hope they do man okay so supposedly as well this guy was like the last surviving member some people in uh Dave rossy's followers suspect it might be Lio LiPO

(34:13) batteries wa is that lithium potassium oh these are smaller batteries what's a lipo battery what is a lipo battery there's no answer here Lithium Polymer hm interesting so sure I suppose it could be LiPO batteries so all weather balloons of

(35:17) chat all the way down wait Joe Rogan say yesterday said that we have orb Tech that seems chat it's ASMR stream time hold on so I'm going give me a clip of Joe Rogan talking about orb Tech that would be pretty spicy that' be pretty spicy I guess we could go to uh what is it he has a he has a Reddit right if you want to hear a bunch of hate on Joe Rogan man dude's website or dude's subreddit like hates him is this the one Bo

(36:22) nickel look at this look look at those down votes oh he's m a Jesus man this is how messed up you know Reddit is man The Joe Rogan subreddit is talking about some guy who's talking about Fox News who cares Tim Dylan man The Joe Rogan sub I've never seen a sub red that hates people more is this the one I think this is Tim Dylan right good for uh I guess the uh it incentivizes people to care about space exploration right because they're going to pay a lot of money to go up there and that money is going to get utilized to

(37:22) discover more things I you know who know for this it's a weird argu yeah cuz like I feel like I mean look I'm happy that they're exploring space but I feel like maybe someone should sit down and go until you guys figure out a better way to get off the [ ] ground yeah let's just let's just chill if how are we saying no one should burn carbon fuel how are we saying that you can't have gas powered cars in California for 2035 how are we saying that while we're shooting off these giant [ ] metal

(37:53) tub I want you guys to go look for the or talking about but literally it's literally burning in the sky I think that's the reward when you have a billion dollars is to you can you it what is he wearing here what is this he looks like he's wearing a Mumu you want to think you can leave yeah that seems can you imagine guys if I showed up to Joe Rogan wearing this if I just had Furs all over me what's up Joe I got my Furs to be the reward it's these guys going like we don't have it quite figured out yet but

(38:30) they're like God it might be nice if I could leave oh pretty funny yeah this F code is out of this world for sure this F C code's got the orb Tech going on uh Joe Rogan Tim Dylan it's a very odd fashion Choice uh this looks like some sketchy website that's stealing his stuff yeah so if you guys can find me a clip it looks like it's two and a half hours I'm not going to dig through it is he flaming gay who cares honestly but

(39:33) curious feather boa yeah lipos are more prone to Thermal runaway interesting yeah is that a pelt honestly I'm getting tired of podcast it might sound weird getting kind of tired of them it's been it's been a lot I think we've done like 60 in fact maybe we can work on that real quick I'm just going to look at my list here okay I'm gonna add start adding names to this when do you guys think that we were on Kim Iverson there Kim Iverson then we did Infowars Jackie

(40:39) deoy germ did he ever even send me a thing I'm not sure if germ ever even sent it to me germ generation Zed skiz aopi Elijah schaer oh boy we did a lot UAP podcast part two man in America we did um we had a space with uh Jake Chanley as we have two more weeks to go quite frankly Jimmy

(41:44) coretti this is when the cloud **debunk** came out that was already almost two weeks ago Elizabeth Lane I don't know where her thing is I a lot of these people never got back to me with their with their stuff investigate Earth part four jeez man uh at the mic with Keith people told me that uh Zep was talking smack about me afterwards that's kind of rude questions afraid to ask drunk turkey blurry creatures Chris Leto part two Ben

(42:55) Kelly we'll call it step Greer space since it wasn't really about us but we are speaker which is pretty neat there's at least like three or four un accounted ones in here right OC and then uh damn man that is a lot of appearances man that is a lot of appearances I think some are missing it's a lot of appearances fashion keeps growing pieces of the

(44:04) plane will show up Jack trading you've got it not Qing on Shaman anymore now it's America's Shaman there is no Qing on let's at least just give the man his uh give the man some respect yeah I'm glad you guys liked the muon presentation I think it was pretty good should we watch the Bob Lazar interview from the 90s that might be fun I'm kind of tired I don't really know if I want to do all the uh go through the evidence let me look at what I have on my notes Here Yeah I'm not going to promote the

(44:40) concrete podcast because he was trying to **scam** me dude dude was just sketchy as hell man the literal day of the concrete podcast Danny is sitting here trying to be buddy buddy like fake buddy buddy with me trying to ask me what I should what I think we should call the the podcast and he's like I want to call it like exposed and I'm like okay dude I'm like if you call it something like exposed or some clickbait title I'm not going to promote it I told him straight up he's like okay well what if I call it

(45:14) like revealed and I'm like okay sure man I'm like whatever you want to do just call it whatever you want man it's your podcast right I remember I was in the tub when he's calling me he called me like three times and uh and so I'm like okay just call it whatever you want to call it right and sure enough I see the title it's like as exposed by VFX artist and I'm just like okay dude I'm like come on man and that's why I actually watched it that was one of the only spaces the

(45:38) podcast I've watched in live and he even the weird part too was when he he pulled the fake Break thing on me like he was trying to get me to say like oh yeah like it felt like he was trying to get me to say like oh yeah I really think this is fake and I'm just saying this to like grift people or something like that's the only reason why you would do that he's like okay let's take a break and he takes off the headset and then he's just still talking he's still recording it's like they were

(46:03) trying to get me like uncensored or something and I'm like dude I'm just a normal guy I'm not lying like what yeah the start about pushing me while I it was so weird uncomfortable he's like why do he's trying to get me to like give personal information about when I was living in Singapore I'm like why does this matter like why are you asking me weird stuff about this like I feels like somebody told him that like I was a liar or a **scam**mer or something and he's like desperate to prove it so want to be like

(46:31) dude you have like people talking about angels and demons and crap on your podcast what do you what is this why is this so offensive very weird man very weird man so that's why like if people do stuff like that they're not going to get promoted I'm not going to promote their stuff yeah like he also gave away he gave to Julian uh imagery from the podcast which might have been illegal CU I didn't sign anything that said that he could use it for things outside of the podcast and he gave it to Julian so that Julian could

(47:10) make the fake thing about how bad I looked and they like they they selectively edited the part where the corridor crew was there to try to make it look like I was nervous or something when I wasn't at all and then Julian's like Ashton's going to get destroyed when the on the concrete podcast it was it was just so weird man so weird they set me up from the beginning both of them did that's why uh for my um I think what I'm going to do is my for my favorite stream of the year before for the end of

(47:43) the year I'm going to post the stream the space we did with them I'm going to post the space them because I think everybody should watch the space with those guys to see what they're really like very bizarre man I'm also not going to promote the lur Lodge stuff here I'm going to delete that as well L Lodge guys just went so off the deep end man like once they got super butt hurt too that was like whenever you try to get butt hurt like when people are like oh just you know you rude to me whatever

(48:20) like okay man bye I'm your guest bye what the why files talk to me about me wait what somebody mentioned this we might have to check this out guys so we can either check out bobard did anyone find the time stamp of the the Tim Dylan Joe Rogan thing if anyone can find the timestamp on this let me know oh there it is he got it okay let me let me make some notes so I don't forget here on some stuff uh y files Bob Lazar he says it starts at about 2 hours 3 minutes okay we're stuck watching this ad huh I don't have any sound anyway do you

(49:05) guys hear anything yeah the I I guys are just kids that's the problem right they're just kids they haven't grown up yet wi files will be good they'll they'll at least give it I I'd be surprised if they do anything that seems dishonest right Hotel on the moon we're going to lose it how close is the the planet that's closest to us that can sustain life we don't know that's a good question wait is it where does fur go he took his furs off I think they're all really far like years take light speed

(49:45) so we're not getting anywhere um so here we go he's talking about it years at light speed exactly the nearest one is four light years away it's Alpha centuri right okay so in order for be to get to us from another planet the nearest star is four light years away four years at the speed of light we have to be able to go faster than the speed of light it depends on what kind of propulsion system we have currently available see what we're using now is all we light things on fire and it pushes us forward like I was saying

(50:20) about like the rocket ships like every time they go up like how much carbon are they burning like what the [REDACTED] are they doing like how much of that stop global warming what are

we doing shooting Rockets what's the big deal here right if they can develop some new propulsion system and I think this is my theory I think that's what all this UAP [REDACTED] is all about you know I think what's UAP um unidentified aerial phenomenon a new way of saying UFO gotcha when you're hearing all these disclosure I think I think two things

(50:55) are happening simultaneously I think it's highly likely that there is intelligent life that's aware of us from somewhere else and I bet they visited and I would if I was them I also think that the government probably has in its possession some new form of propulsion now we uses for drones that is insanely sophisticated and above and beyond what we think is currently available some gravity based propulsion system and that's what a lot of these Pilots are seeing that's why these things move and

(51:27) seen that's why they can go into the that's why they can shoot through the I think they some kind of wacky drone that we've developed it's probably true when they're telling you it's aliens that's the moment I sto thinking it's I love Jo it's aliens we need talk on AI and then when they're like hey it's aliens we're like [REDACTED] you it's not aliens I'm like there's no way you're being honest with oh we've just decided to be honest with you for the

(51:57) first time yeah if was aliens and they did have aliens they would how far they're just trying to I guess you're right just kind of see what you know see what this technology can do also it's a great way to get people off your Trail you know if you just say look there's aliens you know we we have no idea where these crafts are coming from they're from other worlds right these planets that can sustain life that are I think they stole it from me I emed it to them unable to let's find out when where the

(52:27) closest one is yeah where is this planet where is the closest planet that's in the goldilock they found like they had this one plan I think they just they were trying to call two or something like that it's but it's theorized because we don't really have the actual ability to get to that planet and like have highspeed uh drones that get you know save big on tough Toyota does he talk about orbs or is that it that's about it okay got it so I'm going to clip that though that was good that was

(52:57) really good good find Barry good find that's the kind of clip that's going to get hundreds of thousands of views that's a big that's a good clip I think I'm going to clip it from when he starts talking about the distance as well everybody's saying the same stuff it's just think logically folks like it's too far speed of Lights too slow even um diamond and I were talking about it today we're going to lose it we're going to close is the the planet that's closest to us that can sustain life we

(53:30) don't know that's a good question I think they're all really far like years at light speed so we're not getting anywhere um it depends on what kind of propulsion system we have currently available see what we're using now is all we light things on fire and it pushes us forward flip this like I was saying about like the rocket ships like every time they go up like how much carbon are they burning like what the [REDACTED] are they doing like that is if we're trying to stop global warming

what are we doing shooting

(54:00) Rockets what's the big deal here right if they can develop some new propulsion system okay this is where we're clipping it so 245 20245 I think this is my the I think that's what all this UAP [REDACTED] is all about you know I think what's UAP um unidentified aerial phenomena new way of saying UFO got when you're hearing all these disclosure talks and all this stuff I think I think two things are happening simultaneously I think it's highly likely that there is intelligent life that's aware of us from somewhere else

(54:35) and I bet they visited and I would if I was them I also think that the government probably has in its possession some new form of propulsion that it uses for drones that is insanely sophisticated and above and beyond what we think is currently available some gravity based propulsion system and that's what a lot of these Pilots are seeing that's why these things move in ways that no one has ever seen before that's why they can go into the ocean that's why they can shoot through the sky I think there's some kind of wacky

(55:07) drone that we've developed it's probably true so I think that's probably where we cut it right so I think we just go from 20245 if they can develop some some new propulsion system so probably 2043 let's say warning what are we doing shooting Rockets what's the big deal here okay this is where we clip it for one minute um how do we do this guess we just clip the whole thing huh like this seems fine all right if they can develop some new propulsion this is bad uh there's got to be a better way I

(56:01) need to get this without the crap in it um I think what we do is this hold on sorry guys I'm not good at this one second think we clip it here I've got an idea here we go here we go here we go like this maybe we don't even clip the whole view right just clip just Joe Rogan like this seems fine with that if they can develop some new propulsion system and I think this is my the I think that's what all this UAP [REDACTED] is all about you know I think what's UAP um unidentified aerial phenomena the new way of saying UFO got when

(56:58) you're hearing all these disclosure talks and all this stuff I think I think two things are happening simultaneously I think it's highly likely that there is intelligent life that's aware of us from somewhere else and I bet they visited and I would if I was them I also think that the government probably has in its possession some new form of propulsion that it uses for drones that is insanely sophisticated and above and beyond what we think is currently available some gravity based propulsion system and

(57:30) that's what a lot of these Pilots are seeing that's why these things move in ways that no one has ever seen before that's why they can go into the ocean that's why they can shoot through the sky I think they some kind of wacky drone that we've developed it's probably true [REDACTED] when they're telling you it's aliens that's the moment I if I have to do I may have to do this later I may it up let's just take a look and see how come I not get no sound oh man no sound huh weird okay I'll probably take care of

(58:09) that later guys I don't want to make you guys watch that but it's 20245 that's the clip though right 20245 for about till 20345 that's the clip yeah kind of weird Okay um yeah imagine the government has that I mean they already have the advanced propulsion systems I mean he nailed it right there right he nailed it um let's see if we can find the Y files thing this will definitely get us uh copyright stri but whatever where do we think the Wi-Fi thing was there was our live stream right n the microphone button doesn't

(59:07) that's not how the microphone button works the microphone buttons If I want to speak over the top of what's being recorded it should have caught the audio there not sure why it didn't catch the audio pretty weird ASMR stream damn he's got three million subscribers he must be making bank dude whether you're a professional video editor anyone know when he oh it's a three-hour stream folks does anyone know when he's going to say it one day a drunk ice fisherman drilled a hole in and looked into the a loud voice from

(59:58) above said that I hear a lot 2024 blessing here but just hold stories keep coming up or best here any second there's Michael Wade and then you that's the Elgato just just unplug it right from the back I'm trying to unmute youo it says can't unmute your guest and then the week after that we're doing uh an episode on Project 8200 which is really interesting and uh Striders was the first one I brought in uh you know where it is my research you know I had to check IED myself as a Pokemon fan feels bad gotta catch them

(1:00:44) all so you're doing we're doing near-death experiences too hot for YouTube it's too hot for YouTube that is on the podcast did you know we have a podcast I have some uh projects for you I'd like to send you out on [Laughter] on and then we can't do it on the ACT on YouTube but next Monday on the podcast is going to be our first like original original Deep dive and it's going to be on Alistar Crowley and it is damic sound effects all of that Z talking immense immense Str so the episode is going to be about

(1:01:29) hows I think what cut out they this is Lila \$20 hey I'm Lea up the Christmas tree and within screw up as outside cats yeah so to them he does like that this creation of chemistry even over the UN 3T wide take in when you breathe when you eat they must have been watched YouTube before the uh the St and then the evening comes oh he's dedicated weapon where is the Arc of the C her that is that that would be fun and the team will tell you I'm not lying every time I release a video I'm like I don't think it's all that good I

(1:02:16) don't think this which one Gino this guy I not that happy with it Avatar no it someone said didn't command this never i m my mic all right it's little bit of shame my friend bit annoys me when I watch be interested if they just dig in I mean they've been good on their investigative stuff they dig deep into the woo so no come on first of October geologist made that it changed directions multiple times perod large scale extinctions took place on our planet on a regular repeating basis and that the interval

(1:03:06) between the extinction events was cck down and press more guys I don't know how YouTube works you can start calling me Ash I don't give a crap um oh well no big deal let's you

guys want to watch the Bob Lazar stuff I'm pretty sure we won't get uh copyright strike for watching that I'm not going to click on Facebook that's for sure Merry [Music] Christmas Merry Christmas yeah tomorrow will be our last stream probably before Christmas or

(1:04:10) maybe I'll stream more but probably not if I'm streaming more I'm probably going to be taking it easy for Christmas I don't really want to work too hard so this weekend maybe on Saturday I'll stream actually I don't know maybe I'll always stream who knows who knows uh I already filled out the podcast list you can see it goes it's pretty long we need to get links to all this stuff if anyone wants to help with this uh feel free uh I may post this in my Discord and have somebody come help uh

(1:04:38) create links for all this so that I can post it I think you're only allowed like 20 links per tweet so this is going to be like several Tweets in fact there's more alien addict ones here too I did four parts with alien addict so probably like alien addicts number three and there's probably like an alien addict number four down here somewhere so yes I've been busy folks oo somebody found the stream 10745 well where'd it go now we got to go back now we got to go back folks and yes I haven't paid for YouTube

(1:05:27) premium or whatever it is yet nice farmer Justin yeah I want to be in a foxhole with you buddy we would just snipe people for days B silly Sev style doesn't matter what the odds are my man we don't listen to the odds 10736 well I'd like to talk about the Malaysian flight 370 but I don't think I'm allowed to oo no because we're gonna do a podcast on it oh we are yes sorry G I had some great great video uh in our archives for it [Music] ooh great video in his archives did you did you pull some video pulled

(1:06:27) some video uh something very interesting happened this week that that will become part of part of it but um a large um influencer uh Kim kim.com um put up \$100,000 to **debunk** the videos or show the videos without the UFO orbs flying around it um as much as he could uh find he can't find any anyone who could **debunk** this wow it's true okay we'll cover all right Emerald Emerald wow okay wow that's not bad I'm not I'm a little bit worried about it what do this emoji mean hot drinky hot drink

(1:07:12) spicy yeah yeah screw the trolls folks screw the trolls yeah **Rogan** we're going to clip that **Rogan** thing I'm going to post that tomorrow morning probably probably post that tomorrow morning yeah the kim.com thing is old news man these guys are not caught up to speed uh it's all good though um Bob Lazar original video how do we find the original video oh here it is you guys want to watch the original Bob Lazar video that's pretty fun I don't think we're going to get copyright strided for this but we

(1:07:50) might what the hell sound please you guys hear anything I don't hear anything what the hell is this Dennis whose real name the interview had been set up at the last minute Dennis whose real name is Bob Lazar met our news unit in front of the home of John Lear put on a microphone then sent shock waves through UFO circles Lazar recalls what was going through his mind at the time it was a very frightening moment it was uh certainly not a comfortable thing to

do within days the story of the dentist interview had traveled around the world

(1:08:36) busloads of the saucer curious descended on the outskirts of Area 51 the little town Mone from enthusiasm and the search was on for the true identity of the man in the shadows well this is awful whatever this is is just straight up awful whatever that was was garbage where where's the original video I want to watch the original Bob Lazar video what the was 1989 holy [REDACTED] here we go 30 years ago today K air 30 years ago man so this was 1919

(1:09:42) technology reactor uh this technology does not system is in the propulsion sy so he thought he was going to be a superhero huh this is 30 years ago man 30 years ago I believe bobazar actually this is too weird what do you think guys think he faked all this I mean granted I've been the perpet I've been the victim of various hoaxes but he really if he's been lying for 30 years man he's really clung to that uh to the lie huh system is an a gravity propulsion system the power source is an an I'm going to mute uh myself for a

(1:10:19) second and eat this uh sandwich here uh did Sean Ryan interview Bob Lazar maybe they'll interview me in 30 years guys guys if they are not going to reveal anti-grav tech for 30 years doesn't feel like we have a good chance of them admitting to it re anytime soon okay here we go I'm gonna mute myself here before I do that I want to hear you guys uh opinions tell me what your opinions are and boas are while we listen to this okay do all your psycho analysis on what you think is going on here okay I want to hear it all the good

(1:10:56) and the bad let's do it matter reactor uh this technology does not exist at all the claim sounded like Hollywood sci-fi months later when his identity was revealed Bob Lazar said he worked at a secret facility near Groom Lake where alien technology was being reverse engineered that is taken apart to figure out how it worked and whether the Pentagon could duplicate it this is the simple drawing he made at the time here I had access was permitted to view and look at the operation of this main level with the gravity amplifiers and the

(1:11:31) level below the premise seems less Preposterous now in a new documentary about Lazar he describes in detail the spacecraft he worked on 30 years ago the craft that I worked on that when it's when it's going to travel a long distance that is how it operates it flies along and it it puts its belly to the Target and then brings all the amplifiers to power and you know it shoots off in that direction it doesn't fly as it would in a science fiction movies it flies with the belly the bottom forward if the description of a

(1:12:05) spacecraft tilting sounds familiar take a look at the so-called gimbal UFO a video released by The Pentagon in 2017 Naval Pilots encountered a fleet of these unknown craft off the coast of Florida in 2015 and have since had doz of similar encounters the spike in UFO incidents prompted a recent policy change by the Navy which announced it wants to encourage its Pilots to report future incidents Pentagon officials reluctantly Adit now guys Mick West says it's just a balloon or something what does Mick West

(1:12:42) say he says this is a plane flying away God guys Mick West Mick West might be the

worst human being on the face of the Earth absolutely the worst human being on the face of the Earth just unbelievable man he's definitely not that stupid there's no way it's a plane flying away Florida in 2015 and have since had dozens of similar encounters the spike in UFO this is why I hated **mcwest** even before all this stuff I didn't even know but when they declassify footage and he's out here trying to like build like weird systems

(1:13:29) in his garage to try to claim that what's been Declassified isn't real not Mak any sense man it's like delusion one sec and without deceleration so we have a craft without rotors without heat signatures without plumes without Tail Fins and certainly no tail number moving in a way that is counterintuitive to our own Aeronautics when Bob saw that he came to the conclusion this has to be a gravity propelled craft it's rot that it does mimic exactly the propulsion system that Bob Lazar described Jeremy Jeremy Corell directed The Lazar

(1:14:16) documentary but he also broke the story about another now famous UFO incident the 2004 Tic Tac ENC the Navy pilot who engaged the Tic Tac Black Aces Commander Dave fraver has said he doesn't believe the astonishing craft was made on Earth that the propulsion might be anti-gravity when Lazar was shown the Tic Tac video for the first time it immediately reminded him of the sport model his name for the craft stashed in the desert there's no question in my mind I mean I'm virtually certain that's

(1:14:50) the way the craft operated and that uses interes the exact propulsion system former Pentagon intelligence officer Lou was in charge of the Secret Pentagon never trust a guy who doesn't have a neck guys never trust a guy without a neck study he told us one goal of the project was to determine the physics of UFOs how they can achieve the seemingly impossible the military came to believe the craft relied on special meta materials stuff that can't be made with known technology Lazar made similar claims decades ago and was ridiculed now

(1:15:28) the Pentagon I could see myself being the next Lazar honestly I know that sounds super egotistical but I could see them in like 20 years being like yep turns out Ashton was right we really can teleport stuff Ashton was telling people that we could do it 20 years ago got ridiculed for it totally attacked by a bunch of weirdo VFX wannabes everyone was saying it was VFX X turns out it was real it's what happened to MH370 is on the same page where the study magnesium bismuth zinc guys magnesium bismuth zinc layers UFOs did not end in 1969 with

(1:16:09) Project Blue Book in fact that was a lie is now an admitted Lie by our own Pentagon we are living in a world where it is understood that there are craft technologically advanced from unknown or should we check and see howed of humanology did he actually **debunk** Bob Lazar or did he just discredit Bob Lazar big difference big difference let's find out if I I think I watch the Stanton fredman thing bzar Stanton fredman fredman uh how did he uh I'm pretty sure all Stanton Freedman did was attack his credibility through

(1:17:14) his education that was missing right yeah I mean he literally built a rocket car yeah people knew him on camera I I don't know the basar stuff's weird man there's literally a news article talking about him building a rocket car I just I don't get it oh here we go found it proof

Bob Lazar's line this should be fun well so much for that that was a WordPress anyway so two years ago huh Freedman is wrong about this one

(1:18:24) I think we have to be a lot more skeptical of what **debunkers** say guys Bob Lazar W2 oops I don't want to I don't want to lose this yeah didn't he have W2s which thing are we looking at Bob Lazar I don't know why we're going on to Bazar uh b or down the rabbit hole of Bazar today but whatever kind of to keep easy I worked really hard did a lot of stuff today man I'm wiped out yeah not going to find any **truth** on **Reddit** that that's pretty sure about that where which of these things is the W2

(1:19:04) thing the thing I'm skeptical about is uh what is it Lia Element 115 I'm just not sure we need Element 115 for all this I mean he had a W2 from the Department of Naval intelligence seems pretty good doesn't that seem pretty good oh you want to look at images oh yeah I mean looks pretty good to me guys looks pretty good to me this is a W2 he was definitely there definitely got paid by them that's for sure what year is this

(1:20:09) okay I guess it's somebody who has me blocked oh it's this this this guy yeah richel grick well maybe now I don't believe it this Richard grick gu is complete loser complete loser obsessed with me I I feel bad for a lot of the people in the UFO Community because they're never going to get what they want people disclosure never going to happen other in their stories cont uh they met with AI they were taken trips to the back side of the Moon by aliens next guy would say well I went to Jupiter and so I watched this interview

(1:20:50) and this was a limited got people to kind the problem is he had like the original CNN brain guys he had the original CNN brain like he this was the time where everyone would believe the news would tell the **truth** and the government would lie to you as they were called they had their own subculture this from what like the 9s involved with that movement Gabriel green died in 2001 he even ran for president on a ticket when when does this originally UFO contact Stan fre died since then though we have ostensibly with

(1:21:25) credentials who are frauds and who have glommed on to pop 2019 two that come to mind uh Robert Scott Lazar supposedly a nuclear physicist with a masters in physics from MIT the master Electronics from We're forcing disclosure pretty hard but the government's never going to get to without videos like the MH370 videos will'll never get figured out how they work using Element 115 down to it's a long detail story you can buy the videos yeah eat them up I haven't seen you before but I like what the

(1:21:57) words that you're saying I did a lot of checking on Bob I tried to meet super conductors can likely allow high voltage to be produced without high heating that can provide gravity waves exactly it's all about superconductors I checked at MIT I checked at Caltech neither one ever heard of them well but the government wiped his records clean as the response legal council at MIT no way to do that I talked with a guy who has the we're in a situation right now where some people know what the **truth** is and a lot of people can't

(1:22:25) believe that it's real that's the kind of civil that's the situation we're in right now it's pretty wild and more and more people are coming to terms with yes there's I mean there has to be other forms of repulsion right people are coming to terms with it slowly it's gonna be it's going to break a lot of people Minds commencement lists and all that sort of thing no mention of Lazar none of the yearbook show Lazar you need it for Master's thesis well for master's degree you need a thesis

(1:22:53) I talked to the guy who holds those no Lazar item there uh he was asked publicly when did you get your masters from MIT well let me see now I think it was yeah probably 1982 I have friends who went to MIT I was accepted there myself couldn't afford to go out of high school seems like he's kind of got like the thing about the education I don't know like whether or not he actually had the education doesn't really make it what doesn't impact the claims that he made right and uh that's that's part of

(1:23:24) the problem nobody who's gets a master degree in physics from MIT doesn't know what year he got it in he was yeah like this is CNN brain that's the problem right now right is that it's all about credentialism W I know which schools did he go to it's like I just I don't care about that I just asked to name some of I want to know if he's if he worked at Area 51 like we've talked to people like Dave rosi right he doesn't have a PhD he actually works on Advanced propulsion he's a DOD contractor you don't need to

(1:23:55) have any magical credentials you just need to know how to make a gravity wave see now stigma is killing people for sure he named somebody Bill somebody I won't use his name on the here uh I checked on him was not a common name fortunately he was a physicist uh the only trouble is Bob said he would remember him from Caltech this individual bill never taught of Caltech he only taught never taught of Caltech I this just seems weird yeah it's a straw man **debunk** like the stuff that we want them to look into is actually the stuff about

(1:24:33) S4 and Area 51 like trying to hate on someone for whatever their education is doesn't **debunk** any of that but at Pierce Jr college now Bob himself had mentioned Pierce to me on the phone he did go there now that's in Southern California but and he was going there the same time that he was supposedly attending MIT 2500 miles east of there one heck of a commute if you can go to MIT you don't go to pierce yeah like all this this is all just like illogical arguments but it's whatever Pi is in your

(1:25:10) Ashton I don't know what that means but beyond that yeah he's just trolling I checked with his high this guy would be on **Reddit** like telling people that everything is fake I'm sure he's a smart guy I don't want to hate on people but he finished in the bottom third of his high school he finished in the bottom third of his high school class what does that mean why does that impact these arguments okay I think I've seen enough Stanton fredman that's enough of that yeah I mean this is the 80s man

(1:25:51) they can just delete a record they literally don't even have to delete them they just throw them in the trash and then they're gone I think that I don't trust anybody who's a UFO

researcher guys no offense um no offense but I think we have legit UFO researchers who have been following us saying nothing about these videos that we've been disclosing guys I'm going to show the videos this this this one is just incredible how is this too much for UFO people to get behind what's the sea lioning mean again I

(1:26:33) forget what that one means guys what does sea lioning mean oh yeah yeah the people are always like Ashton doesn't answer questions or whatever I mean you just ignore it the evidence stands on its own that I mean how is this not something that Jeremy Corbell wants to look at this this video is more compelling than any video Jeremy Corbell has ever showed in his whole life I just can't get around that why are UFO people looking at this going this is too hard to believe we're looking at freaking gravity engines here

(1:27:13) from orbs man well how are UFO people looking at this going nope this is fake what we're seeing the real physic of a plane guys you want to see what a fake video looks like let's compare it to a fake video someone made one today you want to see what it looks like when people use 2023 After Effects let's look at what 2023 After Effects look like guys like can people not tell what a real video versus a fake video looks like this is 2023 After Effects the plane's not realistic at all it literally just looks like a model

(1:27:51) floating the turn is just completely wrong I don't even know what's going on with these orbs here the clouds look extremely fake they don't look at all realistic the whole thing clearly is a model over the top of it the plane moving through the sky doesn't even look like a plane moving through the sky the tracking of the plane also doesn't look realistic it looks like they just set up a thing to have it randomly Zoom around like it's not like you're going to overshoot it this way there's no shake

(1:28:16) whatsoever even the fuzz in the background doesn't match like this I'm supposed to believe that is this supposed to be a real plane guys like even this whatever this is supposed to be here isn't even close to what the real orbs look like because the real orbs actually follow science this is just somebody's Little Dot that they made with little fuzz coming out of back it and they did this while they were copying the real video imagine if somebody did this from scratch right at the plane just like

(1:28:46) literally just floating through the sky I mean this this to me goes to show you that a bare minimum what we're looking at is one of the best works of art ever if it's an actual fake video right and if it's real well then obviously we should be preparing for what this means this camera shake like not enough to convince people the heat signatures and the orbs while they're spinning around with the forward-facing gravity engine imagine thinking that that's even remotely close to our real video the weirdest part is the comments

(1:29:27) of the the the **redd**itors who are like this proves how easy it is what what what look at this zap look at this zap look at this I don't know exactly what a portal is supposed to look like or a macroscopic phase conjugation but I can see the the tail coming out of the out of this thing I also don't know where like Ken and some of the other people are talking about how you can see

the plane afterwards there's no plane after this guys what are we talking about where are they people talking about they can see

(1:30:09) the plane there's no plane anywhere in here people are like oh you they you can see where they blurred the plane out what are you talking about plane's gone man plane is gone it's like look at these orbs compared to the others and when you zoom in on them you can see the heat signature as well it's like how do people really think this is fake huh if this is fake I want to meet the people who did it yeah the camera Shake is extremely telling because it's extremely accurate look at the orb heat signatures

(1:30:52) here spinning on their axis converges causes a singularity poof and the craziest part is this matches up with electrical engineering like we can explain the science too that's the wildest part that's I we can explain the science this is too much for ufologists apparently I mean yeah it is beautiful it's literally beautiful look at that look at that poof the centered Heat sign can be the fire I don't think it's fire actively I think it's just hot smoke billowing out of the plane from the air conditioning

(1:31:36) units but it could be if for some reason the landing gear was on fire could be but I think the most likely scenario is that the forward cargo Bays that are insulated uh where the the fight where the uh lithium batteries were that's what exploded took out the damage to the electric Bay Electronics Bay which is right in front of it it's not necessarily high energy although what's happening is that the if like what Salvador Pas says is true then what's Happening Here is they're breaking the swinger limit they're

(1:32:15) producing their amplifying energy to such a degree that it's breaking down the vacuum of SpaceTime I think the more logical explanation is what it's able to do is uh this endothermic event is a cold event and it's able to free the electrons from the plane causing the entire plane to become super conductive and now the electrons break free and form a matter wave around the plane and then that's what's causing this uh phase transition of the entire plane itself seems hard to believe but yeah and I think these things are

(1:32:46) like acting like magnets right magnets have the same polarity if you were to jam them together just breaks the shwing limit boom that's what it feels like I don't know that's just what my gut says I don't I don't understand electrical engineering well enough yet yeah nobody is smart enough to come up with this like it takes too much requirements of science to explain it and the engineering part like the biggest thing when I watch that fake video is like just the plane the plane is clearly flying in accurate speeds you

(1:33:16) can just tell like when you look at it it's accurate right this is the accurate turn of a plane wall to people mapped it out it's actually maxing out the capabilities of 77700 the guy's Recreation of it looks like crap right it's like just a crappy model this you can see the size of the plane changes he has to zoom in sees it better zooming in again sees it a little bit better like this is an actual plane flying some people can say that they think they destroyed it the problem with it being destroyed is where does the

(1:33:50) energy go Bob Greener said that that basically there's like a small percentage chance that this is being annihilated and that the um like cuz you can't create or destroy anything right it just changes forms so if that's the case that energy has to go somewhere it has to turn into Mass so where does it go right that's the problem about that scenario and why destroy it too cuz we know it's a fire scenario we can see smoke billowing out of this plane so why are they destroying it all they have to

(1:34:27) do is just let it crash just let it crash into the ocean things gone right these videos are just incredible man incredible that's why I'm certain this part here where like the thing the the heat signature is changing and warping especially as the shake of the camera happens like it's like oh this would be easy like VFX people like **Reddit** brainers are just this would be easy this would be easy but of course nobody can do it how fast in real time it happens in like under a second under one second it's just

(1:35:13) gone so fast our eyes can't even catch it look at that completely encompassed cold phase Tren this is this the aouth right here is this the azth being formed this is like what if the engineers would say this is the breakdown of the uh fabric of SpaceTime right here the physicists would say that this plane itself is undergoing a phase State transition itself and this is the byproduct I can't tell who's right the physicist or the engineers not sure this would take like five minutes it's just creating the storyboard just

(1:35:52) to make the storyboard guys so keep in mind this would be like the **debunkers** are just so dimwitted just to create the story board for this is going to take you several days just to come up with a story okay we've got a drone tracking the plane and we got satellite tracking it and we're going to have the plane be making a banking turn descending we're going to have cumulus clouds in the background all this stuff would take so long just to create like a one minute video this takes all night for us we remember when

(1:36:25) we worked on the catastrophic disclosure storyboard takes like all night now people are talking about making two videos like they don't even understand the prerequisites **Reddit** brain people have the everything is so easy but no one can do it scenario case right I tell you what try to do it from scratch try to make this from scratch without copying anything tell me how long it takes right just it's like wow yeah the clouds seem to match in both videos too we posted one of the videos what was that one video I forgot about that one we might

(1:37:07) have to retweet that post it was before all the cloud crap that one this one's good too clouds accurately being illuminated what's this one someone was trying to show me there's Optical lensing I just couldn't see it there's some kind of distortion that happens but it's too too small what's this this was all the videos put together from different

(1:38:10) sources what's this one this is the VFX uh taylor I need to save this video set off blast waves oh we're going to watch this one again you my best silly wild ass please do stay tuned in that way um we got a lot going on can I give you my best silly wild ass guest okay sure somehow somebody opened up an interdimensional portal in that plane went through it and and we don't

know where it is or where it's going to come out at but somehow it's lost for the time being it will be found again fell in a hole okay the way

(1:39:05) he smiles here at the end creeps me out creeps me out I've already tracked the the orb movements with tracers we've already got that done that's somewhere in here too we've already done everything you guys could imagine she's like okay uh smiling he's like I'm not joking I'm not joking oh here it is here's the synced up one look at this you can tell the clouds match so you can see the Drone is back here and it's seeing the same Cloud that this plane is seeing right here in fact

(1:39:53) this also means the perspective is so angled that this plane is actually in front of the cloud here this plane is actually in front of this Cloud these clouds are actually over here it's from the angle of the satellite we might actually be able to work out the angle of satellite from this this means it's really far away because this is a optical illusion this Cloud's actually not not on the other side of the plane here the plane's flying above this cloud and the drone's able to see it and

(1:40:30) then here the drone's seeing this next Cloud I mean you sync them up and it matches look at that look at that so satellite's looking down some super far away right and so this plane is actually on the other side of this Cloud but the angle is giving it the Distortion that makes it look like it's not is that right the Drone is actually what below the plane lower than the altitude of the plane looking up yeah the Drone is lower than the altitude of

(1:41:35) the plane looking up and here it looks like it's the Drone is over here right so it's looking over here and this is why the Drone is able to see this Cloud right here in the background which is this Cloud right here yeah I mean that's the drone's like right here guys the drone's looking up at the plane right where my mouse is look at this drone's right here you can pretty much tell where the Drone is no clouds because the drone's like right here plane gets here it's in front of the actually in front of the cloud here

(1:42:35) but the angle is being deceptive this is why we begin to see it right here see the cloud can even see this I mean looks like exact same Cloud it might even be going through the cloud in the Drone video might be like right next to it gets to this lull Point here where there's no Cloud so that's why you see this now the drone's looking at an angle here and then it's going to get to the where this cloud is where now it's going to be able see it from an angle in a second so it's looking over here so it's

(1:43:14) like right here somewhere seems pretty accurate to me guys what do you guys think seems pretty accurate I don't know pretty wild yeah it's a lot of detail to put into a fake video man a lot of detail I mean it's like perfect syation right it's wild yeah and the lithium my battery fires um what was that one called going put this into my other videos thing cuz that one's a good one what's this one this one's a little too fast okay I'm gonna go to sleep I think guys uh I'm going to post that Joe Rogan

(1:44:17) clip in the morning yeah that one was flipped that drone that one I just showed uh the Drone was flipped so it matched the perspective because otherwise the perspective would have been backwards so the Drone one was flipped on that last one I just showed you guys intentionally so that you have the same perspective on both because one's looking from one way right so like my phone here is the the plane right you satellite's looking down this way right and then the drone's looking at from this way so you have to flip the Drone

(1:44:47) in order to have similar uh perspectives which is what they did on the last one pretty wild right what was uh what was King friction saying you say it's accurate based on the position of the satellite yeah I mean maybe let's look at that real quick yeah I mean look how far the satellite is so that angle is going to be really stretched I mean I think it's accurate man yeah man look how that stretch the angle is going to be from that far makes sense planes turning here yeah keep in mind this is probably not

(1:45:43) accurate to how far up it is it's 900 km but pretty pretty close pretty close yeah I think it's pretty bang on as well these might be off by a minute at most but otherwise these are pretty much dead on the satellite video was first which makes sense so oops satellite high quality makes sense because this satellite video I mean you can see the subtle movement you can even see it just like Chris let said you can see the water changing as well see the water stuff moving here you can see these clouds kind of naturally

(1:46:25) moving subtly it makes sense because the drones cropped out they thought didn't even think they had to release the other one um King fiction you just have to email me King fiction email me at MH370 xpron tell me like your name or something and I will give you a Discord invite no trolling in my Discord uh if I even suspect you have being weird or anything like that you'll be booted but as long as you're a normal person there no big deal you can see the White Caps disappear some of this Distortion might

(1:47:12) be the citric session the problem is each perspective is so minimal I mean you can see these clouds moving here though these these clouds like here you can see it pretty clearly I mean just look when I move the mouse like just look at look at these clouds right here right where my mouse is down here look watch these clouds guys ready watch these clouds where my mouse is down here you can see them changing you can see them changing look at that all I have to do is move the mouse and you can see these clouds right here

(1:47:49) changing these like very light clouds look at that there's not movement what are people talking about there's not movement not look at like literally I just had to move the mouse you can see the movement all throughout here just watch this area right here watch the movement what are they talking about yes so to be real with you guys when you join the Discord I'm only going to say this once before I log out when you get your invite to the Discord you must verify right away if you do not verify right away the Discord

(1:48:29) boots you so if you don't know what that means you need to go to the verify Channel you need to verify then you need to introduce yourself you don't have to tell me your real name

in the Discord but you got to introduce yourself yeah what do you guys think the next big fake **debunk** is going to be we've already had two people falsely claim they made the videos which obviously one of them's lying if not both of them because they can't all have made the videos none of them have any evidence of

(1:48:53) course so what's the what's the next fake **debunk** look at the clouds moving man you look at all this over here too I mean everywhere you look you can see the clouds moving doesn't mean they're moving fast I mean clouds yeah yeah at this point even if a **debunker** came forward or a hoaxer came forward I'd really be skeptical they've had a lot of time to come forward and collect 150,000 now they would come forward I'm going to be skeptical I mean look at the zap look at the zap look how the zap accurately

(1:49:28) eliminates the clouds huh yeah the orbs are consistent between both videos so I'll play the side by side keep in mind the Side by side's like not perfectly synced up it's but it's synced up within like a quarter of a second synced up within like a quarter of a second I should sit up more not slouch over keep in mind you're looking from two completely different perspectives and two different frame rates as well people think that the orbs aren't moving in the satellite video because they get confused on the fact that it's

(1:50:32) in a in a ring formation and it's only six frames per second yeah you can't tell Cloud movement when you're flying it's basically impossible yeah the corridor creep people are idiots there's no simple way to put it they're actual morons there no there's no nice way to beat around the bush that Nico guy and the other guy they're absolute morons they're just total idiots it's really all it comes down to like I I wouldn't even be surprised if those guys don't even do VFX wouldn't

(1:51:09) surprise me if they literally don't even do VFX if they just pay people to do it for them I'm glad they've learned how to grift uh Zoomers with uh cheesy crappy videos though that have like count chakula in them and weird stuff they found their grift and they make money at it so congratulations to them but they're just idiots yeah tomorrow should be good the cordor crew yeah the cordor crew said that the light on the zap didn't accurately illuminate the clouds I was like what is he talking about

(1:51:52) Danny Jones gets mad at me because I'm sitting here like dude he's wrong I mean it's not a matter of like ar**rogance** it's like look at the zap it accurately illuminates the clouds what is he talking about even the **debunkers** agree that it accurately illuminates the clouds all you do is just do this and you can see that the zap accurately eliminates the clouds it's not rocket science it's not even rocket science just look at it oh man they're like there's a and they're sitting like and there's a light

(1:52:25) source there's a they're trying to say it's daytime I'm like where's the light source coming from I'm like look at the clouds tell me where's the light source coming from uh I'm like where are the Shadows do you see any Shadows no no Shadows Danny Jones's like idiot producer guy is like well it's darker down here I'm like yes cuz there's more IR radiation at the

top of the clouds it's not shadow my God man it's like why is there not Sun if there's if there is a sun that's beaming

(1:53:00) down on the clouds why is it not on this Cloud right here why is this Cloud Darker Than This Cloud which is clearly in the open there's no Shadow I would have respected it more if they were like no this is a computer program it's been computer program that's why cuz like there's no directional sunlight there's no directional sunlight anywhere you just ask people where's the sun where do you think the sun is where do you think the sun is why is if it's coming from the East why is this

(1:53:30) Cloud not lit up if it's coming from the West why is this Cloud not lit up is the sun coming from straight down why are these clouds not lit up uh Diamond thing is going to come out tomorrow so we might do a live watching of that guys yeah no you're right guys the red version looks more real obviously it's easy to fake I asked the guy if he would uh stream him making it cuz I don't think it only took him five hours either I want to watch him stream at make it well this is creepy as hell this is creepy as

(1:54:16) hell H Lex fredman the dream never going happen I guess never going to happen perfect Recreation guys perfect Recreation the way the plane turns here is so silly dude so silly looking like this just goes to show you that even with 2023 technology you can't even get close to faking these not even close does do they think that this camera shift is accurate and then it what just locks in it locks in on the plane this is actually the perfect example here of how why it's not faked whenever you fake a video like it's

(1:55:05) exactly perfectly in the center just like this guy made it like this right it's not like when our videos where it comes off the screen on the screen naturally right he tries to like fake it by like having it like just zoom around randomly right like Zoom around randomly and then instantly put it in the center of the screen boom locks in the turn of the plane also just doesn't look real at all I mean I that honestly tells me what I learned from that is that the uh top gun Maverick person is definitely real that top gun

(1:55:40) Maverick person's real um because what they explained was that the faking the plane the hard the hardest part of Faking the video is the accurate movement of the plane and the speed of the plane and yes that's a 747 yeah it's a 747 I think they had some reason why they use a 747 I don't know why doesn't make any sense but that was that was a 747 not a 777 I mean I think there's some reason why I'm not sure what that reason is but and the zap is like just the fakest looking thing ever the zap is just like

(1:56:13) a shadow it's a shadow that they used I know I should have sent my love letter no I think it might have crept to Lex out I probably crept him out a little too much as it is so okay guys well I'm going to go to sleep I'm tired it's already getting late I needed to honestly get some real sleep tonight so just want to go ahead and appreciate you guys for following along tonight hanging out with us um you know being here I hope you guys have a merry Christmas I think we will probably talk tomorrow I mean I'm going to

(1:56:42) definitely show have The Diamond podcast going tomorrow so you guys can check that out I'll probably be in the live stream for it it's only about 45 minutes it's not too long but it's it's a good one we talk about the **debunks** uh in the diamond podcast we talk about the the the fisherman who found the piece of the wing Diamond's one of my favorite people frankly I I would probably talk to that guy a lot like the alien addict guys they're they're fun man yeah leave some cookies out for Santa folks have a great

(1:57:11) night guys we'll talk soon okay peace

MH370x - MUFON Presentation Live 12/20/23 - YouTube

<https://www.youtube.com/watch?v=Nbb4AMdSK3w>

Transcript:

(00:08) okay Nori looks like she's having trouble yeah and Tim can you uh mute your video sorry about that probably fine machine keep should be good am I muted okay I'm unmuted here okay we're getting ready we're just making some final prep on my side to make it uh the lighting looks pretty good I think on our side here yeah I just happened to have one of my friends in town who's a professional uh um producer so he's actually helping with the light right now so this should be a nice one for you

(00:51) guys here you know somebody named Jimmy who's been joining for some time now and I guess he having trouble joining I don't know what you mean not on my list will you guys let me know when you're ready I'm going to pretty just getting my stuff ready on my side but I'm pretty much ready to go stop all right I think everybody that was in the waiting room is now in let's see just moving some of my stuff around for the presentation one sec recording in progress does that recording mean we're

(01:48) ready to go yes okay okay one second I'm I'll start with mine get over okay go for it I have a series of announcements I make the beginning I'll start with that all right welcome to uh muon Orange County in the December 20123 program oh it's streaming too and i' like everybody to mute their mics unless they absolutely need to talk as part of this int explanation get over here all right let me see ask everybody to mute their [Music] microphones baby get in the house you might have to just force M people I'm not sure they're

(02:42) they're listening all right there we go okay I'll start again welcome to the December 2023 program of moxon Orange County I'm Eric Hartman the section director most of you know that muon OC is an affiliate of the mutual UFO Network work which is an international organization it's the mission of which is to educate investigate and research unidentified aerial and related phenomena tonight's program is a little bit different because we're we're not directly uh as far

as I know going into

(03:18) uh the UFO field but maybe so indirectly we'll see what what it brings up these monthly programs feature the educational part of our mission statement and in our research in selection of speakers we consider and evaluate the many different types of phenomena that have been observed and in some cases personally experienced we Define the UAP UFO phenomena broadly encompassing not only apparent Hardware in our skies oceans and on land that isn't from civilizations we're aware of on this planet but also non Hardware uh

(03:55) unexplained phenomena apparently under intelligent control we look at the possible and most likely explanations for what is being observed and experienced including the Technologies or other methodologies being used considering all the available evidence and the nature of the interest or agenda of the intelligence behind the phenomena we provide a forum to our speakers we don't have a chance always to screen them in advance but uh they have to be talking about something that is related to our purpose and and our

(04:31) interest we encourage you all to visit our website at [www.mon.org](http://www.mon.org) uh especially toward the beginning of the month or maybe shortly after the beginning to uh read up on the upcoming speaker who usually we do have some exceptions but usually is going to be addressing this on the third Wednesday of each month and um our our next speaker who is going to be here on the 3D Wednesday in January or I have I should have right in front of me here but it is I know it's Robert Salis why I don't see his name in front

(05:16) of me on my list I don't know but he's got a very interesting and impressive background and U in 1967 I recall Robert uh Salas was stationed at the U mstom Air Force Base when they had a very interesting UFO encounter that hovered for quite some time over the front gate to that base and in the course of the time it was there all of the ICBM missiles which mstom was controlling went down sequentially with no explanation they tried on temporary power to start the uh the silos and the systems back up again

(05:58) which worked only very briefly and then those all shut down it was pretty fascinating I think the focus of his talk given that that happened as long ago as it did is going to be more up to dat he's branched out a lot in his investigations that should be pretty fascinating so that's going to be January's program tonight and let me just take a moment here to admit a few more people okay tonight we are pleased to have with us Ashton Forbes and the topic of the program is MH370 cat catastrophic disclosure Ashton

(06:37) is the organizer of MH 370x a volunteer group dedicated to solving the mystery of The Disappearance of Flight MH370 with the mission of solving the mystery and disclosing what occurred uh tonight's program will follow our usual format in which uh we we'll allow Ashton to make his presentation and then we can if it's all right with him we're going to go into our usual Q&A procedure we would encourage everybody who wants to ask a question to raise their hand using the symbol in their taskar and so we don't have

(07:15) everybody talking at once I'm still letting people in the room that's why I'm pausing momentarily and uh hey Ross is the camera asht so but the Q&A can go as as I guess he's willing to put up with it deal with the questions and with that we'll begin and Ashton it's all yours well thank you very much Eric for having me on thank you muon here for uh listening to the evidence and the presentation I'm be putting forward today as was mentioned the name of this presentation is catastrophic disclosure

(07:53) and the reason for that is that um I believe that the only true disclosure will come from the the people uh never going to come from the government and what that means as well is that we need uh videos and evidence out there that are indisputable that are put together scientifically and what m370x is trying to do is trying to present the evidence in a scientific way where we can show what type of Technology we might be dealing with when we are dealing with the UFO UFO phenomenon and UAP disclosure so today's presentation about

(08:26) MH370 is going to be a mixture of conspiracy as well as advanced technology and uh without further Ado I'm probably just going to get right into it I appreciate that introduction so I would ask that uh for the format of this is I'm going to go through some evidence I'm going to show some videos I'm going to show the MH370 videos as they referred to and then near the end uh I will let you guys as ask as many questions as you want about it and if I missed anything um I know people are familiar with the case or not familiar

(08:54) with the case and you want to know stuff uh feel free to let me know so right at the beginning I'd like to start with what I call the flight path explainer this is going to be a little bit of an overview of what happened with this plane um so that people who are not familiar with the incident can get into it after that I'm going to explain why the narratives that are out there uh don't make a lot of sense why they are holes in them I'm going to present a narrative that makes a lot more sense

(09:20) than what these uh narratives that are out there these stories out there really tell we will get into the scenario that we've put forth about what really happened to this plane then we will look into the videos Okay so let's go ahead and I'm going to go ahead and share my flight path explainer put together by the MH 370x team here so you guys can see this presumably can someone just confirm they can see this uh video here that I've got up yes okay great okay so this plane MH370 took off from qual Lampur uh which

(09:57) is in Malaysia and is heading north East towards Beijing so about 40 minutes after takes off takes off at 1642 UTC we like to talk about things in terms of UTC time because it's easier to keep track of it especially with time zone changes um 1719 UTC is when we get the final officially released communication that says good night Malaysian Airlines flight 370 the government didn't release this communication till uh I believe it was Weeks Later under heavy pressure and then at 1720 1 UTC just 64 seconds later

(10:32) the plane goes dark now the plane after it goes dark here turns and goes back across the coast of Malaysia here or down the peninsula now this was not known right away for days after

the search they were searching in the South **China** Sea but the Malaysian government knew the entire time because they had military radar that tracked this plane going directly to panang panang is the closest airport that you would go to in an emergency situation here slightly closer than qual lur and has better elevation as well for

(11:02) an emergency event after it goes to panang and gets to panang so 1721 UTC just for some perspective is 1:21 in the morning so it's going to be night time it is we've checked the moon phases the moon was down the sun was obviously set so it was Pitch Black it gets here to panang and this is where this official narrative uh not even official Nar the official narrative that's out there says that they don't know what happened to this plane the narratives that you hear in the news will say that this was a pilot

(11:31) suicide which doesn't make any sense because if this was a suicide route they would have just crashed a plane in the South Indian Ocean they're certainly not going to go to the nearest airport that you would go to an emergency scenario now it gets to the panang airport and for whatever reason it doesn't land but the co-pilot cell phone pings a cell tower so this is about 30 minutes after the plane goes dark here um and at this point for whatever reason we don't know exactly it doesn't land I'll go to that in a minute I'm

(11:59) going to kind of replay this and tell you what our scenario is that we put forth afterwards it heads out over here into the Straits of Mala the Andaman sea towards the nicobar islands over here now originally if you look back at the news reports of the next day you will find out that the last communication was at 1840 UTC which is somewhere around here where this little boat is and we'll get to the purpose of this boat in a minute it wasn't until later that the Malaysian military said that their radar lost track e that

(12:29) either 1822 UTC or 1815 UTC it actually isn't very clear even now which one is the accurate one about 230 mil off the coast here after this point all we have to rely on is these iMat pings that are out there now the iMat pings and the investigators who've looked into the case before us and I consider myself an investigator the way I've looked at this case has been like looking at a criminal case collecting evidence and trying to put together a story that makes the most sense the investigators would say that

(12:59) these ersat pings say that we can't tell exactly where the plane went we can tell there's an arc and they look at these arcs and they say that it couldn't have gone North because there's too many Radars that would have seen it so it must have gone South they claim the location they play claim this plane went South is right here about where this boat is at 1840 UTC again 1840 UTC is the time that all the uh the stories the next day uh subang air traffic control says they lost contact with the plane

(13:28) and then they claim this plane flies into the South Indian Ocean for another 5 to 6 hours until it runs out of fuel and crashes somewhere in the southern Indian Ocean now this is not consistent with a p a pilot suicide scenario again all the pilots that I've talked to at least um say that this doesn't really make sense from a suicide scenario if you look at the German Wings

situation in 2015 you find out that that pilot crashed the plane like less than 10 minutes after locking the co-pilot out in 9/11 as us Americans are going to

(13:58) know you know all those planes were crashed either into buildings or in the case of ua93 where the passengers fought back those planes crashed very quickly as well now let's present a different scenario with some evidence as well same same flight path here as we would see this plane again is taking off but when it gets to 1721 UTC our first witness sees the plane on fire and this is going to be consistent with the 487 lbs of lithium ion batteries that in the Cargo Bay Lighting on fire from a runaway lithium ion battery fire lithium

(14:34) ion batteries are extremely dangerous they've been outlawed in the passenger the cargo bay of passenger planes in 2015 one year after this by the FAA these batteries initially the CEO of Malaysian Airlines lied and said there was nothing dangerous in the cargo and then later on had to admit that there was 487 pounds 221 kilogram of lithium ion batteries that were not screened twice and they were put together and packaged unsafely that same day so Mike McKay is about 300 miles away he sees the plane he sees it very low on the

(15:09) horizon and he sees it on fire from between 5 and 10 seconds he writes an email about it to his work colleagues he says I must have seen the plane it was in the right location the right time at 1721 UTC and this is going to be consistent with the the batteries there was two stacks of batteries that were in the forward cargo Baye that are right next to the main Electronics Bay exploding and potentially damaging the main Electronics Bay which causes the plane to go dark now these bays are actually built to maintain fires and

(15:40) they actually have automatic fire suppression devices that can last for up to 3 hours they would be battling this Blaze now more about the lithiumion batteries is that the runaway lithiumion batteries the reason why they're so dangerous is they keep coming back up again so you can put them out but then they're going to keep coming back up so this is going to be extreme ex dangerous event for this plane if you Google at the battery fires you can see examples of how dangerous they are and you can see that they took out several planes

(16:06) before 2014 so not just Mike McKay but there's actually nine Witnesses along the coast here that all hear loud noises at 17 around 1720 UTC the same time that these batteries ignite now fast forward 10 minutes later this plane turns around and now it's flying to panang because it's an emergency scenario this is the closest airport they would go to in this emergenc the event the explosion might have actually depressurized the plane when people lie a lot of the times they have an element of **Truth** so this

(16:37) scenario wouldn't be where the pilot is depressurizing the plane to knock everybody out they're the plane is depressurized from the emergency event and what the Pilot's doing is they're trying to keep everybody alive and the evidence for that is that 10 minutes later 1730 UTC there's eight fishermen off the coast here of Malaysia and Thailand right along the border here they see all eight of them see this plane flying unus usually low the reason why the plane would be flying low is if you're under 10,000 ft now you have

(17:03) enough oxygen for passengers to potentially be able to breathe in a depressurized scenario the oxygen masks on board the plane only last for about 30 minutes so it's not really a lot of time for those passengers in addition to this there's more evidence is very important another 777 Pilot Flying to Narita to Tokyo here's a communication from the plane indicating that the communications did not go out at 1721 UTC they don't want to be named because they don't want to lose their job like Mike McKay did and they hear the the

(17:34) voices of the pilot and potentially the co-pilot through a lot of static there's not a lot of other information about this communication however there's an interview with the Malaysian Minister of Defense 7 weeks after the events when he should have had all the information he contradicts himself and he's a very sketchy dodgy guy he won't answer any questions he won't even answer when he was told when uh about the plane going rogue or going missing but what he says is the plane is unidentified but then he says they knew

(18:02) it was civilian airliner and they knew it was not hostile the only way you could know the plane's not hostile is if you have communication with the plane otherwise there'd be no way to confirm it's not a hijacking scenario or that it's not a pilot suicide scenario so there's a good reason to think that both this plane is on fire and the Malaysian government knew it was an emergency event now why does it not land a panang when we look at the videos here in a minute uh we will see there's a heat

(18:33) signature right where the uh landing gear is it's possible the landing gear is damaged we actually believe that the forward cargo B fires would be causing the smoke to circulate through the air conditioning system and blow out the heat through the heat vents that are near the landing gear but if the landing gear is damaged now you can't land if they actually did not respond to the plane being dark like maybe they really didn't know about it for 30 minutes while it got here it's possible because

(19:01) it's 2: in the morning that the runway lights were not on in panang keep in mind panang the airport would have been closed this is also a third world country so it's plausible that the landing gear lights were not on or the uh landing strip lights were not on and then it wouldn't have been safe if the landing gear is damaged the next thing you're supposed to do as a pilot you're supposed to land on your belly on the plane without landing gear which to me seems very dangerous um and I think that

(19:26) at this point from talking to Pilots it would have been a judgment call the issue here is that if you have fuel another 6 7 hours of fuel in the in the plane this plane is going to explode if they try to land on their belly so for whatever reason we don't really know they didn't land here the next thing you're supposed to do after that is you're supposed to land in the ocean so one of the big questions we don't know is why don't they land right near panang maybe it's possible that they wouldn't

(19:50) have had any support what **I want you** guys to keep in mind is that if you try to land in the ocean uh your plan's going to rip apart so at this point you could argue that the plane is

essentially doomed if they couldn't land in panang the pilot is it's probably a doomed situation for this plane um when they try to land in the ocean it's going to rip apart into pieces and if people don't have uh you know a way to swim or they uh there's not like active support nearby uh you know it's going to be a bad situation

(20:19) for them now the last witness so we've already had at this point uh one person on an oil rig we had nine people on the coast and we had eight people in fisherman boat so we've already had 18 Witnesses here coating a fire event but now we have our main witness Katherine T she's on a boat over here she's heading from India to puket Thailand right here she sees a glowing orange plane with no navigation lights coming from the right same direction MH370 would be coming upon the agreed upon flight path by

(20:48) everybody there's no way she didn't see this plane she also sees two other planes flying high that have L that have uh land navigation lights on them this plane that she she sees is flying relatively low and for the 5 to 10 minutes of her sighting it's descending as well she also sees it turning consistent with what we see here from this turn uh as recreated by one of her sightings a few years later even to this day she sticks to her story now the reason why the plane would be glowing orange and it this took a little while

(21:18) for us to figure out is that the hon fire extinguishing devices that are trying to keep this fire out they release bromine which is a chemical which is a hon gas Halon gas and hon uh lamps look just like what her sighting that was recreated by artists that she had that she talked to look like it's almost identical so the idea here would be that this 1 hour and uh maybe 1 hour to 1 hour and 20 minutes of battling this fire it's been releasing hallogen gas bromine throughout the entire plane that's seeping out of the plane causing

(21:50) it to glow orange in the very dark night to her um so this is the part where we think our videos happen um and I'm going to get into the videos in just a second also one thing I want to say as well is that she also sees dark smoke coming out of the back of the plane as well okay and actually I think I will just go ahead and show the video side by side now and then I'll do a detailed analysis of the videos later because **I want you** to see how much is corroborated by what I just mentioned now one last thing I'll mention before I

(22:21) get to that is that there was also an intercepted Chinese only Mayday call only reported in Chinese news news the time was supposedly intercepted at 2:43 a.m. if you convert that to Malaysian time it's 1843 UTC the sighting of KT's estimated sighting is 1840 UTC that intercepted communication from MH370 claims that the plane is disintegrating and attempting an emergency landing so now we have corroboration that potentially there was an emergency landing attempt in the ocean which would make sense a fire that we see as well as

(22:57) a witness that supports that now let's go ahead and take a look at our sidebyside MH370 videos and this is where we're going to get into a little bit of the UFO aspect here so right away we can see in these videos there's a smoke Trail coming from behind the plane on both videos both videos are in perfect synchronization with one another we estimate that on our left video

we're clearly looking at a drone here um we think this is an mq1 C Gray Eagle it could also be an mq9 uh they both have the exact same uh

(23:31) configuration in terms of their looks and the Right video here we believe we're looking at something called cbers space-based infrared system essentially this would be a satellite video now it's not as simple as looking through a satellite if we look at the cers video which we will look at in a little bit here um it's a system where it's like a Google Earth video playback for the military for tracking boats planes uh intelligence and Battlefield awareness Battlefield awareness is important because when we look at at

(23:58) this this video on the right we don't see the Drone the Drone is just cropped out of view here which now this starts to indicate intent in the person who would have been leaking these if these videos are real as well when you look in the video on the left I think a lot of you are probably familiar with the 2017 DOD Navy videos Flier footage forward looking infrared we notice here that this is not black and white we also notice there's no HUD data either so if this is a real drone video then this is potentially done by somebody who's an

(24:27) operator They removed the H data they colorized it with a thermal layer using the onboard software so that we would see more details notice as well the smoke here it starts to stack up just like you would expect if you were to change your perspective and look at a smoke trail from dead on now I also want to point out the plane is low how do we know the plane is low because these are cumulus clouds that we see in both videos cumulus clouds only form between 1,000 and 5,000 ft so this plane is flying very low and

(24:59) we've actually had Engineers look at the turn that we saw here initially this plane is descending as well it's maxing out the capabilities of a 777 wall in descent if this was not descending and not turning then this would not be a realistic uh perspective of what a 7772 200 could do it's traveling at about 150 to 200 miles hour just like if you were in your car and you're turning you have to slow down same thing happens with a plane as well so in the Right video we see this map Mouse there was actually a

(25:29) mouse that came on the screen this is actually an indication that what we're looking at is a citric session on the right now for people who don't work at large companies basically every big company uses a citric session to log into their databases um through a remote terminal and this mouse is running at 24 frames per second which is uh similar to what a citric session would run at but the background is only six frames per second so this would indicate that somebody's actually logged into the spy satellite

(25:57) database using a citric session now for my UFO enthusiasts here get ready you're going to have a good time in a second look at was just flying in on the side of the screen coming in at Mach Three speeds some kind of orb here this thing is going roughly based on the pixel how fast those pixels were moving right there roughly 2,000 or more miles per hour if this was a conventional craft it would be getting ripped to shreds just from the friction of uh the air now it's sling shots past the plane and then what it's going to do is it's

(26:30) going to come back and it's going to start rotating around the plane here and we can see right away it almost didn't get to the plane it like missed it and then it starts to rotate like it's locking onto it here now the second orb is going to appear right where my mouse is it's hard to see in this version of the video I have other versions We can potentially show later on if people want to see but it skims across the water shoots up through this cloud and joins the first orb and then very quickly a third orb is

(26:57) going to come flying out of the side of the screen here it's going to join the other two and notice right away you can see the equilateral triangle pattern this is a  $120^\circ$  sin 0 point signal pattern and what that essentially means is a perfect equilateral triangle that is forming there with the plane as the center of mass in between it now on this left video and we'll dig into this a little bit more you can tell that there you can see these orbs here pretty clearly in the thermal and you can start to see

(27:22) these lines behind them we'll come back to those as well I just want to do a quick re a brief showing in the video here to show us that we've got this smoke coming back behind the plane we can see this plane descending consistent with the witnesses sighting who's somewhere on a boat probably we can't see it because it's cropped out um and now the pattern the pattern here looks like it's scanning the plane almost we can only speculate but we can tell there's clearly purpose in this pattern

(27:48) now when the plane gets to where these clouds are the orientation changes and it becomes perfectly vertical and this appears that it's getting ready for something that's about to happen we can also tell on this video on the left it's like the the plane's off the screen so someone's manually tracking this video or tracking the plane and they're zooming in here and all of a sudden we're going to see the plane com in now a much zoomed in view notice the shake here as well the shake is very prominent

(28:14) because they've zoomed in like just like if you were zooming your camera on something far away it's going to be shaking a lot more than if you were not zoomed in you can see this heat signature I was talking about right in the belly of the plane as well and now we can very clearly see that this smoke seems to be coming off maybe even the side of the plane right here and not coming directly from the engines as well you can see this orb has a heat signature on it as well right here as well because of the pattern we were

(28:39) seeing from these orbs it seems almost impossible that there's any beans even a human or alien that's flying these These are being remote controlled this is some kind of computer program that's being run it could even be an AI That's running this I will leave it up to you guys to kind of speculate as to what you think you're seeing and I will tell you my opinions as much as you guys want um but we'll get to that in a little bit as well now notice this pattern here this circle ring pattern around the plane now

(29:06) get ready because we're about to see our main event something that I don't think anybody's ever seen before you see that zap you see how quickly that this zap happens here this

the plane just disappears entirely just completely gone and the video on the right the the operator Scrolls over to the right to show us there's no plane over there anymore now here is one of the frames where you can see the zap in the uh false color IR here so this satellite video is filming in a false color IR we be both these videos are at night time

(29:37) 2:40 in the morning this one's using a false color IR for tracking purposes because that's the point of the CER system the one on the left is using a thermal layer over the top of an electro IR Flier camera so this one we can see there's this cold event and I'll show these videos again in a little bit we'll go into more detail on them but I want to point out a couple things real quick the zap here accurately illuminates the clouds here in the foreground and the background you can't tell very well from

(30:03) this video but we have a single still that shows that the clouds are being accurately illuminated these are very detailed volumetric clouds so this is either an incredibly detailed hoax or this is what it would actually look like we also believe that the only reason why there's a zap is that the electrons in the area around this zap are being energized now what kind of event though are we dealing with here so this this is the version where now it's or I've just scrolled forward now the zap is gone the

(30:29) plane is gone the smoke Trail stops dead in its tracks if this smoke Trail kept going I would say this is a cloaking event but because the smoke Trail stops I think we have to rule out cloaking the other thing that we thought is well maybe this is an Annihilation event maybe this planes just being completely obliterated the problem with that is that Einstein's  $E = mc^2$  tell us that energy equals mass time the speed of light squared and the mass of a 777 is huge so what this means is that if this was an Annihilation event this would be

(30:59) like a nuclear bomb times a thousand or times 100 whatever you want to think it would be blowing up the whole screen here we'd be seeing these clouds getting blown away Etc so it doesn't seem to be an Annihilation event it's also not a black hole because if it was a black hole we would at least see the clouds get sucked in if not the whole earth get sucked in depending on the size of that black hole um so what we've left with is some type of uh teleportation event now what I like to refer to it is a super

(31:26) luminal spe event because this isn't a situation where we're not talking about Star Trek dematerialization or rematerialization we're talking about a scenario where the plane is achieving light speeds or Beyond and essentially moving so fast that we can't even see where it goes so I want you guys to think about that a little bit while I present some more of the evidence and then we'll get back into some more of the detailed uh evidence around those videos and looking at them in in a lot more detail for you guys as well but I

(31:55) hope that just kind of piques your curiosity because when I saw these videos uh 3 or 4 months ago they seemed extremely compelling to me and I actually even remember seeing one of these videos back in 2014 well before I was even somebody who was interested in uaps or UAP disclosure so we actually do have absolute proof these videos come from 2014 including

thousands of witnesses who've seen them and it's potentially only in 2023 that we can even understand these videos to be real now before I get into that though I want

(32:25) to explain why this plane did not crash into the South Indian Ocean so a lot of the official narratives out there these official stories that you're going to hear on CNN and on TV you're going to say well this plane was a suicide route it crashed into the South Indian Ocean we have these iMat pings that say that crashed there I bet you didn't know that in the immat data which I've looked at myself I pulled it off of Victor's blog of the independent group of radio physics you guys can take a look

(32:51) yourself if you want there's a huge anomaly in the XL spreadsheets at 1840 UTC at the exact time where we think these videos happened at the exact time the official narrative says this plane turned into the South Indian Ocean there has never been reported by on by anybody except for me um now here's the problem with the crashing and why we know this plane didn't crash in the South Indian Ocean no debris field number one it is impossible not to have a debris field from a 777 crashing into the ocean as we

(33:20) talked about with the  $E$  equals  $MC^2$  this is a huge plane huge amount of mass This Plane would have left a giant debris field we would have seen it the very next day with our satellites heck **China** would have seen it the next day with their satellites most expensive search in human history searched above and below water the official search did not find one piece of the plane those pieces of the plane that they talk about were not found by the official search they were all found at least a year later by other independent sources there

(33:48) was no black boxes found they claimed they knew where this plane crashed but there was no black boxes found the black boxes have are rated for depths up to 20,000 ft the ocean isn't that deep over there they should have easily been able to hear it plus they transmit on a frequency that's completely distinct there's no reason why they wouldn't be able to hear it um there's several acoustic systems that would have heard the crash of a 777 into the South Indian Ocean the Sosa system the same system

(34:17) that heard that Titan sub pop by the Titanic the Navy lied about that for five days they knew exactly where that sub popped and they let there be oxygen counters on CNN and all the other cable news stations and then after 5 days said oh yeah we knew where that popped and they went and go picked up all the pieces this system was actually Declassified all the way back when the plane crashed that should have heard the plane crash Western Australia and Diego Garcia also have hydrophone systems they also would have heard the plane crash

(34:46) and none of them did in fact the Diego Garcia stuff there's even a story about 25 missing minutes of hydrophone data but before you get too excited the 25 missing minutes are not during the time of our videos um there is no acoustic detections consistent with a 777 crashing into the ocean now radar systems uh there is Indonesia who is right there where the plane turns in the South Indian Ocean India actually has joint bases at car nicobar and Port Blair which both potentially could have seen on radar as well as Thailand should

(35:17) have been able to see this plane none of them detect the plane going to the South Indian Ocean Australia has the Jorndt system which TR that is a very large range radar system it also doesn't see the plane in the South Indian Ocean the location where they have this plane crashing is an active shipping route from Africa to Australia and they say it's crashes in early morning hours and yet there's no witnesses that see a plane or see a plane crash or find any debris Fields the official flight path has it

(35:44) running out of fuel a lot of people may say well the ocean's really big though well yeah but they literally searched everywhere the plane could possibly go there is nowhere else for the plane to go it can't fly to Antarctica it's not flying to the Atlantic Ocean there's actually not enough fuel the official narrative says it ran out of gas um there are four emergency transponder beacons that are all redundant that only activate when the plane crashes none of them activate Rolls Royce actually has their engines

(36:15) actually independently send information Rolls-Royce data was never made publicly available it would have either proven this plane went to the South IND the ocean or did not 19 families of the victims signed a joint statement begging the government to look into the fact that the passengers phones were still ringing for up to 4 days after the event this is not possible if you're in the South Indian Ocean it's not possible if the phone is off not possible if this phone is at the bottom of the ocean um the cell towers don't even reach out

(36:44) that far uh one of them even proved it on National Television as well so that's the reason why there's no chance that this plane crashed in the South Indian Ocean this is why they're not going to ever find a plane down there as long as they surver search now some people may say well they found some debris right that's that's true I bet you maybe didn't know that some of the debris that they found two pieces have very clear burn marks on them uh consistent with the fire event that we've put forth they

(37:11) searched with 42 planes and 39 ships from some people say as many as 25 different countries and N none of them find any of debris from the official search the debris the tiny bits of debris are less than 1% of the over all plane and it's completely consistent with both the fire event as well as this idea of super luminal speeds the plane went somewhere else on the planet Earth those could be pieces that fell off during the fire could be pieces that were just thrown into the ocean wherever This Plane showed

(37:42) up the flapper on the big pieces they used to make the whole situation go away was not matched with the unique serial number that matches it to the plane it was actually matched with a part number a lot of people don't know this the media doesn't tell you this if you just Google and check out flapper on missing serial plate MH370 it find a couple articles this is a piece this is a metal plate that's bolted on to the flap R it's just magically missing that would have you know def definitely ided it

(38:10) to the plane there was actually another plane an exact copy replica of MH370 purchased by GA tesis a 9M MRK purchased in October of 2013 that was also purchased from Malaysian

Airlines so there's a lot of different speculation terms of what that debris could be could be another plane it could actually just be MH370 according to the case that we've been putting forth here now I want to go ahead and show the cbers video okay because I don't think a lot of people realize that the US government is essentially scanning the

(38:44) entire world there is no way whatsoever we wouldn't have seen a debris field in 2014 or anytime in the future um and I think this is one of the things too that even before I dug into this case I knew that there was no way the US government did not know more about what happened to this plane so you guys can't hear the sound but the first thing this says is global persistent infrared surveillance and when we're looking at this just watch the video here I mean this is damning I couldn't believe we

(39:16) could find a video like this this is on locked Martin's website if you just Google cbers you're going to go ahead and you're going to find this video yourself just like we found it and this explains that why we would see a video like we see of the satellite video These on the outside are geostationary satellites meaning they're stuck in place they're 40,000 km away these are equipped with Hubble telescopes so these things have very good Optical capability these uh egg egg shaped a uh oblong

(39:44) orbits here these are your Millennia orbits these are actually your command satellites in the bottom left of our satellite video it says uh um nr22 which stands for National reconnaissance office launch 22 also stands for USA 184 this was sent up in 2006 which is the start of the cber system most likely it is one of our Command satellites that's relaying data through the Sig in system signals intelligence so we can see these scanning our low earth orbit satellites like USA 224 or 229 which we believe was

(40:16) in the right area at the right time uh are going to be very low earth orbit that means they're only about 900 to 1,000 kilom in the sky those are going to be very very close to the Earth and those are not even represented on the video now look at how big these scans are these things are scanning huge swath of the Earth at once this is how they're able to put together a Google video playback that can look in real time as well as it can uh record information to look back anytime they want so when I walk my dog sometimes I look up and say

(40:45) hi to the satellites just in case it might brighten somebody's day now part of the reason why we believe we're looking at the cbers in the in the satellite video is that six frames per second because if this is a computer program that's pulling data from all these satellites in real time and piecing together a Google Earth then is this computer program can only process so much but it's looking at very wide field of view and that's why you're going to have a low frame rate now again take a look at this look at the scanning

(41:10) of the entire planet 247 How could a debris field that would be visible from space from a 777 crash in the ocean not be detected it's just simply impossible and now at the end this is my favorite part blocking Martin we never forget who we're working for you got to love it couldn't be more ominous if you if you asked or if you tried now this video right here is your

your flyover so what did we do MH 370x we looked at all the satellites you can actually look up the historical trajectories amateur

(41:40) astronomers track the satellites they actually can't move satellites can't move because of their orbits they can change their like they can look in certain directions but they can't actually change their their orbit so this is our low earth orbit satellites take a look at the top of the screen 1830 1835 5 UTC we're looking for 1840 UTC that's the time we believe our videos are happening and what do we have here at 1840 UTC we have two satellites staring directly down at the coordinates that in the satellite video now this is

(42:10) a 1,000 diameter uh like kind of bubble we have here we actually believe that these things based on what we were looking at before can probably scan 3 4,000 kilm the actual location of the plane is right about where my mouse would be right down here based on the fact that they have cropped this larger field of view to just show us the plane in our video so this again is damning evidence absolute proof that the US government knows what happened to this plane they either know it went to the South Indian Ocean or it didn't go to

(42:37) the South Indian Ocean and potentially our videos are what really happened to this plane okay now let's talk uh briefly again about the fire scenario and why the fire scenario is the most prominent scenario um this won't take too long but again 487 pounds of lithium ion batteries skip two security screenings fire is corroborated by 19 Witnesses you have two pallets of unsafe batteries in the forward cargo Bays that are right next to our um main engineering uh compartment these compartments are designed to withstand flame sources up

(43:09) to 1700° fahrenheit 900° Celsius the the fire extinguishing gas can last for up to 3 hours but cannot permanently put these fires out which is why they're so dangerous the AC units may be flushing the smoke out of the back of the plane as we've seen our in drone video uh again the altitude is too low for cumulus cloud cumul or contrails contrails only form between 18,000 and above altitude and based on our cumulus clouds what we're seeing here is estimated to be somewhere between 5,000 to 10,000 ft probably close to 7,000 ft

(43:43) of this plane uh I've also got sources that people that have actually testified on the hill that are willing to corroborate that the plane could last wall and fire during one of these events for an hour and 20 minutes which we needed to and that it would glow orange as well um covering up the fire event if this fire event is real why this whole story of it going to the South Indian Ocean and the answer is because of what we see in the videos the technology that we see in the videos the idea that we can actually teleport a macroscale

(44:14) object of 77700 this explains why it would have to be covered up this type of technology is Breakaway civilization level technology whoever controls this technology controls entire planet so some of the things that you might be able to do with this technology if you apply it differently you can have faster than light communication you might even have force fields cloaking Fields would be possible um from a uh Power perspective you could have fusion power in a bubble you can have potentially free energy if you can use

(44:49) the energy of the SpaceTime itself the vacuum of SpaceTime you can actually have a system an open system that puts out more energy than you actively put into it now the next part is what I think true disclosure is really about which is the other thing that you could do with this type of Technology you could create doomsday weapons and I'm not talking about nuclear weapons I'm talking about the type of weapon that would allow a single uh person who is uh like let's just say a terrorist or somebody who has ill intent to destroy

(45:18) the entire planet with the push of a button this is what I think the reason for disclosure being covered up by the military would be you know yes there would be a lot of ontological shock if non-human intelligence is real um a lot of ontological shock obviously if we can teleport an object but the danger that goes along with it you know po potentially the reason for the fmy Paradox and the great filter is what that any sufficiently advanced civilization may just destroy itself with this type of Technology you might

(45:48) even be able to destroy an entire sun with this type of Technology now what I want to say about about the videos so I even had a hard time understanding these videos to be real I had so much ontological shock when I looked at these videos and tried to understand the implications of the technology that I actually asked my own parents if I was in some kind of Truman Show type situation where everybody was lying to me and this was some big hoax that was being perpetuated on me because that seemed at the time more plausible

(46:20) than there being this macroscopic uh phase conjugation event which we like to call it this super luminal speeds of the plane Unfortunately they told me no it's not a Truman show event so I had to deal with it um in order to understand these videos to be real we needed some prerequisites this is why we could not understand them would be real in 2014 we needed the 2017 DOD Navy UAP videos which showed us that Flier footage of what a Drone footage would look like we needed a 2019 Trump satellite picture if

(46:48) you go ahead and Google that you'll see that Trump posted a satellite picture of an Iranian uh rocket launch and this look looks very similar to the optical capabilities that we see in our video obviously it's a picture and not a video but videos are just accumulations of pictures stacked on top of each other turns out that satellite was reverse engineered very similarly to how we reverse engineered USA 229 and it turns out it comes from a satellite called USA 224 which was sent up in 2011 the same

(47:16) year as our satellite USA 229 is we need to understand some Advanced theoretical physics Concepts physics is just science public science at least is just catching up to the science of these videos we need to understand macroscopic Quantum coherence Bose Einstein condensates and potentially in the future a unification theory of quantum mechanics as well as general relativity unification of things that are very small as well as unification of things are very large bringing them together now if you understand the double slit experiment

(47:46) the greatest mystery in all physics you'll understand that this is where non locality the idea that the Universe can react faster in the speed of time this is where quantum tanglement

comes from as well as quantum teleportation which is a real thing in fact I think just a couple days ago they actually teleported a picture without sending the data so we know that it's possible to have objects or information move faster than the speed of light what we need to have happen is we need something of macro

(48:14) scale something that can be seen move faster than the speed of light and what is sci what is magic magic is just science that we have yet to understand so without all these oh and also then we also needed lk99 now whether or not you think that lk99 is real this is a material that is produced from copper and Lead came out of Korea and China that supposedly is a room temperature superconductor whether or not you believe that's real or not we need room temperature superconductivity in order to enable everything that we see in the

(48:45) videos and I'll dig into the science here in a minute for you guys um and then lastly we need to understand AI we need to understand that chat gpt is in daily use now we need to really understand that AI is actually out there and can be utilized for us because potentially what we see from that pattern is an advanced computer program it might even be mapping the plane it might even require quantum computers to pull off what we see in these videos now let's dig into some of the additional detail evidence related to

(49:13) the videos the videos date back to 2014 as proven from internet archives as well as people who saw them the satellite video perspective changes eight times so each perspective that we see in the satellite video is only a few seconds the satellite coordinates shift every time that that perspective shifts but not when the mouse moves those coordinates prove that the satellite videos happening in the nicobar islands the general atomics drone as we mentioned is either mq1 C or mq9 this drone cannot catch the plane it must

(49:43) have intercepted it we believe that it either came from car nicobar or Port Blair which are joint us India bases um there are alternative sources of these videos that were uploaded later on that are higher quality pointing to none of these being the original Source meaning that this would be a leak from somebody else as well um the video the mouse moves off the screen in the top left or top right and the bottom left of the satellite video indicating that it's a large field of view uh that has been cropped uh I'm just trying to read the

(50:21) other evidence here um reeside most likely the the account that uploaded this was called reeside a nan they most likely had to be told that what they were looking at was real because they didn't upload it until much later on the upload date and I'll go ahead and pull the videos up so we can watch once again I'm going to show the original uh r sideon on version actually I'm going to show the higher quality satellite version because it's easier to see the coordinates here so let me shift pull

(50:53) this up okay now in this version of the video you can see these coordinates on the bottom left you can see the nrl22 very clearly here as well um I'm just going down to my evidence here and so red decided on the description on this video says received March 12th 2014 just four days after the events of the videos it says uploaded or published May 19th 2014

the description is satellite video airliner and UFOs which would indicate that even potentially the the leaker of this video did not know what we were looking at

(51:33) they thought they were looking at UFOs non-human intelligence only potentially to be told later on that no maybe this is not UFOs maybe this is advanced technology that the US government or maybe one of their third party contractors actually controls and potentially the person that was leaking this thought well if I'm leaking a UFO video there's no damage here you know the reason why they would have cropped this and all this information is because this is the only way we would ever get the truth of what

(51:57) happened to this plane um what else do we want to put in here uh let's see I've already addressed a lot of this evidence yep so I'm actually going to switch over so what this means is that potentially the person that leak this information and leak these videos would be a US military operator notice there's six decimal places in the coordinates in the bottom left so this is extremely accurate this would require a separate Software System and that you would have to build build that in to have these

(52:26) coordinate shifts to that level of accuracy down there as well we've actually been able to map that out that's how we were able to determine it that this was actually in the nicobar islands when you look at it because um it shows perspective of going uh South into the East which is consistent with the left-hand turn we see of the plane in both videos now the high quality drone video is one I want to spend a little bit of time on here uh and this is really big because what we think we're looking at

(52:51) here is a Ron Electro IR camera and I want to talk a little bit about the science of what we see in these videos as well so when we see these orbs come out we're not looking at a metal ball here we're looking at a nonradiating barrier so early on when I saw these orbs I speculated that this would be super conductivity at play and what super conductivity is able to do especially room temperature super conductivity is create coherent matter waves uh which allow the electrons to cohere and when they here you can start to do stuff

(53:27) that's essentially like magic you can create energy levels that can uh break the swinger limit which allows these objects to completely displace themselves from space time so what we're seeing here is like a bubble just like you would see a bubble in water but you're seeing a bubble in space time itself allowing for these objects to Traverse through the air water o and space potentially all all three of the above um it also means that you can have mass reduction so when your mass is reduced to zero now you ignore gravity

(53:56) and that's what they seem to be doing here and not just that when we watch them getting pulled along here you can see that these are actually forward facing gravity engines that we're seeing here some kind of pulse laser that is being used here that is breaking down the fabric of SpaceTime in front of it as we see from these cold lines and I'm just going to switch to another video that shows it a little bit more clearly we were actually able to strip some of the thermal here so you can see the lines a little bit clear and

(54:23) you can very clearly see these lines are in front of the orbs in this video not behind them the only reason why they look behind them is because of the speed of the orbs which is matching the plane so this is very interesting because who would even think to fake something like this I'm pretty sure that all of you in the chat right now all the people watching most likely nobody is actually seen this type of event um from orbs that are out there or any UFO at least I had never seen them so if anybody has please get in touch with me

(54:49) because I'd like to know more about it now when we see this event happen we also see again the heat signature this has been described by Bob Greener who's looked into no low Power Nuclear reactions I did a podcast with him as the monopole and so if I might be saying this incorrectly because I'm just trying to get brushed up on my science but it's either coming out of the the kind of laser beam effect or that's breaking out space time is either coming out of that or directly or it's the inverse side of

(55:15) it I'll have to look into um understanding that just a little bit better but what we see here in the last few frames and I'm going to skip ahead here there's a few like there's actually this was the original video so there's actually this slow-mo version where you can see these orbs here um after we see the main event and then it actually shows a slow-mo of the final moments of the plane here as well which is very interesting you can still see these lines in front of the orbs and then we

(55:38) see them Converge on the plane this is what's causing the singularity here to happen is that they converge imagine like you were to take magnets and jam them together this is what would potentially cause this uh unification of the forces that they might say here that allows for this event to take uh hold and happen in the final frame as well we can see that this plane blurs and we can see actually that the orbs flatten so the orbs are creating an azth which you just think of like a line or a circle connecting them where there's a very

(56:14) powerful electromagnetic field between them and in this final frame you see them flatten potentially from gravitational lensing happening from the very powerful effect that's happening here the plane's blurring because is beginning to accelerate already just like if you were trying to take a picture of a runner and it actually gets a little bit smaller here as well which may be an indication that mass reduction is already taking place from the event that's about to occur um and then we can see the full

(56:40) effect of our zap is our endothermic event that's why it's cold and this is important endothermic event means an absorption of energy so it could actually be argued that this event is absorbing the energy out of the lithium ion batteries so that the runaway lithium ion battery fire stops as well as potentially teleporting This Plane pretty much anywhere we can't say for sure a lot of people may ask me where did this plane go we have speculated that it goes near the nicobar or near the Maldives because there's a fire

(57:08) suppression device that washes up in the Maldives consistent with a b777 there's also a sighting in the Maldives that was ignored but it was only ignored because the direction of travel

of the plane was not from the East but there's a bunch of Islanders that clearly see the stripe the blue and red stripe of a Malaysian Airlines plane so what's happening with some of the science here so room temperature superconductivity can be induced uh from either meta materials or uh repeated pulse vibrations from the

(57:40) transducers um these orbs as I mentioned are field what we're seeing there is What's called the non-radiating barrier that's what the bubble is there combined orbital Mo Ms moments can actually cohere these electrons the orbs are actually becoming part of the relationship with the plane acting as either electrons around the plane or extending the unshielded electrons around the plane at the point of transition so what this is is a transitional phase change event of the plane where it's obtaining the

(58:08) properties of quantum and therefore allowed to act like a Quantum object from being a macroscale object and then from a Quantum object perspective it can travel at the speed of light just like we have with quantum entanglement when electrons are driven from their equilibrium they begin to self-organize into a matter wave this means that solid state objects may be able to achieve macroscopic Quantum coherence um low temperatures are what allow electrons to couple and move as one and then when you have Cooper pairs

(58:42) which are pairs of electrons they actually begin to act as bosons and what that means is they can occupy the same location in space in time this is how you can have something uh act as an electron act as a matter wave um essentially act as a wave function instead of a particle so it can have a probabilistic point in space and time rather than a deterministic one uh the physicist would say that properties denote the behavior that there's no difference between a large object and a small object only the properties determine it now since time

(59:12) itself is a fluid symmetry time dilation is a real event this means that the less Mass you have the faster your time moves and the faster something can uh travel um and also when there is less Mass it actually takes very little energy to move something as well after the phase transition the object can actually be placed pretty much anywhere and does not necessarily um in the traditional sense have to adhere to the laws of conservation momentum so it's even theoretically possible that this object could just be set down now from

(59:43) the engineering perspective this has been argued that there may be a fourth orb so if I take this rubber band we could pretend like this is the plane with the three orbs there's a fourth orb that's entangled to the other three orbs and then when the singularity occurs this transition then all of a sudden the plane and the orbs go to the location of the fourth orb at the speed of light or beyond the speed of light now if you're into Salvador Pineda who is uh become one of my own friends after investigating

(1:00:12) into this case and reaching out to him he has some patents that are out there one of them is high frequency gravitational wave generator and in this patent he says you can generate high power frequency gravitational Waves by High frequency accelerated axial rotation spin or through accelerated high frequency vibration gravitational wave production Can Happen by

propagating electromagnetic radiation through strong magnetic fields this allows the enabling of macroscopic quantum coherence namely possible quantum mechanical behavior of

(1:00:45) macroscale objects multiple high power frequency gravitational waves if they were be focused on a particular point in SpaceTime locality they can induce produce A Spacetime curvature Singularity consistent with what we see in the videos generating gravitational well can happen along the flight path consistent what we see with the orb movement controlled motion of charged matter under rapid acceleration transits may lead to room temperature super conductivity nuclear fusion may also be engineered and then engineer Energy may

(1:01:18) be Amplified to such a high degree as to generate a space-time curvature Singularity which could lead to the total Destruction of an asteroid or planetoid or if you were to scale that up a planet itself one of the other patents that I want to go ahead and address as well is called high energy electromagnetic field generator H MFG the utilization of such high powered sources for space Power and propulsion generation the artificial generation of gravity waves in a locality of a spacecraft can result in energy Mass removal it is possible to

(1:01:54) reduce the a spacecraft's inertia this allows again for smooth sailing through the negative pressure or repulsive gravity of the Void so this is the science that can explain what we see in our videos now the next thing I want to describe is what it would take to hoax these videos a lot of people might say this is too much to believe right even I think it's too much to believe at some points but the requirements to hoax these videos are extremely long and elaborate so first of all we had a \$150,000 Bounty \$100,000 from kim.com

(1:02:30) \$20,000 from Chad and Sherry the investigate Earth podcast uh \$25,000 for my wealthy follower who's run for higher office as well as \$5,000 for myself no hoaxer came forward this has been going on for at least a month perhaps longer at this point if somebody had hoaxed these videos they took no credit for them there's not a single discrepancy on a single frame of either video the time to produce the video is between 4 and 72 days depending on if you believe Regis cenon's description date of received March 12th 2014 Just 4

(1:03:02) days after or the publish date May 19th 2014 there's no reference copy to copy from these videos do not exist anywhere else on the internet um you'd have to be aware of the fire scenario because we see this this heat event in the middle we see the smoke coming out of the back of the plane everything that we see is consistent with all the evidence that has been put forth um you'd have to know how to create the volumetric clouds that we see how to accurately animate the cameras how the clouds form at low altitudes how to

(1:03:33) accurately light the volumetric clouds when the zap goes off how to recreate exactly what MH370 looks like if you actually take the silhouette from the thermal it's a perfect overlay to MH370 if you look at in the satellite video you can see it's lighter on the top darker on the bottom Malaysian Airlines is white on the top and gray on the bottom you'd have to know the turn radius of a boeing 777 at a certain altitude wall and descent which is maxing out the capabilities you'd have to know where the plane was at the exact

(1:04:01) time it's on the agreed upon flight path in the nicobar islands how to accurately create the coordinate shifts as we mentioned as we see in the bottom left of the satellite video you have to know what the weather was like we looked at the weather satellites in nicobar islands and you can see that there's low altitude cumulus clouds in the area at 1840 UTC within an hour potentially of when uh 1840 UTC happening apologize it's not necessarily exact same time but it's within 15 minutes and an hour of

(1:04:24) the time you'd have to act know how to accurately create the smoke trails and the particles coming out of the back of both the planes in both videos you'd have to know what the thermal looks like to a level to fool the experts you'd have to know how to animate the heat signature in the belly of the plane where the air conditioning units are that changes very realistically you're going to have to know how to animate the shake that we see as well that is very accurate to zooming in on the with the

(1:04:50) camera you'd have to know you'd have to have knowledge of military class systems that were previously unknown to the public in 2014 you'd have to know that the military is using a Citrix environment you'd have to know the frame rate difference between capturing the satellite footage in the background and and the citric session over the top you'd actually have to know what mouse they use because there's a certain specific acceleration that's consistent with either like a a ball mouse or like

(1:05:12) a ball in the middle of a mouse or potentially if it's a laptop it might be one of those little buttons that's in the middle of the laptop but has a very specific acceleration that's different from the normal Mouse um you would have to know what satellites the US has in operation and what their payload is to know that USA 229 is there available you'd have to know what the false color IR looks like you'd have to know how to animate the orbs how that particle system in front of the orbs their forward- facing engine

(1:05:37) looks like which we've never seen anywhere in ufology you'd have to know how to animate those final frames where the orbs flatten and the plane blurs you'd have to know what the mq1 C drone looks like you'd have to know what the payload on the Drone is because we can see these cameras on the wings and there's actually pictures of those drones with cameras on the wings you'd have to have better VFX uh skills than the VFX lead artist of top gun Maverick who posted on social media claiming to be the expert saying that

(1:06:04) they the person who would have done this would had front ran their work by four years that movie was out in 2022 they said that the hardest part for them was to accurately scale the planes and the videos to have to match the C actual capabilities they had to cheat that in those movies and yet in our videos both of them are accurately consistent with a 77700 we had a Mar VFX expert Jeffrey Ford said that in order just to look up all the the information and put together these videos he's the lead VFX expert

(1:06:31) for Marvel Studios so it would take at least four to six months using today's technology you'd have to have a better understanding the most PhD physicists who actually they

themselves don't necessarily even have a good comprehension of any type of unification theory of quantum and macro you'd have to understand advanced mathematics as well as engineering better than experts as in those fields as well due to the pattern that we see from these orbs is perfect sydal pattern um as well as engineering capabilities of the

(1:07:02) plane you'd also perhaps most importantly have to know that we would never find the plane not even 9 and a half years later because the moment we would find a plane the whole hoax would break down so that is a huge list so in my mind the only way these videos are fake is if the US government themselves created them that's just the resources and knowledge that would be required the problem with this is doesn't make any sense if the US government made these they never made them available I am not doing this on behalf of the US

(1:07:30) government in fact I'm doing pretty much the opposite of what I think the US government want if you were to take these videos and put them on CNN MSNBC NBC any of these locations even Fox News um nobody's going to think that aliens zap the plane now maybe people in this chat might people that are my followers might but the uh people that are out there the Normal public is just going to think that the government created these to cover up for the fact that they did something to the plane what this means

(1:07:55) is these videos would just implicate the US government in the cover up so it doesn't make any sense for them to have faked it now we were able to find potentially the person that **leaked** these videos believe it or not I was sitting there thinking well we've have a lot of information about what the mindset the psychological profile would be for somebody who have **leaked** these videos and it took several weeks to find them I looked up pretty much everybody who had been charged with uh espionage will for retention of classified

(1:08:25) information will for retention of national security information um couldn't find much for over a week I almost gave up then I started doing date range searches and then I found Lieutenant Commander Edward C Lyn I thought okay the leaker must be a US military personnel probably an operator probably had an emotional reaction to seeing the videos since rer sideon says they received them four days later um they removed the HUD data they cropped the Drone out of the satellite video they likely cropped other assets

(1:08:53) out of the satellite video as as well they probably had to convince reeside andan that what they were looking at was authentic this could explain why it took reeside andan almost 2 months to upload the videos they may have thought they were looking at UFOs only later on to be revealed that this was actually third-party defense contractor technology now I'll say in my opinion this would have to be reverse engineered technology I don't think we could be the secretly Advanced but again I leave that to you

(1:09:19) all Edward C Lynn was part of the special project squadron 2 the vpu2 Wizards he flew in spy planes one of those spy planes was the locked Martin ep3 Aries 2 that has realtime tactical signant remember signals intelligence and full motion video intelligence the crew fuses collected intelligence along with offboard data for Battlefield situational awareness his actual

job was to relay the information from those planes to leadership his uh charges against him the case against him was given a code name Rogue Archer he had experience in

(1:09:53) signals intelligence based basically every article about this guy talks about signals intelligence his last deployment the dates are damning he was assigned to the vpu Squadron February 2014 he gets reassigned March 25th 2014 just two weeks after the plan goes missing investigation into him began April 2nd 2014 in May of 2014 he accidentally left two flight manifests in his flight suit from a deployment that included search and rescue code names this can only be MH370 the defense argued that the classified information in question is

(1:10:32) available on the internet this essentially has to be the videos I don't know what other classified information that could be available on the internet that would have led to a situation where he was arrested in 2015 we believe that the reason why they waited to arrest him is so that people would not put together the pieces that his charges were related to MH370 like we already have um the charges would have resulted in life in prison they tried to put him away for Espionage first major incident of Espionage by an active duty member of

(1:11:02) the Navy since the end of the Cold War almost 50 years his charge sheet heavily redacted they redacted everything on the charge sheet privy to the Navy's black program portfolio he had Above Top Secret clearance and compartmentalized access to information on Facebook he's friends with General Flynn he was very connected he had knowledge that would be extremely useful to potentially us adversaries but then the government had to come out and admit it wasn't really a spy case there was actually no evidence

(1:11:30) that Lynn ever exchanged sensitive information with anyone from China he was abused while in pre-trial detainment by someone called the Goon Squad agents didn't properly advise him of the crimes that he was suspect uh suspected of or his rights to attorney while he was being interrogated the emails listed as compelling evidence to deny him from his pre-trial confinement appear to be just completely mundane things the judge said he showed a dangerous pattern of disclosure of classified information but didn't point to any disclosures of

(1:11:58) classified information uh all the information was OB fiscated related to his case he was Char he get get a prostitution charge that made no sense as well he actually appealed his case later on and said that the charges against his classified uh um dissemination of information were completely inconsistent with other people as well so they forced him into a plea deal he took a plea deal we got a 9-year sentence for just two charges of mishandling classified information grossly inconsistent with other people he got three years taken off as well as

(1:12:32) two years time served for his pre-trial detainment they did not even let him out he accepted responsibility for the offenses he was actually guilty of and for the people in the chat you're going to love this I did Foya the FBI and NCIS the FBI rejected my Foya and so they couldn't give any information at all to me because it could be used as personal information against him the NCIS rejection they rejected my Foya in total to be kept secret in the interest of National Defense or foreign policy I would ask you if this wasn't a spy case

(1:13:06) what is being kept in the interest of National Defense and foreign policy if it's not these videos it has to be related to m370 has to be these videos so I've been saying this guy's name uh on pretty much every single podcast I've been doing over 60 podcasts he's never reached out to me to tell me to stop talking about him either I think this is quite a bit telling um I've even mentioned that we were able to find him uh and I was just like anyone who's listening please do not harass this guy

(1:13:31) just imagine the psychological State you would have gone through to have released these videos we would have ignored them for N9 years and not done anything about that and now he's out of prison and um you know we would need him to come out as himself as a whistleblower and you know really that would be the only way we could really authenticate these videos is he would have to come out but he's going going to go back to prison if he does his plea deal most likely makes it so that he cannot talk about them

(1:13:58) ever I found a cell phone that I believe was related to him we called it somebody picked up and hung up right away I sent him a message and said sir you are my hero you've made a sacrifice that I would do anything for you to protect you I mean not that I could but I would try um so you know this is essentially the case of MH370 now my opinion here is that we are looking at Lockheed Martin technology this is reverse engineered technology this being kept secret from us the motive here why would you do this why

(1:14:28) take this risk why orb this plane right this is a huge risk if somebody leaks these videos which they did in my opinion then you've just revealed your capabilities you've revealed your trump card this is the kind of Technology that's such Breakaway level civilization that this is the perfect defense against any missile that were to be attacked on us you might be able to use this to teleport a bomb back or a nuke back onto the place it went to you might be able to just completely render the nuke uh

(1:14:55) inert you know some Bob Greener argues that you can basically just disassemble it essentially into other elements using this type of Technology um so you don't want to deploy this unless you absolutely have to here so the the strongest evidence for the motive is the 20 freescale semiconductors and engineers and scientists on board This Plane 20 people from the same company on on a plane is way too many people my company even has a rule it's like two to three people uh this company on the same plane and these

(1:15:24) aren't like that's just anybody not even high level people these were very important Engineers that were going to China supposedly to help upgrade the manufacturing plants there again this plane was likely doomed because it didn't land in panang land in the ocean it was going to be destroyed so the motive here would be to save the plane then right um we found a 2005 National Security Agency report on the commercial superconductivity development of microchips that references freescale semiconductors nine different times it's

(1:15:54) pretty much just all about them we also found press releases to mention free scale semiconductors launching a major initiative dedicated to serving the RF power needs for the US

Aerospace and defense sector so these people on board This Plane were very likely connected to the US defense and they may have been actually connected to the actual technology we see get deployed You could argue that if this is an Espionage event perhaps this fire was started intentionally You could argue that the US government is trying to

(1:16:22) prevent these people from defecting to China because even if you set back China like 10 years from this technology it's probably worth it from a military perspective again whoever controls this technology is going to control the world um you could you could argue that they are preventing the loss of intellectual property that they need related technology and advancing it um you could argue as well that uh and I don't think this is a fringe scenario Fringe case but if this plane is doomed maybe you're testing it out

(1:16:48) it's kind of dark to assume but maybe you're testing it out because the plane is doomed um and that you you know want to see what the effects are on the people now another scenario that's been brought forth as well is what if there's just one person on this plane that's a VIP that's super connected and they just call in their rescue me button and they say hey guys you got to deploy the advanced orbs to save me right um so I think we don't know again I'm not a psychic I don't like to tell

(1:17:15) people what to think I don't like to tell people that I know it all I just have dug a lot into the evidence around this case um now one another thing I want to mention too is why do I think this is our technology versus non-human intelligence and I'm fine in my opinion I was going to go ahead I've done a lot of podcasts some people think no I think this is definitely non human intelligence um other people say yep makes sense this reverse engineer it's locked Martin and yes just real quick I I am

(1:17:40) not suicidal I think it's very important that we say that a lot um now the first thing is that I don't care which it is and the reason is I think one leads to the other no matter which way you go with it if this is non-human intelligence that leads to reverse engineer techn technology if this is reverse engineered technology then that's going to be coming from some non-human intelligence most likely right either something that came before us that we've dug up or something that's visi in US my personal opinion is I

(1:18:04) don't really care either way being as visi in US is not going to impact my day-to-day life I think that this is very important to stay as well is that what really matters is the time we have on this planet irrespective of um you know any any advanced technology or beings that are out are visiting us um there is no reason to do such an extensive cover up for just an anomalous event like this is a UFO event I I don't think they go to this level of degree of cover up I mean this would be multiple countries have to

(1:18:33) be in on this line about it definitely Malaysia definitely United States probably countries like India are also involved in the cover up and China may even know what happened to this and this might be part of the reason why us China relations broke down is that China may even found out one side thing that I want to bring up as well is that China hacked the Malaysians

government on March 9th 20 2014 the day after the plane went missing you know what they stole they stole the crisis meeting minute notes of MH370 as well as classified information

(1:19:01) related to MH370 I would ask you guys what could be classified about this plane the next day like the only thing I can think of would be the communications that they didn't mention now the assets filming this are US military so this implicates the US government directly they either got extremely lucky when filming this if this was actually non-human intelligence or this is an operation and the reason for that is that they're filming before the orbs even show up you know they're actually already filming the

(1:19:31) plane and then the orbs show up the orbs are moving at Mach 3 speeds so there's no chance that this plane is outrunning these orbs you know I thought initially well maybe this orb event caused the plane to go dark but it didn't make any sense because these orbs have no problem catching up to the plane so most likely they were deployed right there right before we see them in the videos the pattern we see is explained by computer program running around the plane so we don't need non-human intelligence to

(1:19:56) explain any aspect of these videos doesn't mean it's ruled out just we don't necessarily need it to explain them the fire event as I mentioned is indicating a rescue motive in my opinion we cannot attribute human motivations to a non-human intelligence I think that there is non-human intelligence out there visiting us they're probably going to treat us the same way we treat an ant on the ground right they're just They Don't Care About Us I don't I don't personally think that there's a lot of reason for

(1:20:21) them to be benevolent but they might be I think just think they'd be most likely indifferent and then I think lastly the most important part is science can actually explain everything we see in these videos now yes it's very Advanced science and the parts that are not available to the public especially are the mass reduction what I've been told by people that have reached out to me is that that is being withheld for National defense purposes because again the idea that you can reduce the mass of an

(1:20:46) object is now going to allow us to ignore gravity and it really enables everything about what we see here enables the macroscopic quantum coherence the macroscopic phase conjugation which is essentially teleportation the super luminal speeds this is all uh related to mass reduction and if those papers are being withheld from us that's what's keeping us in the dark that's what's keeping us back now just lastly to go on to my own little Soap Box I think this technology the reason why it needs to be disclosed is

(1:21:11) that this can change the world for probably billions of people on the planet people that have nothing you know we should have essentially free energy that's out there we don't need to be relying on fossil fuels whatsoever there shouldn't even be people that are homeless on the streets if we have a situation free energy you can get rid of uh we can have abundance right we have no we don't need scarcity anymore and just my own personal investment is that I care a lot about homeless people in general and I think that being on the

(1:21:39) streets impacts people's mental well-being so I think that it's a crime to be able to hide this technology the other side of it is this is that if this is can lead to Doomsday weapons which I absolutely think it can then this technology can only be disclosed in a safe manner in fact I'm so confident and scared that this can lead to Doomsday weapons that I would not even be disclosing this or doing this presentation if that wasn't MH370 on those videos because that's MH370 on those videos those those families

(1:22:09) deserve the **truth** they were the pilots families deserve the **truth** they were vilified when potentially they were actually Heroes trying to save the plane the witnesses 19 Witnesses and those are just the ones that are not on the Maldives they're all vilified they're all ignored they're all told that they were seeing things right and lastly Lieutenant Commander Edward C Lyn this guy if he **leaked** this footage he's a hero he's exactly what UAP disclosure has been asking for they've been begging

(1:22:40) for somebody to risk their security clearance risk their NDA to come out and show us actual highquality military footage that couldn't be denied not just lights moving around in the sky where people say oh it's Chinese lanterns right but actual footage that is of the highest quality cameras of the time that's out there and we did this guy huge Injustice we ignored the videos for n years made him go to prison for six years and come out all these people deserve indication as does the whole entire world so at this point I think I'm ready

(1:23:13) to go ahead and open it up um people may say last thing I guess I'll just get into real quick is where did the plane go right Ashton everybody asked me this where did the plane go what happened to the passengers um based on our flight path we think that the most likely scenario looking at the rubber band scenario right and it actually looks like in the video that maybe the plane is getting sucked backwards that if this plane is going east in the video and it's getting sucked backwards then perhaps it's

(1:23:38) showing up somewhere in the malds and the reason again for this is the b777 fire suppression device that washes up in the Maldives and the sighting in the Maldives that is again more witnesses that were ignored and discredited where these are just Islanders who rarely see passenger planes and they're seeing a passenger plane flying low headed to Diego Garcia military base which is just south of the Maldives Deo Garcia military base is where all the conspiracy theories said this plane went there's even a picture

(1:24:09) posted by supposedly posted by Philip wood the American IBM passenger who posted a picture on 4chan website just a black picture but along with it was texts that said I'm being held prisoner against my will I feel like I've been drugged and I can't think clearly people looked at the exif data on that picture and the coordinates uh indicate that that it was ni uh Diego Garcia military this is about a week after the plane went missing as well Diego Garcia military base in my opinion from what I've been told is the next

(1:24:41) Area 51 in fact it's supposedly Area 51 on steroids it's in perfect spot middle of nowhere in the Indian Ocean um and so you know if there's testing of this type of stuff going on

probably happening there there's a bunch of contracts for dredging that's go on at this place and yet if you look at Google Earth Pro there's nothing to changes on the surface of this this base for like 20 years so potentially they're building stuff underground there if you also look at the pictures before 2014 and then

(1:25:10) after 2014 the pictures before 2014 the runways are filled with giant planes after 2014 nothing maybe one plane this would indicate there's probably some kind of elev underground hanger of some sort where they can hide planes as well perfect place to hide the planes now what do you do with the passengers first of all I want to say that the families of the victims never believed the official story you have a lot of these passengers like the girlfriend Sarah of Philip wood who was going on CNN like over a month later

(1:25:41) going the official narrative is a lie like it's actually unbelievable when you go back and watch it in hindsight knowing all that information about the case the families were most likely forced into settlements where where they were forced into silence no family member not a single one has reached out to me to tell me to stop looking into this not one not one has reached out to me at all in fact this should have been tried in the US uh United States if these videos are real it implicates the US government in

(1:26:08) the disp appearance of the plane however the case uh brought forth by the passengers against Malaysian airlines in the United States was dismissed because it was argued that the correct jurisdiction would have been in Malaysia due to it being Malaysian Airlines despite the fact that both is an American company despite the fact that Philip wood is an American passenger the uh federal judge that ruled and dismissed this case her name is Kenji Brown Jackson she became Supreme Court justice under Biden a couple years later

(1:26:36) after 2018 if the passengers were alive they could have been exchanged uh returned to their countries in exchange for their silence so China most likely this would explain why China would be really pissed off is they would have had to get their pass their their people back the ones that lived what I do want to say is I want to express sympathy to those families of the victims cuz the reality is I think there's a very low likelihood of of them surviving even to this event and the reason for that is the lithium

(1:27:02) ion battery smoke is extremely toxic could have easily filled up the whole plane as well as if the plane was depressurized when the the batteries exploded um this meant that that 30 minutes of oxygen and those masks was going to be vital because we have this plane that needs to last for 80 minutes so you have 50 minutes where there's no oxygen from the masks so there is evidence that this plane survived because we didn't find a debris field anywhere if this plane crashed anywhere we should have found it even if it was

(1:27:30) somewhere in the Atlantic Ocean right so unless this plane got teleported to the zenu dimension or whatever you guys want wherever it could be right um then it had to have theoretically landed somewhere if it if it was on Earth um if the American passenger had survived Philip wood then he probably would have gone into W witness protection he would

have probably had to sign a deal where he's never going to speak ever again and he's going to have a new identity and what have you I mean no matter how you look at it it's pretty

(1:27:55) dark some of them may have been forced to live their days out on Diego Garcia military base and never leave the workers that work on Diego Garcia military base the non-military ones they actually go there for multiple years at a time and they're not allowed to communicate with anybody outside the base um the nephew of the pilot was told and this is from Florence to Changi one of the investigators who I respect a lot I actually am communicate in communication with her um the nephew was told that his uncle was collat damage

(1:28:23) that's just dark the French father I'm going to butcher his name Gan Westeros uh he uh was told that two awx which are these military radar planes US military radar planes were in the area and the Americans know what happened to the plane the former head of Indonesian police says that he was told quote unquote what really happened to MH370 from his Malaysian counterpart so this is just in my opinion the largest verifiable conspiracy of all time it might be the largest verifiable conspiracy of all time even if we didn't have the orbs and

(1:28:58) this zap this um macroscopic phase conjugation event happening in this plane uh but because we have that happen that's why I'm talking to you guys that's why I'm talking to muon this is why I talk to all kinds of podcasts this is why I do spaces on Twitter where we talk about disclosure because I think that people need to wake up to what really disclosure means it's not just as simple as flying saucers it's not just as simple as non-human intelligence and saying hi to you know beu from the

(1:29:24) Andromeda galaxy which sure I'd love to do that too uh if that's true but no it's it's more about what is this technology really mean this type of technology I I have so many people who are viscerally angry at me over just doing what I'm doing revealing this and it's not because they're upset about the families it's because people can't understand this technology to be real because what comes with this technology being real is that we've been getting lied to probably our whole lives it

(1:29:51) means that these Wars that are happening are all meaningless that they are just money production events for you know the military-industrial complex this technology means that any War could be ended in a day if we were to deploy it and then also potentially most importantly it means that this is a a national security risk you know and I don't want to I'm not a Trader I'm not a spy or anything like that so I I wouldn't even want to disclose this information and that's kind of how I'll

(1:30:20) finish my investigation here um and anyone who wants to ask questions we can go ahead and answer them and I'll you know do my best I'm honest and open person and I try to answer everything as uh honestly and openly as I can thank you guys for listening all right we have a few questions uh there's one that's been around for a while from a I may be mispronouncing the name is it luri or lorri Baraga so go ahead and unmute yourself if you want to ask your question uh hello can you hear me yes just

(1:31:01) checking sorry I'm I'm not sure I had a question um you didn't really pronounce my name well but that that's okay don't worry about it uh I I didn't really have a question honestly you can just pass it along so thank you all right there was somebody named Jimmy who uh may have had a question I'm not sure the hand was raised but maybe it was more to make a comment I'm not sure let's put it this way if anybody has a question go ahead and ask it uh this is Gary spake hey Gary how's it going I boy my

(1:31:44) brains are just about to blow up listen into this uh a lot of stuff kind of rings true though um I had a question I just seem to remember that in the early part of this where they were thinking the pilot might have caused the crash or something that he was doing uh like flight simulations at home testing in the area running these scenarios to go these places that were actually where the plane ended up going what was what do you think about that yeah so I'm trying to pull my evidence I just close it I think I closed it okay I'll just do

(1:32:15) this based on memory then instead so the actual the simulator data actually matches mh150 which went from qual lur to Jetta he was actually scheduled to fly that route February 4th 2014 the data points and times from the uh data points they claim were this route was February 3rd 2014 so what really happened here was they manipulated the public into thinking that the route from Jetta uh which isn't even a direct match to this this route that we see from our flight path was some sight of suicide route attempt um they also then try to connect

(1:32:51) the spirit individual ual flight points which is our um South Indian Ocean uh point that they claim they found um they said there was actually two points that they found there um and that's how they came up with this Narrative of oh he practiced this flight path the reality is that this guy was a 30-year flight veteran with 18,000 flight hours every single person stuck up for him including the wife all the officials have stuck up for him and all his co-workers as well so there was a big vind or vilification

(1:33:18) campaign in the media to present false information about him they also claimed that he was part of a political party that was you know they claimed that he was a terrorist because he was part of this political party I mean that's just racism frankly um so the reality is there actually is no evidence whatsoever of this being a kind of suicidal intent um he had a very large custom simulator uh in it on at home as well because he just loved flying and a lot of people who are pilots actually have that as well um in order to turn off uh all the

(1:33:50) electronic devices that were turned off um you would actually have it would take more than one person as well um Captain bellany actually argued that in order to turn them off in 64 seconds you know there's like four apus or um power sources I think they would have had them been uh disabled all at the same time so it's not consistent at all with one person being able to turn all this stuff off but it is a lot more consistent with a fire a lithium ion battery fire exploding and taking out the uh main

(1:34:19) electrical uh computers or Main engineering uh computers all right that makes a lot of sense um have you ever talked with Nim Harman uh no I have not who's that physicist uh he's

kind of worked on the stuff that you're kind of talking about there so I just wonder that'd be a guy for you to meet Haron I'm gonna write that down yeah I'm always down to talk to more people what I will say is that I have been I started my own podcast up um and this is because uh about almost say a little over a month ago someone said

(1:34:53) hey you should reach out to Salvador Pas he's got these uh patents that are out there they call them the UFO patents I I think that does them very a lot of justice and I had reached out to various physicists and what have you a couple of physicists came into my replies and then my DMs guy named Roy de Herbert who he's been kind of tutoring me on the science I I have not a PhD on engineering or phys physics or any of this stuff but so I ended up emailing Salvatore Pas and the very next day replied back and said

(1:35:23) send me a zoom link I want to do an interview and I was like okay well I guess I'm a podcaster now and um that's when I started my own podcast called hard truths so the first one was was with Salvador Pas um and then you know he uh he talks a lot about uh not giving this information away to our enemies and he goes into a lot of detail he's very very uh well educated when it comes to physics and knows all of the science um and can name drop pretty much anyone in anyone's scientific theories the second

(1:35:55) one I did was with Bob Greener who I've mentioned as well who in my mind has kind of figured out how this science Works he doesn't have an NDA he's been doing he's an experimental engineer and and uh I guess you could call him a physicist as well um and then he's been looking at these low Power Nuclear reactions that's where we able to figure out toroids it seems like the shape of a toroid which is a donut or fractal toroids which is a dut inside of a doughnut essentially can uh kind of

(1:36:23) harness and focus the electromagnetic fields into a single point where then they can continue to build up and build up and build up and this is how you can create what we think is how the orbs are actually able to create this energy level that's so strong that it can essentially rip the fabric of SpaceTime under the right conditions he was even able to point me in the direction of a locking Martin P patent for coherent matter wave beam which if you look at it basically what it's talking about is creating a coherent matter wave which

(1:36:52) can induce superc conductivity potentially room temperature superc conductivity which is what we need because room temperature superc conductivity superc conductivity in general is when the electrons can flow freely with no resistance whatsoever and when you have this this is where these electrons can break free from the equilibrium States they begin to self-organize and this is what allows these macroscale objects solid state objects to achieve the properties of quantum the third hard truths podcast I did was with a guy named Dave Rossi he

(1:37:21) is a 20 25y old it's actually most of the the replies in the comments could not believe that this guy's 25 years old self-taught uh engineering DOD contractor and he basically explained pretty much everything that he could um he has like the least restrictive NDA that you can potentially have he's the one who told me about the idea that there might be a fourth orb which

salvator Pas ended up agreeing with as well because I'm now good friends with both of them um and the idea that there would be this uh quantum entanglement

(1:37:51) effect so it's interesting that the physicists see it a little bit differently than the engineers do and I'm sitting here in the middle just trying to wrap my brain around both of them and then the fourth and the final one that I've done hardre podcast I've done so far although I'm planning to do more it was with actually Dave Rossy and salvator Pi at the same time um if you guys want to check those out if you're interested in the science like I am and trying to explain the science

(1:38:13) we see you guys can check out my YouTube channel just X Aston I have all those videos I think a couple of them you have to look at the live vers of and then a couple of them I've uploaded I've just been really busy but those are really interesting if you want to learn about the science of what you know UFOs how they might work how these orbs might work the idea of how teleportation would work and I'll let other people jump in here in a second but one last thing I want to say too is that if you're the

(1:38:39) type of person that believes that there might be non-human intelligence visiting us that I think it's very important to keep in mind that how are they getting here uh I was on a space actually where I was a speaker on X with actually Dr Steven Greer and in that space I clipped part of it because in it he says the speed of light is too slow you know if beu ambassador beu from the Andromeda galaxy is going to get here it's I think thousands of light years away maybe even millions of light years away that is

(1:39:07) going to take way too long to get here you need a way to travel faster than the speed of light and if so what we're talking about faster than speed of light I'm going to call it super luminal speeds because I think that it's very important in this area to use scientific terminology but it's really just teleportation essentially and it's taking quantum teleportation and scaling it up to the macro scale level um so that's just something that I would urge people who who believe in you know the

(1:39:33) non-human intelligence visitation theories that really have to explain how are they getting here because I think that disclosure is a lot more more than just about being nonhuman intelligence is about what is what is the technology how does technology work and what does it mean let's take some more questions YouTube link again yeah just X Aston I'll put it in the chat I'll even try to pull it up for you guys thanks that's all I got yeah no problem that was at just X the the letter X Ashton yes exactly at just X

(1:40:05) Ashton yeah I'm G see if this works I want to take a look at that myself let me see if this yeah okay this works I'll throw it in the chat as well for you guys okay and any other questions probably noce are our minds are almost fried and and don't know exactly when to where to start with questions yeah let me take a look at my list and see if I so I also have this evidence list so if you guys want to follow the case you can follow it on Twitter it's also justex Ashton on Twitter as well I've synchronized up my

(1:40:40) my usernames uh I'm probably going to be posting a new version of the all evidence I'm currently on version two um probably going to be posting version three of the all evidence link which is kind of a summary of what we've been talking about here uh as well and the reason for that is that I always want all the evidence to be out there I want people to be armed with the evidence themselves because the reality is that this uh this case has in my mind broken a lot of people's brains um not probably

(1:41:06) people that are in this chat but people that are out there that have believed all the official narratives like this is too much for a lot of people to take in and um in order to fight that I'm just one person right if we want to get this information out we want to spread this if we want to achieve true disclosure we've got to reach as many open minds as possible my personal opinion is that disclosure will only happen when a vast majority of people just all agree that you know there are other there is other

(1:41:36) life out there that there is technology that we don't understand that's out there and then when we achieve that point now all the mainstream media will just go oh yeah of course it's out there and then what will happen is the people that don't believe will just go oh yeah I always believed it all along right um and I think that's really how it works in real world it's kind of sad State of Affairs but I think that's what it'll take and then this may be a controversial statement as well but I

(1:41:59) think that when it comes to UAP disclosure we need to move away from doing Congressional hearings that are about you know alien bodies and stuff like that it's just too much for a lot of people like my parents for example if I bring it up with them they go what do I care if there's aliens how does that impact my day-to-day life right but if you approach it from the techn technology perspective from the cons iracy perspective that there are third party companies and I'm just going to name them Lockheed Martin Northrup

(1:42:26) Grumman Boeing Bigalow airspace there's several others as well if these people are hiding technology from us that to me is a crime against humanity and that's the type of thing we can investigate it's verifiable information um and if we find out they have that and they're holding that back that's the type of thing that can lead to the rest of that disclosure that we want right that yes there's also now Beaton visiting us because once you have teleportation technology now people are gonna go oh

(1:42:52) yeah okay of course there's probably beans visiting us you can literally just teleport here from Alpha centari and it doesn't take four years to travel right hey Eric uh Tim's got his hand up yep I know I was gonna call on him Gary but then you broke in okay sorry I don't know which screen you're seeing uh good evening um regarding your comment of um how are the ETS getting here um I think that they're couple or three ways probably teleportation certainly is one uh you know their own

(1:43:27) craft uh whatever they may be is number two uh you may be surprised but number three is they are born here in other words they uh get get born to some couple uh here on the

planet yeah arguably from well I won't say my experience but just from what I have seen um that Third Way being born here uh they have to give up a certain number of their innate abilities uh you know that are obviously Superior to ours but some of them they must suppress or give up in order to be born here because otherwise they would you know rise to power and

(1:44:12) rule the planet or destroy it so uh but yeah I see three basic ways where they're coming to our civilization yeah and I think one as well is that like what if you know we are just hybrids or maybe they're our cousins and here's another thought too is that what if they were here before us right and we dug up some craft right I mean that's also possible what if they're living beside us um I'm actually a proponent myself of the ultraterrestrial hypothesis like we don't really know much about the ocean

(1:44:41) at all and in fact when this case happened this was one of the first times we started to map the bottom of the ocean you Ocean's really deep as well so you know it's almost a lot these sightings in ufology seem to happen over the water they seem to be related to the Navy so you could almost argue that you know what if there is another civilization just living right beside us this whole time and that we either evolved from them or were their cousins or what have you um the the rabbit hole goes really deep and I've been trying my

(1:45:07) best not to fall into it but thank you Tim I appreciate your insights it's interesting how things tie together um I haven't had a lot of time to spend on the science of it but when you mentioned the name Salvatore p reminded me I learned about his patents I haven't read them yet but I learned about them years ago and it was in connection with another scientist who is now deceased but who was working uh in locki and uh actually demonstrated some of this so-called anti-gravity technology so it's pretty fascinating uh

(1:45:44) how things kind of click together sometimes when you you hear them coming from different directions same people uh and it's it's definitely worth spending some time looking into into their science yeah a couple comments on that too is that you know I think the reason why we can't pass an audit right is this type of Technology black budget programs I see people in the chat mentioning as well you know like I think they say something like 40 to 60% of the money can't be accounted for the same reason

(1:46:11) why we spend \$110,000 on a toilet seat to quote the movie Independence Day is that you know it's being pushed into these types of uh you know science that's out there I've also been personally told that um you know the department of energy potentially has more power than the president has and the president's a you know temporary employee and that even if we were to try to investigate them they have ways to hide the technology by putting in someone's name and having them flee the country I'm sure there's other ways as

(1:46:39) well um and I but I still plan to Foya everybody around this because I want to collect these foyer's like you would collect Pokemon cards right because they're all just rejections based on National Defense reasons um and also when you talked about locking Martin Skunk Works specifically you know I remember Ben rich I believe it is who said that you know anything that

you might have imagined we've already been able to figure out as well as um having the ability to already take ET home I remember thinking when I heard that

(1:47:06) quote that he was you know exaggerating but now that I've been looking at this case the last four months and it's somehow only been four months I look at it with a fresh new set of eyes and I go wow maybe we really have the capability to go to another planet it um and you know that maybe this really is locked Martin's technology but again I would say I don't care what people want to believe about it um I think everybody should be entitled for their own beliefs related to the videos and what it means

(1:47:34) um I just want the **truth** from the government and people ask me well what's the next step I think the reality is the government's never going to admit this is real at least not until the plurality of the people um believe that it is so for me is twofold one is to make it self-evident make itself apparent so that a vast majority of people understand that what happened in the plane was not a suicide route it was not a crash in the South Indian Ocean you can't have a 777 crash into the ocean without leaving a debris field and then

(1:48:01) the second part is force the government to make a statement the last thing they want to do related these videos to be forced into a statement I think that they actually are not legally allowed to lie I think there's legal liability around that so what they have to do is either have to make a non- statement they have to ignore it entirely or they have to tell the **truth** now we know they're never going to tell the **truth** so right now I think they're stuck into trying to ignore it pretend like it doesn't happen even though I've had over

(1:48:24) a 100 million impressions on my Twitter account I mean if you were tack up my Impressions I'm getting higher ratings than CNN's getting on a weekly basis and yet they just refuse to talk about it um and then so the reality is if we can get them to force into a statement then we can force them into sale we can't confirm or deny that right which is pretty much as good as admitting it's real um and then that's a way where I think we can push the conversation forward any other questions from you

(1:48:52) guys I appreciate you guys been a great Audience by the way just want to let you know that and I thank muon while I have the opportunity as well for you know inviting me on to talk about the case um as you can tell I'm I am passionate about it and passionate about getting the **truth** out there to as many people as possible and as many people that are open-minded that will listen to it well you've done an impressive amount of research and it was a a very well organized and researched presentation so want to congratulate you on that are

(1:49:20) there any other questions before we end the session okay hearing none I guess we will end the recording and we will wind this up thank you guys very much all right thank you recording stopped okay chat so I'm going to be deleting this stream because I don't want to infringe on their uh copyrights on this but wow 360 people were watching this this is a good amount of people so yeah I think we've uh you can tell huh what what questions you guys have I can answer any questions that were left behind I wasn't

(1:50:12) really following the chat very much there guys but I thank you guys very much for the Mind blows uh emotes and what have you um as you can tell I it's a very compelling case right I mean it's it's a ton of evidence that's out there um and so everything I said there applies to you guys as well yeah that that was a lot of people in the Stream there and there was even a lot of people on their thing he said there was only going to be like less than 15 people but there was like 25 people or something like

(1:50:38) that yeah I'm getting better at the presentations for sure for sure um let me just see exist in a higher Dimension there could be a dimensional aspect that's at play with the you know non-human intelligence it could even be an extra-dimensional aspect related to technology that we see I think that that's really interesting as well um and what I would say too is anybody who wants to get the information out wants me to speak on other events feel free to let people know about me obviously you you can tell that I'm I'm

(1:51:13) pretty well versed in this topic at this point Tesla yeah I think that Tesla is somebody who for sure I'm very interested in looking into as well yeah selftaught DOD contractor Dave rosi is probably one of my best friends at this point I think he's one of the smartest people on the entire planet um I think that most likely he will be somebody who's extremely connected in the future I mean I can't believe the dude's 25 years old I actually ask him all the time like are you sure you didn't use some kind of

(1:51:38) reverse aging serum or something like this just can't believe somebody knows that much um I don't know jeep I'm not sure about the octopus situation let's see what other questions anything okay I think they were a really good audience though as well that that was great guys are giving him crap over his profile pick yeah so um I'm glad I was able to stream this for you guys glad you guys were able to hang out tonight um you know I think it was it was a good one we have a lot of work to do chat we have a lot of work to do

(1:52:13) still we've got to update our version two document to version three you can tell that I was kind of including some stuff in there uh removing some stuff uh that I think that needs to be updated um we need to do a new version of all works I probably have another like 50 posts that we have to update into our all Works document we also need to finally finish off yeah I think that was Jimmy uh I don't know who that was actually there we also need to finish off our podcast list a lot of people have ask me about

(1:52:44) the podcast list as you can tell here it's we've got a lot to go I there's been at least another 10 podcasts on top of this year maybe more so evidence is really strong and we're going to keep going uh you know if people don't want to believe if people want to believe that the videos have been debunked from some cloud pictures I mean go nuts as you guys can tell there's way too many questions still to let this go if people want to hate on us or whatever we're just going to let that happen too I'm

(1:53:13) I'm not going to be pushing back on people hating us anymore I'm not going to let those kind of people get to us anymore um we just have too much going for us right and we've

just got too good of a community here and we're going to learn the science together and it's going to be great that's why we call it catastrophic disclosure so I think I'm going to log off for tonight uh I got to go uh Drive uh um Drive uh Melo demon back home he's been hanging out with me for the past couple days we've been working on stuff

(1:53:44) we've got some big stuff coming in the next day as well we've got uh this we're going to probably look at that case of that 1970s plane and then uh we might be having another scientific paper coming out in the next couple days terms of the rebunk info on the cloud picture the reality there is there's just not a lot of credibility to it to begin with right it's a really weird thing that somebody claims to have found these clouds that are like all perfectly match because the reality is that in order to create these

(1:54:13) videos you need to make a 3D rendered environment right and if you make a 3D rendered environment so you can get both angles why would you have a 2d background we've already proved that the the clouds are moving we already proved that um that the Dr when the orb goes through the the uh the cloud that it distorts the cloud right so the whole uh Cloud thing in general doesn't make any sense it doesn't make any sense why somebody who's a Six-Day old **Reddit** account is emailing some other guy to come out and

(1:54:47) make a **debunk** and why that guy is making a **debunk** within one hour of being emailed from an anonymous email it also doesn't make any sense that these Source where these cloud images come from we can't find them we looked at the torrent they don't exist we look in the way back machine before 2016 they don't the cloud pictures don't exist we look at the database update and the database update says December 4th 2023 I'll tell you guys this I work with databases and when a database is updated

(1:55:18) you don't update all all the rows in your database if I go look at the in my my work and go look at my work's database I'm not going to see the database rows getting updated that doesn't happen the only way the database the individual element database rows get updated if somebody goes and changes something on that element and when the the the uh website owner was asked about it the website owner didn't respond and instead they started trolling us started making UFO videos and trolling us so the whole

(1:55:50) whole Cloud situation is extremely sketchy and the thing about it as well is that right after that then I was uh the the victim of a criminal felony fraud where the **debunkers** from **Reddit** committed an actual felony against me falsifying evidence to get us to not look into the case anymore so we really can't trust anything that the **debunkers** are putting out there especially when it's just from sketchy backgrounds um it it just you know it would be too easy to use AI to manipulate an image to add clouds to it

(1:56:23) uh so the reality is unless our evidence right look at all the evidence unless our evidence is refuted unless a hoaxer even comes forward and can prove it and even then I'm going to be skeptical now just because of the levels of the **scam** I've seen them willing to go to until that happens we got to keep pushing forward really the thing that will give us closure on

the case is when the US government comes out and they tell us directly what happened to the plane right that's what we need to have happen

(1:56:49) just like I was saying on that that um interview I did with them we need the US government to tell us what happened to the plane right um and then you know if they come back and they give us a story that makes sense maybe they say they faked the videos right and they can explain why then maybe we can take that but otherwise you know they've just got to tell us the **truth** that they were filming they were filming the plane so okay guys I hope you guys had a great night uh we will be back tomorrow uh we have the diamond podcast we're we're

(1:57:16) going to meet with Oppenheimer Ranch again tomorrow I'm really excited about that Oppenheimer Ranch was a really great guy so that's going to be at 800 p.m. Eastern tomorrow we're at 13 pages of evidence for Paul and I'm probably going to stream either before or after the Oppenheimer Ranch I don't know which so if you're one of the early risers probably it could be streaming from 6:00 p.m. Eastern to maybe like 8:00 p.m.

(1:57:38) Eastern or it's going to be uh afterwards after Oppenheimer Ranch after we talk with him a little bit I think that'll be a fun one he's uh he knows a lot of stuff so it should be exciting yeah we haven't posted this evidence sheet anywhere yet so that's why guys what I want to do in the next couple days is I really want to get the evidence sheet posted to the public so that you guys can share it with stuff I have seen people trying to share the evidence link I want to make sure you guys have all the evidence so let's try

(1:58:04) to do that in the next couple days maybe on tomorrow's stream we'll prioritize the evidence link and we can do that um we're not going to be able to find this stream after I delete it what I will do though is I have a recording of it so if they give me permission I will upload the recording but otherwise it's going to only be available for muon so this was just one that you guys had to watch live so thanks guys have a great night appreciate yall peace

Transcript:

(01:33) hey what's up chat uh full screen face okay there we go let's get this my camera might not be lined up correctly I was moving it around how's everybody doing tonight hey Dorian hey Bernie hey Misty hey pugman Ash catch him hey Chris Chris was the first chatter tonight uh I've also got uh Mello demons in town hanging out so if you guys hear background noise that's what's going on um let's see camera actually looks really good today for some reason interesting okay sweet yeah I think uh

(02:13) Bernie what time are we work doing it Friday I hate to like just have chats in the middle of our stream here but um what time are you guys thinking for Friday I put it down for 8:00 Eastern but we can do whatever you want my my Friday's open um after Friday I'm taking a few days off for holidays I'm not going to be streaming or I mean I'm not going to be doing podcasts at least uh and then I'll take more podcasts after the holidays but I just I need my own little break from podcast I've been

(02:40) doing one every single day hey James how's it going man yeah I saw the article about thisy this fisherman from nine years ago I'm going to spoil it for you guys there's not going to find a playing there but yes I saw it isn't it weird how um okay cool time is perfect uh isn't it weird how this stuff is like getting spammed across mainstream media and it's just like some guy like making a random claim some guy makes a random Claim about he pulled up a a jet engine and a and a wing in his

(03:19) net it's like doesn't like let's go look at let's go find it guys it'll be easy to find hold on I'm going to pull up I'm going to switch views here in a second in fact I wonder if I if I just search MH370 news I guarantee it shows up yeah here it is like eight articles about MH370 where where are the articles about the fact that we've got videos that seem to show what really happened to the plane the fire fisherman finds fisherman claims he found Wing months after disappeared he just didn't take any

(03:59) pictures doesn't have any proof could be just literally anything but yes we're going to go ahead and write a bunch of news articles about it completely unverifiable the only Survivor who is on as well on the boat the only Survivor of anyone who's on the boat everybody else who's on this boat is is dead now it was it was also too big to get onto the deck but he's sure that it was part of the plane okay it's also what thousands of miles further away than where the plane supposedly crashed yikes

(04:50) man this is like uh the equivalent of finding a cloud pictures on a random website uh yeah this is this is wild hey James how's it going man there's more than one James in the chat now um what was I going to say I do want to apologize to the chat for and the followers for how I acted yesterday I feel like it was acted a little bit inappropriately I think that the the high road would have been a better way to take that right uh I think I let these YouTubers and whatever get to me which I shouldn't do so I just want to

(05:28) apologize to you guys for anybody I let down we won't be doing that ever again we are not going to do that ever again typical MSM yeah hey Gap how's it going hopefully you can hopefully that uh you know helps give your daughter uh something for uh Christmas that she enjoys um I always down to help people out okay what should we so just real quick I've got a muon um presentation in about an hour at the top of the Hour 1 hour from the top of the hour here and I think I have a link that I can post uh let me look

(06:17) through my email and make sure that I have it Zoom link okay there's my zoom link if your followers want to hear your talk direct them to this link wait please direct them to the

following link which describes your talk and what to do to connect Eric Hartman okay Eric is the one who got in touch with me muon thing will be interesting let's see what how we do it here oh look catastrophic disclosure oh nice that's even better name for it I love this what is so this this is probably how you guys will get I'll I'll post this in the

(07:04) chat or um I'll pin it to the top of the chat so you guys can if you want to watch I probably won't stream it because I I think they won't want me to do that in full disclosure I guess just so people know like they are uh they're giving me uh like a payment for this uh \$200 oh you actually have to pay to watch H so yeah I probably won't be able to stream this unfortunately well that's disappointing that's probably why they're paying me though huh okay well in that case I apologize but yeah I'm

(07:51) going to prepare for this so I will go ahead and you guys can at least get the inside on this uh hey thanks V Commerce appreciate it man appreciate it uh one sec guys so I'll let you guys can see the inside case of this but um yeah don't spend it all one place don't spend it all in one place oh uh Gata or Gata awesome been following it from the beginning awesome I think that a lot of Pilots um are very compelled by the evidence because it's very compelling and I think a lot of Pilots know that this is not a suicide

(08:35) situation right yeah see def lith batteries people know how dangerous these batteries are oh I should move the chat over here for you guys feels like my like when I look at the side here it feels weird yeah people know there's something wrong with these batteries man I like the idea of catastrophic disclosure we should like not like trademark it but we should just make the term catastrophic disclosure just go viral you know we should make the term go viral oh you got that light working pretty well actually it's doesn't it's not

(09:10) glaring um cuz really the catastrophic disclosure stuff is like really the way for to go it's a little too dark with that I think are you going to set up other lights okay got it um yeah we're working on filming some stuff to I don't know who knows maybe we can get the word out there with this case at some point pretty much all the pilots I've talked to though so far other than the ones who are these like Netflix people or whatever right are realize that there's something something going on that

(09:41) doesn't make sense with regards to this thing so you know what I'll do I'm going to play the flight path explainer in fact cuz I I need to rename it as well just to give people a little bit of background on what we're dealing with here cuz you look at the flight path it's like there's no way this was a suicide route it just doesn't make any sense and I've got a lot of stuff holy crap one sec guys is it this one hello everybody this is Ash yeah this is it okay here we go I'm going to

(10:13) rename this as well real quick MH 370x flight path explainer okay let me let me pull it back up again okay folks here we go this is me oh this me my hair was a lot shorter a month ago hello everybody this is Ashton Forbes here to bring you the MH 370x flight path explainer the plane takes off at 1642 UTC from qual lur headed to Beijing at 1719 UTC the pilot says good night Malaysian Airlines flight 370 around 1721 UTC a lithium ion battery fire explosion occurs

and is scene by Mike McKay on an oil rate 300 mil away he sees fire for 5 to 10

(10:55) seconds nine Witnesses along the coast hear loud noises at the same time the plane goes dark in the case of a fire the first response is to pull the main buses and restore the circuits one by one until you've isolated the bad one if they pulled the buses the plane would go silent the plane heads towards panang lwi International Airport the pilot knew the train was friendlier towards Lanka which was also closer than qu andur at 1730 UTC there's a communication with another pilot who hears the voice of one

(11:23) of the pilots of MH370 at the same time eight fishermen on a boat 10 mil off the coast see the pl flying unusually low consistent with a depressurization emergency event attempting to provide oxygen for the passengers the Malaysian Minister defense claims the plane was not identified but admits they knew it was a non-hostile civilian airliner the plane flies over Lanka at 1752 UTC when the co-pilot cell phone pings a cell tower the plane doesn't land either due to the fire or because they have communicated a

(11:52) rendezu point the plane continues to the nicobar islands until around 1840 UTC when a witness came at sees a glowing orange plane with dark smoke coming out of it this is consistent with the crew battling the lithium battery fire with Hon fire suppression devices releasing bromine a hallogen gas soon after the videos begin they show smoke coming out of the back of the plane consistent with the fire the plane is descending in the videos consistent with an intercepted Chinese only reported communication that claims the plane was attempting an

(12:24) emergency landing and disintegrating the plane's altitude is low in the video as proven by the cumulus clouds that only form between 1,000 and 5,000 ft also consistent with the witness of sighting this is where I just let it kind of play out here because just good to just watch poof so I probably will show this uh in the muon thing so let's figure out what we should do here um just alien cheeks that were clapping yeah I was already mentioned about the fisherman story thing I think there's no chance I mean it's just the last

(13:05) surviving guy of some boat thing says nine years later he's going to bring it up doesn't make any sense right doesn't make any sense I also went ahead and I if you just joined I apologize to the people who I might have offended by being by being rude yesterday to some of the the YouTubers and what have you I think that's not the person that I want to be I don't want to be somebody who's lashing out at people I don't want to be um type of person who is uh you know acting like the people who are hating us

(13:33) are I think that we don't want to lower oursel to that level um yeah um yeah as a pilot I can see the horizon or if I'm at 41,000 ft I can see a large fires from the sky yeah the clouds that that was really weird that was very weird uh the Danny Jones podcast in general was a huge setup did if you watch the Danny Jones one do you guys notice how like he has us go on break but then he's still recording like he was like trying to get me to say something weird and there was several phone calls I had with him as

(14:13) well where it was just bizarre when I was talking to him the thing that's weird about those podcasters that set me up was like they have lots of more esoteric people on um yeah I mean I still felt is important I'm not and I'm not apologizing to the person because the person who um made the the YouTube video about us and stuff you know like that that that's just disgusting to do stuff like that somebody gets **scam**med has a criminal activity happening against them and you're going to try to cut them down

(14:43) it's just disgusting I'm apologizing to you guys because we should be better than that cloud experts and yeah so um I probably won't be streaming later tonight after the uh muon thing which is in an hour just because it's going to be super late it's going to be like 2s hours so it'll be like midnight by the time that ends um but uh I did want to let you guys know about that oh yeah the contrails thing too jeez ridiculous okay so um let's see what we got going on here I want to I want to just set up some some

(15:22) notes oh I already have I already created one is whatever for the muon how can i s the link in the chat to the video you link to what oh the the video of the the contrails ending in midair is probably not related to MH370 I've seen that long time ago long time ago anyway welcome everybody um let's see here so for the muon presentation I wonder if I I should do the flight path explainer first but yeah in terms of the guy with the boat and the story like they're not going to find any debris they're not

(16:07) going to find the plane there guys just spoiler every few months a new article comes out that gets spammed if it's being spammed by all the mainstream news article news websites like it's most likely nonsense if you do want to follow the muon thing it looks like you have to pay \$15 yeah looks like you have to pay \$15 which is disappointing uh but that's muon for you um and no disrespect to muon I you know they invited me on to to do a thing for them uh and yeah I want to do a good presentation for them yeah yeah I think that the goal

(16:53) here is to get as much much exposure as possible for the case right um because the evidence is so strong and even even these experts out there so-called experts I'm going to say which really by so-called experts I just mean people that have been following it for nine years have have solved nothing they've solved nothing right and they can't refute any of the evidence against interview I get I don't know what that is Misty um muon Orange County uh asked me to do a presentation yeah I'm not going to oh

(17:30) yeah you guys could do that uh that might be acceptable I don't know I just don't want to run a file with what they're doing but if somebody buys it and streams on the Discord I I did set up uh yeah you guys can maybe do a live watch thing the voice channel is set up in the Discord if you're a part of the Discord so you guys could probably do it that way if you want yeah um I'm not sure if I'm going to do flight path explainer first but then I'm going to do why didn't crash [Music]

(18:03) um debris that was found then we move into understanding the videos video details probably science Edward sein that's probably going to take an hour an hour and a half for that

and then probably questions so I can kind of do this pretty quick these days the fire scenario actually probably probably go here actually should probably do fire scenario after why I didn't crash and then forward cargo bay I might need my other thing up for that though might need my recent piece up for that that Diane Feinstein piece is taken off

(19:03) over 100,000 views in eight hours I mean this this fining thing if you guys didn't see this earlier of the bin look at the bin Laden pictures look how detailed this is we're supposed to believe they didn't see the debris they've got detailed satellite imagery like this it's probably even better from this is a geostationary video o um what if it looks like I'm in the club guys work in progress setting up for the MU thing in Pakistan that you can see trucks mean you can see everything here

(19:40) so it's like now I'm told a lot of this has to do with the angle of the satellite that doesn't really have to do with the angle satellite how it works lot of people I think that she means like if a geostationary satellite's not straight down the US and others with sated and Diane Feinstein's passed away so this was this was back like 9 years ago technology can't actually see better than the pictures we're seeing well I think it depends on the satellite and the resolution that's provided by the

(20:09) satellite and I mean what does that really mean I guess she's talking about like how low to the ground the satellite is I mean if so I mean USA 229 is right there the satellite how sophisticated our satellite 2011 only three years beforehand uh I'm not going to go into what we have or what we don't have does she know when she says this seems like she knows what I just said suffices doesn't really suffice at all right we want to know like did we see the debris from the satellite right can we assume

(20:43) that the US does know more or can see more I love her questions who is this lady how have I never heard of her not necessarily not what do you mean not necessarily guys do we have to play this s's video I I would answer that that way I would answer that that way this is like the Minister of Defense right now I can't answer any questions directly it's like she's like not sure like how she should lie know whether more sophisticated satellites could be turned onto this area I just don't know I just don't know I mean wow I think the

(21:21) answer is yes we do know here here it is guys there they are these are the sophisticated satellites staring right down at and this is definitely wider than this bubble now we're we're sure it's probably much much wider two to three times bigger than this maybe even bigger than that I mean that's uh it's going to be a big big scan that these things can do so for sure they can see it I mean this is this is what it looked like this is a a satellite that was also set up in 2011 look at the detail I mean

(21:49) these are like cars that they can see here this is Extreme high amounts of detail you can see a car right here damage support vehicle like you could probably see people walking around here that's how this is like insane level of detail the low earth orbit satellites provide so yeah definitely definitely knows um oh yeah that so that reminds me sorry chat what are we say in

chat yeah they were searching in the wrong spot for a while and we also need to show cbers where are we going to talk about cers [Music]

(22:36) cers flight path explainer I don't know if I'm going to go into the searching in the wrong spot so much in in this one that's the thing that a lot of people don't understand about the video as well there was nobody that really understood how no one really understood how well um or how little we understood about the flight path certainly not for months it was not a clear understanding of where the flight path was for a long time uh I'm probably not going to go too much into the **debunk** stuff it's just

(23:20) boring just boring I don't I don't want to waste time on **debunk** stuff right I just want to present the evidence if people don't want to believe it's real they're not going to believe it's real for whatever they want uh I'm approximately 40 years old yeah it's definitely a cover up I think the the cover up part is pretty indisputable the official story makes no sense yeah the debris would have dispersed everywhere man it would have been a huge debris field right if you want an invite to the

(23:56) Discord you're going to have to email me at MH 370x proton and you'll have to give me some personal information uh if you want to invite to the Discord I'm going to skip the ads here whenever I notice it I usually just skip the ads um yeah I mean age doesn't really matter guys but I'm old enough to at least be somewhat mature I think okay let's see let's look at our evidence and see what else we need the video the dates on the videos video details video speculation oh the fake video

(24:35) requirements I could probably go over that instead like you know instead of going over the the **debunks** I mean I have them laid out here in fact we could probably add to the **debunks** now if we want Chinese hack motive probably need to go into motive right yeah thanks G I hope it's Gat G common sense is what most people need today in this day and age and just for people who are wondering I'm not very political either I mean I guess I care about stuff that impacts people so that's what politics really is

(25:31) um but uh you know when we look at stuff of this magnitude of like what we're seeing in these videos it's really hard to care about politics because you just it's how can you see I just see Politics as a game after you look at these videos right hey Amanda welcome 12 feet welcome welcome everybody we're streaming a little bit earlier because we've got a muon presentation yeah I just want the **truth** the official narrative is definitely not the **truth** and it's not even an official narrative

(26:04) official narrative is they don't know what happened to this plane I should probably say that right crap videos come back videos see what other videos I can show there is another 777 that um was scrapped too early purchased by G8 tesis I'm not sure Ken has been talking about this **Reddit** thing that came up that they're claiming that you can see like the plane after it disappears there's no plane here guys there's there's no plane here this little dark Trail seems to be the trail from the

(27:06) orbs that you can still see barely you can see the dark Trail in front of the orb here see the dark Trail in front of the orb here as well as the one here you can still slightly see them there's there's no plane in this maybe he's talking about this it's just a cloud in the background I don't I don't know what people are saying about seeing the plane still I think sometimes people are looking little too hard this is why like I don't I don't a lot of the stuff Punjabi Batman post to is is a little

(27:33) little too much it's trying too hard for Stuff got to have strong evidence for stuff look at this non-radiating barrier here incredible there's new orb footage over La no I think we're going to be seeing a lot more orbs guys a lot more orbs wouldn't be surprised if some of the orbs we're going to be seeing are from other countries as well like China and Russia yeah the disinformation and the VFX debunk stuff I don't really like to go into too much on that although there was a good Artic a

(28:22) good Reddit post I I don't know how long ago it was CU sometimes the stuff just shows up was actually on the UFO subreddit where they were actually talking about all the disinformation that was being pushed on the UFO subreddit let me see if I can find it God this is just this these kinds of post shouldn't be allowed on a UFO subreddit it's always just moral in moral righteousness this was pushed to make people look bad guys there is no credibility in the UFO Community to normal people like you're not a 4K

(29:09) balloon no one even knows about if I were ask my parents to have no idea what I'm even talking about right this 4K balloon stuff like it's always that you're making us look bad it's like dude if you're talking about aliens visiting earth like nobody's taking you seriously already right just just the reality of it um so you know I I will believe you probably because I think that there's life everywhere and if this technology exists then they can get here but normal people won't won't believe it so this kind of

(29:38) post are just ridiculous and like this too like stuff about you know even the extra dimensional aspect it's too far into the woo for a lot of people guys where's the one about disinformation that's pretty weird weird I really don't even check this website out anymore just because of how bad the subreddit is and how completely controlled it is by the government Cat by us helicopter where is it it might have been like more than a day ago here it is it was a day ago um this is the one it's definitely

(30:32) the UFO discussion is being manipulated heavily by the government if you don't think they've got people on subreddits and social media then you need to read the Twitter files they control Reddit most likely it doesn't mean that everybody on Reddit is some kind of disinformation agent just means that they um you know they know how to manipulate the conversation yeah I feel like there's really good people in the UFO community that we've met but overall it's a lost cause like I was talking to this UAP mik

(31:03) guy today who you know we've had we've gone back and forth in general I I just I don't think about him generally but you know in his mind it's about aliens and I'm like if you can't

figure out the technology then you can't really start talking about aliens you know you need to figure out what the technology is first how do these aliens get here if they're getting here right or if they have a super advanced technology it's about understanding that that's the real implications

(31:28) um now where is the the thing that I wanted to find maybe it's in the top comment here it is no that's not it is it the reply to this one here it is 25 rules for disinformation you guys are going to recognize a lot of this stuff I actually kind of want to add it is the problem is it's too long it's too long look how long it is 25 rules um maybe I'll just post a link to it uh where's the disinformation stuff I'm going to go through it with you guys though okay oh hey wow thanks lamp I haven't

(32:24) seen you around welcome Sig to signals intelligence not a pronoun titular yeah I know about signals intelligence OS I did not know open source Intel I didn't know that I did not know that's what OS int stood for hum mint human humint is human Mass int measurement and signals Geo INT geospatial in tell and all other feed analysis interesting thanks L appreciate the donation appreciate that information I didn't actually didn't know a lot of that stuff that's how that's how uh disconnected I am from a lot of this

(33:11) um well let's read through these I think these are good to know guys this is very important if you want to recognize it hear no evil see no evil regardless of what you know don't discuss it especially if you are a public figure if it's not reported it didn't happen and you never have to deal with the issues well think we know that one guys we know that one right become incredulous and indignant avoid discussing key issues and instead focus on the sides which can be used to show the topic is show topic

(33:37) as being critical of some otherwise sacent group or theme also known as the how dare you Gambit I think we know that one right guys this is the how dare you your this is the your hurting ufology argument so the first one is mainstream media won't look at it right as long as the mainstream media doesn't talk about it it doesn't exist second one is how Dare You offend the UFO Community right create rumormongers avoid discussion issues by describing all charges regardless of venue or evidence as mere

(34:06) rumors or wild accusations I mean you've heard this one you have no evidence you have no evidence right you've heard this literally every single thing on here is going to have been played against us every single piece of disinformation that's possible other derogatory terms of mutually exclusive **truth** may also work the method uh which works especially well is with a silent press because the only way the public learn the facts are through arguable rumors right they say that there's you know there's you have no evidence even though

(34:34) we've got literally 13 pages right um use Straw Men find or create a seemingly uh a seeming element of your opponent's argument with which you can easily knock down to make yourself look good and make the opponent look bad either make up an issue that you may safely imply exists based on your interpretation of the opponent or the opponent's argument or

select the weakest aspect of the weakest CH uh charges so this is like what Victor of the independent group did right he says oh well the cloud should be moving right

(35:07) he tries to find some way to argue against it using some kind of straw man and then will we say okay we figure out the cber system how it works right hey Ellie how's it going oh wow thank you very much again lamp appreciate that that's five donations I haven't recognized you yet oh Amanda you got your MH370 didn't disappear itself awesome um Sidetrack opponents with name calling in ridicule I don't even think we have to read into this one right we know sidetracking people with a name calling ridicule you think aliens zap

(35:41) the plane to another dimension right that's what they always say hit and run make brief attack on your opponent's position then **Scamper** off before any answer can be fielded this is why people get blocked right it's fake blah blah blah so Corridor crew said it was fake blah blah blah right hit and run this is what they hate the most this is why they hate being blocked question motives Ashton must be a grifter right twist or amplify any fact which can be taken to imply the opponent operates out of a hidden Personal Agenda or other

(36:12) bias they'll say oh Ashton's too emotionally connected to the case he he doesn't answer questions right they try to question the motives invoke Authority just look at the AA 2014 Discord officially **debunked** right like they uh use disinformation in their headlines intentionally to invoke fake Authority that doesn't exist heck they have people with fake subject matter expert tags right because they're trying to invoke authority over other people literally every single thing on this list you

(36:43) could find examples on that Discord probably within just right away he's seething yeah play dumb no matter what evidence or logical argument is offered avoid discussing the issues except with denials that uh that they have any credibility so again we just say that the US government is seeing everywhere we say that you can't crash 777 into the ocean without leaving a debris field and what do they do they just play dumb they don't address it right they never never address the evidence associate the opponent's

(37:12) charges with old news a derivative of straw man um so this one I this may be one where they actually don't hit us with a lot although Victor did say today when I replied to him that all our evidence is old it's like wait well yeah of course it's all old it's from 26 from 2014 establish and rely on fallback positions using a minor matter or element of the facts take the high road and confess with candor that some innocent mistake in hindsight was made that the opponents have seized the opportunity to blow it all out of

(37:46) proportion imply greater criminalities which just isn't so others can then reinforce you later um I can't think of any great examples of this one right now I'm sure there's some out there though enigmas this is one enigmas have no solution drawn upon overall umbrella of events surrounding the crime and the multitude of events and prayers paint the entire Affair is too complex to solve this is one of those situations where they will commonly say that there's no answer right or that we we just can't know right this is also a

(38:15) derivative of the one where if you ask people what their opinion is that they will not be able to give you an answer right they'll just say that we don't know I don't know right it's almost like they they say it's not something that can be solved but of course everything can be solved everything has an explanation um Alison Wonderland logic avoid discussion of the issues by reasoning backwards or with apparent deductive logic which forebears any actual material fact this is stuff like it would be easy to fake right it would

(38:46) be easy to fake stuff like that Alison Wonderland logic they don't actually talk about any of the facts they just use deductive reasoning reductive reasoning um to avoid talking about it demand complete Solutions if you haven't described literally every single thing down to a detail then you then your argument fails some people literally argue that if they find one thing that's inconsistent that that means everything must be fake right avoid the issues by requiring the opponent to solve the crime at hand completely aoy which works

(39:16) the best with issue issues qualifying with number 10 which is the old news thing here fit the facts to Alternative conclusions um so this one doesn't really work too well cuz usually it's trying to people trying to **debunk** us right so you know they they really have to ignore the facts in general um what are you guys saying YouTube probably would not have more info but I don't know maybe yeah they always they they found debris all the way back yeah that that could could probably be a version of one of these arguments Ellie yeah the VFX

(40:01) **debunk** thing was just straight up disinformation from the top I mean that never matched that was just a way for people to give confirmation bias hey Chad I gotta do something crinkly for a second keep talking you're fine um vanish evidence and Witnesses if it doesn't exist it's not a fact they literally had to dis uh credit 19 Witnesses in order to present a fake narrative on this uh conspiracy change the subject usually in connection with uh blah blah blah this works extremely well with companions who

(40:39) can argue over you so this is where like they control the narrative right especially on sites like **Reddit** especially on the **debunker** sub**reddit** they are trying to make it about what they want to talk about like oh Pro somehow like today I think there was one about somebody's trying to pay somebody to try to find cloud pictures and stuff like that it's like they don't want us solving the case they want to be focused on not solving it emotionalize antagonize and go opponents I mean you know they do this all the time

(41:07) right um they try to they try to emotionally attack you to make you look foolish and overly motivated right they're trying to they do this to me a lot right this is where they and then you you got these Freudian people who are uh these want to be uh people psychoanalyzing every little thing right uh ignore proof demand presented and demand impossible proofs I mean they do this all the time and we literally show them the cers video and then you know they just play this is a modification of the play dumb rule right

(41:39) just completely ignore it never address the evidence um pretend like you never saw it you know demand proof of demand proof that the VFX **debunk** doesn't match all the stuff like

that right even though we do provide proof of that and then they pretend like they never saw it false evidence introduced new facts or Clues designed to manufacture to conflict with opponent's presentations I mean they literally committed felony fraud to present false evidence heck probably the cloud **debunk** is false evidence too right there's no

(42:12) way somebody randomly found those pictures like that just makes no sense not to mention they just don't exist in any Torrance right false evidence call a grand jury special prosecutor or other empowered investigative body um actually this one's a weird one this one doesn't really apply I would love for a grand jury to look at it manufacture a new **truth** right this is where they call we must talk to VFX experts about how this could be faked right so they're trying to create their own **truth** create

(42:43) bigger distractions I mean this is what you see from the news articles that are out there right uh you know let's let's talk about how some guy nine years ago found uh found some uh you know claim to find a wing or something like like that silence critics just remove your critics from circulation this is why they ban everybody on **Reddit** right this is actually the number one tool on **Reddit** for disinformation just Banning people from every subreddit if they don't agree with you ban them and then vanish hopefully I don't I

(43:15) hopefully I don't get vanished so there you guys go 25 uh types of disinformation now you guys hopefully are empowered that you can recognize them hey PJ Mike welcome welcome to the party you're not too late but yeah actually we have quite a lot of people on right now even though I didn't post this on Twitter or anything like that we're only going to be live for another 25 minutes or so because I got to get got to get ready for this presentation although I think I'm pretty ready I've done enough of these already

(43:45) um let me see here so what are we going to be working on uh hold on a sec guys sorry I'm trying to close the door Lulu doesn't want to come in there we go cool um so what are we going to be working on here in the near future um we're going to do we' got a lot of stuff still to work on guys like a lot and a lot of science we I want to do the Rolls-Royce so if anyone out there wants to help and email me any addition I want to find some quotes on Rolls-Royce and them not giving the evidence cuz we know they didn't provide

(44:31) the evidence we know they didn't provide the evidence Twitter is what x is or X is now Twitter yeah orbs are going to be everywhere Punjabi Batman got suspended on **Reddit** are you sure about that although he probably did let me double check if he doesn't respond to me he probably he's probably banned let me see okay I see some emails about um Discord invites I'll get you guys those Discord invites please make sure if you join the Discord do not be confrontational with people if you are confrontational with people you will get

(45:15) banned out of the Discord it's not personal we just we're not trying to create a confrontational Discord we're not going to have a toxic Discord um yeah let me see if he's still here he posted yesterday tweeted me I don't think he's correct about the mountains thing I think he's looking too hard into it yeah I mean there's literally somebody who's just pretending

to have made the videos as well it's just we can't really trust anyone it's pretty wild yeah Rolls-Royce with held the Ping

(46:18) data that's exactly what we're saying we we know they did um I Just Want To Have Some solid evidence for it but yes we know they did we've had some some quotes the problem is it's really hard to find wait are you guys sure he was suspended yeah rhubarb I think that that's a good point how would they know the videos probably this is this is plenty enough for an hour and a half this is going to take the whole time it's going to take the whole time and then what was the one clip I needed drone video here it is lithium

(47:02) battery fires I need this up I need this I pretty much just need these three things I think and the evidence these are going to be the things I need for the presentation yeah we've already talked about the Australian thing guys but yeah if the if the videos are fake how do they know we would never find the plane right how is it that the the videos corroborate what really happened in the plane better than anything why would they end up spending this time Faking It the Rolls-Royce thing we don't have a lot the Deep dive podcast claiming TV

(47:45) producers were showing their export The Disappearance footage and asking if it's real n guys even VFX experts don't know even the experts don't know you can't uh Foya for uh third party contractor information or Foya is only work for governments yeah private companies are exempt from foyers requests exactly you guys figured it out so we would have to figure it out ourselves the lighting is looking pretty good here yeah actually challenging setup you have here but we're doing our best yeah yeah we got Melo demon here he's

(48:27) we're working on getting some nice quality uh footage here metal sphere that washed up in Japan I'm not sure not sure we may actually start talking about some other interesting cases I've got one on the docket that I want to talk about um I'll give you guys a sneak peek we're probably going to be talking about this on Thursday or Friday where is it um here it is quantum electrodynamics the science behind Bruce gan's flight we may look into this this is pretty interesting because it has to do with the Bea

(49:21) triangle and the idea that this guy's flight like like went through something that distorted time where like he got there faster than he should have been able to get there so we may look at this because there's actually like strong there's like hard evidence in here in terms of where he was and how fast he was traveling so it would be interesting as you see here from this image right if you're the planet's in the right spot can the right conditions apply to a specific point where like there can be a

(49:52) warping of SpaceTime I find that very interesting and it kind of applies to our case right cuz what we're talking about here in the MH370 video is a situation where time is working at a different rate for the plane itself right that's the Layman's understanding is that they're able to warp SpaceTime and when you warp it now your playe can either kind of shoot slingshot like the rubber band scenario right the rubber band or if you believe more the physics side then you think that you know the plane is its time is speeding up because

(50:27) there's less mass and then Mass reduction is the answer so you can see here's the compression of SpaceTime happening under the exact right conditions it could really be possible that a plane flies into this and it just appears on the other side quicker than it should now this effect might be very localized it could be very small but if there is uh a distortion perhaps like where the bror triangle is then perhaps that does explain some of the weird stuff that happens there so so this is an interesting

(50:58) case and you can see here's an idea of that like the electron cloud may also get localized around the plane pretty cool actually this is the kind of stuff that I like so we may talk a little bit about this we may talk a little bit about this in the next couple days um so this is one thing that's up there uh I'm probably going to leave this up Quantum electrodynamics this is pretty cool the science behind Bruce gan's flight I might try to find independent sources for this as well H there's a new thing coming

(51:51) out huh through the electric fog this is wow this was 1970 H this is pretty interesting and then the other thing we going to dig into is the Rolls-Royce data so if anyone can find any data on Rolls-Royce we already have a Rolls-Royce connection to uh locki Martin which is already pretty daming and look at this right here 2014 right before one month before the plane went missing we've been saying that it's locking Martin's orbs and now we have a connection of Rolls-Royce where they're paying they're getting

(52:36) paid a billion dollars with locked Martin to deliver engines to them it's like all these companies are in bed with one another so then the Rolls-Royce things MH370 data well we might have just found a chat I think that no matter how this investigation goes down matt Kim's interviewing Tucker Carlson what right now somebody find me a clip to that later if you don't mind I want to watch that it's funny I mean we Matt Kim interviewed us yeah why would you not take pictures of a of a wing you found months after

(53:22) the plane went missing makes no sense man um yeah you guys got me sidetracked now Tucker Carlson stuff gets a lot of views on Twitter and he's been talking a lot about UFOs and UAP phenomenon yeah the higher up you go The More Voltage that's what it is so it is voltage I've been saying it correctly yeah JK Philly fan you are on it man so the Earth is a ball of electrons so the higher up you go The More Voltage there is so there could be the right conditions for or A Spacetime anomaly it's pretty interesting uh I'm doing a

(53:59) muon presentation in 20 minutes Amanda but unfortunately you have to pay to watch it it's unfortunate oh yeah so no matter how this investigation goes I think the story of this investigation is extremely compelling right we found so much evidence so much evidence James Fox is let's just say we don't talk about James Fox let's just say that guys you would think somebody like James Fox would be interested in something like this but it turns out that these types of people who investigate uaps either

(54:34) are not as open-minded as you might imagine or they don't really understand what disclosure means right whoa is that true skinny pop Rolls-Royce delivers cold fire is that

trademark or TM thermal and Power Systems to locking Martin for directed energy field tests  
whoa hey Sean how's it going buddy oh yeah we're we're popping there's a lot of people here  
now it's like \$15 Amanda if you want to pay Amanda and you want to stream it on the Discord  
that's probably okay since we wouldn't be

(55:12) recording uh we did set up the voice channels in Discord where I think you can video  
stream there yeah \$15 is kind of a lot hey messy tube welcome if you are new I would  
recommend uh going to the Twitter here and going through the highlights there's a lot to go  
through this not the kind of stuff you can just get through right away um if you're on my  
YouTube then you probably want to listen to the explainer videos first check out the explainer  
videos they're only a couple minutes long they'll get

(55:50) you up to speed and then you're going to be dropping down into one of the deepest  
rabbit holes you've ever fallen into I have hundreds of posts uh about evidence and about twists  
and turns in the case um so yeah that's okay uh skinny Bob I'll find it I'm going to post it in my  
evidence Channel we'll put it on my our uh our list where's the Rolls-Royce stuff we'll find it okay  
my dog is needing attention she's needing attention she's a good girl yeah I'm pretty much  
solely focused

(56:28) on MH370 but I probably will start to look if something really Peaks my interest I  
probably will do little like onesie TWY tweets on it and look at it just cuz I don't know I need a  
little bit to shake it shake things up a little bit the case isn't going away either Lulu's over here  
she's uh she's demanding attention from Ross at the moment it's pretty cute yeah we're buddies  
yeah she's a pierc beast to find mut Fierce Beast nipping my heels video the field today  
everybody says she looks like a

(57:03) wolf and she acts like a wolf Lulu be good girl be good girl no no nobody nobody okay uh  
let's let's look at this before I have to drop off I'm going have to drop in like 10 minutes here  
guys um and if the if the lighting looks really good it's cuz uh I've got professionals now helping  
out with the lighting we're just getting started yeah it's looking it's looking pretty good here so  
we're yeah but it's you know two inches from the wall so it's a little challenging we're trying to  
do what we

(57:30) can do talk about maybe okay no pressure but Spider-Man maybe for muon could be oh  
we'll talk later yeah May might have he can come down if he has to come down okay um if you  
need the link to the Discord you need to uh email me at MH370 xpron and you just have to give  
me some information about yourself in terms of why you want to join so that I know you're not  
a troll and then then I will give you an invite I will do that probably after the muon thing  
although it's going to be late so you might not

(58:01) might not be till tomorrow Sandy uh just again you can email me as well I Sandy I  
definitely get you an invite if you just tell me you're Sandy on the on the email MH370 X at.me  
send me an email uh let's see yep yeah CERN is pretty interesting uh Eve what did the scammer  
have to say the scammer went on a full meltdown so [Music] we we hacked that password much

faster than they expected which honestly saved the investigation if I had been talking about that for weeks it would have definitely the death investigation it

(58:43) hurt the investigation even that I that I believed it at all um and then they basically admitted more or less that they were a **redditor** that they were a **debunker** um which kind of helped the investigation cuz now now the **debunkers** don't have any credibility anymore cuz it shows the lengths the just sociopathic lengths they're willing to go to to fabricate fake evidence to throw us off um so they they hurt themselves a lot in that respect so that's what happened with the **scammer** it was disappointing I did get

(59:13) **scam**med out of several thousand dollars for that um but yeah yeah the **Rebecca** hate video I deleted my um what do we call it uh uh I I deleted my kind of uh mean-spirited attack on her um even though she is a terrible person like that's true right she is a terrible person but it's not worth stooping to their level right that's what they want I think that it's better if we just ignore it and move on right let let the haters hate let the the people that are just disgusting trusting people to do whatever they want to do if they want to

(59:56) attack us it really doesn't doesn't bother us so I slept on it I woke up I thought I didn't feel right about it um that's not what I want my community to be like that's not how I want how I want to represent the community and if you look at the replies from her community like they're just disgust they're all like just like her right like that's you guys are much better than that you deserve somebody who's who rises above that so I'm going to try to be better at myself and I think that's

(1:00:21) you know something we can all kind of uh get behind and we can all try to better people as well so yeah thank you wow people are Don hold on I'll try to get down to some of these yeah you can DM me as well on on Twitter for a Discord invite if I'm following you and you'll definitely get one awesome let's see Sandy of course I'll give you an invite you just um either I think I'm following you Sandy so if you just DM me on Twitter I'll I'll take care of that lamp thanks thanks man I can't like like this but

(1:00:54) thank you appreciate appreciate it for sure who's who's next oh lamp again sandwich money lamp's going all out man you're awesome tonight appreciate you buddy thank you man or woman I I don't know I guess I shouldn't shouldn't prejudge I also like that we have people of both genders we have people of different political backgrounds who are in this community um yeah getting **scam**med ended up actually being a net positive like the case was like really hurting from that because of that was right after the

(1:01:24) cloud **debunk** and they almost did us a favor cuz they brought a lot of attention to the case um if I if we hadn't had those files unlocked it would have been it would have been bad also was really big that I I streamed all of it as well if I hadn't streamed all of it then people would have been making stuff up about how I was involved in and I did it myself right so it really made it so they couldn't do much lamp thank you very much again wow appreciate you man yeah we're gonna we're going to Mu

(1:01:52) on to move on or move on to muon um they didn't even really say about the PDF they just they just trolled me with like a dozen emails they actually have deleted their email those email accounts as well because they they are actually probably afraid of um the criminal being uh criminally charged CU that was that's actually a felony what they did um you know anything where you **scam** somebody for more than \$500 is a felony in the United States felony fraud so they I I and the reason why I know is cuz I reported them to proton mail and proton

(1:02:24) mail replied saying the accounts have already been deleted by the user so anyway I don't want to really talk too much about the **scam** stuff it's just just obviously it's embarrassing to fall for like crazy **scam** stuff like that which is why I two reasons why I deleted the videos uh all the streams one is cuz I don't want to mislead anybody else who's jumping into the case and then the other one is obviously because it's embarrassing to be **scammed** you know um one of my aunts actually was **scammed** uh

(1:02:52) you know like older people have are very uh you know fall for those **scams** a lot one of my aunts got **scammed** the only reason why I'm talking about is cuz she's already passed away uh she was a great woman and you know she felt really embarrassed by it and I never told anybody about it after she told me because she didn't want anybody to know and I understand you know it's it sucks to be **scammed** for sure but you know in terms of this case you you've got to rise above it oh okay let me go ahead and get you

(1:03:25) guys if you guys are trying to get into the Discord so that you can watch the thing it hasn't started yet Sandy am I not following you on Twitter I don't see any direct let me see let me check my emails real quick because I'm going to have to jump over in like two minutes here okay I'm going to send uh invites to the people who emailed me real quick um 10 users do not not share these invites with anybody I'm if you do I I can tell there's ways to tell so do not share these invites okay Dorian you got your invite

(1:04:09) should be in your mail make sure you when you join the Discord you need to verify right away I'm sorry to hear about people who are mention how they've been **scammed** uh Neil whoever you are in the chat you've also got an inv [Music] um **Mick** you've got an invite Sandy if you email me at MH370 xpron domme you can get an invite as well James I'm not going to say your last name James the one who emailed me you've got a invite as well okay Stuart I'm going to have to get ready for this presentation here guys so I

(1:05:13) think I hit up everybody except for the emails MH370 xpron I'm probably not going to simoc cast it because I don't know if that's if they want me to do that but I will ask them if they tell me that I can simoc cast it then I will go ahead and I'll stream it for you guys yeah it's definitely a roller coaster okay hey Paige how's it going um I think that people are going to probably someone's going to probably try to stream the presentation that I'm going to do I mean it'll be pretty much repeat

(1:05:51) stuff if you've been following the case but if you're new then it'll probably be pretty good um okay P I see you in the P you should have an invite again if you join the Discord you

have to verify right away otherwise it boots you out uh p is Page P if you are then you uh you have an invite think no no people wanted donations turned on people want people actually want uh they want me to turn on subscriptions but I don't know I'm not worried about people thinking I'm a con man I mean I think it's pretty apparent that I'm

(1:06:36) not the money that people have put forth will go to a good cause it's going to trying to get the evidence out there for the families as much as we can I mean that's the **truth** of where it's going um trying to get better production so that our people follow and and follow along um I hope hope we don't let you guys down that's the biggest thing okay a few other people emailed I'm sending those emails out right now as well okay again make sure you verify right away when you guys join I hope I might have to do a

(1:07:14) new let see okay so we're gonna have some newcomers in Discord guys please keep it the Discord uh uh friendly okay there's Shera okay I think that just capped out the invites for this one yeah and again the thing I always say is don't donate if you need your money you have better causes for it keep your money you don't need to donate to me it's not what we're doing this for if I were ever become wealthy all I would want to do is try to give back to people I'm obviously not very wealthy I mean

(1:07:52) I'm I'm well off but I'm not like extremely rich or anything like that okay guys I have to jump over to the um other one I'm going to ask them if I can live stream it if I don't record it um and I'll try to get a few more invites out before the top of the hour for people to join the Discord okay I'm going to probably have to create a new invite for the Discord uh because I think I only made it like 10 invites and I think we just used them all up okay so thank you guys I appreciate

(1:08:23) it um when you when you join make sure you verify right away and then introduce yourself in the introduction Channel and then you should be good to go if you do not verify right away the server will boot you out of Discord and then you'll have to wait for like I think like a day or something so yeah yeah Sean you are awesome appreciate it man yeah bill um I think you were the one who emailed me if you're in the Discord you can probably watch for free otherwise I'm going to see if they'll let me stream they probably won't but

(1:08:49) we'll see thanks guys I'll talk to you guys later um and otherwise well see you on the on um the uh muon thing guys if not then we will uh yeah Amanda you can invite people you have you have a mod capability Amanda so if you want to invite people go for it if you want to DM them you guys are cracking me up uh we will be streaming tomorrow again as well and we're also going to be on alien uh no we're going to be with diamond tomorrow on the Oppenheimer Ranch so we'll probably be streaming probably

(1:09:24) before that it's probably going to be an early stream tomorrow could be a late stream though

MH370x - Drone Video 12/18/23 - YouTube

<https://www.youtube.com/watch?v=lmK7eG94ecg>

Transcript:

(00:29) for yo what up let's not waste any time today full screen face oh need a haircut what up everybody hey Dorian hey vinc D Joe King you just saw UFO sweet dude sweet I've I haven't seen one I'd like to um let's close this there's a bunch of stuff to do I think I want to make a clip about why the plane didn't crash into the ocean I also have to fill out some report for uh muon presentation I'm doing that scammer apparently deleted

(01:39) their email address I filed a report with proton mail and they replied back saying that the user had already deleted their entire account guess they didn't want to get uh thrown in prison where's the muon thing I'll switch over my you in a second guys what was the muon thing a bunch of people want to do follow-up interviews but I I'm I'm booked man I'm getting tired of doing interviews man getting real tired of it actually not against them just it's just a lot where is the release where is

(02:59) it speaker release form I already already downloaded it uh what up what up I'm actually fill up wood yeah no oh yikes H I don't have I don't have Word I actually can't even fill this out if I just copy and paste it into Google dude sorry guys hold on and I have to probably go print this out

(04:02) tomorrow it's annoying there we go just do like this Ashton Forbes what's the date 12 18 I think we're going to post the video the Drone video just got to think of what kind of content we put around it what do we call our presentation MH370 conspiracy and what hey man how's it going yeah I like the alien addict guys

(05:07) that's why I go on them pretty frequently the Drone video the Drone video banner by the way guys I can't keep up with all the emails and messages and stuff that people are sending me it's way too much like not even like not even close we're going to post this video okay back just uh sending back this release

(06:15) for later we're going to trust muon OC to not screw us over we looking at the non-Radiant Barrier right there so let's see what do we do here uh nah maybe man hey gaps hey J hopefully you got what you

(07:21) needed yesterday for your daughter if not let me know okay let's look at a little bit of science I want to get some of these windows that I have here those balls flying around the plane are not balls there it's a radiating barrier it's a bubble so I think that's what we're going to make a video about because we haven't had a lot of people I think a lot of people aren't up to speed uh vinc man um this isn't personal but you asked me a lot to do a lot of Investigation for you

which you should

(08:17) just do yourself please don't ask me to provide you details of the investigation you guys can find them yourselves you can find them in my profile you can Google it yourself you have two hands right it's like I I don't have time to go do your homework that's just the reality of it I'm not trying to be mean but that's just the reality of the situation so if you want to know something you can just Google MH370 simulator and you can find it yourself um also yeah the fire evidence is good I don't know some people like just don't

(09:11) even read the article though like they don't even read the article they're like oh the fire couldn't last I'm like do you read the part where it says it can last for 1980 minutes like it's weird we're also not going to be streaming too late tonight I took a nap I'm if you tell I'm a little grouchy it's because I'm really tired or I was tired now I'm just like just woke up how how does this work oh there it is new project blah blah blah I don't care about features I think the moment I show this video

(10:13) it's going to copyright strike me but whatever yeah that's part of what I think we need to do is we need to if you guys want to instead of trying to look for drones that have the cameras we should look for drones that match the video did I already close it I think I did like you can see the nose of the Drone so we should just be able to match it to the nose of the Drone we should just be able to match this right you can tell it's got this little elongated piece here yeah cargo bays are fire rated that's why people are saying like oh the

(11:06) plane will the plane will burn up or whatever it's like the cargo Bayes literally have automated fire suppression and they're fire rated to protect from that and they have a special filter like people just have to read the article I posted that that's all they have to do uh mq1 C drone NOS it's really hard to tell which one it's definitely got the right shape is there a thing sticking out of the front of this oh there's a thing in the front of this one so maybe that one's maybe it's not

(11:56) this one CU it doesn't have the thing not going to spend too much time on this oh uh no I haven't what do I need memberships for thanks my channel what are the memberships for this one just looks just like like the other one so they have the same chassis oh boy they have the exact same chassis chases ches we can't actually tell the difference they actually look identical

(13:05) no one helped you out okay well I'll help you out um give me a second nobody helped you out huh how does this work boy okay Jim uh I just sent you

(14:21) \$50 hopefully that'll help out with your daughter Merry Christmas oh I don't I don't need regular monthly contributions thanks though um if you want to here I I'll give you guys if you guys want to help gem app I just I just donated to her so that she could get her daughter present it is uh if you care I don't want anyone to feel enti or like they have to but that's what her uh I think it's like cash app is I confirmed I looked at her name that she had sent in the email match that one

(15:19) right there careful because there's two there's one that's in all caps the one that's the correct ones not all caps I'm surprised they let people have ones that are that similar um okay let's do our drone video here yeah I don't need monthly donations I mean I don't even really need any donations but I appreciate it I also have to hook up somebody else who I owe as well

(16:47) I appreciate my channel I hear what you're saying man hear what you're saying if you're good at something never do it for free it's true uh okay let's read a little bit about Quantum batteries while I try to figure out what we're going to do here for uh this Twitter post we haven't posted the videos in a long time guys we haven't really posted videos in a long long time uh not going to look more into the the Facebook photo that looks like the pilot we got a lot of flak even for

(17:35) bringing that up I just don't really care where the plane went that much I mean I think it went to Diego Garcia all the evidence says it went there but it's just not that important so what we need to do chat is we need to discover room excuse me room temperature super conductivity that's what we need to do we need to figure it out it's definitely possible uh we don't need uh meta materials for it we just have to figure it out ourselves hard as that is weird as that is to say um Quantum batteries break

(18:21) causality what do you mean is a Quantum battery sounds like made up yeah they don't exist okay I don't like this paper this is trash hey Orbee let me see what I was going to say about

(19:27) this I almost didn't stream tonight because I was pretty tired but then I woke up and got some food now I'm a little bit better I'm somewhat of a lithium ion battery expert uh I'm not going to try to make it bigger or smaller with to the story Austin I'll pull the chat over here I think that the reality is we just need to keep going out a standard Pace there's so much disinformation and so much personal attacks that I I don't I just going to keep going while people attack us but we just we can't try to

(20:08) force the situation there think there's a lot of podcasters well I mean the stock photo guy is like some kind of weirdo man some kind of super weirdo it like has no credibility whatsoever it's whole story makes no sense at all makes no sense why he'd be doing this uh it's obvious that he is invested in the **debunking** the situation which rules him out the website you know whatever textures.

(20:45) com like the owner is some kind of like Nut Job who uh you know is making like making prank videos and CGI videos instead of releasing their database uh instead of releasing their database logs you don't update uh specific rows in your database when you are doing like General updates that's not how that works so none of the story makes any sense related to clouds whatsoever clouds could not be found pre-dating the cloud pictures cannot be found predating the videos so that's the end of discussion the cloud **debunk** is technically

(21:23) dead I don't care who or why I was involved in the hoax but the reality is the people that are trying to **debunk** are willing to go so far as to commit criminal fraud criminal felony fraud so

uh unfortunately we can't take anything the **debunk**ers say uh at face value okay um how I spell turbulence

(22:27) wrong oh it's e so how is the A and the E's jeez my spelling is struggling it's hard when you have a microphone right in front of you uh there's rumors that the videos were

(23:36) uploaded earlier I think I saw it on the community chat but there's nothing conclusive nothing conclusive on that yeah I think we should do a video maybe I can just even do it right now and do a clip of it I could always just clip it right I think I want to do it a little more professionally though um I think we're going to do we need to do some explainer videos right so let's let's look up here I think we can delete the lithium battery stuff now we did that that's done we need a drone video explainer and we

(24:36) need the wi didn't crash into the into the ocean explainer including debris but like the amount of people have commented someone commented in all caps that I told you there was debris found I'm like what the hell uh yeah I mean that's why I **debunk**ed the debris like I I never said that there wasn't debris found I said the official search didn't find any debris which is it didn't which is impossible spent \$155 million didn't find one piece of debris let's see what we got going on sorry I'm

(25:41) going through my notes Here deleting old notes don't matter anymore oh yeah shutter what is shutter can someone explain this to me take photos like these May in three things aperture the a camera typically and stop shown as again we for the the camera dark the image would be if I was to take the shot now I'm going and keep your eye on the light meter once it stops flashing then you know you're

(26:45) getting close to The Perfect Exposure we're now looking at a shutter speed of 1 second two seconds doesn't make sense to me shutter speed it doesn't I don't get it um I could also mention the interference pattern but I don't think we need to mention that just got back from a Christmas concert with first to Fourth Graders awesome welcome back Jimmy welcome welcome welcome uh I think we want to dig into the scient scientific aspects let's let's pull a video up here on the side where can we

(27:26) put it where you guys can see it manually tracking shaking okay we see the orbs nonradiant barrier why did they do to a plane probably

(28:29) there's probably limitations to this technology guys most likely they do it to a plane because it's in the air right one thing I learned from watching a lot of anime is that no matter how powerful someone or something is there's always limitations always limitations yeah I can't tell if this is the Gorgon stair Wing mounted cameras on an mq1 C or if this is a mq9 they both look really similar so if you guys can help with that I think the best way I mean the problem is that both of them are look

(29:09) exactly the same both the drones look exactly the same my guess is you can't do this to

an object on the ground three orbs is the minimum number of orbs you need create a uh two-dimensional space and two-dimensional object and threedimensional space I mean if you only had two orbs then you can only make a line right but with three orbs you can make a triangle that's the answer how many orbs do you think there should be seven four five right uh we need to find the high frequency gravitational wave generator where did I put that

(30:26) one oh yeah yeah look at that it's just levitating it's funny oh I think I actually have it in here I think I already posted in here where's the salvator P science where is it oh there it is for

(31:59) yeah I mean I think what we're seeing here is the real deal it's not Annihilation because  $E=mc^2$  maybe more energy release but it's theoretically possible the phones are ringing afterwards so if the phones can't ring if the planes another dimension I don't think yeah the math says there's a fourth orb but the fourth orb would be somewhere else controlled motion of charged matter under rapid acceleration transits may lead to room temperature super conductivity huh that's the locki Martin

(33:26) thing for I don't think that's right oh wow thanks for Robert Russell yeah a lot of people can't fathom us

(34:33) making this and then once you figure out that we can that science can explain this then people come to realize that this is our technology even myself for for

(36:22) I don't want this to be too long okay let's see what else we can do here with this oops you got displacement of the orbs when it travels through the front and the back excuse me wow look at that orb being displaced there orb displaced in the front here h

(37:31) let's go back here and take a look at what I'll read the science with you guys yeah I think the speed of light is a constant to some degree I just don't think that the speed of light is the speed limit lithium ion batteries could be a catalyst we just don't have any evidence I don't know if quantum computers are real I think we just have to wait and find out I think if they weren't real people wouldn't be building so many of them though yeah if we have uh technology from non-human intelligence then could

(38:35) definitely explain what we see here I've dug into Lynn probably the most out of everything we found so much about Edward Lynn we even found his appeals man found everything there is defined I think the fact that Edward Lynn hasn't told me to stop talking about him is pretty damning also the time of his charges are extremely damning he had to be related to MH370 repeated pulse vibrations from transducers for

(40:55) for for for should we call it gravitational lens you

(42:25) I don't know if that's actually accurate as we there's no we can't find reeside and on guys we need to back away from this idea that alien zaap the plane I mean even if you believe aliens zaap the plane like you shouldn't say that out loud even if you believe that that's just my advice no one's going to take you seriously you have to ground your stuff in real in reality man and you

can believe whatever you want I'm just letting you know people are going to give you weird looks the science that we're talking

(43:18) about here isn't Magic we can actually figure it out yeah lensing is specifically with that for

(44:30) gravitational lens is not quite accurate maybe though so yeah like when you say like oh aliens did you're basically just saying like you think magic happened right like you got to you got to follow the evidence and Science and that's the reason why people make fun of us just say you think aliens zap the plane cuz like in their minds they're so simple-minded that they can't comprehend how science really works and they they're trying to belittle us as well of course maybe aliens did zap the plane

(45:15) right but we got to understand the science we have to be able to explain it this is already probably too long I'm not going to even add potential Mass reduction here

(47:08) think that's good guys I really hope aliens are real just for all of you guys I really do I think that life is everywhere in the universe and I think it would be weird if there aren't aliens out there somewhere if this technolog is real and there's no reason why they couldn't get to us should we uh bold a lot of stuff probably never

(48:55) for that seems good how's that how's that go why ads on the live stream I don't know I just have it turned on for uh monetization I think you can just hit like skip right doesn't make you actually watch them does it one Theory I don't like is uh future humans Theory it doesn't make any sense you can't break causality if you believe in string theory I guess maybe it can make sense but I'm actually not a big proponent of string theory I don't I don't like the idea that uh the past can

(49:59) be altered it just doesn't make a lot of sense to me maybe it's possible yeah you can just skip the ads it's just five seconds guys okay let's read through this together this is the original drone video pulled from the regon channel on the internet archive the operator of this of this drone is manually tracking the plane there's realistic camera shake from the turbulence in addition to it increasing naturally when the camera Zooms in as previously mentioned there's dynamic 3D Parallax in the clouds we can

(50:28) see the orbs in their non- radian barrier this is a field that acts like a bubble displacing the object inside of it from space time allowing for Mass reduction therefore they can ignore gravity gravitational waves can be produced by propagating electromagnetic radiation through strong magnetic fields generate gravity well in its path I think we get rid of this part we see these geodesics uh there's an extra comma thing there has dark cold lines in front of the orbs I think that's good the electrons of the plane are

(51:21) being driven from equum State and self organized into a matter wave which can allow solid state objects to achieve macroscopic Quantum coherence the orbs converge in the plane

triggering phase State change of the plane the orbs create an aouth and flatten due to the powerful electromagnetic field being generated that induces The Singularity the plane blurs indicating acceleration which leads to Super luminal speeds I think this is good what do you guys think seems good this is good so one thing two is the terminology

(52:20) is very important guys V fors terminology is very important you're probably not going to hear me refer to things as a wormhole or anymore but it's just a matter of terminology right we name things based on how we can explain them I also don't like the word teleportation because when we talk about teleportation then people are thinking Star Trek like every single time people are thinking Star Trek reality is we probably need to be calling it super luminal speeds faster than speed of light like people like I have literally

(52:56) people going How can there be debris if it's teleportation and I'm just looking at them thinking like what do you think the word teleportation means just like what what do people think the word teleportation means super luminal speeds superluminal means faster than the speed of light or the speed of light when an object moves from one place to the other there's nothing wrong with finding debris I I don't know how that's people are confused by that think this should be good achieving battle save paay

(53:40) Supremacy against all foes uh real person Jedi you're cracking me up I'm G to give you some laughs in the chat I like that like obviously Consciousness is something again I I don't care where the plane went like we can't we can't confirm where the plane went it's a good question but yeah don't pretend to have the qu answers although the answer here is that we know how the science Works we're starting to learn it okay I think they're good here okay guys here we go you guys go make it popular do your

(54:28) thing chat okay Dr this is kind of a late post so I don't think this one will take off like many others have but it's whatever it's worth for yeah we're really really really far

(55:57) ahead of the science game hey Dom uh most people can't understand this stuff to be real is the reality it's just it's too far Advanced for a lot of people it's too far Advanced for me early on Einstein's variable speed of light theory has to do with zero Mass I mean it's all relative as Einstein would say it's all relative yeah speed of entanglement should be instantaneous yeah we've already seen this but we we can't no one can pull the video up okay oh yeah no problem shy I think on

(57:19) one of the podcasts the podcast I did today uh I mentioned how I just I don't care about what people think of me or whatever like everybody so cares so much about what people think of them it's like all I care about is getting the answers thank you me going to give you a follow for that appreciate it yeah yeah I don't know what Jack Sara's deal is what he's got me blocked so I can't read what he says but dude is straight up grifter for sure or just a spook I don't really know he's literally

(58:05) just stealing people's work he's posting stuff about teleportation when he was trying to

hate on me what the hell how does that make any sense don't trust a single thing Jack Sur fatti says who has that mq9 footage someone can post for this guy I'm just I can't answer every single person in the world like gez man like it did wasn't it just like mq9 **China** drone video wasn't there some mq9 footage like just the other day there it is oh it's a **Russian**

(59:20) jet these guys are just so stupid I hate to be mean but it's getting to the point where like I just I don't know people are just there you guys Happy God internet's just terrible man okay I want to look at room temperature super connectivity a little bit and then I'm going to go to sleep early tonight in the next 30 minutes hopefully okay what's this somebody added Ashton well that's not

(1:00:24) me this isn't how it works guys let me guess this guy think yeah this is I think it was months ago I want to do room temperature super connectivity that's what I care about that's what we need to discover sure so I was watching parts of the Ross Kart Gary Nolan thing but Rosell Kart's either an idiot or just controlled by

(1:01:29) the government I don't know which one doesn't really matter which one Ross kohart I'm pretty sure has never once in his entire life revealed anything verifiable that's a pretty big red flag man like you don't go hey guys go look around chasing buried UFOs and Trump knows kind of stuff like that's not it's not what journalists do man journalists actually reveal stuff Ross kohart is more concerned about being a TV personality and making his making a career and making money selling books yeah Ross is probably on the

(1:02:22) federal payroll most likely on the federal pay payroll pretty much any big person who's on TV probably is on the federal payroll or they're being they're being controlled either directly or indirectly that's the sad reality of what we've started to discover with relation to this case is that you only keep this stuff quiet by controlling a lot of people you want people to not be able to uncover something yeah skinny Bob I think what we needed oh God all the the noses on all the drones look the same I'm not really sure

(1:03:04) how we're going to be able to prove which drone it is it's too difficult yeah the spinning heat signatures of the orbs so if you're interested in that check out Bob Greener interview I think I actually asked him problems is like three hours long I I really need to watch that again yep fundamental in in uh intive principle the enablement of microscopic Quantum coherence induced by controlled motion of charged matter under rapid acceleration transients uh yeah I think Ras colart I'm sure says stuff that

(1:03:43) is uh you know appealing to the masses for sure uh I mean I've been saying the disclosure bill is not going to be anything for months they're never going to give us disclosure guys just quote me on that they're not going to wheel out the alien spaceships they're not going to wheel out the alien bodies it's just not going to happen people want to believe that it will that's fine I doesn't bother me but just telling you this the implications of this are just too great The the rich people have too much

(1:04:18) to lose 4K drone video oh yeah I don't I don't know maybe it's a balloon maybe it's not a balloon seems pretty damn weird to me you should be very if I were you guys I would be very hesitant to the stuff that Think Tank puts out there I think you've seen how much he waffles on stuff right like posting videos going wow this is amazing and then five minutes later saying oh it's a balloon like is does not lend one's one to uh levels of credibility you should should stick to an opinion and form your opinion before

(1:04:57) you start trying to get people to give you clicks it's okay to be wrong and change your mind but dude changes his mind on literally everything think tank is flip floppy McGee like oh change my mind again change my mind again it's like dude why don't you you know investigate before you push everything out there superconducting materials they claim that it exhibits super conductivity at room temperature now did not turn out to be a super conduct this is it bugs me how they say it does turn out to be a room temperature conductor

(1:05:42) like this is just disinformation just disinformation we're literally staring at it floating yes I've thought about the temporal implications that's why you can't travel back in time guys there's no temporal implications I also don't think there's such a thing as future humans either because it does doesn't work you can't break causality man if I could break causality I'd be a billionaire and I'd control the planet actually probably not because that's not what I want from life but you

(1:06:19) get the point breaking causality just doesn't actually make sense moving forward in time is fine but moving forward in time is not the same as moving backwards in time okay where's the part that I want okay here we go this is the part we need to learn the electrons are free to move normally we think of electrons as being bound into their atomic orbitals sometimes the outer shell electrons are shared between atoms in molecular Bonds in conductors there there are either extra out of shell electrons or electron

(1:06:57) holes that can jump pretty freely between adjacent atoms and I think we're going to clip this when does he say this 230 I can't tell where the thing is oh there it is it's over the top their resistan flow of electr what the what is going on with this how do I make this like their resistan less flow of electricity has been exploited in some powerful ways like the super strong magnets used in MRIs particle

(1:08:00) accelerators and fusion plants and then there's the bizarre ability to levitate in magnetic fields but the broad use of superconductors is limited because they need to be called to extremely low temperatures to work 23 seconds but what if we could produce super conductivity at room temperature it would that's what's going on oh okay yeah this is what's going on here I see this is seconds how do I how I make this the heck guys how do I go to the right there we go two here it is is just a material in which some of

(1:09:08) the electrons are free to move normally we think of electrons as being bound into their atomic orbitals some sometimes in atoms in molecular Bonds in conductors there are either extra out of shell electrons or electron holes that can jump pretty freely between

adjacent atoms add a charge or voltage differential across the conductor and a stream of electric charge a current will flow in a regular conductor current doesn't flow completely freely the conduction electrons can interact with each other or with non-conducting layers

(1:09:47) of electrons all that bumping around manifests as heat atoms begin jiggling electrons move talking about here is that yeah so there's like when there's resistance it's because electrons can't flow through them but when you have a superconductor then there's no resistance the electrons are just flowing freely they're coupling this saps energy from the current and results in resistance in fact the hotter the material the higher the resistance because the random motion inhibits a nice ah so the the higher it is the more

(1:10:19) the flow of electrons neutrons moving around and cooling a conductor decreases resistance so it might seem reasonable to wonder how low resistance can get for example if you get to I'm learning VFX [Music] skills mq1 C with a gorgon stair wide area Airborne surveillance system yeah that could be that could be why you see this here I guess you're seeing the housing of the thing above it although this seems like one would be groundbased

(1:11:24) think we have to be less uh certain about our ideas this to me looks like something that's going to be staring downward oh this was 2011 though maybe maybe says it's too heavy to be flown on an mq1 C can't be an mq1 C with gorgon here it is too heavy there's your answer has to be either mq9 with the Gorgon stair or an mq1 C without the Gorgon stair jok King got this that's too long zero jiggling do get zero

(1:12:37) resistance the universe really satisfies our most simplistic extrapolations except in this case near zero resistance is possible although it's not for simple reasons we move this over here right here how do I export this it's not Spider-Man 2 uh super conductivity resistance export sweet exported open folder yeah damn we're editing stuff chat we're editing stuff okay how do I go back to this now super conducting materials

(1:13:43) SE can I start this over okay pull that over there superconductors can make things fly well can make them hover fast forward to 1933 see else we got mezer effects I guess this is how you make it go over to the right really happening here we can predict what'll happen to a superconductor inside a magnetic field if we know just where's the other part oh this part's pretty interesting no resistance the induced electric

(1:14:49) current can get strong enough to completely cancel out the initial magnetic field in fact all three electrons in the superconductor will quickly spiral along the magnetic field lines and sit upes of current at the surface persistent currents those little current Loops don't take any energy to maintain so where's the part where he shows how they make the field go around it yeah here you go conductor as being layered with electromagnets another way to think about this is the the magnetic field lines expelled from the superconductor

(1:15:26) pile up on the outside causing an intense magnetic pressure this effect is nicely described by the London equations figured out by the German Brothers this is the one I like right

here it these guys were able to explain the Meisner effect based on the Assumption of perfect conductivity without having any idea why superconductors have no resistance one other subtle assumption in the London Brothers theory is that the system should be in an equilibrium State they figured out how things should look after the electrons finish rearranging

(1:16:05) themselves into whatever final configuration of currents and magnetic fields were induced they took time out of more drone stuff tonight guys so the next Advance was made by putting time back in in particular by thinking about the transition into and out of the super conducting state that change is what we call a phase transition phase transition the equation so the next Advance was made by putting time back in in particular by thinking about the transition into and out of thinking about in particular by putting time

(1:17:00) back made by putting time back in in particular by thinking about the transition into and out of the superconducting state that change is what we call a phase transition closely related to the more familiar State transitions between solids liquids and gases this is **Russian** physicists valital Ginsburg and Lev landow realized that there are certain rules that all systems undergoing a phase transition have to obey even if we still don't know the actual nature of the post transition state so in 1950 still not knowing what

(1:17:35) caused superconductivity we got the Ginsburg landal Theory this new mathematical description of superconductivity predicted everything that the London Theory predicted but also some new weird stuff and this new way of looking at superconductors yielded another Nobel Prize shared between a few contributors to start with they predicted that there are two types of superconductors that behave very differently around the phase transition for regular states of matter the phase transition Point depends on both temperature and pressure water boils at

(1:18:08) a lower temperature on a Mountaintop but the phase transition Point into Super conductivity depends on temperature pressure and magnetic field these materials have to be below a certain critical temperature above a critical pressure and below a critical magnetic field the old London Theory allowed any amount of that it filled to be expelled by the superconductor but the new Ginsburg landal Theory said that if the field gets too strong then Super conductivity will break down and fair enough any material only has

(1:18:47) so I think we want to cut it right here conductor but the new Ginsburg land AI Theory said that if the field right here Theory allowed any the old London right there basically magnetic field to cut it delete clip so this is our clip of phase transition we'll we'll post these clips tomorrow so we got a phase transition

(1:19:53) clip it's pretty spicy see what else let's delete this pull this back down come on types of superc [Music] conductors this is flux pinning here another Nobel Prize impossible as the material is cooled down traveling electron set up these patterns of oscillations in the nuclei of the material's crystal

(1:20:58) lattice the electrons sort of ride these waves in pairs what we call Cooper pairs yeah

Cooper pairs electrons are of the fermion particle type which means no two electrons could occupy the same Quantum state that type is determined by the electron spin any half integer spin particle is a fermion so that covers spin half electrons but Cooper pairs typically have spins of 0 or 1 half plus half or half minus half which makes them bosons and bosons behave very differently to fermions any number of but this is where we want to cut it

(1:21:44) right here Quantum state so our material gets cold enough and these coherent oscillations allow Cooper pairs to form all of the Cooper pairs drop down to the lowest energy level now from there it should be possible to excite a Cooper pair back up to a higher energy State through some Collision but in a cold material collisions aren't energetic enough to allow that transition in quantum mechanics you can't excite a particle only halfway to a new energy state it is All or Nothing in the case of the superconductors it's

(1:22:32) nothing no excitations are possible so no collisions happen there is no resistance so finally we how superconduct Okay think that's no resistance cut it there Cooper pairs but Cooper pairs typically have spins of zero this is good I like this as well guys I'm learning how I'm a VFX expert guys when you think the corridor crew will sign me up now I think I have achieved Nico levels of uh VFX editing just call me Captain Peard we'll just we'll all name ourselves after uh Star Trek next Generation

(1:23:27) characters I'll be actually I'll be William Riker Dana L. Troy or what was her name I think that was her name I don't even remember Ian the loudness of the video is a little inconsequential it's just the balance is as high see is there anything after Cooper pairs Cooper pairs all this is where he starts talking about uh high temperature super conductivity and others soon managed to get the critical temperature up to 93 Kelvin this is probably that was a game changer because it meant that superconductivity could be produced using

(1:24:21) liquid nitrogen rather than liquid helium a much cheaper option that opened up the technology to industrial use bed no and Mueller got the Nobel for their demonstration of the newly emerging field of high temperature super conductivity and we've actually stopped counting the superconductor Nobel prizes and this wasn't even the last we've now managed to induce superconductivity in exotic Ceramics with temperatures as high as 133 Kelvin and and higher still for materials under extreme pressure I think this I don't

(1:24:57) know if there's anything else look here way colder than the room temperature super conductivity claimed by the recent result and so it still requires expensive and cumbersome cooling apparatus so is room temperature super conductivity okay that's it that's pretty good though don't save Wesley Crusher rude rude guys it contracts and squeezes applies pressure to itself you think the pressure is causing it the quantum coherence maybe okay I think that's going to be it for tonight though I'm going to go go to

(1:25:53) sleep uh but thanks for going out there can you see the plane again you want to watch again after we've I think sure we can watch it again after now that we've learned a little bit more about superconductivity right start to get a little bit more of uh understanding of what we're

looking at right so let's watch that again full screen oops well that's not good okay seven of nine over here Dax I'm data okay sure yeah we got everybody here so many inuendos so we can see our uh room temperature superconductors orbs here

(1:26:38) that are producing their field we can see them creating their geodesic using their high frequency gravitational wave generators um we see this drone manually scanning for the plane here and then we see it zoom in squeezing into that form entices electron movement into a pinned State huh now we see this happen now we watch it in super slowmo here we can see that this is what's causing the singularity to happen is when the orbs converge here this is where they're forc in the electrons to break free when the

(1:27:19) electrons are breaking free here they're Achi they're causing a phase trans which is causing super conductivity in the electrons around the plane think of the electrons around the plane as a field or as a uh yeah like a a gas of electrons or a field of electrons right and then they're Breaking Free that's what's causing the phase Singularity to occur uh they organize into a matter wave like instantly self cohere into a matter wave they get the CER pairs begin and this is why we see that low temperature as well that low

(1:27:50) temperature and pressure are what's causing potentially the electrons to break free here in the final moment I wonder if like right here in this final moment the flattening I think that we're seeing a very powerful gravitational field beginning form to form right here this is just wild I could watch this all day the flattening pretty wild yeah the red is heat I mean we're looking at a thermal see it gets cold though as well right excuse me in the final frame final frame it actually just gets cold you can

(1:28:37) see it turn all green right look how it's all green here except for a tiny bit of yellow right there where the engine is I wish we had like more frames imagine if we had any more frames I I think that the reason why it's cold as well is consistent with that super conductivity we were talking about causes it to cool down causes the electrons to break free causes the electrons to form that coherent matter wave like locked Martin's technology and then that's how the plane is now beginning to act like an elect like a

(1:29:12) atom itself with the matter wave of electrons flowing around it coherently H does kind of seem like a does kind of seem like a like Wormhole or portal though really does yeah the plane was never found yeah the plane shrinks as well slight amount of shrinkage at least from what we see visually right I don't think the plane is actually shrinking but right here the plane gets a little bit smaller in this Frame than the previous frame I have a picture of that as well I think it's better better when you see it side by side in the

(1:30:01) picture I probably should have posted this with the video here it is wait no this is the one where it turns backwards but sure this also works it's a little bit smaller in this one than it is in this one this is actually the one where you can see it kind of getting sucked backwards here's a couple more if you want to watch it getting sucked backwards like you can actually tell in this one that they overlaid the frames you can see that the tail of the plane right here seems like it's

getting sucked backwards everything's falling getting

(1:30:51) pulled backwards towards a common location here pretty wild yeah it's breaking the swinger limit we're going to probably have to look into breaking the swinger limit in the near in the upcoming days what it really means snapping shrimp attacks what the heck is this oh this is going to be cool the pistol shrimp what was that what is this whoa you see that can we slow that down oh look at that that it's able to move its hands so fast

(1:31:58) that it creates bubbles whoa whoa I don't want to get hit by that guys I wonder if this is similar to like when you crack a whip what did he just do is that a mantis thing is gross looking what is this this wait is he going to shoot at it that's neat Oh

(1:33:03) weird Super Punch Super Punch Yeah I watched the star and the jar stuff which is actually similar as well the star and the jar is really weird I mean we might as well watch it cuz I think we've already probably demonetized our our stream from watching all the other stuff I think this is it right that's not what I'm looking for that's not the star in the jar so luminence here it is this is pretty weird is it just sound like look at that

(1:34:10) create a miniature star and this is why this is important is because if size doesn't matter if size is irrelevant then this could be a star right it's just a small star yeah it'll burn you because it's hotter than the Sun and they're trying to measure how hot this gets in the middle this is how you test it on a smaller scale right here people have already done it this is just water and they put sound wave through it to the point where it creates this Soul luminescence take it easy PJ Mike I'm

(1:34:43) going to sleep in a minute as well and they're trying to measure the temperature on the inside where just you're literally looking at a little tiny miniature star look at that just I think through resonant frequency or something like that he mentions how he wants to measure the temperature on the inside he thinks it might be hot as a star on the inside it is just from sound waves right pretty wild man yeah SC see buddy like God man **debunkers** are just the worst people man you haven't answered all my

(1:35:27) questions that are nonsensical therefore I mean I'm not trying to make you believe man it's not my goal if somebody doesn't want to think it's real they're going to find a way to not believe it to be real it's called Uh confirmation bias all I can do is give you 13 pages of evidence that covers the science the papers the videos the flight path what it requires to be fake fact that dim crash into the ocean and then you'll still go I don't understand why the temperatures are the way it's like d

(1:36:02) okay man just handle something else then Size Doesn't Matter or does it or does it folks or does it I think we need to get this uh evidence out there to everybody as well guys I think we need to make this evidence available so this might have to be one of our priorities ities this might have to be one of our priorities let's get the evidence out there so that you guys can use it a little more uh correctly yep confirmation bias goes both ways that's why the **debunkers**

should make sure they apply it to

(1:36:44) themselves I think that we've got plenty of evidence here imagine if de bunkers had this much evidence for the videos being fake instead of just going oh but some six- day old account says they found cloud pictures that don't exist before 2016 or a one day old account says a VFX that doesn't match matches which is the one experiencing cognitive uh confirmation bias guys the same **debunkers** if we had a one- day old account that claimed the videos are real would would never believe them to be real right I agree make sure you're

(1:37:20) applying make sure you're not being a hypocrite make sure you're applying your same level scrutiny to your own beliefs like when a person says they don't want to be involved in the videos and then they're doing ask me anything about them does that uh does that sync up where how people who are photo manipulation experts are the ones claiming to have found cloud pictures that they remember from over 11 years ago when they've taken hundreds of thousands of pictures just apply your own level scrutiny to yourself

(1:37:49) man I think that's my biggest problem problem with the **debunkers** also the fact that they **scam**med me no we're not going to block anybody tonight let's not be vindictive but anyway uh I appreciate you guys tonight it was a good night I think we did uh yeah if I didn't think this was real I'd just move on right that's what that's the whole shebang right they want everybody else to move on so that nobody's talking about it uh anyway that's I think that's enough for evening guys I appreciate you guys being

(1:38:23) here check out the stream if you want to oh I just confirmed crypto I just confirm something with Thursday with uh Diamond of the Oppenheimer Ranch we could do it after that if you want so Bernie my thing with Oppenheimer yeah I don't know if it's going to work Thursday I'm booked uh at 8 o'clock Eastern on Thursday so we'll probably have to try to do it Friday if we can Bernie but anyway you can send me an email man I'm going to go to sleep and I'll check my emails in the morning

(1:38:54) thanks everybody have a good night

Transcript:

(01:08) what's up with chat what up full screen face rocking the shirt today um well it's going to be a weird one I've got I've got to do Pokemon Go stuff while I do this it's going to be kind of nerdy going to be kind of nerdy folks going to be kind of nerdy um what up hey everybody hey

darar hey Aaron Hey Joe how do you have that it's weird my boss at the agency said I have to watch this okay full screen um I want to steal the I think we're going to pull the Punjabi Batman clip that he posted because I want to go over

(02:02) um how we know it's oh jeez how we know it's 3D already um okay let's do this red is limit our access wait can I just right click on it I can that's easy okay uh drone video 3D uh parallax guess we don't need to worry about that then okay guys you want to watch it

(03:14) together that was my birth control alarm guys um let's see here where's the clip pretty tired tonight A this one's a little slower than the last one we played I think maybe it isn't slower huh May it's not slower what do you guys think what's up fam yeah well no well bye buddy uh just in case people don't know if you troll the chat that's your only chance you're gone there's no I don't put people on **timeout** I just St to block them you're free to move on and go do

(04:14) something else n Noel you're free to move on and live your life unencumbered by our quote unquote fake video or whatever you want to think hey thanks Danny appreciate you bud appreciate you yeah I was watching the AEL stuff I need to watch the uh Alien scientist thing a little bit more clearly though um I had a post prepared for this video that we were watching here imagine looking at this and thinking this is fake we're looking at 3D Parallax I mean we're looking at a drone actually flying underneath the the thing

(05:17) here and have to C manually track onto this plane I mean okay man if you think it's fake you think it's fake no one's going to stop you so don't be surprised when we haven't given up recap what do we oh um yeah give me a sec so the oh and there's a new new sub**reddit** now the other sub**reddit** already got banned only took two days they banned the the only moderator so somebody made another sub**reddit** and they added me as a moderator probably because they now know that it's going to get banned oh it's a private

(06:23) Community wait aren't I I'm part of the private Community though aren't I confused like aren't I the aren't I a moderator of this community oh it's three uncore orbs okay hold onore orbs there's no post yet on it new community let's see how long this one gets banned guys um hey Richard thanks for being here man appreciate it Richard so there's a new **Reddit** Community if you want to post here we'll see how long it gets banned till it gets banned um so I'm not going to Hash on this too

(07:18) much but I think I don't think I've posted it yet so we do now have proof that the person who **scam**med us or the group that **scam**med us is the **redditors** we do have proof now we do have proof and it's right here well that's not what I want to happen there's your proof right there Punjabi Batman made me do it I blocked the sender PB made me do it this is a reference to **Reddit** this was not a random **scam** uh unlike what the **redditors** claimed this was one of them this is one of the **debunk**ers here um Dam Danny you lost your chance

(08:02) Bud uh well the **redditors** **scam**med us for starters this is absolute proof right here so the reason why we um the reason why we won't be able to accept any more **debunks** no matter

what that originate on **Reddit** is because of the **redditors** that **scammed** us here using an elaborate uh social engineering **scam** so again **redditors** um you can feel free to apologize anytime you want since this was one you I I mean I know you're not I'm joking I know you're not going to apologize but you guys have radicalized

(08:37) people you've actually now committed a felony fraud so this is the reason why we can't listen to anything you say **redditors** committed felony fraud to social engineering a fake uh fake set of files for me for the sole purpose of trying to uh ridicule no this person they're not trying to throw this this is a joke this is a joke what this does is this proves that that the person that did this is some of the **debunkers** and **redditors** is what this proves not it proves that it's not a random Nigerian **scammer** or a random Indian **scammer** this

(09:15) is literally someone from **Reddit** probably a group of people from **Reddit** in fact if I had to guess so we're not going to harp on this I just want to make sure there's absolute proof that you guys see this yeah Punjabi Batman did not do this guys are you really this slow guys are you really this slow come on guys you can figure it out this this is a troll man he's talking about Punjabi Batman because he's a **debunker** who hates Punjabi Batman it's not that hard yes it's the **redditors** this is the

(09:46) **redditor** **debunker** nut jobs this this is absolute proof this was a group of people that pulled this this was this required planning and coordination so you again you can't anything you see on **Reddit** especially from the **debunker** sub**reddit** you need to be very careful yes they're extremely disgusting people and they've now committed felony fraud felony fraud now so they've they've escalated it to actual crimes felony crimes um so I don't want to hear any moral High Ground uh no the suicide note was

(10:29) actually real the suicide note was actually real guys the person who lied somebody lied about making the suicide note but they did not I I know they did not I'm looking at the username right now of the person that sent the suicide note this was let me make sure I mean honestly I don't know actually wait let me look here all their posts are gone I don't know it either way I have no idea I mean I can't confirm it one way or another I mean if somebody faked a suicide note that's like just up that's just

(11:30) that's like Beyond effed up man their profile said they were a veteran and they had a picture of their kid in their p in their thing huh yeah anyway we're going to move on with that you even if it's fake I even if the suicide thing was fake it's not something you joke about I mean that's messed up man it's like really messed up okay so real quick let's go back to this but that's the level of like just straight up demented people we're dealing with right like straight up demented where man where did I put

(12:28) it hell it is um okay carrying on I want to post this because it proves that this is a 3D video and you couldn't use 2D assets for it and that it matches our other one we're going to move on from all the garbage but uh you know I just need to make sure it's recorded for all time so that they can't claim later on the people we're dealing with are extremely disgusting really

just the worst subhumans on the planet Tony I'm not going to ban you I'm just

(13:34) going to put you in **timeout** for an hour uh 30 minutes apparently don't uh don't play like you're a mom in my chat no trolling no acting like you're a mom or a Karen just be a normal person I don't even like the term Karen it's pretty disrespectful also okay here we go yeah we're moving on relax guys we got work we got to do so I'm going to

(14:46) try to focus here guys I don't want to get too sidetracked actually I need coffee as well yeah I mean there's just like don't even just not even just the date look at what we're looking at here you think someone faked this Parallax 3D accurate Distortion accurate tracking accurate camera shake like okay who faked this I'm I'm I'm filling out the details of the video chill cordor crew could even recreate 5

(16:01) Seconds of it sorry guys I'm trying to do like two things I wants here h for

(17:32) dude I just did the verbally F I just filled people in with verbally guys I'm involved in Pokemons over here yeah if it's faked it's faked by the government guys that's really what it comes down to there's no random people fake this I'm I'm doing a drone clip here of Punjabi Batman and then I'll probably post the full drone video right after and we're going to do we're going to go over the matter wave as well there's also a new sub**reddit** a new new sub**reddit** the one from yesterday has

(18:33) already already been the moderator got banned and they were the only moderator so now there's no way no way to keep the other sub**reddit** alive anymore so they made a new new sub**reddit** I know this because they emailed me I'd show the email but I'm just gonna you guys are just going to believe me on this one they made me moderator of this one which I don't know if that's going to be a good thing or a bad thing uh a little con concerned maybe I'll get my **Reddit** account banned I mean if they ban my

(19:02) **Reddit** account it just furthers the case that **reddit**'s completely controlled so maybe they won't maybe they will who cares either way one sec guys sorry sh

(20:57) okay oops it's SP Parx WR two I's this is pretty

(22:00) good merry Christmas everybody there oh yeah I already said it's mird I already said it was

(23:20) mired sorry guys I'm involing my Pokemon happy FES of us for the rest of us okay that's good oh wait one more one more Pokemon to evolve time is running out I'm not even going to link to their sub**reddit** James shut the hell

(24:27) up imagine if you put one tenth of the scrutiny you put into things you refuse to believe into your into the idea that somebody found some Cloud VI cloud pictures randomly on an obscure website it's ridiculous man I can't the **debunkers** are just off the deep end man off the depend is not even good like I'm going have to buy like a weapon for personal protection that's

how nuts the **debunkers** have gotten it's gotten to the point where I actually have to freaking defend myself from potential Psychopaths these are the people that

(25:17) want to take the moral High Ground my God man I think this is good so many experts all of a sudden everywhere on **Reddit** and not just **Reddit** but everywhere yeah sure you're not man James you're from Chris Leo's Community which is the most toxic Community I've ever run into so come on man literally told Chris today that I like him I love him I think he's a good guy I think he's got the best in heart but I will not go back on his show because his community I mean not like he would ask me but his community is just the most

(26:11) toxic people I've ever run across he needs to like Wipe Out the moderators start over fresh and start Banning people that uh are just completely unhinged I mean I think he just doesn't care because he doesn't use his Discord but yeah yeah I don't really want to dig too much into the **Reddit** stuff but uh yeah it's the worst place ever um Punjabi Batman's the only one out there even trying to solve the mystery he's the only one out there I'd say like I like about one out of every five of his

(26:56) posts so some of them are just too there's not enough connection there for me oh wait someone mentioned the Chinese hackers thing can't believe this AMA dude okay I think I'm just going to post this okay here's the Drone clip you guys can have it go nuts folks what do we call this uh FX Twitter oh wait oops jeez uh drone clip okay I screwed up that yikes uh

(28:02) post all the updates in my discords okay next one we are going to do paid actor AMA guys can you imagine if I did an AMA can you imagine if I did an AMA how toxic it would be okay James I gained a little bit of respect for you gained a little bit of respect for you for leaving that server gained a little respect little bit of respect gained okay now what do we do about this PL coherent matter wave beam I'm trying to figure it out what do we do about this

(29:56) yeah any thoughts on how we should play off this why would you think step Greer would know Edward Lynn what what guys no they found the black boxes last night guys um Gemma do you want me to promote that thing you emailed me about hey Gem Gem apps do you want me to promote the thing you emailed me about can't tell I don't think Leto's Too Faced I just think that he cares a lot what people think generally it's a big problem in our

(31:03) society is people care more about being popular than being correct sorry I'm distracted at the moment okay it has some of your your private information in it though that's what I wanted to ask ahead of time find where the hell are my emails so Gema uh in lie of donating to me I would prefer if people would help out people in need man where my emails I close it you go to be kidding me apparently I closed it literally over here like looking up what kind of uh Firearms to produce to protect myself can't believe it's come

(31:56) to this um so I definitely prefer if people don't donate to me where is her thing oh here it is okay I'm going to uh blur out your name Gema since you put it in there uh wait let me make sure it's going to work correctly oh I mean I think you actually posted this publicly but I'm going

to go ahead and post it here anyway without your name since this is my stream okay guys uh Gap is uh looking for donations to help her daughter get a Christmas present so so yeah I didn't put your real name in

(33:00) there I blocked it out so if you guys in lie of donating to the investigation for the near future like today or whenever you were going to donate I would prefer if you guys would donate to gem apps cash app looks like here that she has on the screen um so don't donate to me today or in the near future instead go ahead and donate to gem app so she can get her daughter uh a present would appreciate that maybe I don't think she wants to buy her a Glock 19 but you know that would be nice the only reason why I've promoted

(33:40) uh this is because J apps has been here following us for a long time following the case and I care more about other people getting stuff I don't I don't really need it I want to help the needy so if you also want to help the needy you don't have to go overboard but you know this would I'm sure help her out yeah I I would not I would not promote it unless I knew that gem app was legit so there you go guys can do something nice for somebody you can help change their Christmas you know appreciate it um I may leave this over to the side

(34:24) for now just in case people don't see it or haven't written it down or something um let me see here make sure I'm not showing my DMs we're get on that just to be clear I I'm a Chris letto fan myself I like Chris just not really a fan of his community

(35:29) yeah I I think that trying to call me a grifter is one of the weirdest things considering how many real grifters there are in the UFO Community it's like people are out here like buy my book buy my other stuff and I'm like yeah I don't I don't I don't know man I just don't know okay so there you go Gap appreciate you I'm also donating to uh JK Philly fans doing a homeless thing we may promote that a little bit later yeah I think Chris just doesn't care about his community uh I actually don't think

(36:12) Greer is a grifter anymore I actually don't think Greer is a grifter anymore the reason why I don't think that anymore and I was buying into it before which I probably shouldn't have you know so respect to Dr Greer um i' I'm now thinking that he's a normal guy that has been uh attacked I mean we get called a grifter too right and I don't even collect money um but Dr GRE specifically said that yeah we're going to look at we're going to look at this I'll leave this up here for you guys to

(36:44) read um he said that he was they were doing crowdsourcing for their projects because that way they have control over it compared to it being shut down which is doesn't surprise me like yeah the government's going to shut down anything that they don't want out there now I don't know I don't really buy into a lot of the I don't buy into a lot of the the beu alien stuff it's a little too much for me man it's a little too much I shouldn't laugh I shouldn't laugh honestly I really

(37:13) shouldn't it's just a little much for me like I can only do I can only do so much I can

only absorb so much at the moment guys yeah it feels like uh Brave traveler they've run out of insults it's like everything's Griff Griff this Griff that it's like what about can I just like try to get the **truth** like man I just want the **truth** for the families is that is that okay apparently not Galactic Federation uh it was like he's like oh time travel or uh the speed of light's not fast enough yeah my dog was just

(38:02) she's actually man I almost want to take a picture she's on the blanket underneath the table over here looking so cute are you looking super cute Lulu yes she's just staring at me with her blue eyes um I lost my train of thought I lost my trade of thought oh yeah the beu thing beu thing was funny Ellie yeah the like oh speed of light's not fast enough but and we were in contact with Buu from Andromeda galaxy I'm like oh man why' you have to include that in there yeah some of the claims are just

(38:42) too much for me where it's like it's kind of the same scenario of like the videos where it's like I just wish there wasn't orbs in these videos right you got to like realize you're talking to people that aren't they're not ready for all this man you got to take it a little bit out of time man it's like the Grays and the reptilians it's like that's where you you start to lose me when you start talking about like the Elohim and the palladians like guys let's just start with advanced technology then

(39:07) let's work our way up to the various Spiritual Beings and different species of aliens and whatever right and again I say that as somebody who's like I'm I'm down to believe I just one step at a time man I actually would do a C5 event but I don't think I'm GNA pay \$ thousand dollar for it I just not really feeling like thousand for C5 or whatever they're charging although it's funny it didn't uh yeah Dave rosi is like my favorite person on the planet it's funny when uh Dr Greer

(39:58) called out Aaron Rogers I don't know was that public was that even public information he called out I gotta look it up yeah I don't think he even I don't even think that's public information dude he didn't that Aaron Rogers thing was not public information I just Googled uh you want another update what's been going on um let's see oh he did talk about it Selena Gomez as well geez man I know lizo lizo definitely and oh wait Demi levado I think Demi levado was the one uh let's see well I got a a suicide

(40:57) note that was pretty messed up now I actually don't know if it's real or not the person that was sent me the suicide note left the Discord they're not in the Discord anymore so if it was a **scam** that was like the most messed up thing ever their Discord profile had like veteran and all this stuff on it wait no wait they didn't leave the Discord it says Mutual server hold on what why are all their messages gone oh no they didn't leave the server what what how come I didn't find their messages did they change their

(41:55) name that's weird man huh oh maybe it's because I have streamer mode engaged oh I bet you that's what's wrong I bet you it's because I have streamer mode engaged why would they have deleted their message they haven't been online that's the weirdest part but yeah I got

a suicide message um I don't feel super comfortable showing it but I'm going to show it anyway just cuz people might think I'm fine or something I'm not going to show their name oh did everyone get the Gemma thing

(42:32) who wants to donate I'll show it one more time if you want to donate to gemma's daughter for Christmas instead of donating to me that would be awesome here you go here's your cash app thing if you have it I appreciate you guys can I have their spot dude that's dark dude that's dark you you you don't need to uh take somebody's spot was the don don burge's one from like a few weeks ago yeah it was garbage there's been a lot of low low rent um low rent low uh YouTubers who've

(43:22) been trying to leech off of our our situation I think Don Burgess was one of them somebody's mentioned his name before okay just in case if this is a **scam** then wow I mean I don't know I've been getting **scam**med a lot but this is this is pretty dark man if you want to invite to the Discord send me an email I'll get through them so if you do get an invite I want to be

(44:52) clear no trolling BS stuff we hold our community a pretty high standard um you need to introduce yourself when you join so this was the message I got last night while I was streaming I didn't see it until later on and then there's a followup as well a couple more messages pretty damn dark man pretty dark doesn't seem I mean I don't know anything could be a **scam** I suppose at this point I don't know why someone would **scam** a suicide note I mean this was somebody in my Discord this is not a random person this was

(45:30) someone in my Discord yeah the D burges guy is just some random clown guys he's just some loser not wasting my energy on losers okay yes this was extremely sad this note is extremely sad I was actually crying about this so I hope that this was not a joke this morning I mean it's heartfelt it's extremely sad this was somebody who I checked they had posted messages on my Discord I looked to see if I thought they might be a **scam**mer from the messages on their Discord uh no that was that was not somebody getting me to

(46:27) quit if anything they increased my resolve and told me I should never ever stop I looked at their messages on my Discord and they didn't have they didn't seem like a troll at all yeah they trolls would do something like that for sure but their messages on my Discord made me think that they're not a not a **scam**mer no I mean maybe but I can't be sure what's real anymore honestly I really can't it sucks people will go to the the lengths that they've gone to to try to discredit the case really does

(47:25) suck uh the time between those two messages was less than 10 minutes less than 10 minutes between those two messages yeah I I've heard I've I've never had gotten a suicide note but that one looks messed up next move is the matter wave now we're going to ignore all the it's matter wave of time okay okay

(49:02) oh there's Jeremy what's up Jeremy yeah check out this uh I'm gonna pin this actually

podcast I did with uh Dave Rossi is really good Dave Rossy is like my favorite person on the planet he's just like a super good guy probably one of the smartest people on the planet uh highly respect him for sure n Dolan hasn't said anything sorry guys only a few more Pokemons to do only a few more to

(50:19) do it's like the once in a year thing you do on in Pokemon where you have to like evolve your guys or something and I've waited until like the last 30 minutes to do it I haven't played this game in months but I don't want to lose miss out it's fear missing out guys fomo fomo Momos uh oh how do I do the candies for this guy give them candies guys how do you do this hold on Jesus the candies there we go guys I used to be really big in a Pokemon go I mean I know that's extremely embarrassing

(51:15) but sometimes you just got to tell it how it is man I think I'm pretty much done here okay so I yeah I mean if Dolan wants to reach out I'll probably hit him up jump on what do you mean jump on oh you wantan to you want to fill in on the stream uh I don't even know how to do it man I'm too tired to set up a zoom link or something something I need to get like um what uh Jeremy what do you use for streaming do you use uh which platform streamlabs or which one do you use I need to get something better than zoom zoom is awful

(52:11) man zoom's like the worst one I don't even know how what do I what do I do just go on zoom and let him talk how does that work I want to do this matter wave thing streamyard I got I probably got to switch over to streamyard uh we can probably do that in the future I'll try to get streamyard set up for the future it's just like I'm so bad at technology man just learning one thing at a time here one thing at a time okay I want to do another post about this I'm trying to figure out I I used to be disgusting at Pokemon

(53:06) like I was like one of the the community leaders but then it got to be too much like there people got too serious man it got to one of those points where like people are getting like angry at each other in real life like redditors like kind of scary kind of scary stuff yeah we'll do I'm going to get figure out how streamlab works and then we'll do something for sure in the future that way I can let people just jump in and take over my stream if necessary definitely wouldn't mind having you helped

(54:05) out okay the question here is what should I just post the matter beam uh should I post this or should I post this with the video I'm not sure yeah Gema actually I think that worked I think that fig fixed the camera I changed it to oh changed it to high temperature yeah my guys if you guys saw my Pokemon go list you'd you'd crap yourself I have like all the best Pokemon like all the best I used to raid like a lot a lot I've got a 100% Shadow Mewtwo yeah I I I hung out with like the most hardcore Pokemon go players there

(55:05) were like ones that would run like six different accounts yeah it was pretty wild you didn't miss anything or not much Haley welcome welcome to the stream uh and I've got a 100% shiny gudon as well I don't mess around I don't mess around when I do things I go hard at it I go hard um okay I think I'm almost done with this guys what do you think we should do here with

the matter beam wave should I just post the matter beam wave patent or should I post it in conjunction with the video show account I don't even know how

(55:50) to show my account let me let me look and see if I can figure it out oh wait what's this guy um people want to see my Pokemons dude should I show my Pokemons in the in the Stream I'll show my Pokemons in the Stream in a second since the people want to see I'm might get I might get myself banned though I have three different counts okay this first one of my janky oh you can't even see it wait can you yeah no it doesn't really work quality is too low on the screen like that

(56:56) seems good 100% Shadow Mewtwo seems good it's like literally the best Pokemon in the whole game uh okay that's enough nerd stuff let's do more nerd stuff got to catch them orbs I think we're just going to post this I think we're going to post it like this get him on the hunt for MH370 early on I was in a Discord and I I said something about MH370 and people had no idea what I was talking about and I was like yeah this this is the wrong crowd wrong crowd for that okay I I think I've upgraded all

(57:54) the guys hold on yeah okay I what about this yeah okay that's it that was good that was good folks I think I got everything I needed okay we evolved everybody we need good done with Pokemon for next year okay I think yeah I think we're definitely nerds in this in this uh stream right now we're science nerds we're gamer nerds we're all the above all of the

(59:15) above okay oh oh I remember what I was going to do start over start over Mulligan [Music] where's there it is let's listen to Bob Greener for some reason when I clip these the first little bit doesn't come across Einstein condensate a coherent matter at near absolute zero I learned from The loed Martin 2013 paper systems and methods for creating a coherent

(1:00:22) matter wave that using an electric discharge of electrons going into some 10 Micron cavities they could produce coherent matter weight using the Aron Hof bomb effect which allows for phase synchronization and energy exchange okay challenge is people think you can only make a Bose Einstein condensate a coherent matter at near absolute zero I learned from the locked Martin 2013 paper systems and methods for creating a coherent matter wave that using an electric discharge of electrons going into some 10 Micron cavities they could produce coherent

(1:01:02) matter weight using the rhof bomb effect just going to quote this I think I think the best way to go about this is just to quote it dude yeah he's legit which allows for phase synchronization and energy exchange okay challenge is people think you can only make a Bose Einstein condensate a coherent matter and near absolute zero I coherent matter at near absolute zero I learned kabose Einstein condensate a coherent matter at near absolute zero I learned from the locked

(1:02:06) Martin locked Martin 2013 paper systems and methods for creating coherent matter wave that using an electric discharge of electrons going into some 10 Micron cavities they could

produce coherent matter weight charge of electrons going into well we're going to use all this charge of electrons going into some 10 Micron cavity come

(1:03:17) on Micron yeah exactly this was published not even 10 years ago like 12 years ago they could produce coherent Micron cavities they could produce coherent matter weight using the Hof bomb effect which allows it's good enough I could say the air and half bomb in fact but I don't know how to spell it for phase synchronization actually we better put it in using the Aaron Hof I'll I'll fix the spelling an energy exchange bomb effect

(1:04:24) which allows for phase synchronization and energy exchange okay challenge is people think you can only make a Bose Einstein condensate or coherent matter at near absolute zero W using the iron Hof bomb effect which allows for phase synchronization and energy exchange okay challenge is people think you can only make a Bose Einstein condensate Ching that's the money quote right there uh how do you spell Aaronoff bomb effects it's probably is it with the E Aaron Hof I was close I was really close man this is wild man what do you think

(1:05:40) about this uh Jeremy what do you think about this man this is this paper is like The Missing Link man coherent matter wave we're talking about phase synchronization the capability of creating Bose Einstein condensate at not absolute zero seems wild to me did I spell it wrong no I got it a h a r yeah Bose Z and content state is definitely involved this is where we were talking about turning fans into bans and back again I don't even know if we have to turn them into bans I think we can just act like bant this to me explains the

(1:06:22) videos this to me explains the videos so oh this is the publication damn it was a application was 2011 publication was 2013 yeah the Bob Greener stuff just went over my head is the only downside granted in

(1:07:33) 2016 oh the citations that's a good call where are the citations are they down at the bottom yeah this this is the this is what we need to get down to I think you my my community just wants to clap alien cheeks I know you guys I know you guys trying to clap those alien cheeks matter wave Quantum tunneling what the what if one of the legal events was MH370 I want to know what Jeremy thinks

(1:08:37) about this I asked Dave about this paper should I see what Dave said assuming it's appropriate he said he was very familiar with it he said he was very familiar with this paper don't let the aliens know don't let the aliens know we're trying to clap those cheeks for

(1:10:20) I think we reply right and then the replies we can put the paper what do you guys think I think we scroll to patent section citations 33 uh what if I just download PDF wait I don't see the citations here they are uh um who is that Amor Amore uh

(1:11:28) which one were you thinking which citation yeah this is this feels like catastrophic disclosure from locked Martin here you go Jeremy this patent is sketchy man this patent is sketchy as hell it's lockie freaking Martin how's this lockie Martin it's like man this is the missing

link man yeah dude I want to but now they have

(1:12:39) the patent Jeremy how they got a freaking patent on teleportation how are we supposed to do it while they own the patent these mfers dude I'm gonna upgrade this to 1080 yeah we're literally connecting the dots live guys this is just nuts I want to oh is this claims where is there not a better link for citations down here somewhere what's wrong with this crappy you know what might be a better way to do this maybe there's a better one what's this so I'll just

(1:13:50) Google definitely feels like a yatsi moment I'm expecting like Amar Oz o or Amar oav Amar oad or aads uh like name to show up or something like that what the oh there they are patent citations there they are there they are let's look at these real quick before we post this MIT 1988 matter wave Optical systems hello 1987 how long has this been out here cor semi-conductor drive device coherent particle beam 1994 how how old do we think this technology is electron wave coupling or decoupling to devices on Quantum

(1:14:54) interference devices what does this one on the right mean publication date 2002 device and Method from generating and manipulating coherent matter waves Max plank what the f matter wave resonant resonator system sorry I just want to read all of them dude this I think we found the missing link guys I think we found the missing link this

(1:15:58) is uh it doesn't find that one where how come I don't find that one oh is it a different one wow that one's interesting too using Tangled Quantum particles dude what the f man we literally have they liter have another one for Quantum entangled particles I mean you just add this up together and you create cre our orbs electric field guided particle accelerator Ain hom bomb

(1:17:09) sensor damn dude damn dude this is wild this is definitely this is definitely locky Martin I'm ready to call it if I just add up like a few of these things here we've got our orbs okay we're just posting this Aaron off bomb effect in the double slit experiment where do you see that James here you guys go yeah well now we have the scientific papers to back up our stuff

(1:18:34) coherent matter ways how's that taste the answer to figuring this out is definitely the science I think we might need to do a post just about locking Martin is the US patent office used to spread disinformation I certainly don't think so go ahead and try to patent something that's nonsense and see how far you get I'm going to close this tachon thing is this our paper oh it says this our paper what did someone say aof bosm effect on the double slit experiment does look just like the double slit

(1:19:51) experiment doesn't it I just don't understand the significance I'm not smart enough yet how's it going people o YouTube video o yeah James you're you're on fire right now James is it this one this one James yeah okay oh yes we're watching this I'm going to get some coffee before we watch this oh I'm excited guys I love science YouTube videos I love them love them okay good we're going to watch that uh I'm GNA let you guys read Maxwell while I go grab

coffee I'll be back in like I don't know

(1:20:49) less than 5 minutes oh actually you know what the coffee machine probably to warm up okay guys I'll be right back don't get too excited hey yeah I'm ready to solve the puzzle I

(1:25:04) think folks how do what's the I'm Peter Parker yeah this is my 3D uh Spider-Man thing goes from like spider venomized Spider-Man back to normal Spider-Man um okay yeah I'll take a look at I'll take a look at my things later and try to get you an invite yo so how does the game Clue work again how do you solve the puzzle and clue uh clue I want to solve the puzzle it was locked Martin with the orbs in the nicobar islands against MH370 folks let's watch this video and then let's solve the puzzle in this episode we will talk

(1:25:59) about pure quanton effects of electromagnetism the aranov Bon effect let's enjoy it unification is an important issue in physics basically the whole mod physics is always looking for unification unification in the past electricity and magnetism were considered as two separated forces ah thanks to the works of Maxwell genius Max later understood that both forces were just manifestation of a single interaction we call to the electromagnetic interaction inside electromagnetism or electrodynamics Chargers are able to

(1:26:43) generate magnetic Fs in this way it is also true that an electric current can generate magnetic fields which basically move forming circles around the electric current the mathematical formulation of this phenomena is represented through the Ampere law right hand rule additionally a charge moving along a region where there is a magnetic fi we also experience some Force perpendicular to its direction of motion and perpendicular to the lines of the magnetic fa this phenomena there is a magnetic fa a charge moving along a reg

(1:27:22) where there is a magnetic fi a charge moving along a radium where there is an electric electromagnetic field or magnetic field we also experience some Force perpendicular to its direction of motion and perpendicular to the lines of so it's perpendicular so this is the field motion of the magnet north to south so it's experiencing this Force like this Super Mario yeah Super Mario chat oh I want to show my mug off that's my room 2008 mug you guys see that room 2008 they sent me this I like when the people send me stuff

(1:28:25) says conspiracies paranormal unknown when's the alien adct guys going to send me something of the magnetic F this phenomena is represented mathematically through the Lawrence Force law know that if the charges in the middle of the magnetic fi region don't move then and they will not experience any magnetic force indeed magnetic forces are fa only when the charges are moving when there is a group of charges moving we then have a current in this way the currents also experience a magnetic force if there is a magnetic

(1:29:12) field crossing the cables transporting the current the electric motors for example and other engines use the lence force for transforming energy in kinetic energy which will be used for practical purposes this doesn't make sense to me it is also well known that there are positive and negative electric charges and that they attract each other when they have opposite sign

understand and they repel each other when they have the same sign I'm back guys I'm back I'm following again the representing this

(1:29:45) phenomenon is the colume law another inter where's mayosi phenomena from classical electrodynamics is the fact that a change in time of a magnetic flow generates an electric current or motion of charges this phenomena is known as the law of farad Faraday's law man this guy's accent's killing me though how many streams you guys do where they're just literally going through electric engineering uh don't think there's a lot par is fundamental for the operation of generators of alternate current

(1:30:26) basically the electricity arriving to our homes is a natural consequence of the fact that the generators transform the kinetic energy in electric energy finally for completing the scenario about classical electrodynamics we have to mention that accelity charges generate electromagnetic waves which move okay I can see this electromagnetic wave is going to use the right hand rule so that means it's going to be going this way I got you I'm with there move over the vacuum at the speed of light subsequently Einstein's theory of

(1:31:05) relativity confirmed that maxw theory was correct Einstein basically realized that the symmetries of maxw theory have to be translated to the laws of ordinary Dynamics besides this Einstein realized that one of the consequences of Relativity is that a magnetic fail in one frame of reference can perceive as an electric fail in another frame of reference and vice versa man this is the case I need somebody with a less harsh accent because both fails are just components of the same tensor felt from the perspective of a special

(1:31:45) relativity if we go now from classical electrodynamics to Quantum electrodynamics at the quantum level it has been demonstrated that the fundamental objects describing the dynamic of the particles inside the electromagnetic interaction are the potential Fields namely the vector potential which is related to the magnetic fi and the scalar potential which is connected to the electric fi both fields are just components of the same quadri Vector from the perspective electrodynamics and from the perspective of special

(1:32:24) relativity among all the effects perceived at the quantum level the don't know bone effect is one of the most important ones ever this guy's this guy's video like what is what year is this from like the 90s my guy he needs to upgrade it it is an effect that demonstrates that the potent I want I want more witches and and warlocks to teach us electrodynamics have a testable physical effect at the quantum regimes for understanding this aspect better imagine for a moment a standard double experiment with electrons if we

(1:33:06) send electrons one by one then the pattern of impacts over the screen behind the slits will generate the standard interference pattern observed in waves this means that each electron crosses both leaks simultaneously in principle now imagine that we put a solenoid between both leits as it appears on the figure okay if a current crosses it then a magnetic F will move through the center of the solenoid however all the regions surrounding the solenoid will be free of any magnetic felt yet still the magnetic potential

(1:33:51) generated in the magnetic  $F$  doesn't vanish over the same regions surrounding the solenoid then it comes out that there is an additional shift between the paths taken by the electrons when they cross the double slit this extra shift is a physical effect generated by the vector potential surrounding the solenoid in this way the Vector potential has some observable so I think he's saying if you put a solenoid there you can modify the way that the wave function operates physical effect in summary while at the classical

(1:34:38) level the potentials are just considered to be mathematical artifacts without any physical observable effect at the quantum level they are physical fields which generate testable and physical effects if you like this video please give share the link you could no way we need something that's a little bit more easy to understand nothing wrong with this one but we need like the simple yeah we need the simple version um may this one we want to make sure that your money

(1:35:42) this is the kind of one one we need here first 100,000 people use this link will get the free oh yeah no I don't want that during this video check out a free Tri of SK field represented by these field lines the compass this guy seems like he knows what he's talking about when you have the man bun that adds like a lot of credibility the man bun adds a lot point in this direction at this point in space and if we moved it to this point the compass would point in this direction and so on and so forth there is of course a lot more to

(1:36:12) magnetic field lines but this is a really nice basic visual description that we'll stick with now a magnetic field is often represented by the capital letter  $B$  and on top of this  $B$  we draw an arrow in order to tell us that we're working with what's known as a vector field we can assign a vector to every point in this space and each Vector represents something about the magnetic field itself the size of the vector tells us something about the strength of the magnetic field at that point in space and the direction tells

(1:36:39) us the direction of the magnetic field for a long time when physicist studied magnetism they treat magnetic field thick glasses these are some thick old glasses this guy might be able to see into outer space with these as very fundamental quantities of high importance the concept of magnetic fields very clearly and concisely described how magnets interact with each other after all every magnetic field must be generated by some sort of magnet as well and so the magnetic field  $B$  was included in a lot of mathematical

(1:37:07) equations that described magnetism however the magnetic field was not always the most mathematically convenient quantity to deal with for more complicated scenarios for example where the magnetic field is not quite as simple as the one we're dealing with here the magnetic field gets very complicated and very hairy very quickly instead it made a lot more sense to work with another closely related quantity that we look at in a second that made the mathematics a lot easier but essentially this quantity was defined just for convenience no

(1:37:36) other reason it's just to make the magnetic field simpler now the quantity that we're talking about is known as the magnetic Vector potential as I mentioned earlier it's meant to be defined

for mathematical convenience and the reason we is actually purely due to a mathematical trick take any Vector  $\mathbf{a}$  and we find what's known as the curl of this Vector  $\mathbf{a}$  doesn't really matter what curl actually means followed by finding the Divergence of the curl of this Vector  $\mathbf{a}$  then a mathematical identity tells us that this quantity must always be equal

(1:38:06) to zero again just to reiterate we don't really need to know the meaning of curl and Divergence all we need to know is that maths tells us that this quantity must always be zero for any Vector  $\mathbf{a}$  for more information on what this means and why this identity is true I've made a couple of videos discussing  $\mathbf{C}$  and I'll also leave some useful resources in the description below now interestingly one of Maxwell's equations which are the equations that with electromagnetism tells us that the Divergence of any magnetic field must

(1:38:35) always be zero I've also made a full video about this particular equation so check that out if you haven't seen it already but basically the point is that if our understanding of classical electromagnetism is correct then the Divergence of the magnetic field is always zero for any kind of magnetic field and the mathematical identity that we saw earlier the Divergence of the curl of any Vector must be equal to zero also can be used in this scenario and so at this point it might make sense for us to just Define  $\mathbf{B}$  the magnetic field as

(1:39:04) the stud  $\nabla$  for and specifically this quantity  $\mathbf{a}$  now we will call the magnetic Vector potential what we've done is Define any magnetic field  $\mathbf{b}$  as the curl off this other vector quantity the magnetic Vector potential because sometimes working with a magnetic vector potential is easier than working with a magnetic field now before we go any further I'd like to thank this video's sponsor skillshare skillshare we want to find out what the magnetic Vector potential is for a particular scenario that we happen to be studying where we

(1:39:36) only know the magnetic field  $\mathbf{B}$  then there is a family of different solutions all related to one another but there's no one right answer as to what  $\mathbf{a}$  is if we know what  $\mathbf{B}$  is the best analogy I can give here is that it's like differentiation versus integration if we have a function and we differentiate it then we get an exact answer because there's only one thing that this could differentiate too however let's say we didn't know what we're calling the original function and we want to find

(1:40:02) out what it is knowing this quantity when we integrate it it could be one of a set of solutions represented by this plus  $\mathbf{C}$  an even simpler but slightly further away analogy is that if we want to find the square of a particular numbers then we you know I have to do it there he is dude there he is dude just  $\nabla$  for dude dude he needs to clean up his beard a little bit he'd be ready to go dude I think this might be him he needs to wear some more eyes Shadow as well eyeliner if you get some eyeliner my dude's ready to

(1:40:50) go we know that there's only one possible solution but if we want to go the other way what it could be one of two different answers and similarly if we just know  $\mathbf{B}$  then we can find  $\mathbf{a}$  but  $\mathbf{a}$  can be one of a few different solutions whereas if we know  $\mathbf{a}$  then we know exactly what  $\mathbf{b}$  is all of this will become important later so let's keep that in mind basically like I've said using  $\mathbf{a}$  is

just for the mathematical convenience it's a mathematical trick it doesn't represent anything physical or correspond to anything real in our

(1:41:19) universe it is the magnetic field  $B$  that actually represents how magnets interact with each other that's the fundamental quantity and that is what scientists thought until the study of quantum mechanics revealed something rather interesting to understand what quantum mechanics has revealed to us let's first recall that when studying a Quantum system we most commonly deal with what's known as its wave function this can be thought of as a mathematical function that contains all of the information that we know about our system in this

(1:41:46) video we will be thinking about what happens when an electron passes close by to a coil of wire known as a solenoid specifically we'll be thinking about how the wave function of the electron is affected by the solenoid to understand why a coil of wire would affect an electron passing close by to it in the first place we should understand that when we pass a current through this coil of wire it generates its own magnetic field in practice this is the main purpose of a solenoid is to generate a magnetic field and importantly the

(1:42:14) magnetic field inside the coil of wire is very strong but the magnetic field outside is really quite weak now it's important to note that because the magnetic Vector potential relates to a magnetic field but is not the same thing as a magnetic field it is possible to have a region of space where the magnetic field has a value of zero there is no magnetic field in a region of space but the magnetic Vector potential isn't necessarily zero I mean why not right as long as the curl of  $A$  gives us the magnetic field which is essentially

(1:42:44) the thing we're most interested in doesn't really matter what  $A$  could be but the point is that there are different versions of  $A$  that satisfy  $\nabla \times A = B$  where  $B$  is equal to zero but  $A$  isn't necessarily zero and so here's the thing if we pass an electron through a region of space where the magnetic field  $B$  is zero then we'd expect nothing to happen to the electron and on the surface that's pretty much what we observe I mean the motion of the electron is not affected or anything like that but if we consider

(1:43:12) the electron's wave function then we see that when passing through this region of space when the magnetic field is essentially zero but the vector potential  $A$  is not zero the phase of the wave function actually changes not necessarily  $180^\circ$  phase that's it folks that's the answer they're able to change the wave function by manipulating the space that it goes through I wonder if this is a toroid is needed for this or not shift like we've shown here but the phase definitely changes and how much it

(1:43:40) changes depends exactly on what the value of  $A$  is in this region of space even though we thought  $A$  was just a theoretical construction the phase of a wave function has physical consequences as well as well we can actually measure how much the phase changes by looking at interference patterns of these electrons as they move close to our solenoid now it's worth me stressing that the specifics of phase change or interference patterns aren't really important again I'll leave some resources in the description below but

(1:44:06) the point I'm trying to make is that we see a real physical measurable change caused by the magnetic Vector potential and it has nothing to do with the original magnetic field  $B$  cuz so we can actually modify the phase yeah we can modify the the wave function so what you do then is you get all we then we're trying to do is get them in sync right once we get the waves I wonder if this is what the orbs are doing magnetic field strength in this region wonder what this is what the orbs are doing is this what the orbs are

(1:44:37) doing are they manipulating the wave functions of the electrons around the plane causing a phase shift huh or I imagine that's I don't I don't know they're doing something right this part maybe this is the part where they're doing it we don't see any visual change here though could it really just happen instantaneously like here could really happen that fast you can see the lines still in front of the orbs the lines are still in front of the orbs right here you see them this line is still in front of the

(1:45:36) orbs I think what do you guys think causing resonance yeah you think when they're spinning around it they're causing the plane to get into resonant frequency SC scalar inferiority yeah huh yeah the moment the planes converge is really interesting definitely feels like electro electric engineering on a play here and I wonder how like looking at this in real time it's crazy how fast it happens in real time just straight up

(1:46:40) gone in like under a second under a second just W man huh is it wait is it even possible to change Twitter into chronological order what do you mean they are they my Twitter is in chronological order and I don't think it's something I can control is that even something that's even possible guys you can you change your Twitter to chronological order is that even a thing pretty sure Twitter only works one way of space is zero what we've just discussed is known as the aharonov bom effect and what this effect is

(1:47:30) suggesting to us is that magnetic fields and similarly electric fields are not the fundamental quantity that we should be talking about really we should be thinking about their potentials whether that's the magnetic Vector potential or electric Scala potential because it looks like those are the things that relate to something physical in our universe something that causes a measurable change and also because knowing the vector potential in this case allows us to find exactly what the magnetic field is anyway so if we know a

(1:47:57) then we definitely know what  $B$  is it's a rather crazy idea something that we discovered as a bit of a trick ends up being an actually important quantity when we study it quantum mechanically and just to clarify in this video we could have been talking about the electric field and its potential rather than the magnetic field and the Magnetic Vector potential because the aov Bome effect deals with both kinds of field but the reason we talked about magnetic fields is because one form of the Haron of bone effect deals with an electron

(1:48:22) passing close by to a loop of wire and that particular experimental setup is the one that has shown actual evidence of the aronov B effect being real and with all of that being said I'm going to finish up here oh so this is why the electrons passing close to the electrical wire

that's what the um solenoid is huh yeah there's no well cone or signature what's uh Patrick Stewart got hello I'm Patrick Stewart Bo Patrick Stewart is did you know that right now over big thanks to skillshare for spons

(1:48:58) he was already old please do hit the thumbs up lines then there is of course a lot more to magnetic field lines but a vector to every point in this space and each Vector represents something about the magnetic field itself the size of the vector tells us something about the entity tells us that this quantity must always be equal to zero again just to reiterate we don't really need to know the meaning of we need to know is that maths tells us that this quantity must always be zero for any lifestyle all related and we

(1:49:28) want to then we know that there's only one possible solution but can't do everything tonight Sir Patrick Stewart how about vacuum per per Vivid zides oh this one's a little too long this one looks like somebody looks like a witch though might be riding backwards look at this one this one's only four minutes our ancestors [Music] out of three layers two layers of Reynolds Wrap which are good conductors and then one layer of plastic wrap in

(1:50:31) the middle which has a higher permittivity and so in order to make this work uh and make it a little bit more portable I rolled the whole thing up and so it looks like that if you look at a real uh capacitor it's going to be rolled up but it's essentially the same thing you have conductors on either side and then something insulated uh in the middle and so let's look at this video for just a second right now I'm hooking up my capacitor to a multimeter and you can see that there's no electric charge

(1:50:56) on the inside now I'm connecting it to a couple of batteries so I'm adding charge now to the capacitor and now I'm going to hook it up to the multimeter and you can see that the charge increased really quickly and so I had stored charge in just this little amount of rental drape and plastic wrap you can see it's kind of discharging now and so what is permittivity well if you have an electric field like this matter has an ability to resist that electric field and that resistance to an electric field is

(1:51:24) called its permittivity and so the permittivity of free space would be the resistance offered by just a vacuum between those two conducting plates and so that's a constant value that we can compare uh I haven't seen project unity's video what is it what do project un's recent video compare other materials to and so if we have other materials their permittivity is based on their structure so their atomic or molecular structure it's going to be variable and as we vary the permittivity we can make a capacitor that is more or

(1:51:56) less efficient and so um let's look at a real basic capacitor and that'll show you the elements of capacitance this is what they look like today so if we zoom in like this what you have are two conducting plates on either side so those are connected with wires and then in the middle we have a dielectric and so that's going to be an insulator it's something that we can resist that electric field forming in that capacitor and so if we look at basic free space permittivity so what we would have in the

(1:52:23) middle now is going to be just a vacuum and so what we do is uh as we hook it up to voltage you're going to see that there's an electric field across that Gap and that's the free space permittivity or sometimes we refer to it as the dielectric constant and so for a vacuum it's going to be one uh air is going to be slightly higher than one but it's going to be pretty close to one and so what happens when we add a dielectric in the middle when we add an insulator in the middle well that's going to be

(1:52:50) made of atoms and atoms are made up of protons and electrons and what happens is as that field moves through the dielectric what it does is it shifts the electrons so the electrons are actually being shifted in this case to the left and that creates an opposite field which cancels out that electric field and so if you add a dielectric between these two conducting plates what you're doing is resisting CA that electric field and what that does is build up a charge on either side that's how we're storing

(1:53:20) that energy and so we now see that we have a dielectric constant that's going to be higher than our constant which was one and so if we look at this pH simulation we have a capacitor here in the middle and so we're going to add a little bit of voltage to it and you can see that charge is starting to build up on both sides of that plate now if we take a dielectric and slide it in the middle well this dielectric is just free space and so you can see that it didn't change the capacitance but if I start to

(1:53:47) increase the permittivity watch what happens to the charge on the plates so now we're at two need to make these CC's go away and now we're at three and now we're at four you can see charges building up on the plate and each material Teflon 2.1 paper 3.5 glass 4.7 is going to have a different constant and if I pull that dielectric out then our capacitor drops down to zero and so did you learn that electric permittivity increases resistance in the electric field we can use it to make a Capac which could be made simply out of

(1:54:22) Reynolds Wrap and plastic wrap I hope so and I hope that was helpful guess that was helpful why was the video mirrored yeah project un paper reads like K Harris's speech okay well now you guys got me interested uh what's his is it YouTube is this him there's something Beyond it is this

(1:55:28) him yeah him ladies and gentlemen coders and debuggers Today We Gather in the sa Church of wow okay so for the past few days as some of you know because I put out a video recently I have been meticulously drilling down into a large language oh it's on X whatever here we go model which I'm now happy to say uh is cloud or Claude C I a u d e Claude 2.

(1:56:08) 1 the only reason I didn't want to say it at the beginning was because I was worried that I was potentially uh exploiting a window that I didn't want them to close up so that's why I was keeping it quiet but I've now finished my entire PDF document and one thing I'll just say off of the bat is that I sent this document off to Dr Salvatore pus and he responded to me this morning so I'm gonna salvator pus doesn't like to be referred to his doctor but okay oh alien scientists are podcast reviewing it okay I'd rather watch alien

(1:56:44) scientists version of this although get that up for you now just give me one second wow this thesis is the most profound cohesive Collective thought I have ever read dude you should try to publish this in the philosophy of Mind journal or even in the annals of the asentia foundation brackets Dr Bernardo castrop now real quick a fair amount of people have been tagging Bernardo castrop of the whole thing well he said he said a word that I can't in the process and I was sounding a bit frantic and I was very excited and I'm sure some of you

(1:57:24) were like H Jay slow down you know I'm not Jay's making AI papers but teleportation's too hard for him huh not 100% sure if this is this is viable on not and that's fair but I was losing myself in it intuitively I I felt that this was right and I was just getting it to you know go deeper and deeper and deeper anyway it's been at least for now validated in a pretty significant way with like major thumbs up and 10 out of 10 stars from salvatoris so we're getting somewhere with fact and

(1:57:59) formula explain philosophy and physics you know intuition and logic Project Unity this is what I've been kind of building towards I mean I didn't do this in any way on purpose this was completely sporadic random thought experiment into something that's now and uh this was also a a new iteration of the cloud language but um in the descript was going stop going to rip this shreds oh he was streaming an hour ago a man I want to do catastrophic disclosure with Jeremy where where is it the first 10

(1:59:07) minutes yeah I'm telling you he needs to do more of this stuff where is it the hell oh he didn't upload it is why he just he just was going live is this one what's up we are here catastrophic disclosure live Jeremy number five Jeremy needs to get a better camera though and I wanted to talk a little bit about um is this maximum quality it's me it's my fault um Eugene see to it within the hour oh here we go here so stay tuned for that and uh yeah good um nice nice job Jay on that and uh a nice job

(1:59:59) on some of the other you know other people that have put out some uh funny um comedy responses to this P pancake recipe that's a good one John Warner and um yeah we'll get into the what was royy Herbert saying I want to know what royy Herbert said uh royt why come he doesn't show up damn royy Herbert's getting more followers folks he's getting more followers I mean this guy probably should be getting followed by more people is this really what he looks like this looks like an AI generated picture uh Mr Herbert sir can we get

(2:00:59) your picture updated yeah and we need more than this this like a 10minute YouTube video we need to do a little bit more my man we got to work on a social media presence where was he post yeah you should probably follow him somehow this explains everything I haven't quite figured it out I just I just like everything he says where is the AI thing he was busy today why do I hear

(2:02:11) noises where's this thing about I don't know whatever let's go back to this physics of that hit the like button and um we're going to get uh Jay I'm going to get Jay on again sometime we were on a stream one of those Twitter spaces sometimes I see these guys on and I'll jump on

with them there it is it doesn't Lang large language models don't have an intuition or un a true understanding of what what they're doing they're just mashing words together based on the probability so if we look at the title

(2:02:48) though that's interesting think it's saying that there's um uh mystical traditions and science are related in some way but also uh it's it's really just a word salad so if we go down here oh word salad like just scroll through quickly um whatever it's this is just this like the disclaimer on uh on the uh what's the a open AI or whatever it's a disclaimer um but it looks like they've taken off a lot of the guard rails that open Ai and other AI models use so they didn't bother to do any of

(2:03:24) that so it's clear he prompted to take seeds and idea seed ideas and introduce and push them into extremes of abstraction and conceptual development yeah well I mean it's it's using a lot of like words but whatever I mean at the end of the day let's go down further so the thing is right there's not a lot of content here we can just what we really need is something that from AI is to AI to solve quantum gravity for us but you're not going to solve quantum gravity with AI by prompting it quite in this manner

(2:04:00) it's it's sort of a different yeah I mean we got we got a project here at WPI where we have a professor um dude uh Michael Peron can you put a turn a light on dude turn a light on if you're G to stream's my man's streaming in the dark over here he's streaming in the dark even even I have to turn the light on bro ring light's like only like \$15 just buy a ring light they're what they're doing is they're making human readable AI where they effectively they have a neural net and each layer of the

(2:04:34) neural net okay for the uh equation of motion for a pendulum but that uh that model was able to discover the equation of motion for a pendulum in about three minutes so that will do the job but neither this nor uh large language models are um artificial general intelligence neither of these does all of the things that a human mind does um they're they're very optimized for their various things that they're doing um but yeah they're they're not uh they're not capable of as many things as a person is

(2:05:15) or anyway let's go through this so yeah we're definitely on the ver Tech Superfluous wording could be Ang could also be lock Mar technology brain turn off when they hear like buzzword let's go down no because another post he programmed it to talk about quantum gravity implications which we already commented on the problems with you know this this type of AI solving quantum gravity um then only garbage in garbage out it'll just do whatever is on Wikipedia basically it'll take in whatever human girl it and'll just

(2:05:51) killing this paper right now just going to do whatever wikip maybe you'll get a few useful connections out of it so it is useful for uh rubber duct debugging as they say so sometimes a person will uh you just like type in a thing in a chat bot or whatever and it spits out some recombination of the words and that unlocks uh realization in your brain which that you can then use and that's where that's where uh large language models are helpful to science right

now is it just like uh jumbles up your uh it

(2:06:23) it puts noise into your own neural net which can help you figure out problems but like it's not going to find it on its own yet it's not there so let's keep going down well he has geopolymerization Dynamics which is kind of like a a funny funny colorful buzzword again for for the idea of that pies this is the idea that the pyramids right that whole French group that thinks that the pyramids are um ancient concrete well see here it's it's it's it's presupposing that if this is the case

(2:06:59) and then speculating uh accordingly so let's this is this is just the intro this is uh let's keep going yeah um I mean it's 60 something Pages it'll take forever otherwise uh so wait wait up I mean go go down each page yeah no I've already been through I want to talk about EV one you're right that's very so okay so go down one more page um so basically so this is a this is talking about a specific uh UFO encounter supposedly but it looks like it might also be jumbled with some other

(2:07:35) a bunch of different things in you different U UFO encounters don't go too fast now don't go too fast you're missing okay so cracking me up uh what's it uh yeah like is mixing Focus attention somebody with the microtube Quantum channels it's kind of like presupposing that this is the case right um although I mean Focus attention is useful as a skill um let's see mathematically yeah okay so look is is using a forier integral um that's not correct I think that might be a uh that might be a ll

(2:08:11) transform I would have to double check that that looks like a l transform and it also has an error there's two sets of parentheses around the T minus to which is unnecessary yeah and then Dynamic kernel that's just some function of T minus to so um I mean first off it's not a fora integral kernel second um it's it's assuming that like a 4A integral so a 4A series these already lost me not um 48 integrals are we talking about you want to use a WAV transform or a llas transform that's got

(2:08:52) it contains more information than a forier transform so for series is not going to be like that that's like that's like college level math that's not grad school level math like it's it's not going to be whatever the final theory of anything is it's not going to be related you you got you got wavelet transforms and you got llas transforms which contain more information than the 4A transform so it's just wrong on that point okay I think I've seen enough I don't know what's going with this

(2:09:24) Isotopes has right no but uh but what is this Quantum oscillated momentum is this like the potassium in your brain States in your microtubules you can't explain it may harmonic that's tubul 10 to the seven tubulin confirmation spinning not we got some tubulin confirmations going on here guys there's spanning lots of CNS neurons this is like Star Trek where they like would do write papers and then they would just like put in put in uh fancy sounding word cerent it's not coherent it's just not yeah well

(2:10:06) it's so Jay was reading this and he thought he had like the most profound thing here here out based off of some some papers not not based off of thinking about a paper just based off the words in the papers so let's see objective reduction equation I'm not familiar with their imedia work uh and then microtubule automa is assigning too much uh what would you call it yeah it's too much techno Babel here uh capability to so like the microtubules I think the underly principles probably fine they're

(2:10:44) not going to be the full aom combining it like this doesn't work and that's also just technobabble words so it's again it's overly flowery language it's yeah this comes from uh Kurt go just read there's there's an MH370 Wiki should we read the MH370 Wiki guys let's see what this thing has to say huh blah blah blah flight blah blah blah left radar search for the missing plane became the most expension in history we could probably like rewrite this whole Wikipedia lack of information in the

(2:11:27) days after disappearance prompted High criticism from the Chinese public yep it's true several pieces washed ashore in 2015 2016 many pieces you mean three pieces that's not even really confirmed this is this is wrong Wikipedia is awful second search again found nothing it's hard to find a plane it isn't at the bottom of the ocean relying mostly on iMat data well there's your problem where do they even mention a fire scenario they don't even mention a fire scenario here 221 kgs of lithium

(2:12:22) ion batteries just ignore that Jesus man God Wikipedia is bad that's it pilot suicide scenario is not even mentioned there you go they didn't disclose any [Music] information that's it what is it can't tell if it's raining outside or what's going on no there was no passwords found um any sufficiently advanced

(2:13:30) social engineering **scam** will will catch you especially if it's targeted how Malaysian government fell for a much less sophisticated social engineering **scam** I don't do Wikipedia guys it's candy Pettit one of my Bigg biggest haters on **Reddit** welcome this guy is completely obsessed with me it's funny how they don't mention pilot suicide in the scenarios is there's some pilot suicide stuff did they mention here did they mention the missing the phone calls from the ground to the plane I keep hearing tapping

(2:14:29) nois what is that oh wow yeah that's the wind hold on whoa oh wow stuff's getting blown over that's wild I was wondering what that was let's see what else they say here MH370 hit Tower number seven okay the radar junk is pretty much garbage although I do think that the

(2:15:32) plane went to panang I just the radar stuff doesn't even line up detected panang yep they really make it confusing here they just can't draw a graph or Draw on a map there it is here's the F they do have the telephone calls here they only called twice you got a plane that's I got a rogue 777 you only call twice walk me through that guys you got a pilot suicide scenario or hijacking scenario you only call it twice doesn't make any sense when you call again does the it probably doesn't mention the fake

(2:16:37) passengers there is literally zero evidence of pilot suicide literally none there's actually zero evidence of pilot suicide literally everyone stuck up for the pilot nobody official has said it's pilot suicide it's actually just a completely fabricated narrative you don't fly to the nearest airport when you're on a pilot suicide route you crash the plane the pilot suicide narrative is easily the dumbest one ever I even was on an interview with a uh with an actual pilot and she agreed that it just made

(2:17:17) no sense whatsoever ever changed the status of the flight to accident huh there it is there's the kotabaru all these people saw the plane man how burning object in the sky like what they think all these people just made up these all these sightings like come on man every single one of them saw the plane it's ridiculous man they didn't

(2:18:25) the phone calls didn't connects see it's spent three years no evidence literally no evidence from the official search after three years of searching wow \$155 million just for the underwater search 155 million God it's so

(2:19:38) embarrassing yeah the fire has got to be one of the most key discoveries yeah I've never read this page before I don't really read Wikipedia because it's garbage there's a reason why you're not allowed to recite Wikipedia in uh in even in school when I grew up you couldn't cite Wikipedia you had to actually do research which usually meant just clicking on these links and then going to the link because Wikipedia is editorialized hopefully people understand why Wikipedia is not good cuz you're taking editorialization these are

(2:20:17) not direct quotes right they're editorializing based on these references what your teachers want you to do is want you to figure it out yourself you click on the links and figure it out does it say 1840 was the loss of the signal anywhere no black boxes were covered no yeah wikipedias it's not that like of course if you Source stuff correctly it can be fine but the problem is that Wikipedia is just completely editorialized that's the main issue but you can dig into the sources sure sure that's what I used to

(2:21:07) do in school is I would just click the links and try to find the sources from there find other sources then quote those that's that's the difference between you doing your own search and taking someone else's word secondhand you know look at these search areas guys and I guarantee you they saw more than this this is probably just the underwater search areas cuz searching over out with the airplane you're going to see much bigger wide wider field than this yeah these look like these are maybe the water search

(2:21:52) areas like where do you think guys think the plane went you think it's in one of these little dots that they didn't search over here or something like come onit that wait was that only only three big planes have never had the black boxes recovered the last one was MH370 wow that's interesting what were the ones before that depleted uranium Cowboy what years were the ones before that I don't know how nobody thought that this could be how could nobody have thought that this was a lithium ion battery

(2:22:30) fire I'm pretty sure I'm the first person to bring that forward right is it did anyone else before us even speculate the lithium ion battery fire are we literally the first ones I I love how people try to claim that I stole work who came up with lithium ion battery fire who who uh found all the witnesses that match up who found Edward C Lyn right did **Reddit** find any of that no did anyone else in social media find that no yo kradon yeah I think we're ready to uh solve the puzzle it was locki Martin

(2:23:03) with their Quantum uh coherent matter wave orbs uh taking out MH370 in the nicobar islands Wikipedia makes a reference to it okay let's see underwater search I they searched everywhere man 2018 search ocean Infinity blah blah blah I met I emailed ocean Infinity months ago said you guys are never going to find a plane down there I wonder if they appreciated that yeah they want a credible leak here's one oh 2023 unless they're looking at Diego Garcia I don't think they're ever going to find the plane in the bottom of the

(2:24:07) ocean I think they they got the black boxes from uh af447 though yeah they got the black boxes from af447 where's battery fire the leading theory next to Pilot suicide is that true James welcome to the investigation James welcome this idea that like that the they were able to tell if the flapper on was up or down or whatever is total nonsense I don't believe that for a second parts from stabilizer other debris I mean Rolls-Royce literally had engine data Rolls-Royce literally had engine data wait how do Rolls-Royce not engine

(2:25:08) data not made public oh yeah we're we're going watch I'm going to probably go to sleep here in a minute I'm pretty tired tonight I keep staying up too late yeah this page oh we're not even close to the bottom oh we're going to have to skip down through some of this stuff oh JK Philly fan this is for you here BTO bfo oh here we go power Interruption unresponsive crew hypoxia what's the evidence of that so basically they say because this

(2:26:13) is all just being uh extrapolated based on the IMAF pings that's it there's no actual evidence of hypoxia they're just extrapolating that okay oh yeah here's this flap run analysis okay this is definitely oops yeah this is definitely what analysis you cannot an you can't figure this out from looking at a piece of debris here's here's the piece of debris this somehow they're able to figure out whe the fla Ron was extended or not come on no way what what is the actual evidence of

(2:27:10) it though they don't explain the evidence they just make claims here there's like no actual evidence they just say that they that that's what it means without actually explaining how it means that okay oh here's the passenger involvement there it is there's your passenger involvement stolen passports oneway tickets this doesn't add up at all either you don't fly to **China** to try to get to Amsterdam that's not how it works

(2:28:13) at all especially on St passwords you're just risking getting caught every country you go through you're risking and getting caught so they don't give any evidence for why they ruled them out they just say they ruled them out great this isn't sketchy at all what's chat GPT say honestly that's a good idea okay I thought I was just going to keep going

(2:29:18) there it is double slit experiment POS Einstein condensate interesting hey everybody crew

(2:30:27) involvement us officials believe this why would us officials say that so the United States government the [Music] one the ones who are implicated so this is a big cover up this is a big big cover up Chad gbt is going to say it's **debunked** by the corter crew wow this is a big cover up why is the US government is the one that said that I want to see a

(2:31:33) Quote us intelligence officials man this is bull snap dude this is BS I mean these are the people who have satellites that would have known exactly where it goes this is total total nonsense man why is my government so sketchy man I'm much if this was **China** I'd feel a lot better about exploit exposing this this just all leads the United States locked Martin I know where you're at yeah nobody from locked Martin's going to talk about this because they don't want to get killed lock Martin doesn't want to get

(2:32:14) killed we're probably going to have to Foy some people it was locked Martin I'm calling it locki Martin sensor systems and methods using entangled Quantum particles 2010 here's some more Aronoff bomb sensor 2013 systems of methods for generating coherent matter wave beams 2013 man lockie Martin man I want one that's called orbs building superconductive harmonic orbs okay sure sure sure crew involvement the home simulator thing has already been **debunked** it's just mh150 why were people saying does do

(2:33:02) people not know where jedha is I it would surprise me that Americans have no idea about geography they're like oh jetta's not even in the right direction what are you guys talking about dude mh150 to jeda oops images guys mh15 Z to Jetta it's literally the same route this is how they were trying to claim that this was a suicide route because it's the same general direction here but they forget can I zoom this in here this one look at this this is why they're trying to claim it's the same because it just goes in the same

(2:33:46) general direction right here this tiny part this is this is the literally the suicide route they were claiming matches even though it doesn't include anything from South **China** C over here they're like oh well this is the same one dude he's practicing route to Jetta man God this stuff is so dumb man hey fbw T E yo Bernie what's up sorry I saw your email I still haven't responded yet should literally have it open in the background right now what about oh I was busy today yeah there I had a bunch of stuff going on

(2:34:29) today I'm so tired I've got a bunch of requests too but maybe Thursday or Friday we could do this week wait what is that comment oh dude one of the funniest parts was when uh um I'm not even sure I want to say the word the r word on stream but Greer said that all the aliens want to R Us I guess I just have to say it he said he said everybody just wants uh aliens to come and rape us I was like jeez I was like boy that's dark clapping those alien cheeks oh here's the cargo so I saw something about the

(2:35:15) microchips there's a lithium ion batteries the B There It Is batteries were assembled

they don't mention that they didn't get scanned twice or they they missed two screenings there it is do not go through the screening there did not go through any additional inspections of qualum poor so yeah I mean dude come on what the hell man how is this not the thing they don't even mention how much there was 221 kog Thursday Bernie Thursday or Friday works whichever one you want to do I'll do Thursday or Friday with you guys this

(2:36:02) weekend if you or this week if you want I'm replying right now I just replied for you Bernie the bit right above the cargo this is total nonsense stuff it's like oh if we take a couple manually programed coordinates we just combine them together no unusual activities other than game game related flight simulations exactly there it is the waypoints he was literally scheduled to fly mh150 February 4th one day after this yeah we're talking about clapping alien cheeks over here I mean this how do they not come to the lithium ion

(2:37:06) battery conclusion here they even talk about this here what how do they have a whole section about it but nothing tying it to the plane yeah we just had a bunch of lithium ion batteries but no one's investigated it we're just going to conclude it out and they even have a whole part about how many other planes have burnt up from it there's another plane that crashed wait wait which one's this this is a different plane too another plane that burnt up UPS plane to

(2:38:10) Dubai it's like dude dude how are they not coming to the conclusion Friday evening yeah it should work that should work yeah let me know thanks man any single alien green chicks hit me up might might be getting honey potted guys might be getting honey potted but you know what it's all good it's all good decoy plane I don't think there's going to be a decoy plane mentioned I don't think there's a decoy plane it's too complicated it's like going to have another it's like going to have another

(2:39:04) 777 come flying in from where in the middle of the night where's it going to put flying in from not get detected it's just too complicated so that's it huh just nothing about the lithium battery there's like yeah we got a whole bunch of lithium ion batteries that weren't scanned but you know not going to consider that anything aftermath financial troubles blah blah blah compensation so I already know it's 50,000 each this they did definitely not get this nothing thing I found says they got

(2:40:01) 175,000 maybe they did get paid so maybe there was a separate a different payment though here an American Court could be expected upwards of 8 to 10 million look at this 8 to 10 million is what was expected from an American Court they got 30,000 does he even mention this does he even mention Kenji Brown Jackson there it is that's \$5,000 in Comfort money that's nothing dude wow passengers got screwed dude or the familes got

(2:41:12) screwed what is going on outside so there was four elt transponders that just didn't go off how does that happen none of this story makes any official sense purple skin Ellie purple skin yeah I want a telepathic green alien as well clapping cheeks something about clapping cheeks just cracks me up every time they're like hey guys we're going to give you a a comfort payment

of a few thousand. Jesus is bad, it's nothing. Flight recorders, yeah, we wouldn't find any, no black boxes found, that's it, huh, that's

(2:42:11) it just yikes, guys, okay, this is Wikipedia, page, someone needs to update the fire scenario part of this Wikipedia page, anyone out there wants to update the Fire part of the Wikipedia page, you guys should update it to say Ashton 408 says that the most likely scenario is 221 kilograms of lithium ion battery fires supported by 19 witnesses, here we go, here we go, there it is, dude, I think there's like a tornado going on

(2:43:14) outside, I don't, I don't update Wikipedia pages, I spend \$5,000 on raw files every week, true, true, very true, guys, I think people's like next door, like, stuff is blowing around there, it is high density packages of lithium ion batteries and cells not to be transported at cargo passengers on airplanes until such time as methods of transfer are established and followed, wow, we might, we got a new article, right here, guys, we got a new piece, not for tonight, probably, I'm, I'm tired for tomorrow, though, maybe, did we ever do the calls from NC

(2:44:23) boy, yeah, we did, we did, we did the calls, we did the phone calls, go on, hacker man, get your hacker man's going, tornadoes in December, seems kind of weird, hey, uh, Candy Pet, could you get the [Reddit](#) people to stop signing me up for random stuff on, um, using my email account, that'd be cool, that'd be cool, they signed me up for like 50 fake things, I just deleted them, but it's kind

(2:45:28) of annoying, it's like, like, when, like, a mosquito, B, too, it's pretty annoying, there we go, that's what we need, wait, what, why would the duration of the flight and whether or not it's flying over water matter, guys, well, it was worth, it was worth

(2:46:34) asking anyway, candy, P, it, yeah, I like the investigating part as well, I keep, we keep finding more stuff as well, um, if you think, just find any evidence on how it could be suicide, just find any evidence, there's literally no evidence of suicide, none at all, just start with this, go, look up the German Wings incident in 2015 and find out how long it took for the guy to lock out the cockpit before he crashed the plane, it was 9 minutes, suicide narratives, you usually crash into something you don't go on Joy rides

(2:47:20) for eight hours, that's not how suicide narratives work, even in, uh, even on 911, which I don't know if you guys are too young or not, but those planes, like, crashed into the buildings within, like, uh, 15 minutes or something like that, like, they don't, you don't go on Long Joy rides and UA93, when they fought back, they caused the plane to crash really quickly, as well, the Ping data is basically, you guys want to look at the Ping data, I was showing somebody the Ping data earlier today, people should actually go look at

(2:47:54) the Ping data, cuz it doesn't add up, here, I'll show it to you, guys, here's the Ping data, guys, so let's just start here, this plan hasn't taken off yet, it's 1606, look at the Ping data, I'm just going to let it all play out, I'm just, this is a video of me scrolling through the Ping data, showing the time 1606, it's, uh, still loading, it's on the runway somewhere, okay, let's just, let's just look at

the Ping data together because I think like here we go so now it's on the

(2:48:31) runway getting ready to take off at 16:30 it's backed away from the gate I think the number of people that have actually looked at the Ping data is like a handful in the whole world okay look at I mean just look at the data look at how many rows we're scrolling through here hundreds of rows if not dozens if not hundreds okay so the plane's taking off at 1642 it's taking off right now planes taking off 1642 here's another ping 1655 here's another ping 1656 1706 1707 there's a couple weird rows there but

(2:49:03) you know nothing big 1707 plane goes okay so plane goes dark at 179 so now we're already at 1803 here so the plane's already past panang at this point so plane's gone dark it's past panang it's 1805 1825 1828 now look at this what the f what the heck's going on here 1839 boom zeros blank rows look at this what 1839 hey guess what guess what time this is oh it's the time where our videos happen look at this does this look normal to you guys does this look normal all of a sudden just blank rows

(2:49:50) and just zeros for P for at least a page multiple Pages look at this one ping here everything else is just zeros nobody can tell me this is normal I don't care how many times Victor yells this is normal at me without explaining it this I do databases I work with relational databases which are basically just Excel spreadsheets no chance this is normal all of a sudden then guess what well we look down here now what now the day the time comes back 1941 2041 2141 here's five hours of data right here folks five

(2:50:31) hours of data right here where I'm circling 10 total rows we just went through what two hours and it was like about 200 300 rows then it just goes to zeros and then now it's just and you can see this pattern 104 4 10 4 10 4 10 4 I could have just copy and pasted this into here the Ping data is sketchy as hell man I can't believe nobody looked into this before I looked into this look at this this is either manipulated or I don't know what's going on here something is not right here though 184 1839 1840 something's

(2:51:09) wrong something's definitely wrong it's 10 total rows so just and the video makes it I think is better but when you look at here's the individual screenshots as well so I just I mean it goes as you guys saw it goes on for a while on this one and then this is where the 10 hours this is five hours of pings right here five hours of pings 10 total rows this is supposedly when it's in the South Indian Ocean does that look normal to you doesn't look normal to me that's the problem is everything's

(2:51:45) based on these pings and the pings are sketchy as heck so hopefully that answers the question this is why we can't and in order to make for those pings to make any sense they had to rule out 19 Witnesses so would you rather look at that data or you rather look at 19 witnesses to me 19 W humans is more credible than 10 sketchy rows of data and about two dozen rows of zeros and blanks it's funny because when people they when they talk about the ping data they delete all of that other stuff they don't look at all that the zeros and the

(2:52:24) uh and the empty rows they just ignore it entirely this is the difference between listening to what you get told on TV and doing the investigation yourself yeah you can't ping what's not there Governor you got it ghost you figured it out pretty weird man some people argue that they manipulate the Satellite computer yes and the reason for that as well is that the the satellites never ping to p p satellite so the I satellite that we were looking at there sorry about that is over the Indian Ocean but the P satellites over Japan in the

(2:53:01) Pacific even though the plane was going towards the P satellite it never pings the P satellite for the duration of the flight the reason why this is important is because it makes it impossible to track the plane it's very weird the biggest problem is the iMat data when it was released like it wasn't released for months they had plenty of time to manipulate the data plenty of time one guy even was killed we were going to look into that or he died under mysterious circumstances I don't know that he was

(2:53:31) killed nobody can really explain the difference between the P Channel c channel and R Channel stuff to me candy pedit Victor uses a lot of like just technical mumbo jumbo jargon that doesn't make any sense no matter how you look at it though the zeros and the blank rows make no sense there's something that happened at 1839 1840 and coincidentally enough and it's not like I looked at that ahead of time like I looked at that after we were after we were like 1840 we had the satellite at 1840 like I'll show the

(2:54:07) satellite just to get people up to speed on some of the stuff cuz not everybody's been like following along the investigation early on we thought this is the South Indian Ocean over here and you can see it's like 18:30 here this this satellite was here for about 15 minutes on the south Indian Ocean and we're like how does the plane get here like does it teleport twice and then we figure out it has to be the northern coordinates which was nicobar Island and then we're like oh well just fast forward the time it's like oh actually

(2:54:34) it's staring down right over here pulling the data that it needs for the cber system at well look 1839 it's like this is the exact time like how can this is why I'm like I'm not afraid of a courtroom man I show jurors this and go 1839 and match it up with the sketchy data it's like I I'm pretty sure I can convince a juror I'm pretty sure I can convince an entire jury like well look guys 1839 52 1839 zeros staring at the plane here we are this this is what I'll show the jury I'm just going to pull this up I'm going

(2:55:10) to show the zeros and then I'm just going to pull up video of the plane I'm just going to be like well what do we think happened I'm like how about this is what happened this is what happened 1839 feels like we're staring down this is this is what happened it's like yeah it's hard to believe but I mean there's the there's the ersat data I don't know man all everything just lines up accidentally it's like every everything just lines up and people want to say that I have like confirmation bias no

(2:55:56) it's just called way too much evidence that lines up and a witness who's there it's like damn man just has to be a battery fire the reason why I to they have to cover up the battery

fires everybody knows that in a battery fire there's no chance that the plane goes to the South Indian Ocean it's not going to last for eight hours it's actually like almost unbelievable it even lasts for 1 hour and 20 minutes like even lasting for 1 hour and 20 minutes is a pretty big miracle but it's it's possible It's just

(2:56:37) tough like has to the fire would have to be contained and they would have to be actively battling it like persistently persist consistently actively battling it it was not designated as the dangerous goods shipment not designated as dangerous goods 221 kgr did not go undergo safety checks dude how is this not the leading theory where did that just go how did this how is this not the leading Theory yeah we're going to do another follow up on the lithium ion batteries tomorrow it's just it's wild man yeah I'm going to play the other

(2:57:36) clip my other favorite clip real quick for you guys also here here you go guys you hey having a nice day in the beach very bad for these beach goers what happens when you try to land a plane in the ocean are you ready for it here you go this is what happens look at this plane look at the wings go ripping off the moment this plane hits lot the engine just ripped off and went to shreds there's going to be bodies everywhere that's a controlled descent controlled descent these people are all dead I have not looked into the neutrino

(2:58:33) detector in Antarctica but it is the Antarctica situation is very sketchy the Antarctica situation is very weird how no one's allowed to go there JK Philly fan did a crazy amount of work on the B the ion batteries and the atsp report watching The V the pictures of it it's these things look so sketchy look at this the Assembly of the batteries were packaged into individual boxes two of the boxes were then put side by side into brown box carrying standard international warning this is they just stacked all

(2:59:15) the batteries on top of each other and then they just put the brown boxes into a larger box and then and then they just put them on wooden pallets dude this is this is super super dangerous so dangerous man how do we not find this article earlier 47 487 lbs total weight of the batteries yeah there he goes look at this guys Bingo yatsi folks yatsi this article is amazing how do we not find this article before thermal runaway there it is okay yeah this is this is what we needed guys this is the article we needed we're going to need to pull those

(3:00:11) pictures back up yeah we might have to be looking into neutrino detectors I also want to know more about some people need to spill the beans on Diego Garcia this Diego Garcia base stinks man yeah that's safe there like this is the sketchiest I cannot believe 487 pounds of batteries that were just stacked up together in wooden pallets this is just the worst possible this is not safe this is not safe at all no insulation from protecting what there's no insulation to prevent protect prevent this from happening yeah

(3:00:58) this is definitely it guys I'm 100% sure I am 100% sure this is a lithium ion battery fire it's actually ridiculous that this was ignored yeah I mean the whole batteries would have just lit up man this is what uh Mike McKay saw you saw the batteries start on fire a whole stack of batteries dude look at this while being accepted from the majority of D danger they literally

didn't have them ex um they had them Exempted from dangerous good Provisions this is like if you just put bombs on the plane and we're like nah

(3:01:57) those aren't dangerous we're all good they'll be fine honestly I'd feel more comfortable with bombs on my plane than I would with these batteries at least bombs aren't probably just going to blow up these batteries are just ticking like literally ticking time bombs ready to blow up yeah don't please don't put any batteries in the cargo please don't put any batteries in the cargo don't put them in your check bags do not put lithium ion batteries in your checked bags there's nobody down there

(3:02:29) watching how did this get dismissed wait it was divided into three pallets two were in the forward cargo bay how come I it's not highlighting damn guys we might have to make another post I'm going to save this next post for tomorrow morning I'm going to save this post for tomorrow morning and then tomorrow we'll do more science but I'm going to this is this is too wild oh there it is there it is the for it was in the forward car Bay man took out the electronics Bay that's the problem there it

(3:03:19) is the forward one's directly behind what's the cerebral cortex of the 777 the main elect equipment center of the electronics Bay booya that's what we needed uh Motorola made these batteries and guess where freescale semiconductors broke off of in 2004 Motorola Motorola pallets there they are two side by side pallets oh my goodness oh my goodness man this is how do we not find this JK Philly fan how do we not find this article before dude how do we not find this article before Oh there's even a

(3:04:12) picture oh my God look at this look at this so this just ex ignites right here huh and then it takes out the electronics Bay and then the smoke is going through the air conditioning system and then it's coming out through the air conditioning ex exhaust ports here feels very very likely yeah we might have to make a **Reddit** post yeah this I think this line right here that doesn't have a thing is the this is like the electronics Bay right here so this would have exploded somehow damaged this I mean this is like two

(3:04:59) pallets of them dude there is something going on outside the wind is like scary outside right now H let's look at the the videos again again guys we're in fullon investigation right now yeah we got a new **Reddit** we're going to post to we're going to see it we're gonna see if it gets banned in under 24 hours we're I mean I'm going to post it on on Twitter first don't get me wrong we're we're checking to see how long it takes us to get permanently banned on **Reddit** somebody who made another

(3:05:42) sub**reddit** already got their main account band or whatever account they made for it I mean this right here is the lithium battery smoke the reason why this shows up is because it's not smoking your barbecue ribs this is smoke from a toxic lithium ion battery fire that's why we can see it let's look at it in the full thermal so you see it here I mean look at how clear this shows up this smoke here and it's hard it looks like on this from this perspective it's coming from the engines but when you get closer you

(3:06:15) can tell it's clearly not coming from the engines it's coming from the belly of the plane the shaking is natural as well the shake here ISC and you see how much more it shakes when they zoom in as well you can tell from this view here that this smoke right here is not coming from this engine it's it's up a little bit higher the smoke here what's happening is coming out of these AC exhaust ports here and then it's wrapping around the plane to the side of the plane it's like coming up here and

(3:06:49) wrapping the plane and then pushing out the back creating two lines one on each side the shake is natural too like what did they build in a shake into their fake video you can see the orb here is being naturally distorted as it goes through this uh smoke here as well how can this not be smoke look at this you can see it it's coming right here you can see it you can literally see the the hot of the smoke as it cools when it enters the atmosphere here it's hot right here it's getting cooler Etc this is not coming from the engine

(3:07:32) look at this look at this right here it would not be the same temperature if this was like all of a sudden coming from the engine this would make no sense no I mean Chris I respect Chris Leto but I think I vehemently disagree that that's not engine exhaust hot spot is right behind the nose what no the the heat signature is coming from the Hot Smoke it's not coming from the where the battery fire is the battery fire is contained in a cargo bay that is actually made to contain these fires the question is when it exploded

(3:08:30) how much damage did it do that's the real question how much damage did it do when it exploded yeah the front cargo compartment is not hot because it's uh literally a heat heat containment cargo bay the cargo Bays can maintain uh temperatures up to 1700 degrees 900 Degrees fhe yeah my guess is they're venting the smoke through the air conditioner system or if it if the plane was damage there could be holes in the plane as well but the theory that was put forth by uh glory and NC boy was that it's

(3:09:16) it's ramping through the air conditioning system from the forward cargo base and then it's going through the air conditioning system here and then it comes out through the exhaust ports at the bottom here I have images of the exhaust ports I'll show you guys as well I have everything my I have SE several discords but so here's one example I think this is a 777 you can see you've got these exhaust ports here and you've got the ones down here as well I think I have another picture as well my number one priority is trying to

(3:10:09) understand the science though that's the way we'll prove it we need to understand the science here we go hello I clicked it there you go boom vent one vent two I think that matches up so those would be those two vents there most likely yeah CU there's the landing gear door there's your vents landing gear vents Vents and it could be damaged and the plane could be damaged yeah the pilots could have been in big trouble too honestly yeah I don't know about the holes I mean I'm just speculating with

(3:10:58) the holes but I would say that because the plane was seen flying low that most likely the plane had been depressurized the question is how much damage I I don't really know maybe

there's very little damage maybe there was very little I'm not sure maybe taking out the electronics Bay did damage to the uh air pressurization I'm not sure that's actually interesting thought maybe that's what it is maybe there wasn't holes in it maybe the electronics Bay getting damaged caused issues with

(3:11:26) keeping the plane pressurized yeah that's actually very interesting maybe yeah here it goes boom cargo is a special liner intended to contain a fire until it's extinguished oh boy there it is as right next sentence this is the this article is the money article here Daily Beast could degrade the airplane's ability to suppress a fire by crucially uh changing the flow of air and oxygen there you go there it is there it is this article is the money article we needed this article before how do we not find this till today we just hit the

(3:12:19) jackpot there it is could have breached the liner and there so allow the air flow to weaken in concentration the fire Howen fire sign suppression wouldn't have kept it out anyway oh this is what guys this is why he saw the fire go out the fire explodes and starts starts the plane on fire Mike McCay sees it go out because the automatic fire suppression devices get deployed the fire suppression devices get deployed and it take it puts the fire out immediately then the crew goes down and has to battle it then the crew is battling it manually

(3:13:00) after that wow this is also probably why they had to fly lower maybe it didn't take out maybe didn't damage the plane enough but it did damage the electronics yep the air flow patterns see how long concentration the how and fire suppression device retain their effectiveness it's not going to work on lithium ion batteries though yeah and they would have to they'd have to get the G the smoke out of the plane so they would have put the gas masks on for sure like immediately there it is overwhelm the

(3:13:43) fire suppression devices there it is compromise the wall separating the cargo Howen fire sings there it is Boom look at that there it is some of it is automatically released on the onset of the fire boom I just called it you guys see that I just freaking called it just called it there it is right there it's it's like having a delayed reaction right now can last as long as 180 minutes booya booya there it is 180 minutes that's what we needed that's what we needed who said it couldn't last for hour and

(3:14:47) 20 minutes who said that booya 180 minutes there it is metered flow can last as long as 180 minutes they don't even need they don't even need to go actively battle it they can actually just have a metered flow shooting the hon and there trying to keep it at Bay can last for 180 minutes there it is wow how did we not find this article how do we not find this my God how did we not find this before Oh I know what pictures we're going to use we're going to use the pictures of the burnt debris we're going

(3:15:35) to use the pictures of the burnt debris we have pictures of the burnt debris as well that clearly has burn marks on it where are my images I got to move them over before I forget look at this look at this look at the burnt debris look at the burnt debris with the burn marks all over it oh my God we're solving MH370 folks that that first one even literally says burnt marks it

literally even says burn marks on it it's got the honeycomb pattern consistent with MH370 look at this heat damage I mean this is obviously a burnt up piece right

(3:16:31) here right this is what this all is this is burn marks from burning off this stuff oh my God man yeah this is YSI the only problem with it being intentionally started fire is it's too complicated it's just too complicated but maybe I mean I can't rule it out I've never ruled out that the fire was intentionally started God I can't believe we saw read found something that says 180 minutes too yep yep toxic fumes there it is O flooring and arsonic okay you know guys know what I'm looking up next right

(3:17:34) can this be seen in IR damn it we need a video I almost guarantee they can be seen in IR let's ask let's ask chat gbt oh here's the new here's the new uh subreddit by the way this is where we're going to post three orbs whatever I don't even care what it's called well that's disappointing it

(3:18:40) doesn't look like they're does not look like what I wanted to get but that's okay we have to follow the evidence wherever it goes wait oh wait Organo fluoride compounds wait what did this say organic electrolyte I think it is Organo floride compounds organic electrolyte in lithium oh man we need to figure out if we can see this in infrared wow

(3:19:43) their compounds often can be seen using infrared spectrometry it's spicy says it right there yep yep oh guys I think it's smoke I think that's got to be smoke coming out of the back of the plane that's it that's it how do they write this whole article and they don't get a response or anything how could it have continued this is the thing it didn't it didn't continue for six hours it's pretty simple it didn't continue this is why they ruled it out because they went with this stupid iMat data that we just

(3:20:46) showed that it's got a huge anomaly they had to come up with a fake story guys you hear you heard her here first folks we solved the mystery granted maybe The Daily Beast solved it before us but they didn't they didn't run with it like they should have maybe they didn't run with it like they should have this was definitely a lithium ion battery fire no doubt no no doubt 19 Witnesses support this including one that sees the plane glowing orange because of the hon fire extinguishing gas releasing bromine a

(3:21:22) hogen gas what what is wrong with this Daily Beast website man who's Dr edel yep there it is there it is right there boom Dr edel we need to get a hold of Dr edel we need to find this person chat you know what we got to do we got to find Dr edel if they had the Drone footage that was it that would have been it they would have been able to figure it out I guarantee it even if the transponders were located in different parts of the airplane they could have been disabled by fire in electronics Bay holy crap man holy

(3:22:28) crap this I can't I can't copy anything that's like this website's garbage is there like a reader view or something what these buttons do anything up here the Rolls-Royce engines the Rolls-Royce engines would have been like how do we not get the data from the Rolls-Royce

engines they would have continued working flawlessly Rolls-Royce know what happened to this plane Rolls-Royce know what happened to this plane no the pilots probably did send out a Mayday they probably did send out a Mayday it's been classified we're

(3:23:05) talking about a major cover up here we have multiple reasons to believe that the communication was not lost with the plane I'll run through the communications 1730 UTC 10 minutes after the plane goes dark there's a communication with another 777 pilot that's uh that doesn't want to lose their job so doesn't say anything the Malaysian Minister of Defense says that the plane was unidentified but that the uh it was a civilian airliner and not hostile the only way you can know it's not hostile is if you have communication

(3:23:36) 2:43 a.m. **China** intercepts a communication from the Taiwanese Embassy that the plane is attempting emergency landing and disintegrating that's three different potential vectors of communication yeah we're doing better than a multinational multi-million dollar investigation they should just pay us \$150 million I'll just divy it up amongst the MH370 crew so MH370 X crew is Rolls-Royce a sub of locky Martin no is it is it actually it can't be right rollsroyce successfully Powers directed energy field tests what the

(3:24:27) f what this is this is one month before the plane goes missing what the what the where where is that what you see that someone find me someone find me the web Archive of this someone find me the web Archive of this article right here Rolls-Royce has completed a long-term agreement with loocking Martin worth up to \$1 billion to deliver over 600 engines February 12th 2014 holy crap holy smokes Rolls-Royce is in bed with locked Martin I'm screenshotting this guys we're going to get freaking killed we're going to get freaking

(3:25:18) killed man I don't even care we're calling out locky Martin I'm I'm sick of this someone needs to find me those articles in my Discord I didn't want to mess with locky Martin I just it's too late it's time to just call these people out dude everything just lines up huh it's getting spicy huh I bet Rolls-Royce stock I'm I'm invested in nxpi what were you saying why would Mayday have been classified yeah I mean this candy petted I think we know why it's classified my man this is the only

(3:26:03) reason why they classify it right here you have to classify because if they tell us the **truth** then same reason why they changed the time of the plane disappearing D had to develop a cover up we think this is like within a minute of the plane of the intercepting that communication you mean of course you have to okay that scared the hell did did that just go dark for you guys too that was scary yeah this is getting spicy out here post link to that article here I'll give you guys the article my screen just went black did I

(3:26:43) go black for you guys too man it's not looking good for us guys I'm not going to die of old age chat I'm not going to die of old age I don't know if the pilot knew they were going to get orb'd I to me looking at these videos it doesn't look like the pilot knows they're going to get orb'd to me just looking at this like they're Landing they're getting ready to land in the ocean someone just deploys the locki Martin orbs and is like we're saving this plane I don't think the

(3:27:13) pilot had any idea what was about to happen but I don't know how we would know one way or another initially I thought maybe they were slowing the plane down because they were getting prepared for the teleportation but now I'm looking at it again and I'm just thinking they probably didn't even know what was going on with these orbs man and there's not enough time to react this is only 30 seconds 30 seconds before here and they get teleported away I honestly don't even know if anyone survived

(3:27:46) this we're talking about a coherent matter wave I what do you guys think they would do to cover this up I would think they would do basically anything to cover this up basically anything including killing people the MayDay is not suspicious the MayDay is just classified like everything about this freaking case is classified every single time we Foy anybody they say it's can't be given out because of National Defense I need a version of this website that isn't garbage that doesn't like lock up on me it could also have been

(3:28:35) remote controlled too there actually could be a remote control aspect to this like if the pilots were wiped out maybe the plan getting remote controlled by the awax that were in the area there's definitely an aspect where that could be a possibility as well I mean I just I don't know I just I'm not going to pretend like I know all the answers oh my goodness it would in some way be contained and then died out before it could finally degrade the airplane structure oh my God man we need to find Dr edel

(3:29:16) dude we need Dr edel to come to congress with us huh I don't think the pilot would have been able to know advanced the chemistry here how do we not find this article man yeah there's a lot of scientists die of mysterious uh conditions you I mean Candy Pet it man why do you think they classify it dude like they have to classify all the stuff that would leave to the **truth** that's the answer that's why it's all classified cuz we're talking about National Defense purposes here this is why they only release the communication

(3:30:14) from before the plane goes dark no one really believe no one could explain why they would not have communications there's no scenario where they wouldn't have communications the Malaysian Minister defense knows the plane's not hostile how can they know it's not hostile without there being communication they had to have had communication with the plane and it makes sense that's why you don't set up Jets because you know what's wrong with the plane it's a fire maybe the Americans say it we'll take

(3:30:44) over not sure the only reason why this all makes sense is that I don't think the passengers all died you return the passengers back to the whoever wait what there's the aim system right here this thing could definitely be remote controlled huh all the critical electronic systems are concentrated in one place wow dude wow wow man I think we got it chat I think we got all the proof we need for

(3:31:49) the fire scenario what more could we ask for we can we the plane can last for hour and 20 minutes it's going to be taken out the electronics Bay two pallets were in the front yeah I mean that's why it didn't just crash right didn't crash this is the reason why you need to cover up

candy pedet you're starting to get it the only thing that explains why the cover up of a fire is these videos it all fits together if it was just a fire and the plane was crashing we would have found the plane crashed in

(3:32:28) the in in a fire and there' be no need for a cover up there' be no need to fake the immat stuff you would just tell the **truth** they had to fake The Narrative of the iMat they had to change the time of the plane going missing the reason why they had to change the time of the plane going missing is because of this what we're seeing right here locki Martin orbs coherent matter wave teleportation's real or maybe it's cloaking I don't know it seems like teleportation to me though I think the only way you could say it's

(3:32:59) cloaking is if somehow this event is taking out or pulling the energy from the batteries this is the only explanation I mean I just can't come up with a better one wow W what an investigation tonight chat what an investigation tonight we got more and more people are actually coming on the later it gets because of how much stuff we've just uncovered this is wild this was this was a really good investigative night tonight I'm not going to write this up tonight so you guys have the inside info we'll write write it up tomorrow I'm too

(3:33:50) tired yeah I mean I wish the orbs and teleportation stuff wasn't real to be honest with you man I really wish it wasn't real life would be a whole lot easier for me right now if that stuff wasn't real there wouldn't be as many people hating on me and I could have just solved the mystery of MH370 and been famous without having any uh orbs in there but the orbs and stuff are real so it's it's a it's a rough battle it's a rough battle and for the record I don't really care about being famous I'd rather just

(3:34:19) go back to me my normal job but I'm going to get the answers for these families oh more pictures oh yeah oh yeah there's the ases cabinets right there baggage look right behind this wall huh so how does the the fire take out these these computer systems there it is right there there look at that hostile

(3:35:24) takeover by the crew is a very low probability oo deliberate Act of planting something in the cargo ooh guys is the Espionage scenario back on the table oh thank you very much yeah we need a subpoena Rolls-Royce locky Martin rathon General Electric my cousin Vinnie yeah all we got to do is all we got to do is subpoena some people yeah this community is the best community no doubt we're just solving the mystery right here tonight folks let everyone know we're solving the mystery tonight I'll post it tomorrow damn this article just goes on

(3:36:26) and on and on wait do we need to cop clip any more of this I think this is what we need to clip do we even need this part we might not need this paragraph but I'll put it here anyway save this wow yeah we have a whole long piece right there okay this is just this just goes to explain like how people are just completely unaware of the dangers just completely unaware of the dangers I've been streaming for an hour longer than I was going to yeah I'm going to be going to sleep here in a minute as well people

(3:37:18) saying can do who's can do guys it doesn't matter what website this is it's literally an expert talking about the scenarios is I don't is Daily Beast a bad Art website I don't know and I don't care is the answer shout out to my cousin Vinnie yeah heat melts wires insulation causing shorts yeah that's why he says there's many scenarios that could take it out I mean we just looked at the pictures of the fire so we're going to put on our our piece we're going to take this picture right here we're going to

(3:38:00) take this picture up higher here as well wait what's this one what's this oh hello oh yes is this thing going to explode oh guys this is going to be spicy oh yeah oh yeah how I bet this is only like a couple batteries in here too compared to five 487 lb is it going to blow up oh yeah it's going to blow up oh my God oh my God we have to clip this holy crap did you guys see that how much was that how many batteries was that imagine 487 lb imagine 487 lb of

(3:39:04) that you see how big that explosion was oh my God that's like a bomb oh my God how do we never have this video oh yeah well this was a good night this was a good night folks this was a good night we are going to go ahead and take this video Steal This video and that's our video now damn dude oh and look at it so look so it gets it gets suppressed right now watch this it doesn't now it just comes back up again and it was just put in like cardboard boxes look at this look at the runaway lithium ion

(3:40:09) battery fire here oh my God God so they would have the fire suppression devices would have put it out but it's going to come back up again my God look at this this is less than 5 minutes now they're trying to put it out and how much how many batteries was even in this that was just like what a couple batteries 487 lb 487 lb divided into three shipments so we're talking about probably 300 lb of lithium ion batteries exploding 300 lb two pallets man yeah this is how do we not how did no one figure this

(3:41:02) out this article even mentions that no one brings this article up I almost want to put that video and up upload that video I'm going to we're going to post that video right now uh maybe I'll clip it maybe I'll clip the video actually we probably just post the whole thing let's take a let's take a quick look at this yeah that plane's not going to be pressurized for long how long is this it's kind of a long video 5,000 lithium ion batteries oh my God I guess it's fine it's like a couple

(3:41:54) minutes long we're going to give uh a little treat for people till tomorrow it's all off one sketchy article this isn't one sketchy article man if you want to argue with the facts let's argue with the facts let's not try to discredit the Articles uh where the article comes from just want to see if there's anything else we need here so many interest stakes in the outcome uh I think there's reason to doubt the investigators yes they ignored a lithium ion battery fire supported by 19 Witnesses I'd say that's that's a

(3:42:45) pretty strong reason to doubt them Hey look it's Jake Chanley damn he's got some hotties with him I don't care what people think I like Jake I really do not care man spends four years in jail or something like that or however long he spent when was when was J six I don't

know couple years in jail over like walking through the capital and then he's got such a good attitude about it that's impressive to me anybody who goes to jail and has that

(3:44:01) good of an attitude coming out you've uh you're a good guy in my book I think we just push like this we just go like this with it get people hyped up clip with a link we could do clip with a link but I think I'm just going to post the whole video I'm just going to post the whole video I think whole video is pretty spicy dude although I like the part where it blows up

(3:45:13) should I do breaking update 41 months in prison dude spent almost four years in prison Ian he spent his time man he does not deserve to be vilified anymore man even if you even oh insurrectionists yeah do you really think they were going to take over the government man just be honest with you guys man do you really think that the j6 people are going to take over the government it's not how you take over a government man and even so even if you think he did man even if you think he did he spent three and a half years in prison for

(3:45:51) walking through the capital being escorted by police come on man that's not equal justice man I think I'm not going to break it I'm not going to make it breaking update we're just going to have it be like this I think we'll just go like that sweet okay here's the fire guys come on man if you guys have been following this in investigation this long and you're upset about which sources are being used and how credible the sources are you haven't learned anything if I if you can learn

(3:46:53) anything from this investigation **I want you** to learn that how many credentials somebody has how many letters they have next to their name how many times whether or not it comes from CNN or whatever has no bearing on factual uh content no bearing uh what should we call this okay I think it's sleepy time I think it's sleepy time

(3:47:59) folks I don't know about directed energy weapons all I know is that this plane had a fire we had already figured out the fire because we talked to Witnesses now finding an article that corroborates it has a literal expert named what was his name doctor something or other I mean that's that is what it is what was his name could to find that guy's name I'll find it tomorrow it's in that article somewhere there's a literal expert uh quoted in there anyway pretty sweet this was a good job tonight chat uh that was fun that was

(3:48:50) fun that was like that was like taking us back to the old school days of the early investigation right there that was a lot of fun Ben chill out man Jesus Ben you've got full on CNN brain Ben Ashton didn't even look him up because I don't need to look him up man I can read what they're saying I can come to my own conclusions without being determined there he is Dr edel I can come to my own conclusions without determining whether or not I think somebody's expert enough or whether or not they've uh got the right

(3:49:27) uh the right people like them I don't care how how many letters people have next to their name all I care about is what's the evidence show me the evidence the evidence lines up everything that's written here is logical and rational anyway let's go ahead God Ben you are Ben

go watch CNN man go watch CNN um okay let's play us out guys you know what you know how this goes we're playing it out catastrophic disclosure no breaks wait there's no sound either Malayan 370 contact 120m Nan 37 breaking news tonight A Malaysia

(3:50:22) Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] [Applause] [Music] I remembered the line from the Hindu scripture the babad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of worlds

MH370x - MUFON Presentation Live 12/20/23 - YouTube

<https://www.youtube.com/watch?v=Nbb4AMdSK3w>

Transcript:

(00:08) okay Nori looks like she's having trouble yeah and Tim can you uh mute your video sorry about that probably fine machine keep should be good am I muted okay I'm unmuted here okay we're getting ready we're just making some final prep on my side to make it uh the lighting looks pretty good I think on our side here yeah I just happened to have one of my friends in town who's a professional uh producer so he's actually helping with the light right now so this should be a nice one for you

(00:51) guys here you know somebody named Jimmy who's been joining for some time now and I guess he having trouble joining I don't know what you mean not on my list will you guys let me know when you're ready I'm going to pretty just getting my stuff ready on my side but I'm pretty much ready to go stop all right I think everybody that was in the waiting room is now in let's see just moving some of my stuff around for the presentation one sec recording in progress does that recording mean we're

(01:48) ready to go yes okay okay one second I'm I'll start with mine get over okay go for it I have a series of announcements I make the beginning I'll start with that all right welcome to uh muon Orange County in the December 20123 program oh it's streaming too and i' like everybody to mute their mics unless they absolutely need to talk as part of this int explanation get over here all right let me see ask everybody to mute their [Music] microphones baby get in the house you might have to just force M people I'm not sure they're

(02:42) they're listening all right there we go okay I'll start again welcome to the December 2023 program of muon Orange County I'm Eric Hartman the section director most of you know that muon OC is an affiliate of the mutual UFO Network work which is an international organization it's the mission of which is to educate investigate and research unidentified aerial and related phenomena tonight's program is a little bit different because we're we're not directly uh as far

as I know going into

(03:18) uh the UFO field but maybe so indirectly we'll see what what it brings up these monthly programs feature the educational part of our mission statement and in our research in selection of speakers we consider and evaluate the many different types of phenomena that have been observed and in some cases personally experienced we Define the UAP UFO phenomena broadly encompassing not only apparent Hardware in our skies oceans and on land that isn't from civilizations we're aware of on this planet but also non Hardware uh

(03:55) unexplained phenomena apparently under intelligent control we look at the possible and most likely explanations for what is being observed and experienced including the Technologies or other methodologies being used considering all the available evidence and the nature of the interest or agenda of the intelligence behind the phenomena we provide a forum to our speakers we don't have a chance always to screen them in advance but uh they have to be talking about something that is related to our purpose and and our

(04:31) interest we encourage you all to visit our website at [www.mon.org](http://www.mon.org) uh especially toward the beginning of the month or maybe shortly after the beginning to uh read up on the upcoming speaker who usually we do have some exceptions but usually is going to be addressing this on the third Wednesday of each month and um our our next speaker who is going to be here on the 3D Wednesday in January or I have I should have right in front of me here but it is I know it's Robert Salis why I don't see his name in front

(05:16) of me on my list I don't know but he's got a very interesting and impressive background and U in 1967 I recall Robert uh Salas was stationed at the U mstom Air Force Base when they had a very interesting UFO encounter that hovered for quite some time over the front gate to that base and in the course of the time it was there all of the ICBM missiles which mstom was controlling went down sequentially with no explanation they tried on temporary power to start the uh the silos and the systems back up again

(05:58) which worked only very briefly and then those all shut down it was pretty fascinating I think the focus of his talk given that that happened as long ago as it did is going to be more up to dat he's branched out a lot in his investigations that should be pretty fascinating so that's going to be January's program tonight and let me just take a moment here to admit a few more people okay tonight we are pleased to have with us Ashton Forbes and the topic of the program is MH370 cat catastrophic disclosure Ashton

(06:37) is the organizer of MH 370x a volunteer group dedicated to solving the mystery of The Disappearance of Flight MH370 with the mission of solving the mystery and disclosing what occurred uh tonight's program will follow our usual format in which uh we we'll allow Ashton to make his presentation and then we can if it's all right with him we're going to go into our usual Q&A procedure we would encourage everybody who wants to ask a question to raise their hand using the symbol in their taskar and so we don't have

(07:15) everybody talking at once I'm still letting people in the room that's why I'm pausing momentarily and uh hey Ross is the camera asht so but the Q&A can go as as I guess he's willing to put up with it deal with the questions and with that we'll begin and Ashton it's all yours well thank you very much Eric for having me on thank you muon here for uh listening to the evidence and the presentation I'm be putting forward today as was mentioned the name of this presentation is catastrophic disclosure

(07:53) and the reason for that is that um I believe that the only true disclosure will come from the the people uh never going to come from the government and what that means as well is that we need uh videos and evidence out there that are indisputable that are put together scientifically and what m370x is trying to do is trying to present the evidence in a scientific way where we can show what type of Technology we might be dealing with when we are dealing with the UFO UFO phenomenon and UAP disclosure so today's presentation about

(08:26) MH370 is going to be a mixture of conspiracy as well as advanced technology and uh without further Ado I'm probably just going to get right into it I appreciate that introduction so I would ask that uh for the format of this is I'm going to go through some evidence I'm going to show some videos I'm going to show the MH370 videos as they referred to and then near the end uh I will let you guys as ask as many questions as you want about it and if I missed anything um I know people are familiar with the case or not familiar

(08:54) with the case and you want to know stuff uh feel free to let me know so right at the beginning I'd like to start with what I call the flight path explainer this is going to be a little bit of an overview of what happened with this plane um so that people who are not familiar with the incident can get into it after that I'm going to explain why the narratives that are out there uh don't make a lot of sense why they are holes in them I'm going to present a narrative that makes a lot more sense

(09:20) than what these uh narratives that are out there these stories out there really tell we will get into the scenario that we've put forth about what really happened to this plane then we will look into the videos Okay so let's go ahead and I'm going to go ahead and share my flight path explainer put together by the MH 370x team here so you guys can see this presumably can someone just confirm they can see this uh video here that I've got up yes okay great okay so this plane MH370 took off from qual Lampur uh which

(09:57) is in Malaysia and is heading north East towards Beijing so about 40 minutes after takes off takes off at 1642 UTC we like to talk about things in terms of UTC time because it's easier to keep track of it especially with time zone changes um 1719 UTC is when we get the final officially released communication that says good night Malaysian Airlines flight 370 the government didn't release this communication till uh I believe it was Weeks Later under heavy pressure and then at 1720 1 UTC just 64 seconds later

(10:32) the plane goes dark now the plane after it goes dark here turns and goes back across the coast of Malaysia here or down the peninsula now this was not known right away for days after

the search they were searching in the South **China** Sea but the Malaysian government knew the entire time because they had military radar that tracked this plane going directly to panang panang is the closest airport that you would go to in an emergency situation here slightly closer than qual lur and has better elevation as well for

(11:02) an emergency event after it goes to panang and gets to panang so 1721 UTC just for some perspective is 1:21 in the morning so it's going to be night time it is we've checked the moon phases the moon was down the sun was obviously set so it was Pitch Black it gets here to panang and this is where this official narrative uh not even official Nar the official narrative that's out there says that they don't know what happened to this plane the narratives that you hear in the news will say that this was a pilot

(11:31) suicide which doesn't make any sense because if this was a suicide route they would have just crashed a plane in the South Indian Ocean they're certainly not going to go to the nearest airport that you would go to an emergency scenario now it gets to the panang airport and for whatever reason it doesn't land but the co-pilot cell phone pings a cell tower so this is about 30 minutes after the plane goes dark here um and at this point for whatever reason we don't know exactly it doesn't land I'll go to that in a minute I'm

(11:59) going to kind of replay this and tell you what our scenario is that we put forth afterwards it heads out over here into the Straits of Mala the Andaman sea towards the nicobar islands over here now originally if you look back at the news reports of the next day you will find out that the last communication was at 1840 UTC which is somewhere around here where this little boat is and we'll get to the purpose of this boat in a minute it wasn't until later that the Malaysian military said that their radar lost track e that

(12:29) either 1822 UTC or 1815 UTC it actually isn't very clear even now which one is the accurate one about 230 mil off the coast here after this point all we have to rely on is these iMat pings that are out there now the iMat pings and the investigators who've looked into the case before us and I consider myself an investigator the way I've looked at this case has been like looking at a criminal case collecting evidence and trying to put together a story that makes the most sense the investigators would say that

(12:59) these ersat pings say that we can't tell exactly where the plane went we can tell there's an arc and they look at these arcs and they say that it couldn't have gone North because there's too many Radars that would have seen it so it must have gone South they claim the location they play claim this plane went South is right here about where this boat is at 1840 UTC again 1840 UTC is the time that all the uh the stories the next day uh subang air traffic control says they lost contact with the plane

(13:28) and then they claim this plane flies into the South Indian Ocean for another 5 to 6 hours until it runs out of fuel and crashes somewhere in the southern Indian Ocean now this is not consistent with a p a pilot suicide scenario again all the pilots that I've talked to at least um say that this doesn't really make sense from a suicide scenario if you look at the German Wings

situation in 2015 you find out that that pilot crashed the plane like less than 10 minutes after locking the co-pilot out in 9/11 as us Americans are going to

(13:58) know you know all those planes were crashed either into buildings or in the case of ua93 where the passengers fought back those planes crashed very quickly as well now let's present a different scenario with some evidence as well same same flight path here as we would see this plane again is taking off but when it gets to 1721 UTC our first witness sees the plane on fire and this is going to be consistent with the 487 lbs of lithium ion batteries that in the Cargo Bay Lighting on fire from a runaway lithium ion battery fire lithium

(14:34) ion batteries are extremely dangerous they've been outlawed in the passenger the cargo bay of passenger planes in 2015 one year after this by the FAA these batteries initially the CEO of Malaysian Airlines lied and said there was nothing dangerous in the cargo and then later on had to admit that there was 487 pounds 221 kilogram of lithium ion batteries that were not screened twice and they were put together and packaged unsafely that same day so Mike McKay is about 300 miles away he sees the plane he sees it very low on the

(15:09) horizon and he sees it on fire from between 5 and 10 seconds he writes an email about it to his work colleagues he says I must have seen the plane it was in the right location the right time at 1721 UTC and this is going to be consistent with the the batteries there was two stacks of batteries that were in the forward cargo Baye that are right next to the main Electronics Bay exploding and potentially damaging the main Electronics Bay which causes the plane to go dark now these bays are actually built to maintain fires and

(15:40) they actually have automatic fire suppression devices that can last for up to 3 hours they would be battling this Blaze now more about the lithiumion batteries is that the runaway lithiumion batteries the reason why they're so dangerous is they keep coming back up again so you can put them out but then they're going to keep coming back up so this is going to be extreme ex dangerous event for this plane if you Google at the battery fires you can see examples of how dangerous they are and you can see that they took out several planes

(16:06) before 2014 so not just Mike McKay but there's actually nine Witnesses along the coast here that all hear loud noises at 17 around 1720 UTC the same time that these batteries ignite now fast forward 10 minutes later this plane turns around and now it's flying to panang because it's an emergency scenario this is the closest airport they would go to in this emergenc the event the explosion might have actually depressurized the plane when people lie a lot of the times they have an element of **Truth** so this

(16:37) scenario wouldn't be where the pilot is depressurizing the plane to knock everybody out they're the plane is depressurized from the emergency event and what the Pilot's doing is they're trying to keep everybody alive and the evidence for that is that 10 minutes later 1730 UTC there's eight fishermen off the coast here of Malaysia and Thailand right along the border here they see all eight of them see this plane flying unus usually low the reason why the plane would be flying low is if you're under 10,000 ft now you have

(17:03) enough oxygen for passengers to potentially be able to breathe in a depressurized scenario the oxygen masks on board the plane only last for about 30 minutes so it's not really a lot of time for those passengers in addition to this there's more evidence is very important another 777 Pilot Flying to Narita to Tokyo here's a communication from the plane indicating that the communications did not go out at 1721 UTC they don't want to be named because they don't want to lose their job like Mike McKay did and they hear the the

(17:34) voices of the pilot and potentially the co-pilot through a lot of static there's not a lot of other information about this communication however there's an interview with the Malaysian Minister of Defense 7 weeks after the events when he should have had all the information he contradicts himself and he's a very sketchy dodgy guy he won't answer any questions he won't even answer when he was told when uh about the plane going rogue or going missing but what he says is the plane is unidentified but then he says they knew

(18:02) it was civilian airliner and they knew it was not hostile the only way you could know the plane's not hostile is if you have communication with the plane otherwise there'd be no way to confirm it's not a hijacking scenario or that it's not a pilot suicide scenario so there's a good reason to think that both this plane is on fire and the Malaysian government knew it was an emergency event now why does it not land a panang when we look at the videos here in a minute uh we will see there's a heat

(18:33) signature right where the uh landing gear is it's possible the landing gear is damaged we actually believe that the forward cargo B fires would be causing the smoke to circulate through the air conditioning system and blow out the heat through the heat vents that are near the landing gear but if the landing gear is damaged now you can't land if they actually did not respond to the plane being dark like maybe they really didn't know about it for 30 minutes while it got here it's possible because

(19:01) it's 2: in the morning that the runway lights were not on in panang keep in mind panang the airport would have been closed this is also a third world country so it's plausible that the landing gear lights were not on or the uh landing strip lights were not on and then it wouldn't have been safe if the landing gear is damaged the next thing you're supposed to do as a pilot you're supposed to land on your belly on the plane without landing gear which to me seems very dangerous um and I think that

(19:26) at this point from talking to Pilots it would have been a judgment call the issue here is that if you have fuel another 6 7 hours of fuel in the in the plane this plane is going to explode if they try to land on their belly so for whatever reason we don't really know they didn't land here the next thing you're supposed to do after that is you're supposed to land in the ocean so one of the big questions we don't know is why don't they land right near panang maybe it's possible that they wouldn't

(19:50) have had any support what I want you guys to keep in mind is that if you try to land in the ocean uh your plan's going to rip apart so at this point you could argue that the plane is

essentially doomed if they couldn't land in panang the pilot is it's probably a doomed situation for this plane um when they try to land in the ocean it's going to rip apart into pieces and if people don't have uh you know a way to swim or they uh there's not like active support nearby uh you know it's going to be a bad situation

(20:19) for them now the last witness so we've already had at this point uh one person on an oil rig we had nine people on the coast and we had eight people in fisherman boat so we've already had 18 Witnesses here coating a fire event but now we have our main witness Katherine T she's on a boat over here she's heading from India to puket Thailand right here she sees a glowing orange plane with no navigation lights coming from the right same direction MH370 would be coming upon the agreed upon flight path by

(20:48) everybody there's no way she didn't see this plane she also sees two other planes flying high that have L that have uh land navigation lights on them this plane that she she sees is flying relatively low and for the 5 to 10 minutes of her sighting it's descending as well she also sees it turning consistent with what we see here from this turn uh as recreated by one of her sightings a few years later even to this day she sticks to her story now the reason why the plane would be glowing orange and it this took a little while

(21:18) for us to figure out is that the hon fire extinguishing devices that are trying to keep this fire out they release bromine which is a chemical which is a hon gas Halon gas and hon uh lamps look just like what her sighting that was recreated by artists that she had that she talked to look like it's almost identical so the idea here would be that this 1 hour and uh maybe 1 hour to 1 hour and 20 minutes of battling this fire it's been releasing hallogen gas bromine throughout the entire plane that's seeping out of the plane causing

(21:50) it to glow orange in the very dark night to her um so this is the part where we think our videos happen um and I'm going to get into the videos in just a second also one thing I want to say as well is that she also sees dark smoke coming out of the back of the plane as well okay and actually I think I will just go ahead and show the video side by side now and then I'll do a detailed analysis of the videos later because **I want you** to see how much is corroborated by what I just mentioned now one last thing I'll mention before I

(22:21) get to that is that there was also an intercepted Chinese only Mayday call only reported in Chinese news news the time was supposedly intercepted at 2:43 a.m. if you convert that to Malaysian time it's 1843 UTC the sighting of KT's estimated sighting is 1840 UTC that intercepted communication from MH370 claims that the plane is disintegrating and attempting an emergency landing so now we have corroboration that potentially there was an emergency landing attempt in the ocean which would make sense a fire that we see as well as

(22:57) a witness that supports that now let's go ahead and take a look at our sidebyside MH370 videos and this is where we're going to get into a little bit of the UFO aspect here so right away we can see in these videos there's a smoke Trail coming from behind the plane on both videos both videos are in perfect synchronization with one another we estimate that on our left video

we're clearly looking at a drone here um we think this is an mq1 C Gray Eagle it could also be an mq9 uh they both have the exact same uh

(23:31) configuration in terms of their looks and the Right video here we believe we're looking at something called cbers space-based infrared system essentially this would be a satellite video now it's not as simple as looking through a satellite if we look at the cers video which we will look at in a little bit here um it's a system where it's like a Google Earth video playback for the military for tracking boats planes uh intelligence and Battlefield awareness Battlefield awareness is important because when we look at at

(23:58) this this video on the right we don't see the Drone the Drone is just cropped out of view here which now this starts to indicate intent in the person who would have been leaking these if these videos are real as well when you look in the video on the left I think a lot of you are probably familiar with the 2017 DOD Navy videos Flier footage forward looking infrared we notice here that this is not black and white we also notice there's no HUD data either so if this is a real drone video then this is potentially done by somebody who's an

(24:27) operator They removed the H data they colorized it with a thermal layer using the onboard software so that we would see more details notice as well the smoke here it starts to stack up just like you would expect if you were to change your perspective and look at a smoke trail from dead on now I also want to point out the plane is low how do we know the plane is low because these are cumulus clouds that we see in both videos cumulus clouds only form between 1,000 and 5,000 ft so this plane is flying very low and

(24:59) we've actually had Engineers look at the turn that we saw here initially this plane is descending as well it's maxing out the capabilities of a 777 wall in descent if this was not descending and not turning then this would not be a realistic uh perspective of what a 7772 200 could do it's traveling at about 150 to 200 miles hour just like if you were in your car and you're turning you have to slow down same thing happens with a plane as well so in the Right video we see this map Mouse there was actually a

(25:29) mouse that came on the screen this is actually an indication that what we're looking at is a citric session on the right now for people who don't work at large companies basically every big company uses a citric session to log into their databases um through a remote terminal and this mouse is running at 24 frames per second which is uh similar to what a citric session would run at but the background is only six frames per second so this would indicate that somebody's actually logged into the spy satellite

(25:57) database using a citric session now for my UFO enthusiasts here get ready you're going to have a good time in a second look at was just flying in on the side of the screen coming in at Mach Three speeds some kind of orb here this thing is going roughly based on the pixel how fast those pixels were moving right there roughly 2,000 or more miles per hour if this was a conventional craft it would be getting ripped to shreds just from the friction of uh the air now it's sling shots past the plane and then what it's going to do is it's

(26:30) going to come back and it's going to start rotating around the plane here and we can see right away it almost didn't get to the plane it like missed it and then it starts to rotate like it's locking onto it here now the second orb is going to appear right where my mouse is it's hard to see in this version of the video I have other versions We can potentially show later on if people want to see but it skims across the water shoots up through this cloud and joins the first orb and then very quickly a third orb is

(26:57) going to come flying out of the side of the screen here it's going to join the other two and notice right away you can see the equilateral triangle pattern this is a  $120^\circ$  sin 0 point signal pattern and what that essentially means is a perfect equilateral triangle that is forming there with the plane as the center of mass in between it now on this left video and we'll dig into this a little bit more you can tell that there you can see these orbs here pretty clearly in the thermal and you can start to see
